THE LONG DISTANCE WALKERS.—The entries for the championship walks, which begins at the Rink, this city, to-morrow, are very large and as will be seen, include many men who have made their mark. Among those already entered are: T. H. Armstrong, Harlem, the amateur champion of America; E. C. Holske, Harlem, the 3-mile champion; G. Bruce Gillie, the 25-mile champion; Charles Connor, Scottish-American 10-mile champion; R. H. Pelton, Greenpoint; J. W. Goodwin, American A. C.; Hugo Wiese, Western Union Telegraph Co.; Julian Schmidt, Brooklyn; Julius P. Mackey, American A. C.; J. Stern, Amateur A. C.; Frank L. Edwards, S. A. A. C.; G. Cook, Brooklyn; James Dugan, N. Y.; John Byrnes, N. Y.; W. A. Clark, N. Y.; W. Wilson, N. Y.; John Holyman, N. Y.; and M. J. Ennis, Harlem. The professional list will contain John Ennis, of Chicago, O'Leary's antagonist; Charles A. Harman, of Haverhill, who, it is claimed, can beat the best 100-mile time on record; Wilson Reid, one of O'Leary's earliest opponents; W. S. O'Brien, the 500-mile walker of Newark; Frank Clark, of Philadelphia, the trainer of O'Leary; E. Wigzell, the champion short distance walker of New York; George Coyle, Weston's old opponent; Peter Van Ness, O'Leary's last antagonist in America; George J. Law, the 50-mile walker; James L. Downey, who recently attempted to walk 400 miles in 100 hours at Central Park Garden; Ben. Curran; James McIntosh of Ithaca; J. C. Moore, of Australia, Harding's entry; and Carl Temple Forrester, of Newark, and several others. The conditions and stipulations governing these championships are as follows: In the professional the winner will receive the belt and \$200; the second man will get \$100, and the third \$50. Twenty-five dollars will be given to the man who beats the American record at fifty miles (8h. 52 min. 18s), and \$25 to the man who beats the record at 100 miles (18h. 53m. 40s).

INTER-COLLEGIATE ATHLETIC ASSOCIATION.—The third annual meeting of the Athletic Association of American Colleges will take place on the grounds of the New York Athletic Club, Mott Haven, May 18. The following is the programme: Standing broad jump, mile walk, running high jump, half-mile run, pole vaulting, one hundred yards dash (trial), putting shot, running broad jump, one-fourth mile run, standing high jump, 220 yards dash (trial), throwing hammer, mile run, hurdle race (120 yards), two mile walk, one hundred yards (final), mile walk (graduates), 220 yards dash (final), one hundred yards dash (graduates). Handsome medals will be given to first and second in each event. Entries close May 11, and must be addressed to E. S. Melville, University of Pennsylvania, to whom also must be sent the name of the judge (if any) appointed by each college. All communications to the Executive Committee should be addressed to Princeton, N. J.

PRINCETON ATHLETICS.—The annual spring athletic meeting of the Princeton College students was held last Saturday. The winners in the fourteen contests are to represent the athletic ability of the college at the coming inter-collegiate games at Mott Haven. The contests and winners were as follows:

Standing Long Jump.—F. Larkin and H. Minor, both of the class of '79. Won by Larkin; distance, 9 ft. 10 in.
Half-Mile Run.—W. Phraner, '78; A. Scribner, '81. Phraner won in 2m. 16 1/4 s.
Putting the Shot.—F. Larkin, R. Karge, '78, and H. Stevenson, '78. Three throws, the ball weighing sixteen pounds. Larkin won.
One Hundred Yards Dash.—J. Dunfield, '76; A. Hunt, '78; H. Stephenson and H. Minor, '79. Won by Hunt in 10 s.
Pole Vaulting.—J. Washington, '80, and F. Larkin. Won by the former, 8 ft. 6 in.
One Mile Run.—W. Phraner, and M. F. Peyton, '80. Won by Peyton in 8m. 13 1/2 s.
Throwing Hammer.—R. Blackwell, '79; F. Larkin, R. Karge, and H. Stephenson. Blackwell won, 15 ft.
Quarter-Mile Run.—T. W. Cauldwell, '81; J. A. Stewart, Jr., '79. Won by the latter in 56 1/4 s.
Running Long Jump.—A. Hunt, 18 ft. 10 in.; A. H. Stephenson, 17 ft. 10 in.
Running High Jump.—J. Withington, A. Hunt, H. Minor. Latter won, 5 ft.
Hurdle Race, 120 yards, 11 hurdles, 3 feet high.—H. Stephenson and H. Cuts, '79. Won by former in 19 4/5 s. Won by same party last year in 19 1/5 s.
Standing High Jump.—F. Larkin and A. N. Dennison, '78. Won by former, 4 ft. 6 in.
Two Hundred and Twenty Yards Dash.—H. Stephenson and L. P. Smock, '79. Won by latter in 23 s.
The sports were concluded with a tug of war.—Captain B. Ballard, '80; J. Kirk, '81; F. T. Bryan, '80, and L. P. Funkehauser composing one team; and Captain A. McLavee, '80; H. Cuts, '80; R. Karge and C. Wigton, '79, forming the other. The event was decided in favor of Captain McLavee's team.

COLUMBIA COLLEGE GAMES.—The twelfth field meeting of Columbia athletes was held at Mott Haven, last Saturday. The events were as follows:

One mile walk.—W. B. Parsons, 8m. 43 1/2 s.; W. Barnes, 8m. 54 1/2 s.
Running high jump.—J. P. Conover, 5 ft. 4 in.; N. L. Bogart, 5 ft. 4 in.; E. T. Browning, 3 ft. 1 in.
Half-mile run.—A. J. Barton had a walk-over in 2m. 21 s.
Pole vaulting.—Bogart, 7 ft. 6 in.; Pryor, 7 ft. 3 in.
One hundred yards dash.—W. Walton was the only competitor, 11 1/2 s.
Throwing hammer, 16 pounds.—O. D. Parmenter, J. Vansindere and J. H. Montgomery. Parmenter won; first throw, 71 ft. 9 in.; second, 73 ft. 7 in.

Four hundred and forty yards dash.—A. J. Barton and G. Taylor. Won by former, 56 s.

Two hundred and twenty yards Dash.—Waller, Barton and Bogart. Waller won in 25 s., Barton second.

Running broad jump.—Won by Conover, 20 ft.

Hurdle race—120 yards, 10 hurdles, each 3 ft. 6 in. high. 10 yards apart.—Conover and Pryor ran a dead heat in 19 1/5 s.; second heat Pryor won by 15 inches in 19 1/5 s.

Tug of war.—Freshman vs. Seniors. The Freshman team was made up of Messrs. W. Foster, J. Vansindere, J. H. Montgomery and G. Ward. Their opponents were Messrs. W. B. Parsons, A. H. Kingsbury, C. E. Eldridge and R. D. Rhodes. The Freshman won the first tug in 20 1/2 s., and the second in 19 1/2 s.

One mile race.—G. S. Allen, C. W. Eldridge, F. Klopelke. Won by Allen in 6m. 13 1/2 s.

Strangers' half-mile run.—Won by F. Burnham, N. A. O., in 2m. 15 1/2 s.

Steeple race, one half mile, mostly out of the inclosure over the broken ground to the east. Messrs. Pryor and De Forest were the runners. At the start De Forest led slightly, but upon the rising ground both runners kept nearly side by side. On the home stretch they had five hurdles to jump, which they took nearly together. At the finish De Forest by a splendid effort came in two feet ahead. As he touched the line he fainted and was carried away by his friends. The time was 2m. 26 1/2 s.

FOOT BALL.—The Liberty Club, of Jersey City, and the Union Club, of Hoboken, had an exciting game of foot-ball, at the West End Ground, Jersey City, last Saturday. The first two goals were won by the Libertys, the next two by the Unions, and the final one by the Libertys.

CRICKET.—The St. George's Cricket Club, of this city, has decided not to join the newly formed Cricketer's Association.

GEORGIA PEDESTRIANISM.—"Professor" Consigny, who finished a walk of 500 miles in 500 hours at Atlanta, Ga., May 1, may now be consigned to the ranks of the long distance walkers.

—The 125-yards run, in the N. Y. A. C. meeting, May 30, is a handicap. Entries for the contests close May 20.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

22—Q-K5	22—Q-Q B3 (j)		
23—Q-K B2	23—P-K B3		

NOTES.

(a) Inferior in the opinion of the best authorities to Kt-Q B3. The move made reduces the game to a variation of the Petroff Defence, that should, with the best play on both sides, ultimately yield Black a somewhat superior position.

(b) Authorities differ upon the efficacy of this move. We consider it the best at White's disposal.

(c) Mr. Lichenheim, who first brought this defence into notice Castled at this point. It appears that P-K R3 is necessary at the same time, hence we think the move in the text is preferable, as leaving Black his option of Castling K R or Q R.

(d) Black evidently intends Castling Q R. We think this to be better play than the more obvious move of Castling K R, as, in that case, attack can be made upon Black's K R P by P-K Kt1, R-Kt1, etc.

(e) This seems best, but should have been followed up by Castling on Q's side.

(f) Threatening the following: P-K6, and if Kt Ks P, then Kt Ks Kt and if P Ks Kt, B Kt5.

(g) Injudicious. It lessens White's chances for an attack, and removes a piece which could be used defensively to great advantage.

(h) White is now weaker on K's side than Black is on Q's side.
(i) White is in no condition to commence an attack, and this move turns out lost. R-K would have been better.
(j) A very strong move, if 23—Q Ks P, Q Ks B P, etc.
(k) Good again; preparing to bring the R to play in a quarter where White is most vulnerable.
(l) This move looked very tempting when the R was at Q5, but is now almost decisive.
(m) There is nothing better.
(n) Far better than taking the exchange at once. The game has now become very agreeable for Black.
(o) From this point to the end is only a question of the number of moves.—Hartford Globe.

Game No. 57.—SCOTCH GAMBIT.

THE OAR AND PADDLE.

SCHUYLKILL NAVY.—The thirteenth stone boat-house of this association is now being built above Fairmount Dam for the West Philadelphia Barge Club. This house, like all the others, is built from ornamental designs, and completes an array of fine boat-houses and appurtenances such as no other city in the world can show, even the metropolis being far behind sister city in this respect. Good for Philadelphia, say we; may others follow her lead! The clubs located on the Schuylkill comprise the Bachelor, Crescent, College, Fairmount, Malta, Pacific, Pennsylvania, Philadelphia, Quaker City, Undine, University, Vesper and West Philadelphia. Capital invested, over \$100,000 in houses alone.

HENLEY REGATTA.—The stewards of this regatta have finally complied with the demands of justice and common sense, and have removed the six weeks' restriction against American crews, the entries for British and foreign competitors closing on the same date, June 22. This will afford the winners at Watkins an opportunity to send over representatives to Henley, as intended.

WATKINS REGATTA.—The Secretary announces that no crews will be sent to Paris, as originally proposed, since our French cousins have not seen fit to arrange any races on the Seine, but the propositions with regard to Henley will be strictly carried out.

HARLEM ROWING MATTERS.—Messrs. West and Mack will go in a pair at Watkins, and Mr. Rathbone will try his luck in a single, as will also Mr. Geo. Gaisel, of the Gramercy Club. The night and day clerks of the Post-office pulled a four-oared race on the Harlem, May 2. Day crew broke an oar, and dusky night got the best of Helias' sons. Distance, three miles, with turn; time, 21m. 25s; winning crew pulling easy. The May turn-out of the students of the college of the City of New York took place last week, thirty-five boats in the fleet.

HARVARD AND CORNELL FRESHMEN.—The freshmen crews of these two colleges will offer all-meet at Saratoga Lake, the Harvards having reversed their decision not to row on the Saratoga course.

THE AMATEUR QUESTION.—The London *Field* makes a mistake in speaking of Courtney as an amateur. He is now a professional, and no longer recognized under the N. A. of A. O. as an amateur. It is by just such oversights of the English press that the Henley difficulty arose, and that American amateurs are placed in bad repute in Europe.

PARIS INTERNATIONAL REGATTA.—The utter decay and stagnation of French nautical interests may be gauged by their failure to offer prizes of any description at the coming *Exposition Universelle*, either for yachting matches or rowing races. The condition in numbers and spirit of the aquatic clubs of a country can always be taken as a true index of the prosperity of the national nautical interests, and the elimination of yachting and boating from the list of French sports is only in unison with the disgraceful display of the incapacity of their navy during the Franco-German war. It seems almost incredible that a government, while voting away vast sums of money for grand State dinners, could not find a few crumbs left with which to initiate a series of competitive which would materially add to the brilliancy and *clat* of the season. Such things as our international meetings at Cape May and on the Schuylkill will, as it appears, not form a prominent part of the French exhibition.

BOATING AT BALTIMORE.—Our Baltimore correspondent sends the following:

"Considerable interest is being awakened in our yachting and rowing clubs for this season, and already the Patapsco is dotted in the afternoon with crews practicing for the summer regattas. The Undine, one of the best of our Baltimore crews, will have a spurt with the famous Annapolis Club, of

Washington. The affair comes off May 25, but I fear the Baltimore boys will stand a poor show. Still the tide of affairs may turn. Our famous L'Hirondelle Club, the champions of the Patapsco, and our crack Baltimore crew, will challenge the winning crew of the above race for a pull on the Patapsco, in four-oared shells, subsequent to the race on May 25, and before June 10 proximo. The challenge was sent last Friday by Mr. John Redwood, Secretary of the L'Hirondelle. One thing is certain, if the Anolostans get the best of the Undine, the L'Hirondelle will get the best of them. Altogether, I think the Patapsco navy will have pretty lively times this season. Yours truly, **THATMORE.**

REAL ESTATE AFLOAT.—The pretty club-house built by the late Mr. Garner and occupied by the New York Yacht Club as a club-house at Stapleton, S. I., and which had recently been abandoned by them, was moved bodily to a new place of rest at Alpine Grove, on the Hudson. pontoons were floated under it at low tide, and the structure raised from the dock and then towed up the bay. It formed a novel sight to the Battery shellbacks, who were in doubt as to what the strange monster really was—Noah's Ark resurrected or a Russian privateer. The building is 40x80ft., weighs 200 tons, and the job was executed by John F. Baxter, of the Baxter Wrecking Company.

CANOEING ON NEWARK WATERS.—Editor *Forest and Stream*: The Passaic canoists, lured by the forwardness of the season, are out in force. Any pleasant afternoon the flashing double-paddle or the white sails of some tiny cruiser may be seen at Newark, and the variable spring winds have already scored a capsized for two of our most prominent canoists.

During the last of March the *Qui Vive* cruised some forty miles on the rivers Passaic and Hackensack, her captain spending the intervening night within his little craft alone on the marshes.

On April 19th, the *Rambler*, in company with the *Qui Vive*, cruised from Newark to New York; the run, on account of light winds and adverse tides, occupying six hours.

Two "Qui Vive" built canoes, the *Spray* and *Arrow*, under the respective paddles of Messrs. E. Doane and F. Peniston, started a few days ago for the Water Gap, via Morris canal.

Some changes are observable in the rigs of the various canoes. The *Passaic* and *Qui Vive* have discarded the lug and adopted the gaff-mainsail. These canoists declare that the projecting fore-end of the lug renders it dangerous in the uncertain, gusty Passaic breezes; and affirm that the safety gained by the use of the gaff, more than counterbalances the extra trouble in setting and furling.

If the "Qui Vive" canoes, the *Rambler*, Mr. C. R. West; the *Don*, Mr. Percy Chubb; and the *Blue* canoe, Mr. J. H. Connell, are at Gowanus. The *Passaic*, Mr. F. Hussey; the *Delaware*, Mr. T. F. Lemassena; the *Thetis*, Mr. Johnson; and the *Dragon*, Dr. H. G. Fish, are at Newark. The *Qui Vive*, Mr. I. F. West, is at New York. Mr. John Hahberton's wooden canoe *Alice*, is at Newark, where the *Kaboolah*, Mr. Kingman Putnam, of New York, has recently paid the *Lady Alice* a short visit. **MAGDA.**

CANOEING CRUISES.—The canoe *Psyche* desires company on a cruise on the Housatonic about June 1. Answers or inquiries may be sent to our office. The Housatonic is a very picturesque and interesting river, and a cruise in company on its waters would no doubt be remembered with pleasure.

THE HERALD CANOE.

EDITOR *FOREST AND STREAM*:

Mr. Wm. B. Garfield has a letter in your last issue criticizing certain assertions made by me in a recent number of *Harper's Magazine* concerning canoes. Giving to Mr. Garfield's evident want of knowledge of his subject his criticisms are not very withering.

I found fault with the *Herald* canoe because her thwart roder sleeping in her impossible. Mr. Garfield says:

"The thwarts are not necessary to hold the sides in position, as stated by the opponent, but are put on for the convenience of the paddler, and can be dispensed with if desired."

To this I reply that Mr. Herald himself says that canoes of the *Herald* patent cannot be built without thwarts. Perhaps he knows as much about his boat as does Mr. Garfield. The latter is, of course, unaware that no canoeist ever sits in a thwart when paddling a *Herald*. Mr. Garfield next says:

"The objection made to an open *Herald* canoe on account of carrying the necessary trappings and provision in a bag is entirely imaginary, and in this instance theory and practice will not pull well together. All practical cruisers concede that there is nothing equal to a bag for the storage of provisions and equipments. If our friend who objects to the trouble of opening and closing a bag should at any time take a canoe trip, we think he would say on his return that there was nothing like a bag of some sort for the storage of articles, no matter what kind of a craft he may travel in."

This is amusing in view of the fact that "our friend" introduced canoeing into this country, founded the N. Y. C. C., built the first "Nautilus," ever built on this side of the Atlantic, designed the "Shadow," and has made more canoe cruises than any other American. An ordinary bag, or rather a number of bags, carried in water-tight compartments, are very useful. It was to the water-tight bag, the mouth of which must be laced up, that objection was made. Mr. Garfield proceeds:

"The *Herald* canoe will not sink when filled, and there will be buoyancy enough to the craft to keep two persons from drowning."

Like all other wooden boats, the *Herald*, if turned upside down in the water, will hold enough air to support two or more persons clinging to her. If, however, a *Herald* is filled with water while her owner is sitting in her, she sinks; whereas in like circumstances a "Nautilus" or a "Shadow" can be paddled ashore. This is what I referred to in saying that the *Herald* sinks when full of water, and it is founded in the testimony of a veteran canoeist who uses a *Herald* exclusively. Mr. Garfield further says:

"As to the amount of sail to be carried, that is left entirely with the purchaser, but one sail stepped in the proper place is considered better than two, as all the sail that is necessary can be had in one, and of course can be handled to better advantage."

This simply shows that Mr. Garfield knows nothing whatever about sailing a canoe. With one sail the *Herald* will, of course, sail before the wind, but the after sail is absolutely necessary when sailing on the wind, and even with its aid she cannot be tacked unless she is helped around with the paddle. A "Shadow" or a "Nautilus" will sail close hauled under mainsail alone, but neither of them will tack unless the jib and dandy are also set. The remark that "all the sail that is

necessary can be had in one," will appear sufficiently ridiculous in Mr. Garfield's own eyes when he learns how to sail a canoe.

These are all the points in Mr. Garfield's letter that require notice. With the merits as well as the faults of the *Herald* I am perfectly familiar, having made three long cruises in company with *Herald* canoes. The *Herald*, after her thwarts have been turned upside down so as to give room for sleeping; after she has been decked over, and after she has been fitted with air-tight compartments, all of which must be done by the purchaser, is a strong, swift, safe and commodious canoe. She is nevertheless much heavier than a "Nautilus" or a "Shadow" of the same length; her full bow makes her throw water all over herself in a head sea, and owing to her want of keel she cannot be dragged out on a rocky shore without scraping her bottom planks. I gladly concede her merit when intelligently set forth by a canoeist. Mr. Garfield, however, is not a canoeist, as his letter clearly shows. Two years hence, after he has made at least two good cruises in company with a "Shadow" and a "Nautilus," his estimate of their comparative merits will deserve consideration. **W. L. ALDEN.**

EDITOR *FOREST AND STREAM*:

Dear Sir—In your valuable paper of May 2 a statement—or advertisement, or whatever it may be—in which Miss McBride accuses me of advertising her idea and not keeping it in. In justice to myself will you kindly publish this, my absolute denial of the same?

Yours respectfully,

W. HOLBERTON.—(A.D.)

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

F. M. B., New York.—Duck shooting is now against the law in New York State.

A. D. B., Carlisle. There was no show in 1877. This year the winner was Elcho.

M. A., Milwaukee.—For duck shooting go to Oconomowoc and the region round about.

L. A. C., Jersey City.—The name you mention is a trade name, and is not put on first-class guns.

D. J. B.—For American champion amateur walkers see our Rational Pastime column this week.

W. M., Ohio.—Messrs. Peck & Snyder, of Nassau St., New York, will sell you boxing gloves. Price from \$2.50 to \$6.00.

J. W. B., Boston.—Has Mr. Colwin made a new map of the Adirondacks after recent surveys? Ans. No new map made.

A. B., Panpack, Pa.—For woodcock shooting within 150 miles of New York go to Pine Brook, N. J., or to Florida, Orange Co., N. Y.

C. M., Otsego Lake, Mich.—The two handed rifle musket, 50 cal., 70 grs., was discarded by the U. S. Army in 1875, and the .45, 70 grs., issued in its place.

J. R., Sag Harbor.—I have broken my barrel rubber root, not badly. Can you please tell me how to mend it? Ans. Take your root to a jeweler, or buy a new one.

S. R. T., Ithaca.—Do well-bred setters ever have five toes on each hind foot? Ans. It is simply an abnormality, quite possible to a well-bred dog as well as to a cur.

NATHAN, Saratoga Lake.—The little red fire fishes you refer to are called "sludgers." The white ones are all females, the red ones males. You ask old Steve Turner, the guide, when you see him.

W. F., Harnsburg, Pa.—Salmon paste was formerly imported in very limited quantity, but cannot be procured at present. Salmon eggs for the purpose are not obtainable. You must scrob the fish markets.

C. E. L., St. Paul, Minn.—Where can I get a book on pistol practice and the cost of the same? Ans. Buy "How to use the Pistol," Industrial Publication Company, 170 Broadway, New York. Price 75 cents.

A. S. G., Lowell, Mass.—Have sent you form. Your pedigree is excellent. Write to Arnold Berge, Hillside, Mich., who has the pedigree books in his charge. Would be very glad to hear from you when your club is under way.

W. E. F., Boston.—For snipe go to Marblehead, Ipswich, Lynn, Salem, or other coast towns. You will find good trout fishing about Natick. Yes, break your own dog. For shooting in Massachusetts keep yourself posted by consulting our game columns.

OBSERVER, Kane, Ill.—Where can I procure a copy of a work entitled "Prairie and Rocky Mountain Life," written by an Eastern attorney some years since? It is a book of 1,000 or more pages. Ans. Apply to Henry Miller, bookseller, 82 Nassau St.

W. J. W., Cohoes.—1. Please let me know through your paper if my 28 in. 12 gauge can be bored to give a pattern of 200 No. 6 shot, 40 yds. 30 in. circle? 2. Who would you recommend? Ans. 1. Yes it could. 2. Send it to Mr. H. C. Squires, No. 1 Cortlandt street.

C. E. C., Oil City, Pa.—Is Cones' "History of North American Mammals," published by the Government, and mentioned by you April 12, ready for distribution yet? Ans. Not yet issued, as a whole. A volume on the Fur Bearing Animals has been issued. It is printed by the Government.

W. R.—For map of Hudson River send to People's Line Steamboats, Pier 41, New York, or to the Scribners, this city. It would require a very large and a very powerful coiled spring to propel a boat 20 ft. in length. It would take a team of mules to wad it up. Your idea is as old as the centuries.

PSYCHE.—R. R. transportation for canoes varies so much as to distance as to render it impossible to give you a satisfactory answer. We can at least give you freight on New Haven R. R. to Bridgeport, \$1.52; to Norwalk, \$1.44; to Portchester, or anywhere this side of it, \$1.35; to New Haven, \$1.65; to Hartford, \$2.03; to Springfield, \$2.34.

T. A., Indianapolis, Calhoun Co., Texas.—1. What will it cost to have an extra pair of choke-bore barrels made for my Dally, of good quality, laminated steel? 2. Who would you advise to make them? Ans. 1. Cost of new barrels is generally one half of cost of gun. 2. Clark & Snelder, of Baltimore, would make you an admirable pair of barrels.

J. C. C., Shilliminstown, Pa.—My Laverack bitch has mango, the red mango, I think. What shall I do for her? Ans. Feed no meat. Open the bowels occasionally and apply kerosene oil once a day. Wash with carbolic soap. If this does not cure, write again. The dog pedigree it will take us some time to look up. Will try and reply to the inquiry later.

SUBSCRIBER, Providence.—I have a setter, 18 mos. old, with a mania to gnaw everything within his reach. About ten days ago he had a

slight eruption of the skin, hair coming off in a small patch. Used carbolic acid, and the trouble of the skin disappeared. What shall I do? Ans. Open his bowels a few times by giving him castor oil, and feed very little meat.

K. B. S., Canada.—1. What reputation have —, of London? I have a 12 bore, double-barreled, breech-loading shot-gun (No. 3,004), bearing this name, and also the name — (No. 7) on under side of barrels. 2. What is the proper charge of No. 3 Falcon duck powder, Oriental Mills, for this gun? Ans. Not names well known, never heard of them. 2. 3 1/2 grs. powder, 1 1/2 oz. shot.

J. T. P., Bellefontaine.—Please describe the overlauding shell. Are they sold by the dozen? If so, what are they worth? I want to get Nos. 32, 33 and 34, two dozen each. Ans. The overlauding shell has great thickness of walls, and is made to last. Can be used many times. That is about the principal difference. Cost, we think, about \$8 per 100. Write to Schuering & Daly about them.

J. F. S., Bridgeport.—I have a fine — laminated steel double barrel muzzle-loader, 14 bore, 34 in. barrels, weight 7 lbs. 1. What would be a proper load? 2. With such a load what would you consider a good pattern with No. 6 shot, 30 inch target, 40 yards? 3. Would you advise reducing length of barrels? If so, about how much? Ans. 1. 2 1/2 drs. powder, 1 oz. shot. 2. About 60. 3. Yes, make it 30 inches.

H. R., Philadelphia.—My puppy, five months old, has fits. He froth at the mouth, jumping and striking his head on the floor. Spelt lasted about an hour and a half. Ans. Give your puppy two teaspoonfuls of castor oil, and ten drops of laudanum once a day for three days. Keep him free from excitement, and warm and dry. It is very difficult to determine the cause of such a trouble without seeing the animal.

E. R. T., Providence, R. I.—I use one of —'s best shot-guns and their brass shells, which are 3 1/2 in. long, and I suppose, of course, fit the gun. Would it affect the shooting of the gun to use the U. M. C. Co.'s shells, 2 1/2 in. long? Gun has no shoulder, but is tapered at the breech. Ans. To do good shooting length of shell must be made to the chamber. It would not injure your gun, but might not make good shooting.

FLY TRAP.—The trap you want can be had of Messrs. Benham & Stouteborough, No. 370 Pearl St., New York. The rotary trap it is called, and it goes by clock work and gables up every fly within a circuit of many miles. The circular says, "The public and press universally acknowledge their value as a pleasing novelty," but whether flies cry for it has never been stated. (We have lost your address or would send you circular.)

A. B. B., New York.—The birds you describe as having been seen on Long Island which had long bills and legs, making short flights from tree to tree, could not have been bitterns, as bitterns only frequent marshes. The birds might have been night herons which breed in trees. If you could get a specimen we could of course decide the point. The night herons breed all along the coast of Long Island, and this is just the time for them.

RACQUET CLUB, New York.—Can you inform me of the best and quickest way by which to go to the Neplgon, the best time to go there, and the average daily expense? Ans. Take rail to Toronto and Collingwood, Canada, and thence steamer to Red Rock Landing, Neplgon. The best time to go is from middle of June to 1st August. It will cost about \$50 for the round trip including incidentals, and \$2 per day on the river for canoe and men.

H. A. F., Woodsocket, R. I.—Inclosed is a specimen of a small fish caught while fishing for brook trout. It took the bait like a trout. Will you tell me what it is? Ans. Your pretty fish is the black-nosed dace (*Leuciscus atronotus*). It is also known as the brook minnow. Body above greenish brown; top of head black; a dark brown lateral line from the gill covers to the tail; body below lateral line silvery. Dorsal and caudal fin brown; the other fins bright orange.

MACK, Bellefontaine.—1. Have a painter which six weeks ago bit the end of his tail. It has been growing sore. The hair has almost entirely gone from the end of it. He is licking it all the time. What shall I do for him? 2. Have a sister whose father is one half Irish, one half English; mother full English. What is the division of blood in the pup? 1 claim three-quarters English, one-quarter Irish. Ans. 1. You feed too much meat. Sock the end of the tail in kerosene oil once a day for a few minutes. 2. You are about right.

C. S. J., Phillipsburg, N. J.—1. I have an 8 lb., breech-loading — gun, London twist. Is it a safe one with an ordinary load? 2. After firing one load it becomes very dirty. Is it poor powder, or what, or what is the cause and the remedy? 3. Please inform me whose make of powder and wads you would recommend? Ans. 1. A perfectly safe gun. 2. Must be the fault of your gun. 3. Use Hazard's or Dupont's, either; Kiley pink wads, two of them over powder, and one half-wad over shot. Mr. H. C. Squires, of No. 1 Cortlandt st., will furnish you.

C. O. E., Boston.—1. Is the Connecticut River navigable from Springfield to Long Island Sound for a row boat large enough to hold three or four persons, and is the current too swift to row up from the sound to Springfield? 2. How long would the trip take? 3. Is it a pleasant route, and what sort of fishing is there? Ans. Quite navigable for stern-wheel steamboats used to run to Springfield. You will have to carry around the Holyoke Dam. You ought to make two miles an hour easily. You will find some shad, salmon and black bass in the river but cannot guarantee a mess of either.

H. S. H., Boston.—1. What is a good pattern for a gun 7 1/2 lbs., 12 bore at breech, 13 at muzzle; load, 3 1/2 drs. Hazard's F.G. powder, 1 1/2 oz. No. 8 chilled shot (400 to oz.); 30 inch circle, 40 yds. 2. The same at 30 yds. 3. Also, the same load No. 4 chilled shot, 30 inch circle, 40 yds. 4. Also, at 30 yds. 5. Is No. 9 chilled shot large enough for shooting glass balls at 21 yds. Rise? Do you or any one else publish score books for each class (1, 2 and 3), target separately, each class in a book by itself? Ans. 1. About 200. 2. 275. 3. One-half the counted number of pellets. No score book published such as you speak of.

H. E. S., Sparta, Mich.—1. Is the — gun a good, serviceable and durable gun? 2. What is the best action for a double gun? 3. What is the price of glass balls by the barrel of 300? 4. What are the different modes of waterproofing hunting suits which leaves the cloth most pliable? Ans. 1. Yes, quite so. 2. Either a top lever, Purdy roll, or a double grip. 3. Smooth balls, \$1.50 per 100; Bogardus and Paine balls, \$1 per 100. 4. Take 1/2 lb. sugar of lead and same weight powdered alum; dissolve in a bucket of rain water; pour off the fluid, and steep clothing, etc., in it.

H. E. D., Albany.—1. In what year was the first breech-loader manufactured, either rifle or shot-gun? 2. Can you tell me where I can find any good trout fishing near this city? Ans. 1. Research seems to prove that the farther we go back the older are breech-loaders. Marshall Saxo armed cavalry in the seventeenth century with breech-loaders. For practical purposes they may be said to have had their renaissance at the World's Fair in 1851. The pin-fire gun is as old as 1830. 2. We know of no fishing in your immediate neighborhood. Six hours' ride from Albany via the Utica and Black River will put you in good fishing country.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, THE PRESERVATION OF FORESTS AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 (old No. 103) FULTON STREET, NEW YORK.
(Post Office Box 2532.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editor's columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money, or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 9, 1878.

To Correspondents.

All communications, whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLACK, Editor.

T. C. BANKS, Business Manager. S. H. TURRILL, Chicago, Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 10.—American championship walking at Rink, New York. Base ball: Buffalo vs. Lowell; at Lowell; Cricket vs. Springfield, at Springfield; Allegheny vs. New Bedford, at New Bedford; Harvard vs. Princeton, at Princeton. Trotting at Prospect Park, Brooklyn.

Saturday, May 11.—American championship walking at Rink, New York. Base ball: Buffalo vs. Lowell; at Lowell; Cricket vs. Springfield, at Springfield; Allegheny vs. New Bedford, at New Bedford; Harvard vs. Princeton, at Princeton. Trotting at Prospect Park, Brooklyn. Base ball: at New Bedford as above; H. Tuell vs. Rochester, at Rochester; Tecumseh vs. Lowell, at Lowell; Buffalo vs. Manchester, at Manchester; Harvard vs. Princeton, at Princeton; Amherst vs. Holyoke, at Amherst; Trinity vs. Wesleyan, at Hartford; Harvard Fresh. vs. Yale Fresh., at New Haven, Chicago University vs. Northwestern University, at Evanston. Stamford Conn., Rifle Club Match Running Meeting, at Lexington, Ken.

Monday, May 13.—Base ball: Buffalo vs. Manchester, at Manchester; Cricket vs. Utica, at Utica; Tecumseh vs. Lowell, at Lowell; Star vs. Rochester, at Rochester. Trotting as above, and at Suffolk Park Philadelphia.

Tuesday, May 14.—Westminster Kennel Club Bench Show, New York. Base ball: Cricket vs. Star, at Syracuse; Allegheny vs. Springfield, at Springfield; Buffalo vs. Live Oak, at Lynn; Tecumseh vs. Manchester, at Manchester. Trotting as above.

Wednesday, May 15.—Westminster Kennel Club Bench Show, New York. Base ball: Cricket vs. Star, at Syracuse; Allegheny vs. Springfield, at Springfield; Buffalo vs. Live Oak, at Lynn; Tecumseh vs. Manchester, at Manchester. Trotting as above, and at Suffolk Park Philadelphia.

Thursday, May 16.—Westminster Kennel Club Bench Show, Portland Yacht Club Challenge Cup Regatta. Base ball: Cricket vs. Hornell, at Hornellville; Allegheny vs. Utica, at Utica; Tecumseh vs. Live Oak, at Lynn; Buffalo vs. New Bedford, at New Bedford. Trotting as above.

EXCURSION TO LABRADOR.—Mr. M. M. Chick, of Boston, who has gotten up several summer excursions to Labrador, but whose attempt last year failed, is out again with another prospectus for the coming season. Having once aided in organizing a Labrador expedition ourselves, we know that it can be made most enjoyable. For further particulars refer to advertisement in our columns, or address the projector, 41 Franklin street, Boston.

THE CROTALIDÆ.

The rattlesnakes and their nearest allies possess a peculiar interest in view of the fact that they are the most venomous of the North American ophidians, and are, at the same time, those which the sportsman or naturalist is very likely to encounter in his wanderings. There is really less danger, however, from the rattlesnake than from some other species—the copperhead, for example, or the moccasin—which are not provided with the characteristic appendage of the genus *Crotalus*. It is very unusual for a rattlesnake to strike without first sounding his note of warning, which so closely resembles the crepitating noise made by some grasshoppers as to be easily mistaken for it. The popular belief that the number of rattles increases annually by one, thus indicating with certainty the individual's age, is, like many other widely accepted statements, so far unsupported by any direct and absolute proof; and, until we have some definite evidence of its correctness, cannot be accepted as a fact. A very similar erroneous impression, namely, that the number of lines on the horns of the common deer is an index of the age of the animal, has recently been exploded. As suggested by Drs. Coues and Yarrow in their recent paper on the herpetology of Dakota and Montana, "the growth of the organ must depend largely, as in all parallel cases, upon the vigor of the individual, which is not the same at all periods of life, granting even a continuous state of perfect health."

The question, of what use is the rattle to its possessor, has often been asked, but no altogether satisfactory explanation of its function has as yet been given. Certain it is, that in all of its relations to its enemies, this appendage seems to be a positive disadvantage to the snake, informing them of its proximity when otherwise they might have passed it by, and giving them ample warning of any intended hostile demonstration. Two hypotheses have been advanced concerning the possible uses of this organ, either of which, although not fulfilling all the necessary conditions, seems likely enough to be correct. The first of these is that the rattle is a call by which the sexes may be brought together at the breeding season; the other suggestion is that, owing to its resemblance to the sound produced by one of the large Western grasshoppers, the call may be used as a means of attracting the birds or smaller animals, which feed upon these insects, within reach of the snake. The question, however, is still an open one, and calls for closer observation on the part of those favorably situated for investigating the habits of this most interesting group than has yet been given.

The mechanism of the poison apparatus and the method which the snake employs in striking, form a most interesting topic, and one which we should like to describe at length, did our space admit of it. The reader who is interested in the subject is referred to the paper from which we have quoted, where the process is described in detail.

The enemy which exists between the black snake (*Basiscodon*) and the rattlesnake is a very curious one, and is not easily to be explained. That such an enmity exists can hardly be doubted in view of the testimony which has been adduced. We are told that the black snake invariably conquers the rattlesnake, and, having killed him, makes a meal of his victim. The same state of things is said to be true of the king snake (*Ophibolus*) and the moccasin. We have in the past printed occasional notes on this subject, and should be glad to receive further communications on the matter, if any of our readers can furnish us with evidence on so interesting a point. The food of the rattlesnake consists chiefly of small birds and mammals, and of the former those species which nest upon the ground are, of course, most often captured; mice, shrews and squirrels in the East, and mice, rats and spermophiles in the West are the mammalian victims.

Among the enemies of the rattlesnake, besides the ophidians already mentioned, are deer, hogs, and the peccaries of the Southwest. Hogs, being protected by their great development of adipose tissue, the venom of the snake is prevented from entering into the circulation, and hence these animals face the rattler without danger, and make many a hearty meal of his flesh. Deer kill these snakes by springing upon them with their hoofs. Of course, man is their worst enemy, and the number killed by him far exceeds those destroyed by other agencies. "The seed of the woman," you know.

A WONDERFUL SOUP.

PROBABLY no greater difference in customs and habits of life exists among the various families of the Caucasian race than among certain of the Indian tribes who roam along our western frontier and throughout the mighty West. Between the Sioux, Blackfeet, Pawnee, Arapahoe and Apache warriors of the plains, and the Ute, Pi-Ute, Snake, Assiniboine and Ojibwa hunters of the mountains, there are in certain things as distinct lines of demarcation as those drawn between the Chinaman and the Frenchman, the Japanese and the American. Each of these various tribes has certain peculiar customs that are exclusively their own, governing them in peace and in war, at home and abroad. The plain Indians, differing as they do among themselves, differ yet more widely as a great class from their brethren of the mountains. The riders of the prairie are natural warriors, the climbers of the peaks are as naturally born hunters. Yet, strange as it may seem, the lowland tribes are in the main better providers than are those of the upland. The fighters' family generally runs less danger of starvation during the winter than do the squaws and papooses of the sportsman.

Why this is so is beyond my knowledge, but personal observation has often called my attention to the fact. Winter among the Rockies is not always so grim and terrible a king as upon the plains, yet seasons come when the swarming game, from the mountain lion to the gray rabbit, flees southward from before him; and then it is that the thoughtless Uto, less provident than the squirrels who hibernate about him, finds the gaunt wolf of starvation at the door of his tepee hut, glaring at the bare walls and the closely-gnawed bones that strew the floor. Then it is, at last, that the Indians must eat or die; and rather than die he will eat anything, such food even as his first cousin, the coyote, would refuse.

Throughout the Rocky Mountains grow the yellow and white pine; young trees when blistered by the suns of twenty summers, nor yet old when toughened and twisted by the storms of three score winters. The pine has two barks, or, more properly, a bark and a skin. The one is the overcoat worn all the year around, the other is the epidermis of the tree, through which, in the spring, courses its life blood up and down. Now, visit with me an encampment of Uto or Pi-Ute Indians in March, when for four or five months the unblushing, unsoftened snow has lain like a great white blanket over peak and level and canyon. There is no game; for days and weeks the forest has been as silent and deserted as the northern ocean, and as cold. There is in the whole camp neither meat nor fish nor vegetables, and yet the Indians are cooking and eating.

Examine the contents of the copper kettle, black and green without from the smoke of a hundred fires and the verdigris of years, stolen perchance from some far-away rancher, whose wife yet bemoans her loss. As it hangs over the coals, themselves growing dull and brown, a faint piney odor exhales from the thick grayish soup that slowly stews within. It is breakfast, dinner and supper, three meals in one for the group of gaunt figures who surround it, watching with hungry eyes the bubbles that come and go, and secretly regretting the loss of the very vapor which drifts from it as it simmers. It is bark soup, made from the skin of the young pine. Stripped from the trees, chopped into small pieces and cooked with snow water for hours, the glutinous or gelatinous portion of the wood is extracted, concentrated—not refined, however—and forms a thick gruel-like soup, with just enough nourishment in it to sustain life. And so, sometimes for weeks even, these miserable human beings, if such they may be called, exist until spring releases the streams and the disappearance of the snow brings again the game from the southward.

This strange food I have seen in the camps of the Utes and Pi-Utes, and nowhere else, and I believe its use to be confined to these and neighboring tribes of the Rocky Mountain Indians. Certainly the custom is as strange a one as that of the Chinaman who eats rats, the Frenchman who loves frogs, or the American who devours oysters. F. E. HAMILTON.

HOW TO PROTECT FISH.

WANTON WASTE OF SHAD IN NEW YORK BAY.

IT is from the State of Oregon that we are to receive our lesson how fish should be protected. It is as simple as possible. It makes the fisheries of the community provide the revenue for the fish culture operations of the community. In the fishery legislation now being enacted at Olympia, two bills are under consideration—one to regulate salmon fisheries in the waters of the Columbia, and the other to encourage the establishment of hatchling-houses on the said waters. The proposed bill—at least, that portion of it which particularly attracts our attention—is as follows:

"No person is to be allowed to take salmon upon the river, except by first having license therefor. For each boat a license of ten dollars is to be paid, and every fisherman taking salmon with a gill net must pay five dollars license for the season. For each seine used the license is to be ten dollars, and for each weir or trap, fifty dollars. Licenses cannot be transferred. Penalties are provided for fishing without license, or otherwise violating the law. All moneys received for licenses or as penalties are to constitute a fund to be applied to the assistance of hatchling establishments and to the propagation of salmon. The funds are to be paid over to such person or company as may successfully inaugurate the business; or if there shall be more than one establishment, said funds are to be distributed *pro rata* according to the number of hatched salmon."

Mr. Livingston Stone, whose knowledge of the salmon streams of the Pacific and the legislation necessary for their protection is second to none, writes us: "The adoption of this principle by Oregon and Washington Territory is, I believe, an entirely new thing in this country, and has never been contemplated in any of the Eastern States. You must see at once how important the principle is and how valuable it may possibly prove in giving permanency and certainty to the fishcultural labors of the States." Mr. Stone asks, "Why should not the shad fisheries of Eastern rivers pay for the hatching of the shad in these rivers?"

As far as we can see, we consider the plan proposed in Oregon an admirable one. Possibly, if fishermen were made to pay directly for fish culture in restocking the streams they fish in, they would be more interested in the results. Such cases of utter waste as we directly noticed in the fish market last week with shad, we take just here the opportunity of giving publicity to.

Thousands of small shad, the largest weighing something over a pound, the smallest less than three-quarters of a pound, were found exposed for sale. Ten of these fish weighed less than fourteen pounds. These shad were caught in fyke nets,

in the bay. How is it possible for shad to be found of size or in any quantity, when, at the very threshold of our river, there is such wanton destruction? As food, such fish are useless, and they are peddled about the streets, selling for a few cents. We must particularly call the attention of the Fish Commissioners of New York to this dreadful waste, and we hope the American Fishcultural Association will memorialize the Legislature in regard to it. This kind of thing has been going on for years, and putting to naught the earnest efforts of fish culture. It is time that such stupidity—to call it by no better name—should be checked, and a stringent law should be enforced, preventing any further repetition of this indiscriminate waste of fish.

THE "PACIFIC LIFE," the representative journal of the sportsmen of California and the west side of the continent, has been of late in charge of our esteemed friend R. L. Ogden, Esq., Commodore of the Yacht Fleet, and leading sportsman of the Pacific slope. Mr. Ogden has been long and favorably known by the sobriquet of "Podgers," over which he has written some of the raciest bits of sporting literature. When the *Pacific Life* sporting paper was started, Mr. Ogden told us personally that he "would give it ten months in which to live." Now that he has become its master spirit we will vouchsafe to it a hundred times ten, and wish the enterprise all success. There is ample material of natural resources, men and measures in that part of the country, requiring an especial exponent. The information to be constantly mined out of the rich and unworked lodes, leads, gulches, pockets, or whatever they may be called with which that country abounds, needs a sensible and experienced parveyor. There are men in other parts who should be supplied as well as the home consumers.

HOW TO PRODUCE THE GRAY PARTRIDGE.—The article in our last issue, relative to the gray partridge (*Perdix cinerea*) of Sweden having caused numerous letters to be addressed us as to the method of procuring the birds, we are glad to give some information as to how they can be obtained, John H. Stevens, Esq., U. S. Consul at Stockholm, having kindly given us the methods of transportation, cost of birds, etc. Mr. Stevens says that the gray partridge can be obtained in southern Sweden, and could be caught from August to the middle of November, but that about September would be the best month to transport them. The cost of delivery on steamer would be from five to six crowns a brace, male and female—from \$1.35 to \$1.60 per pair (the Swedish crown is about 26 to 27 cents). Transportation from Stockholm to London or Liverpool could be easily arranged. Any one desirous of importing these birds should address Col. Nere. A. Elwig, No. 13 Drottninggatan, Stockholm, Sweden. Our thanks are due to Mr. Stevens for his kind attention.

A FLATTERING LETTER.—A gentleman in Pittsburgh, Pa., sends us the following. Such acknowledgment of our usefulness is exceedingly grateful to us. All we can say is that it will be our desire to merit the many expressions of friendly feeling which we receive:

While your columns are not given up to the discussion of subjects of the lower order of sports—and it is not this word greatly abused by many—you furnish the true sportsman with such reading and reports as none but a true sportsman can appreciate. Though ranking specially as a sporting journal, your columns are treasures to the naturalist, the historian, the anatomist and students of other scientific and scholarly pursuits. Allow me to thank you specially—and I know I speak for many—for the manner in which your columns devoted to inquiries are conducted. One cannot peruse these questions and answers without finding much that is of interest. In keeping up such a column for inquirers, you not only exhibit enterprise, but bestow in many cases a great favor to the inquirer.

ANOTHER INDORSEMENT.—Here is another gratuitous indorsement from one of our advertisers:

EDITOR FOREST AND STREAM: Boston, April 2, 1878.
We were led last year by emphatic assurances of a number of our neighbors, dealers in sportsmen's goods, etc., to have high expectations as to the results of advertising in your paper, and it gives us pleasure to say that our hopes have been more than realized. From the time we began until now we have been constantly receiving letters of inquiry and many orders for our goods. They come from almost every part of our continent, and from all sorts of people—from army officers, civil engineers, surveyors, college professors, divines, sportsmen, miners, trappers, and campers out generally, and also from dealers; and for this reason we have kept our advertisement in your paper in season and out of season, so much longer than we at first intended. We have never been so well satisfied in all of our advertising experience as we have with you, and deem it no more than justice to say so.
Respectfully yours, GALE & CO.

Mr. Ingram Fletcher, Esq., of Indianapolis, has returned from his third expedition down the Kissimmee River and around Lake Okechobee in Florida. He found the mouth of Fish Eating Creek and saw Al Fresco's "old dead cypress," which he beheld afar off when the lettuce and drift forbade his near approach to that great inland sea—Okechobee.

A MONSTER PARTY.—On Saturday last the Prospect Park and Coney Island R. R. Co., of Brooklyn, sent out invitations to some 30,000 people. To accommodate so many persons, some 75 trains of 6 cars each were kept running all day. Mr. Culver, the President, and Mr. Washington, the Vice President of the P. P. & C. I. R. R. may be said to have reinvented Coney Island. It is indeed surprising that this wonderful place, right on the ocean's side, and in close proximity to some 2,000,000 of people should have waited so long to be practically developed. A railroad may lead, it is true, to nothing, but this largely syllabled little railroad has for terminus Tom Cable's famous restaurant. On the occasion we refer to, there was a magnificent band of music right before Cable's establishment. The day was quite a festive one, and will inaugurate a series of pleasant summer junketings.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

New Hampshire State Sportsmen's League, Manchester, April.
New York State Association for the Protection of Fish and Game, Buffalo, May—; Sec'y., John B. Sage, Buffalo.
Connecticut State Sportsmen's Association, Hartford, May 15.
Iowa State Sportsmen's Association, Des Moines, May 28.
Nebraska State Sportsmen's Association, Fremont, May 21st and 22d.
National Sportsmen's Association, Wilkesbarre, Pa., June 11.
Illinois State Sportsmen's Association, Quincy, June 11; Sec'y., Geo. E. Wheeler.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sec'y., Benj. F. Dowance.
Ohio State Sportsmen's Association, Cincinnati, June 15; Sec'y., Wiltbank, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2; Sec'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President Missouri State Sportsmen's Association.

BREEDING CALIFORNIA QUAIL AND PINNATED GROUSE.

BAY'S END, Md., April 16, 1878.

I received in the winter a number of California quail of both the mountain and valley species. I took good care of them during the remainder of the winter, and turned them loose in the spring. All disappeared but one pair, which stayed around the house and fed with the chickens. This pair was frightened off by some means, and went to a neighbor's, where they made a nest and were said to have laid several eggs. Whether any of the eggs were hatched or not I do not know, but none of the young ones were ever seen. I see no reason why they should not succeed in this region, especially the mountain birds, as they must be accustomed to quite as severe a climate as we have here. I also received five pinnated grouse from Ohio. Three of these were shot before breeding season. The remaining pair laid thirteen eggs, every one of which they hatched, and were all raised. They increased, till in a year or two, there were between seventy-five and one hundred birds. These stayed on the marshes most of the time, only coming off to feed in the fields. In spite of a law made to protect them, these have all fallen a prey to the pot-hunter. I do not think there is a bird left. I consider this a very hardy bird, even more so than our native quail.

DR. T. S. PORNELL.

SHAD AND NUTMEGS.—It has been left for the broad-minded and public-spirited Connecticut farmer, with his extended views of political economy and inter-State courtesy, to make an important discovery in scientific farming. This brilliant tiller of soils long since exhausted by the continual bearing of wooden nutmegs has found that his barren acres may be restored to their pristine fruitfulness by a generous deposit of fish, as manure. And the rustic experimenter has determined that of all the fish in the Connecticut rolling past his door, the tender young shad possesses virtues the most potent. So when the Massachusetts fish commissioners, with much labor and unstinted outlay of money in the last few years, turned their attention to the artificial propagation of these fish, the riparian possessor of landed estates in the sister State, smiled in his sleeve, mended his nets, and then took his shute and worked out this little problem: "So much money expended by Massachusetts fish commissioners; so many shad fry; so much shad manure to an acre; so many bushels of nutmegs." Then he chuckled again and wrote to his Boston commission agent to get up a corner in nutmegs. But how foolish it is for Massachusetts to complain that having expended her dollars she should have a shad or two! Shad ought to.

LONG LAKE CLUB.—We took occasion upon the organization of this club to express our gratification at the action of the Adirondack guides, and we now take pleasure in noting the good results of their work. From a letter to a gentleman in this city, under date of April 20, we learn that the rules of the club have been most rigidly observed, both in regard to shooting and fishing, and as a consequence the prospects for both of these sports is all that could be desired by sportsmen. No deer are to be killed until after July 10th.

KENNEBEC ASSOCIATION.—The officers of the Kennebec (Maine) Association for the Protection of Fish and Game, are: Pres., Dr. G. W. Martin, of Augusta; Vice-Pres., Geo. P. Haskell, of Augusta, and S. B. Glazier, of Hallowell; Sec. and Treas., R. B. Capen, of Augusta.

VIRGINIA ASSOCIATION.—At the annual meeting of the Virginia Fish and Game Protective Association, at Richmond, May 3, the following officers were elected for the ensuing year: President, Charles T. Palmer; Vice-President, Dr. O. A. Crenshaw; Secretary, Edward H. Fisher; Treasurer, John Ott; Executive Committee, Moses Ellyson, A. Q. Holliday, W. Russell Robinson, A. C. Babcock, Philip Huxall.

OHIO FISH LAW.—The new fish law of Ohio, which went into effect the first inst., reads as follows:

"SECTION 35. Whoever, in any of the waters of any creek, river, canal, lake, pond, or reservoir, or in any body of water, whether artificial or natural, lying within the State of Ohio, except the waters of Lake Erie, injures, or kills, or catches, in any other way than by hook and line, any fish, except minnows, or owns or possesses any fish pond, fish net, fish trap, or fish seine, except seines to catch minnows, in or connected with any waters in the State of Ohio, except the waters of Lake Erie, or in any way maliciously disturbs any fish in any private fish pond, shall be fined for each offence not more than fifty dollars, nor less than ten dollars, and be imprisoned in the jail of the county not less than ten days nor more than sixty days. And provided further, that it shall be unlawful to catch, or destroy fish in any manner during the spawning season, excepting in reservoirs containing one thousand acres or more, from the 1st day of May to the 15th day of June, in each year."

The Rifle.

DR. CARVER.

IN VERMONT.—The National Rifle Club at South Vernon, Vermont, will hold their spring meeting May 29. This club uses old fashioned rules and old fashioned rifles. As questions are sometimes asked us as to handclapping, we copy from the programme of the club. What a rifle a 40-pounder must be! There must be some of the old English three-locks in Vermont to this day. The standard weight of rifle barrels being 15 lbs. all over must give the following odds:

From 15 to 20 lbs. 1-4 inch to the lb for every 10 shots,
" 20 to 30 " 3-16 " " " " "
" 30 to 40 " 1-16 " " " " "

MASSACHUSETTS.—Boston, Saturday, May 4.—First trial of the May amateur series, and sixth renewed competition of the "dirty match." Wind high, rendering fine shooting impossible. Contestants were not numerous, owing to the bad weather. The following are the scores at 200 yards:

J. Wemyss, Jr.	4 5 5 4 4 1 4 4 4 3-11
W. E. Tierney	4 4 4 3 1 4 5 4 4-40
J. H. Parker	3 5 4 3 3 1 4 4 5 4-40
W. Arthur	3 5 4 4 1 5 5 3 4 3-30
W. F. Smith	4 4 4 3 4 3 4 4 4 4-39
H. B. Southern	4 4 1 4 4 3 3 4 5 4-39
W. J. Jones	4 4 5 4 4 3 3 3 3 3-35
W. C. Childs	2 3 4 4 3 4 3 3 4 4-34

But few marksmen entered for the non-cleaning match. The result of this match at 200 and 300 yards was as follows:

	200 yards.	300 yards.
W. Poland	5 4 4 4 4 4-18	3 5 4 4 3 5-25-63
J. Wemyss, Jr.	4 4 4 4 4 4-18	4 5 4 4 3 6-25-63

Gardner.—The rifle club have elected the following officers: President, Henry C. Knowlton; Vice-president, C. D. Bent; Clerk and Treasurer, G. F. Ellsworth; Executive Committee, A. Coleman and S. B. Hildreth.

AT WALTON HILL.—Want of space prevents our giving more than Captain Jackson's remarkable score, with two others at the range near Boston. The total 218, fifteen shots at 800, 900 and 1,000 yards, is a marvelous one. It is true 218 have been twice beaten, Dudley Selph, at New Orleans, scoring 219, and the same number having been made by Mr. Bruce. Making 149 out of a possible 150, at 800 and 900 yards, is marvelous. Mr. Tyler's 200, and Mr. Poland's 190, are excellent.

	W. H. Jackson.
800	5 5 5 5 5 5 5 5 5 5-75
900	5 5 5 5 5 5 5 5 5 5-75
1,000	3 4 5 5 4 5 5 5 5 5-69-219

	H. Tyler.
800	4 3 4 5 4 5 5 5 5 5-69
900	5 4 5 5 5 5 5 5 5 5-69
1,000	5 5 5 5 5 5 5 5 5 5-71-209

	Wm. Poland.
800	5 5 5 5 5 5 5 5 5 5-74
900	3 3 2 5 4 5 5 5 3 3 5-52
1,000	4 5 5 5 5 5 5 5 4 5 5-69-190

At the second competition for champion gold medal, presented by Zettler Bros., at Guttenberg, Sunday, May 5, 1878, although the weather was very unfavorable for good scores, the following scores were made:

M. Darler	191	J. Datto	173
G. A. Schumann	188	F. Faber	172
M. L. Hux	183	B. Mier	165
B. Zettler	205	P. Feunung	160

Boston, April 30.—Best scores at rifle gallery, 655 Washington street, for three rises, eight shots per man, distance 150 feet:

F. Holts	5 4 5 4 5 5 5-38
J. E. Harris	4 4 5 1 5 5 5-37
H. T. Beckwell	5 4 5 4 5 5 5-37
J. Fitzpatrick	5 5 5 5 4 4 4-37
J. Cowen	3 3 4 5 5 5 5-36
D. F. Wing	5 4 5 4 5 4 4-35

STAMFORD AMATEUR RIFLE CLUB.—Yesterday, May 8, at 10 o'clock, the all-comers' short-range match took place. On the 11th will occur the fourth competition for the Sharps rifle; on the 15th for the Tiffany cup; on the 18th for the Harris revolver; on the 23d for the bull's-eye badge, and on Wednesday the first competition for the "Tackle Cup."

—Harvard and Yale are to have a rifle match.

JAMAICA ROD AND RIFLE ASSOCIATION.—The first challenge badge of the season at 200 yards took place on Saturday at the range. Mr. T. Rogers, with a score of 43, won the first prize. The second was won by Mr. J. M. Crane with 38, possible 50.

CREEDMOOR.—Saturday, May 8.—In spite of the strong wind and squally weather, the shooting was fairly good. The leading match was for the Sharps' prize, \$250 gold, which commenced shortly before 11 o'clock. Match open to all comers, with any rifle. Distances, 800, 900 and 1,000 yards; 15 shots at each range. Mr. Weber's score, 215 out

of a possible 235, was superb. There were sixteen entries, but eight withdrew.

	800 yds.	900 yds.	1,000 yds.	Total.
L Weber.....	73	70	68	211
I L Allen.....	69	69	53	191
Frank Hyde.....	69	60	65	194
B L Doughty.....	63	63	68	194
H F Clark.....	63	60	60	183
H Fisher.....	63	60	60	183
J Johnston.....	63	60	60	183
G L Morse.....	63	56	61	180

The *Turf, Field and Farm* challenge badge was next in order. Ten shots at 200 yards; badge to be won three times. The following are the scores:

R H Helton.....	42	J W Todd.....	31
D F Davis.....	40	J F Dackworth.....	34
D C Pinney.....	40	Thomas Lloyd.....	34
S W Sibley.....	39	Drs T G Badley.....	34
S J Gorman.....	37	J H Grohman.....	34
C R Blydenburgh.....	37	A L Pauling.....	33
A Anderson.....	37	H W Gouney.....	32
J S Conlin.....	36	L G Bruce.....	32
A G Weber.....	36	J E Irwin.....	32
F Alder.....	36	E W Candee.....	31
Capt C F Robbins.....	36	Capt C D Truslow.....	31
C H Eagle.....	36	J Binkowski.....	28
Homer Fisher.....	35	Lewis Cass.....	26
W H Dunlap.....	35	A W Dimock.....	26
Wallace Gunn.....	35	F L Eames.....	26
Capt W C Reddy.....	34	R W Day.....	25
T Fitz.....	34	S C Kingmaud.....	17

The Seventh Regiment Rifle Club shot a competition for the regimental diamond badge. Private O. H. Eagle was the winner with a score of 61 points out of a possible 70, at 200 and 500 yards.

The Irish-American Rifle Club held the third competition for the Maltby rifle. Mr. N. D. Ward won for the third time, which makes it his property.

For the Frazier Prize—Military teams intending to compete for the Frazier prize for rapid shooting, which will be shot for on the first day of the spring meeting, will be supplied with the new cartridge box for rapid loading on application to the superintendent of the Ordnance Department, N. G. S. N. Y.

ZETTLER RIFLE GALLERY.—Scores made at Zettler Gallery, 207 Bowery, on April 30, at Creedmoor targets reduced to gallery distance; possible 50:

P Fenning.....	49	M D Eagle.....	44
D F Farbarus.....	49	H Oehl.....	44
C G Zettler.....	43	R Zimmerman.....	43
B Zettler.....	46	W Wiegand.....	43
M L Riggs.....	40	W E Moore.....	40
D Miller.....	45	J Cplane.....	40
C Judson.....	46	J Levy.....	40
M Dorrier.....	46	F Hunziker.....	40
G Schuman.....	45	C Vellars.....	40
J Dudi.....	45		

AMATEUR RIFLE CLUB.—A lease of the property in rear of the range at Creedmoor having been obtained by the club, and the necessary openings in the range fence having been made, members may now practice at the distances of 1,100 and 1,200 yards. An arrangement is now being made with the National Rifle Association, whereby the club will secure the use of two targets for its members, on each Wednesday and Saturday from and including May 15 to October 30. These targets will be for the exclusive use of members of the club, free of charge. The programme of matches will be as follows: Short-range match and mid-range matches during May, and the long-range prize in June. Fourth match for the Leech Cup, May 23.

SARATOGA AND MILWAUKEE.—In our last issue want of space prevented our giving in detail the score of the two clubs. At 200 yards ten scoring shots were allowed, at 500 yards fifteen. Individual possibilities then were 75, and for yards fifteen, 300. The aggregate possibility of each club in the match being 500, it will be seen that the Saratoga approached it by 32 points, and the Milwaukee Club by 48. At each range the score was:

	200 yds.	500 yds.	Total.
Saratoga Rifle Club.....	176	292	468
Milwaukee Rifle Club.....	159	293	452

The individual average of each club is shown thus:

	200	500	Total
Saratoga Rifle Club.....	44	73	117
Milwaukee Rifle Club.....	44	73	117

The following was the score of the Saratogians at 200 yards:

D Eddy.....	5	4	5	4	5	4	4-45
G J Wiegand.....	5	4	5	4	5	4	4-44
F D Wheeler, Jr.....	5	4	5	4	5	4	4-44
G W Aldsworth.....	5	4	5	4	5	4	4-43-176

At 500 yards:

J W Shafter, R.....	5	5	5	5	5	5	5-74
G W Aldsworth, R.....	5	5	5	5	5	5	5-74
J Webb, R.....	5	5	5	5	5	5	5-72
Jerome Pitney, R.....	5	5	5	5	5	5	5-72-292

—It is proper to state that in the telegraphic match between the Saratoga and Milwaukee rifle clubs there was some misunderstanding as to the selection of the men constituting the Saratoga team, which might have arisen from the Saratoga gentlemen not understanding the terms of the Milwaukee challenge. The same Saratoga men who shot at the 200-yard range did not shoot at 500 yards. We are pleased to have had a visit paid us by J. Johnson, Esq., of Milwaukee, one of the most active officers of the Milwaukee Rifle Club.

RIFLE SHOOTING IN NEW JERSEY.—The Rahway Rifle Club held their match on Saturday for a gold badge. Distance, 300 yards; ten shots; possible 50. We give the score:

F H Helton.....	41	C E Blydenburgh.....	39
L D Banks.....	43	J S Conlin.....	39
F Alder.....	42	H W Gouney.....	39
Homer Fisher.....	42	E M Squire.....	39
C Watson.....	42	B Vall.....	39
D F Davis.....	41	S T Dudley.....	38
F Sheldon.....	40	L Fitz.....	38
P Lombard.....	40	M Sharp.....	37
W H Dunlap.....	40	J W Todd.....	37
H G Helweg.....	40	B Squire.....	33
S W Sibley.....	40		

—Major Fulton, as was reported, has not resigned from the committee of the New Jersey Rifle Association range team, but is still chairman of that committee. The range will be at Elizabethport. The name of the range has not yet been decided upon. All the gentlemen on the various committees are warm in their praises of Gen. McClellan, the Governor, for the great interest he has taken in rifle shooting.

OFFERS FOR A TELEGRAPHIC MATCH.—Editor *Forest and Stream*: We have our long range in order now, and have

got fairly under way in our practice. As we are isolated from other long-range clubs, we desire to have matches during the summer with other clubs by telegraph. That seems to be the only way we can have competitions at present. If any amateur club will open correspondence with us we will be glad to hear from them, and make arrangements for some contests of a friendly character. This, of course, is not intended as a challenge to clubs, but as an expression of a desire to afford amusement for ourselves and others. We have eight members who are supplied with Maynard Creedmoor rifles, and as many more not yet armed. We can get up a team of four at any time for a long-range contest.

Respectfully yours, etc.,
Wheeling, W. Va., April 29.

CHAS. E. DWIGHT,
Pres. Maynard Rifle Club.

GEORGIA—Savannah.—On the 1st of May a team match was contested for between the George Hussar team and the Guards, which was won by the Hussars. The shooting was done with the Springfield rifle, .45 and 50 cal., six pounds pull; distance, 200 yards:

J W McAlpin, captain of team.....	43	Lieut W E Johnston, captain.....	41
Lieut G B Pritchard.....	43	J G Heyward.....	40
L M Ryals.....	39	J Ketter.....	40
W F Preston.....	40	H G Black.....	39
James W Schley.....	40	J M Bryan.....	34
S Mca White.....	40	Geo Appleton.....	37
C M Cunningham.....	40	Lieut W P Hunter.....	36
O L Tilton.....	35	M Maclean.....	34
B B Minor.....	39	E T Harden.....	34
B C Wright.....	25	J H Hunter.....	34
Julian Schley.....	38	A McNulty.....	34
George C Galliard.....	37	J O Postel.....	34
John S Coburn.....	38	Maj Jos Phillips.....	35
John D Martin.....	34	A Calder.....	32
D M McAlpin.....	40	Geo Allen.....	38

Total.....565
Average per man, 27 2-5.

Total.....548
Average per man, 26 8-15.

DENNISON'S TARGETS.—The attention of rifle clubs and associations is invited to the advertisement of Messrs. Dennison & Co., No. 198 Broadway, New York City. These gentlemen offer paper targets, Creedmoor pattern, sizes from 25 to 1,000 yards, also pasters and score cards, at moderate prices. These targets can be readily set up in frames, and will be found of great advantage in team matches, each man's target being separate and distinct. The N. R. A. intend to use a number of the Dennison 200 and 500 yards targets during the coming spring meeting.—*Spirit of the Times*.

THE WINCHESTER REPEATING ARMS COMPANY.—The manufacturers of this well-known rifle are now fitting up an extensive establishment at No. 245 Broadway. A full line of their arms will be kept constantly on hand. In a subsequent issue we will be able to give a full description of the new store of the Winchester Repeating Arms Co., with a history of the company.

EXPRESS BULLETS.

THE INFLUENCE OF RECOIL ON FLIGHT OF BALLS, ETC.

SAN DIEGO, Cal., March 19, 1878.

EDITOR *FOREST AND STREAM*:

I notice in *F. AND S.*, of Feb. 28, an interesting letter from A. G. Mann on the penetration of Express, or rather expensive, bullets, in which the results of his experiments differ very decidedly from those of mine. The expensive ball, from my rifle, has only about one-half the penetration in wood that the solid ball of same size has, and has still less in flesh. The hole cut in a block of dry cottonwood was the shape of a beet—44-100 at the entrance and about three inches across at the bottom of the hole—the whole penetration being only about five inches. On deer the effect was precisely that described by "Viator" in his letter in issue of Feb. 7, viz., "generally lodging against the ribs on the opposite side."

This difference results, mainly, I think, from the difference in the balls, and it would be well to try experiments before adopting any particular one. The best one for hunting is undoubtedly that described by Mr. Mann—"one which will expend on striking a soft substance, and retain its form when shot into a hard substance." If Mr. M. has tried that ball often enough on both hard and soft bodies to be sure of this conclusion of his, I wish he would give us the dimensions and hardness of the ball, and the depth and width of the hole. The ball I have used is a .44 cylindrical, one inch long, with hole of the diameter and depth of a .22 long cartridge. After shattering the use of explosive cartridges, I cut off the plug so as to make the hole the length of a .22 short. This increased the penetration of the ball without diminishing the diameter of the hole cut by it. This ball was driven by only seventy grains of powder, but I do not think that would effect the expansion in a solid body. I think the best ball for hunting is not one which dies into "splash" upon striking, as mine did before I shortened and narrowed the bottom of the hole, but one which will open out like an umbrella and still hang together. The "splash" of a light ball is too fine to penetrate far, and as the ball will under high velocity cut a four-inch hole even if it stays together, the "splash" principle is unnecessary. The diameter of the hole cut by a ball depends, first, upon the calibre, and, second, upon its velocity on striking. A .55 round ball will cut about twice as large a hole on flesh as a .44 round at same velocity; and a .44 round, with seventy grains of powder, cuts about three times the sized hole on flesh that it will with only ten or fifteen grains. I think, therefore, the best ball is that which, with the very highest velocity, will expand to twice or thrice its diameter without flying to pieces. And this would depend upon the shape and size of the hole, and the toughness of the ball.

The same considerations doubtless influence the accuracy of the flight of the ball with the hole open. Mr. Rigby, in *F. AND S.* of Feb. 21, says it makes no difference whether the hole be open or closed. I think he is correct as to some balls, and not as to others. Where the hole is small and short it would probably make no difference. Since shortening the hole in my bullet, as above stated, I have not tried it with the hole open; but before that it was very wild at 200 yards and over, though true enough at 20 or 25. It is certainly better to have them of such shape that the open hole will make no difference, and I think the ball described above as the best for hunting will travel true for a long distance without closing the hole.

In *F. AND S.*, of Feb. 28, Mr. Rigby proffers to Mr. Ferris and

others the following poser: "Why does a rifle bullet not leave the barrel in the same direction the axis of the bore had when the trigger was pulled?" I think the great majority will fear at Mr. Rigby as a blunderer in making this assertion. He is, however, perfectly correct as to some guns and rifles, and has raised a very important point, which I have never seen discussed or even mentioned before. This recoil question is of far more practical importance than one would suppose, and conclusions should not be hastily jumped at, nor the subject shoved aside as a mere abstraction of no real value. A long time ago I noticed that some rifles will not throw a heavy cylindrical ball on the same line with a round ball, or on the same line with the same ball with light charge of powder. I refer entirely to distances at which gravitation can make no difference. I have a .44 Maynard of 9½ lbs. weight, 32-inch barrel, and charge of seventy grains, the long ball of which weighs one ounce. This rifle, like every other Maynard I ever saw, is, when properly loaded (hardened balls should generally be used, even if shot without patch), extremely accurate. At 200 yards I have shot five successive balls with it into a four-inch circle, and at twenty-five yards five into a ½-inch circle, all with a coarse ivory-front bunting sight, and a large hole in the back peep sight. This rifle will, however, throw round balls with 70 grains, and the long ounce ball, with only 30 grains, four inches higher at 25 yards than it will the long ball with 70 grains. I have tried this over and over, with dead, double rest, and taken every precaution to eliminate all chance or accident from the problem, so that there is no question as to the fact with this rifle. Each set of balls is, however, perfectly true on its own line. Make a diagram with a one-inch bull's-eye with six successive balls in it, and another group of six balls all cutting into each other just four inches above it, and you will have the target as it has appeared after several trials. A Sharps rifle, bought three years ago from factory, 28 inches in length, round barrel, about 8½ pounds weight, 77 grains of powder, does precisely the same thing—throws the heavy ball down four inches at 25 yards below the round or heavy ball with light charge. On sighting these rifles at a mark, and then looking through the barrel, the axis of the bore is found pointing at the exact spot where the upper set of balls hit. A Frank Wesson rifle, of .40 cal., about 8 lbs. weight, 60 grains of powder, 30-inch barrel, and a conical ball of about 300 grains, shoots both sets of balls to the same spot, and the axis of the bore corresponds to the level sights. A No. 40 old style Maynard I once had also shot both kinds of balls to the same spot. These are all the rifles I have tried upon this point. The conditions of this throwing down are: a very heavy ball and heavy charge of powder.

But now comes a singular fact. A shot-gun overloaded, or fired with both barrels at once with heavy loads, will generally kick up over the mark. So will, generally, a short, light carbine or pistol if overloaded. Most all the modern cartridge pistols will throw far above the axis of the bore and the line of the sight with which they are furnished. This I have often noticed and been annoyed with; but to put the point in more definite shape before writing about it, I tried this morning a large "Russian Model Navy" revolver, .45 cal., with round balls and half charges, and the long balls full charges of the regular cartridges. I fired with dead rest at only seven paces. Both sets of balls went perfectly true, but on entirely different lines; but the heavy balls with full charge cut into one hole 2½ inches above the round balls, which were all in the bull's-eye aimed at, exactly the reverse of the rifle balls.

Another singular fact is that neither of these rifles can be made to kick up, or any way but down, and always to the very same spot (provided care is taken to get always the exact charge of powder). I have rested the end of the muzzle in one end of a balance with a purchase that would be sure to lift it, and hung a weight on the other scale just touching the surface of a pan of water, which an attendant watched, and which one-quarter of an inch downward pressure on the end of the muzzle would raise out of the water. The ball was thrown down to the exact spot as before, but the weight was not raised from the water, but the contrary. As this might have resulted from the tilting up of the breech, I then hung the breech part in the scale, and weighted the muzzle to see if I could make it throw down any further, but the ball went on precisely the same line as before.

I varied these experiments in several ways, and tried by tying down both breech and muzzle, hanging on weights, etc., to make the heavy ball and charge take the line of the axis of the bore, but could not succeed. Every ball went almost into the same hole, but just four inches below the line of the others. In every case the muzzle was plainly seen to jump up on firing, and by no arrangement I could devise could I or others detect it jumping down. It certainly must do so at first, or else the barrel must bend, which seems impossible. I did not try a vise, as I have none proper for the purpose where I live. I never knew a rifle to kick to either side, though a pistol sometimes will if overloaded and loosely held off-hand. It will then often spring toward the place where the grip is the lightest. A Frank Wesson's .32 light pistol I have, throws to the left if loosely held in the right hand, and to the right if loosely held in the left hand. This I have often noticed.

I have no opportunities for careful experiments, and wish some one who has would investigate this subject carefully. My view of recoil is this: The backward pressure of gas begins at the same instant with the forward pressure, but cannot at once overcome the inertia of the gun. The recoil, therefore, commences at the time the ball starts, but is not complete until after it has escaped the muzzle. If, therefore, the weight of the gun is great enough in proportion to the charge, it will not yield enough before the ball escapes to throw it (at least, not apparently,) in a line different from the axis of the bore. If the weight of gun is not great enough it will yield sooner; but if the disproportion between the weight and charge is not too great, the amount of deflection will be so regular as to amount practically to no inconvenience, except that of requiring different adjustment of sights; while if the disproportion be excessive the jump of the gun may (I do not say will, necessarily,) be too irregular for correct shooting, and I think I have seen rifles and pistols that were inaccurate mainly for that reason.

T. S. VAN DYKE.

P. S. The most convenient way to put light charges in a long shell is to drop in a stick of one-half the diameter, and pour the

powder around it. Will some one having a Creedmoor rifle try this and give us the results?

MR. RUBY TO THE PRESIDENT OF THE SHARPS RIFLE CO.—To the President of Sharps Rifle Manufacturing Company: Dear Sir—Press of business prevented my replying sooner to yours of March 5th. I do not think any useful purpose can be served by discussing further the points raised in your letter.

It has been published at length in the American Press, whereas mine, to which it was a reply, has been passed over. Thus the public are liable to be misled by having one side only of such arguments. I am not "getting away from my original challenge," but you seek to fasten on it a meaning which it does not fairly bear. I do not need to be instructed in the capabilities of breech-loading rifles when rapidity and accuracy are combined. My experience of breech-loading arms is perhaps of longer date than that of any one now connected with the Sharps Company, and I am perfectly aware that by slightly modifying the method of loading you could render any time match between a muzzle-loader and a breech-loader absurd.

My "challenge," as you call it, was to test the muzzle-loading match rifle used at Wimbledon against the American breech-loading match rifle as used at the Centennial.

This is proved by the context as my remark came at the end of a letter giving a description of those rifles. This would be fairly tried by following the conditions laid down in my last letter, to which I must adhere.

If they do not suit you it is open to you to give at Creedmoor a public exhibition of the capabilities of your rifle in shooting against time at 1,000 yards, and so attain the object you have in view.

If you prefer to accept the conditions in my last I shall be glad to hear from you in course of post.

I am faithfully yours,
Dublin, April 20, 1878.

JOHN RUBY.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis*.
Salmon, *Salmo salar*.
Grayling, *Thymallus tricolor*.
Salmon Trout, *Salmo confinis*.
Shad, *Alosa*.
Land-locked Salmon, *Salmo gairdneri*.

FLIES IN SEASON IN MAY.

BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline.

COW DUNG, No. 10 AND 11.—Body and feet, brownish yellow; wings, yellow-gray.

GREAT DUN, No. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setae, dark brown annulated with gray.

RED SPINNER, No. 10 AND 9.—Body, bright scarlet, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setae, pale brick color.

YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setae, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setae, scarlet green and wood duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and Gray Palmer are made respectively of the different colored hackles that distinguish them.

FISH IN MARKET.—RETAIL PRICES.—Striped bass, 20 cents, large do., 12½; blue fish, 12½; frozen salmon, 30; green do., 60; Connecticut River, 75; mackerel, large, 15; do. small, 10; native shad, 30; weakfish, 15; white perch, 15; Spanish mackerel, 75; green turtle, 15; halibut, 15; haddock, 6; king fish, 25; codfish, heads off, 8; do., heads on, 6; black-fish, large, 12; small, do., 8; flounders, large, 10; do., small, 8; porgies, 16; sea bass, 20; eels, large, dressed, 15; lobsters, live, 8; do., boiled, 16; sheepheads, 25; turbot, 20; scallops, \$1.50 per gallon; soft clams, per 100, 30; do., large, 60; brook trout, wild, 50; Long Island brook trout, \$1; hard crabs, per 100, \$3; soft crabs, per dozen, \$1.25; red snapper, 15; pompano, \$1.

During the last ten days no less than 46 very fine salmon have been caught in the Connecticut River and sold in Fulton market. Connecticut River has also furnished shad weighing seven pounds each. At Mr. Blackford's, trout from Moosehead Lake were exhibited weighing four pounds. This is a season of wonders. Blue fish, coming from Baltimore, have been in market weighing 7 pounds, fat and in splendid condition. At this time of the year in former seasons, blue fish seldom are heavier than 1 to 1½ lbs. This advance of the season is notable in pompano and sheephead. Fish are cheap and plenty.

PARASITES IN FISH.—Relative to the very stupid alarm about the trichine in shad, a correspondent writes to us: "Many of our fishes are infested with pin-worms. The late Prof. G. F. Hart told me that, while studying under Prof. Agassiz, he discovered that the flesh of the codfish was invariably 'alive' with parasites, to a greater degree, in fact, than that of any other fish."

RICHARDSON LAKES—Oxford Co., Maine, May 3.—The ice went out of the lakes this year April 26. Fishing may be expected to commence about May 10th. Last year, which was an early one, the ice went out on May 9, and the fishing was quite good May 26th. In 1876 the ice did not go out until May 26th, and in 1875 until May 28th.

WHITNEY.

MOVEMENTS OF THE FISHING FLEET.—There have been no home arrivals from the Southern mackerel fleet as yet. The Georges fleet continue to bring in very small fares for the season, and the average trip will do little more than pay expenses, while many fail to do this, and but few show any respectable margin of profits. The number of fishing arrivals reported at this port the past week has been 14 from the Banks, with 80,000 lbs. codfish and 230,000 lbs. halibut, and 47 from Georges, with 550,000 lbs. codfish.—Cape Ann Advertiser, May 3.

CONNECTICUT—Windsor, April 16.—The fishing in the lake this year is remarkably fine. Some large strings are caught almost daily.

SALMON IN THE CONNECTICUT.—Centre Brook, Conn., May 6.—Hurrah! for Connecticut salmon are ascending the Connecticut River. I have a piece of a twelve pound salmon, one of the fifteen caught near the mouth of the river within the last few days. They are probably just beginning to ascend the river. Average weight, ten to fifteen pounds. Trout fair this season. I took a basket of trout April 15, ten largest weighing over ten pounds, largest one weighed one pound nine and a half ounces.

G. H. C.

RHODE ISLAND.—Newport, May 7.—Scup have begun to arrive in goodly numbers; some blackfish and tautog are being taken off Brenton's reef.

LONG ISLAND.—Menhaden fishing is active at the east end of Long Island, and some of the largest catches on record are reported as having been made last week.

NEW JERSEY—Barnegat Inlet, Kinsey's Ashland House, May 1.—Bluefish made their first appearance to-day; over 2,000 lbs. taken. They run from six to twelve pounds. The inlet is swarming with them and moss-bunkers. Previous to this year, the earliest ever known was the year 1873, when the first taken was May 18. Noah Taylor and John O. Bailey caught on that day 1,460 lbs.

B.

Greenwood Lake, April 27.—From present indications the bass fishing will be very fine. Several salmon trout, six to eight inches long, are reported to have been seen. Pickerel are taken in large numbers at the lower or Jersey end of the lake.

GREENWOOD.

PENNSYLVANIA—Erie, May 3.—Fishing very fine for the last week. A good number of black bass and muskallonge have been caught in our bay. "Jake Graham," who is well-known among sportsmen, has leased "Massassaugie Point," a well-known shooting and fishing ground, situated five miles from our city at the head of the bay.

SNIFE.

Pottsville, May 6.—Trouting good in the Tobehana.

DOM PEDRO.

MARYLAND—Baltimore, May 6.—Numerous fishing parties are embarking daily on trips down the Chesapeake. Several visited Cobb's Island during the past week, and report the sport very good and active. Gudgeon are still being caught by the thousands on the Patapsco and other surrounding streams. Nearly eight thousand people visited the Relay, B. & O. R. R. in one week gudgeon fishing. A party of six of us went down last Saturday and caught thirty dozen in four hours, but the season for them will soon be over now. The first embryo of the season was caught at the Ferry Bar last Friday by a little boy. Old fishermen say the coming season is going to be a very good one, and already there are lots of elegant perch coming to the markets, and last week I saw the finest fresh shad in our markets I have ever seen.

TRAYMORE.

VIRGINIA.—Bass weighing six pounds have been caught in the river near Olifteen Forge. The propagation of these fish has been completely successful around Forecastle. Bass yield fine returns in the Shenandoah at Warren. Trout fishing is good about Wytheville.

TENNESSEE—Nashville, May 3.—A catfish weighing 83 lbs. net was caught last week in Big Harpeth by Messrs. Parr and Crumpler. It measured 4 feet 3 inches in length, by 9 inches around the body. We have had too much rain for the last two weeks for good takes of fish, besides the fish are now shoaling and will not bite. For the last few nights some parties have been out seining Mill creek, which with the fish shoaling has virtually put an end to any legitimate sport in that stream for this year.

J. D. H.

KENTUCKY—Lexington.—The observance of the laws is followed here by a noticeable increase in the supply of game fish in the waters hereabouts. Several large fall fish have been caught, and the prospects are that in a year or two there will be sport and profit for all.

THE WILDERNESS TROUT REGIONS OF VERMONT.—The New York and Connecticut River Railroad enables the angler to reach the White Mountain region in one day. Within easy access of the famous hotel resorts are wilderness districts, almost unknown, except to the natives, which abound in small mountain trout. From these sources the guests of the hotels are kept supplied. As many as 100 lbs. are known to have been taken from a single stream in the course of a season. Exceptional fish are large, but those weighing one and a half pounds are seldom caught. The average run of a basket would possibly not exceed a quarter of a pound. But the streams are ice-cold, having their sources in the snow deposits of the higher mountain valleys, and the trout are very beautiful to look upon and very gamey. The Ammonoosuc River and its tributaries are well tenanted with trout; and if the angler has only pluck enough to stroll beyond the sound of the hotel gong or the farm-house horn, he will be able to refute the oft-told story that the White Mountain streams are drained and depleted. The stage roads throughout that region make a large area of country accessible, and a night or two in camp will not only satisfy, invigorate and embrown the tender young men who go abroad, but make heroes of them in the eyes of the damsels. The girls will never fail to inquire, with eyes enlarged, if they saw a bear. The scenery of the White Mountains is justly celebrated, while the comforts to be obtained on every hand are greater than in other regions less frequented and circumscribed.

THE HEAVIEST AMERICAN SALMON.—Some weeks since we answered a correspondent who inquired the weight of the

heaviest salmon. Our information was of rather an indefinite character. We are happily now able to give an authentic figure, namely, 83 pounds, the weight being attested to in the following letter dated:

WALLA WALLA, April 22, 1878.

EDITOR FOREST AND STREAM:

In answer to a request made by you in one of your numbers, to regard to the weight of salmon, I would say that there was one caught by a fisherman in the employ of Booth & Co., near the mouth of the Columbia River, which weighed 83 pounds.

Yours truly,

JOHN GOUDY.

CHUB, et al.—Albany, April 24, 1878.—Mr. Editor: I have caught them in the Mohawk as heavy as two pounds; noticed that most of the larger ones had short horns on the nose, something similar to the horned dace. These were always darker than the others. In this river I have caught them on all varieties of bait—on the fly, and a few times on the spoon when trolling. They are principally taken in spring and fall, but few being caught in summer as compared with other seasons. When caught among the rocks in swift water, on a light rod, they afford considerable sport, and are nice eating while the water is cold. Most of the residents of the Mohawk region call them whitefish. I have never heard them called windfish.

DEXTER.

Carlisle, Pa., April 20.—With us they are called fall fish, and are taken with red and blue nearly all the year round. We use the white grub, dough bait, grasshopper and mussel, the common red worm and pieces of minnow. I notice that one of your correspondents says that they very seldom weigh more than a pound. I have seen them taken from our creeks here measuring from 16 in. to 27 in. in length, and weighing from two to three pounds. They are a very beautiful fish, the large ones especially, the back being a dark blue color, and the sides of a silvery whiteness, while the flukes and under part of the body are a beautiful scarlet. I would mention here that we have some of the finest fishing in this country to be had anywhere. We have trout, black bass, pike, and in fact almost any kind of fishing a true angler may desire.

GEO. D. KELLER.

MOVEMENTS OF SPORTSMEN.—All the Florida visitors have returned home, and the mosquitoes, alligators and moccasins can now have it all their own way.

Mr. John Johnston, of the Milwaukee Rifle Team, sailed yesterday for the Paris Exposition.

A. E. Hume, of Charleston, S. C., owner of one of the island cottages in the St. Lawrence River, has gone to London for the summer.

Dr. W. H. Daly, of Pittsburg, Pa., sailed for Europe a few days ago in company with his wife, to be gone a year or two.

Fayette S. Odes, late President of the Blooming Grove Park Association, recently rejoined his family at Geneva, Switzerland.

Messrs. Geo. M. Sleo, of Poughkeepsie, and J. Ordway take charge of the Ordway House at Blue Mountain Lake, Adirondacks, the coming summer.

E. C. Litchfield, Esq., of Brooklyn, has just returned from an extensive tour through the West Indies.

Fred A. Ober, the naturalist, is at Granada, West Indies, and expects to go thence to Martinique and return home to the United States. He is well, and is doing good work.

Coulin Campbell, of Tarrytown, has just returned from Nova Scotia, where he has been salmon fishing. He and Saul the Indian broke space in the ice for fly-casting early in the season, and landed many goodly fish. Saul always takes his first fish in March and sometimes in February. The best of the season in Nova Scotia is over before it begins on the St. Lawrence. Campbell says the salmon run up the river under the ice all the winter through, and he has a theory that they go up on an errand of pure gallantry, namely, to escort the smelts down in the spring on their first visit to salt water—just as if a smolt couldn't drift down to the ocean with the tide without being piloted by friends! But "it may be true—yes—it may be true."

NOT A CENTENARIAN.—In our last issue, in correspondents' column, Mr. G. W. V. S. attempted to give some information about the debson, purporting to say that he caught debsons and black bass on the Mohawk in 1821. But really he didn't do anything of the kind. The types lied when they said so, and Mr. S. doesn't mince matters much with the compositor in asserting the fact. It is true that Mr. S. is the editor of a work first published in 1866, entitled "Fyessie and Fyessing," (and a very readable book it is—for sale at this office, price, \$1.50), but it does not necessarily follow that he is now 400 years old, and was a comparative youth in 1824! The author of that book died long since, lamented by the angling fraternity of which he was a noble part, in everything but sex—Dame Juliana Berners by name. It is only the editor who lives (!), and we cannot tell what merces may yet be in store for him! But by all that's gracious, we cannot divine why the man "S." is so chagrined at being considered old! Had it been the woman, Dame Berners, who protested, we would have attributed the protest to the natural diffidence of the sex; but as it is—well, as the old woman herself said: "It is as it is, and can't be any tisser!" Let the reader pay heed while he speaks:

"Helgramites in the Mohawk, 1821! O, Lord! 1824! When was I born! Will you please sentence your proof-reader to angle for tom-cods in Bowery Bay? It was 1864 when I used 'debsons' for bait in the Mohawk. There are three gray whiskers on my right cheek now—but don't say 1824! And don't let your proof-reader correct my spelling. It is not the printer's fault; because it happens twice in four lines. The right way is 'sieve,' not 'seive.' But 1824! Guess I'll apply for a pension. There were plenty of helgramites left in 1864."

G. W. V. S."

THE FIRST BITE.—A veteran angler, whose flies have danced upon the waters of every more important trout and salmon stream in the United States and Canada, remarked to us th

other day that the first bite of a young fish was very like the first sip of the flowing bowl. If the young fry escaped his fate when he swallowed his first hook, the chances were as one thousand to one that he would be an unquenchable appetite for swallowing hooks would be contracted, which would finally land him in a confirmed biter's grave. Our own experience gives some plausibility to the theory, and doubtless the piscatorial experience of our readers will confirm this view. Here is a bit of testimony from the *Hartford Times*:

"Frederick A. Chase and a friend, George Wilson, of New York, were fishing on Saltonstall lake last Friday, and hooked a very large fish, but it got away because the line broke. Mr. J. P. Studley, of New Haven, and a friend were fishing there some days afterward, and they caught this same fish. It was a six-pound black bass, and in the upper jaw was Mr. Chase's hook, with the sniker and four feet of line attached."

THE HOME OF THE DOBSON.—*Albany, May 3.*—Tell J. S. T., of Oriskany, if he will overturn the large stones on the banks of the Mohawk soon as the spring freshets subside, he will find all the Dobsons he wants. Then let him get a cheese box and place a large sod in it. By changing the sod and sprinkling a little water on occasionally, he can keep them for some time, as they will burrow in the sod and thus keep moist. Be sure to place your cover on the box, and have some small holes in it. DEXTER.

SILK WORMS.

NEW SOURCES FROM WHENCE GUT CAN BE HAD.

In my last communication I gave a brief account of the history and the habits of one of our native silk worms, the *Attacus cecropia*. I now give you a short description of another one, the *Attacus promethes*.

Both of these native silk worms can be reared, and silk gut of the best quality, and even silk, can be manufactured from these silk worms, without difficulty, where suitable food can be obtained for them. The larva, or worm, of the *Attacus promethes* feeds on the leaves of the sassafras and spice bush, both of which are too well known to need a description; and it probably feeds on the leaves of other trees or shrubs. The silk of this worm is of the finest and strongest quality—white and glossy.

The worms invariably spin their cocoons on or in the leaves of the tree on which it feeds, by folding over the edges of the leaf, forming a suitable place for the cocoon; but before spinning its cocoon, it fastens the stem of the leaf to the twig on which the leaf grows. So securely do they do this, that I have seen near a hundred cocoons on one sassafras tree, the most of which had hung on the tree for many years after the month had left them.

These cocoons can be collected in great numbers where the sassafras and spice bush are abundant, as it is in this region. Silk can be drawn from this worm, from three to four feet long and strong enough for salmon fishing, of the very best quality: the Italian worm does not produce a stronger or a finer silk. Like the *Attacus cecropia*, the cocoons should be collected in the fall of the year, or it would be equally well, to collect them early in the spring, before the foliage of the trees are out.

The same rules should be observed in the management of this worm, as with the *Attacus cecropia*, with the single exception of the kind of food it requires. *Bradford, O., April 25, 1878.* T. GARLICK.

SPRING BALANCE FOR ANGLERS.—Competitors for biggest fish will be delighted with the compact little spring balance which Brother Holberton sells at his Sportsman's Emporium, 117 Fulton street. It is made of German silver, is only three inches in length, and indicates the weight of a fish of twelve pounds or less. It is not registered for speckled trout which weigh over twelve pounds. Price 75 cents.

HOOK EXTRACTOR.—When your fish swallows a hook which you cannot detach, Dr. E. Sterling, of Cleveland, Ohio, has

recommended us to use one of these. You can buy them of the surgical instrument dealers. For bluefish, pike, muscalonge and sharks and the like, long handles will be needed.

TO DISLodge FOUL HOOKS.—The pleasure and profit of bait fishing are frequently interfered with by the hook catching into rocks, limbs or rubbish on the bottom. When thus entangled, the usual method of relieving the hook is to move the line back and forth, pull upon it gently, or let out several feet of line and then pull upward gently, and, if that is not successful, to pull until it is torn from the fastening, or the hook or line is broken, causing a loss of time and patience as well as loss of bait, and it may be hook and line. When fishing from a boat and the hook becomes thus fouled, it can be almost immediately loosened by slipping a short leaden tube over the loose end of the line and letting it slide down the line. When it strikes the hook it will, by its weight, loosen it some. A three or four-inch section of a half-inch (inside diameter) lead pipe is best, for should it strike the point of the hook it will not dull it like iron or other metal. *Barrington, Yates County, N. Y.* SNOOK.

[This is a good method. It is similar in its operation to the iron riag long in use by English anglers.—ED.]

HOW TO PREPARE FISH.—From the *Fishing Gazette* we take the following, which may help some angler who may be desirous of putting under a glass case the next big Moose-Head Lake trout he may catch:

"The most difficult operation in fish stuffing is the skinning. Lay your fish on a damp cloth, best side down, then, with a sharp knife, open the side from the head to the tail (this enables you to place the seam out of sight when set up in the

case), proceed to remove the skin from the back and sides with a sharp pen-knife, and take away the body; the flesh can be easily taken away in small pieces. The fin bones must be cut off as close to the skin as possible, taking care not to cut the skin or displace the scales. The skull must then be thoroughly cleaned and the gills taken out. The next process is to preserve the skin from rotting, which is done by washing the inside of the skin with preservation unction, which may be purchased at any naturalist's shop. More than half an hour must not elapse after using the preparation before the fish is placed in proper form, or the skin might stiffen and crack when handled. Next place your skin on a board and fill the inside with fine dry sand and roughly sew up the side. Having properly shaped your fish, lay out your fins and tail by pinning them between pieces of card; these must remain till the whole is perfectly dry, when they may be removed. Next proceed to varnish your fish; first size your fish with three thin coats of size, which must be applied hot, letting each coat dry before applying the next coat; when the size is properly dry thin coats of crystal varnish must be applied in the same manner. When your varnish is quite dry you must take out the sand and proceed to fill the body with cotton wool, taking care to disturb the skin as little as possible during the process, then neatly sew up the opening in the side and give the finishing touch to your specimen, which will be ready to put in the case. Stuffed fish are mostly put in a swimming position, but the best plan, I think, is to represent them lying on a mossy bank with rushes and sedges growing behind. The sloping bank can be made with stiff card bent to the required shape and muss glued on. The rushes can be painted on the back of the case. It is almost impossible to get a perfect specimen unless operations are commenced within three hours after capture, but the fish will keep twelve hours if wrapped in wet rushes or grass. After this time the fish become difficult of arrangement and the scales loosen. The flints or eyes can be procured at the naturalist's and are fixed with putty.

J. B. CROOK & CO.—For over forty years the name of Crook has been associated with sportsmen. Season after season the fathers, and after the fathers the sons, have bought their rods, their lines, their books and lures, their quads and their ammunition at the old stand in Fulton street. In the very same place, year after year, has the business been carried on. But all things must change, and change often for the better. In token of this, the old stand, No. 50 Fulton street, has been enlarged by absorbing a store right alongside of it. The handsome display Messrs. J. B. Crook & Co. make wanted an ample display. Now the sportsman can select from a full stock everything he may want in the fishing or shooting way. The new catalogue issued by this house we would call especial attention to. It tells of rods, reels, flies, hooks, nets, spoon baits, guns, double, single, muzzle or breech-loaders, pistols, rifles, air-guns, game bags, dog collars, fencing goods, fishing suits, hammocks, and most everything else. As to their rods, they are all hand made, and manufactured at their factory at Rutherford, N. J.

LEONARD'S ROD FOR THE SPORTSMAN'S CONVENTION.—Mr. Leonard has taxed his ingenuity and his best efforts to produce an inimitable rod to be presented as a prize for the fly-casters at the coming Sportsman's Convention at Buffalo. It is an eight-atrip bamboo rod of selected material, heavily mounted with German silver, and is capable of eight combinations. It can be made long or short, and slender or stumpy; the but is reversible, so that the reel can be used either above or below the hand; and, in fact, it is one of those comprehensive rods so much desired by the universal angler, which will do all kinds of work—the heaviest and most delicate—equally well. We think Mr. Leonard has succeeded admirably in making a kind of rod for others to use which he does not use himself. It is a rare faculty to be able to do this. Should Brother Reuben Wood, Seth Green, or Hon. Robt. B. Roosevelt be so fortunate as to win this prize, we are certain they will lay it by and preserve it with greatest care as a memento. The cost is \$75.

THE BUCKINGHAM FLY RODS.—Mr. Buckingham, of Utica, seems to have entered as a competitor in the manufacture of fly rods. He is now making a really superior article of eight-atrip rods, German silver mounted, which he sells at \$20, \$25 and \$30. There are so many manufacturers of first-class rods now at work that every sportsman who is competent to use one can suit himself. We do not recommend fine rods for amateurs.

—Holberton's fly books are in great request now. They keep the gut lengths straight and ready for use. You can buy them at 117 Fulton street, price \$5.

COMFORT FOR THE MUCH-ABUSED.

EDITOR, FOREST AND STREAM: NEW YORK, May 4, 1878. I am displeased at your printing, in the May 2 issue, that extract from the letter of "Bass," of Cincinnati. I think that an anonymous letter, and one so unnecessarily unkind, is out of place in *FOREST AND STREAM*. Who is "Bass," that he should criticize so sharply? You rightly say, "No pleasing everybody." Certainly the very lively, agreeable articles on bass fishing (the writer of them is unknown to me) have pleased some of your readers. For myself, I ask you to urge their author to give us the additional article hinted at in the second letter, published April 15, and I believe many readers will join me in this request. But even if the articles did not suit at all, it seems to me that "Bass's" letter is cruel: worthless as the opinion of an anonymous writer is, this must have mortified, and very unnecessarily, the author of those articles. Permit me to hope that he will not, however, be deterred by this rude and unjust critic from giving us more of his pleasant articles. You have my name and address. If "Bass" makes his known, you can give him mine. Yours, G. W. V. S.

New Publications.

THE MAY MONTHLIES.

"THE ATLANTIC" this month contains a paper devoted to the "May Days," extracts from Thoreau's note book. Thomas Bailey Aldrich has a felicitous record of travel, entitled, "From Poconagog to Pesh," and H. James, Jr., writes of "Recent Florence." Warner continues his series entitled, "The Adirondack Verdict," this month, giving us "A Character Study" of an Adirondack dweller, whom, Mr. Warner thinks, approaches the type of the primitive man of the Champlain period. Mark Twain, in a cold-hearted sort of a way, explodes some of the fondly cherished illusions of "Magnanimous-Incident Literature."

ature." Of fiction there is the installment of W. H. Bishop's "Dit mold," and "The Daula Party at Harrison's Cove," by Charles Egbert Craddock. Horatio C. Burdard discusses the question, "Who Pays Protective Duties," and N. S. Shafer contributes "The Silver Question Geologically Considered." Of poetry there is "Evolution," by Boyesen; "The Captain's Drum," an incident of the Revolution, by Benj. F. Taylor; "Daffodils," by Laura N. Fenling; "The Rank and File," by H. H., and a nature study, "Monotony Lake," by J. T. Trowbridge.

The publishers of *SOMMERSET* tell us that Maurice Thompson's paper on archery in that magazine last year brought to him nearly five hundred letters of inquiry. The present number contains a fresh subject for the questioners to Mr. Thompson's paper, "Merry Days with Bow and Quiver." The new material is interesting and instructive and the contest between the ride and archery teams, to which the former were defeated, will spur our riders to look to their laurels. Mr. Wm. L. Tilston has a finely illustrated paper on a sporting dog, in which we recognize some of the favorites of the show bench. Dr. Brewer begins this month a series of papers on "Bird Architecture," describing Bower-birds and the wonderful gardea and cabia-building bird discovered by Dr. Reeser, this being the first full account of the bird in English. Two camp-out papers are "Camps and Tramps about Ktaadn," and a humorous sketch by Frank R. Stockton, entitled, "Camp Out at Rudder Grange." Edward Eggleston describes in a finely illustrated paper, "The New York Post Office." Another illustrated paper is by Margaret B. Wright, who writes of artist "Bohemian Days" near Paris. The serials, Mr. Eggleston's "Roxy," and Miss Trafton's "His Inheritance," are continued. Of the unfinished material, there is "An Impossible Story," by Bayard Taylor; "Lissy," a short story by Margaret H. Ekerson; "Little Rose and the House of the Snowy Range," a Colorado bit of travel, by H. H.; and an essay, "Concerning the Use of Fagots at Geneva," by Leonard W. Bacon.

The paper in *APPLETON'S*, which we may denominate the paper of progress, is that devoted to an illustrated review of the slow progress and final fulfillment of New York's dream of "Rapid Transit." Mr. Wm. H. Kidding writing on this topic in his usual happy vein. Dr. A. H. Guernsey gives a description of Stanley's convert, the African king Mtesa, presenting the explorer in a character little accorded to him. The English biographer of Poe, Mr. J. H. Ingram, contributes a series of hitherto unpublished letters by the poet, which may serve to throw some light upon his career. Lucy Hooper writes of "French Pictures for the Paris Exposition," and in "Real and Ideal Houses," O. B. Brace puts in some clever hits at the bric-a-brac mania of the day. The serial story, "Jet; Her Face or Her Fortune," is continued, as is also "By Celia's Arbor." Other pieces of fiction are: "Mrs. Gainsborough's Diamonds," by Julia Haythorn; and "For Love of Her," by Nora Perry. The poems are: "The Heavenly Harmony," Cornelius Matthews; "Not Wholly Dead," John Moran; and "Wind from the East," Paul H. Hayde.

THE NATURALIST.—While several of the papers in the May number of the *Naturalist* are rather technical, and others of interest only to special readers, there are not lacking a number of articles which will prove attractive to all. Prof. W. J. Beal contributes an interesting account of "Hairs and Glandular Hairs of Plants, their Forms and Uses," and Prof. C. Y. Riley continues his valuable narrative of the "Transformation and Habits of the Blister Beetles." Mr. Arthur E. Brown, Superintendent of the Philadelphia Zoological Gardens, discusses the Sireals in a very agreeable style. This group is but little known even to naturalists, and, perhaps, a majority of our readers do not even know that it is the order which contains the moths and dragonflies. Since several moths have been kept alive in the Fairmount Gardens for some time, Mr. Brown has enjoyed exceptional facilities for studying their habits, and much that he tells us is new. Mr. Hays' discussion of the "Origin and Formation of Prairies" is an interesting contribution to the literature of a long-mooted point, and one which is not likely soon to be settled. The article on "Methods of Labeling Zoological Collections," though brief, is practical and to the point, and suggests a way out of difficulties that have long been felt by collectors. "Notes on Indian Manners and Customs," such as those presented in the present number by Dr. Palmer, should be diligently collected at the present day. If our Indians are not dying out, at least their customs are constantly changing under the influence of contact with the whites, and before long it will be impossible to find any tribe which retains the customs of its forefathers. Recent Literature and General Notes contain many items of interest.

UPLAND GAME BIRDS AND WATER-FOWL OF THE UNITED STATES, by A. Porter, Jr. Scribner, Armstrong & Co., New York.

As this work has additional numbers issued it increases in excellence. In the fourth part now before us, we have the ruffed grouse and the blue-billed duck. The *Bonasa umbellus* in the cleverly executed plate, almost, if not quite, the size of life, has that peculiar pugnacious strut, which that bird assumes. He stands as cock of the walk on a fallen limb, with possible intention of drumming, while the head bird surveys the scene from a weed-covered patch. Both birds are full of spirit and life. The birds have just that fineness of feather which is characteristic, and the russet color, with the little green iridescence of the neck ruff, is truthfully given. The work is natural, and is no poor copy of a taxidermist's still work. As to the blue bill, or broad bill, or raft duck, as the Marylanders call him, the print is suggestive of blinda sea cold fingers and canvas-back ducks. There sit the duck and drake. Perhaps it is the most careful of all Mr. Fox's pictures that we have seen reproduced so far. Your blue bill is a dandy duck, and all his feathers are close and snugly fitted to his body. The pretty, soft, curly mottle on his back, that ripple of plumage, is quite exact. For a swift flyer when he wants to go, commend us to the black duck. The artist has brought in a capital bit of background. Your two ducks are well off from shore, and there stretches back white dunes, with a spectral light-house. Two comrade ducks are coming in under easy sail, and will probably flutter down near the two who are paddling at their ease; but away off there is an uncertain flock, which may be going seaward to find a reach some twenty miles or more beyond. We have already expressed the pleasure these prints have given us, as recalling to our mind the characteristics of birds, far more strongly than can be impressed by the common ornithological works.

BOOKS RECEIVED.

"THE MATCH MAKER, a Society Novel," by Beatrice Reynolds. Philadelphia, T. B. Peterson & Bros. Price \$1.

THE DOG, with Simple Directions for his Treatment, and Notices of the Best Dogs of the Day and Their Breeders. By Idstone. Twelve full page engravings. Fourth edition. Cassell, Peter & Galpin, London and New York. With the coming dog we should suppose that this book would be very acceptable.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle .32, .38, or .44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 35, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. box 1,178.

Gunpowder.

THE HAZARD POWDER CO.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or who call at our office. 69 WALL STREET, NEW YORK.

Lafin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6 1/2 lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFGG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less recoil than any other brands made, and are recommended and used by Capt. A. H. HOGARDUS, the "Champion Wing Shot of the World."

BLASTING POWDER AND ELECTRICAL BLASTING APPARATUS. MIITARY POWDER of all kinds on hand and made to order.

Safety Fuse, Frictional and

Platinum Fuses.

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

We shall be pleased to quote prices on any different styles of outfits or single articles that parties may desire.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and is held solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses HART & SLOAN, Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

NEW YORK WAREHOUSES, 177 BROADWAY.

The Stanton Siphon Fountain Pen Holder.

The Only Practical and Really Useful Fountain Pen-Holder Ever Manufactured.

The only Fountain Pen-holder with a FLEXIBLE SIPHON, so that any size or make of Pen can be used. The only Fountain Pen-holder in which the INK does not come in contact with oxidizable metal, and therefore cannot decompose or coagulate. No spilling of ink can occur in filling, as the tube is filled by suction from any vessel containing writing fluid.

No Inkstand or Special Ink Required.

ALWAYS READY FOR USE.
Is a very handsome and convenient pocket article; is made of strong metal, heavily nickel-plated and polished. Contains sufficient ink to closely write twenty pages of foolscap; will feed to the point of the pen until the last drop of ink is exhausted, and being air-tight the ink can neither evaporate nor mould. Is easily replenished, always perfectly clean and any steel or gold pen can be substituted for the handsome Esterbrook Indestructible Golden Pen furnished with each holder.

Sportsmen will find it a most Convenient Companion when away from home.

Will carry sufficient ink for TEN DAYS' ordinary use. Especially adapted to the use of Doctors, Lawyers, Commercial Travelers, Collectors, Government Officers, Railway Officials, Tourists, and all who can appreciate the immense comfort in always having their own pen and ink with them.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for \$20 are sold at 63 Clark Street, at the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipage taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha and Green Bay for bass fishing; Bitterroot Creek and Lake for muscalonge; the many bluegills and lakes of the Flambeau and Chippewa which team with bass, pike and pickerel, never till last season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ash and or Bayfield, while rock fishing for speckled trout and trolling in the Bay affords excellent sport.

The Chequamegon Hotel at Ashland, built last year, has been enlarged, and is supplied with a steam yacht, sail and rowboat and excellent guides. The atmosphere at Ashland is a sure preventive of hay fever.

Steamers from Ashland to all Lake Ports. Send for Guide Book.

HUNTING SUITS,
 which attracted great attention and were much admired by all Sportsmen.

THE BOSTON

SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON.

BOSTON, MASS.

NEW YORK AGENTS:

Fowler & Fulton,

300 BROADWAY,

The Best in Use.

ONLY ONE QUALITY MADE, AND THAT IS THE VERY BEST.

Flexible Waterproof, Tan-Colored Duck.

Each article—coat, trousers, vest and hat cap—has the name and manufacturers' address stamped upon it, and no suit is genuine without it bears this imprint.

We make no discount except to the trade.

The price of the suit complete is \$13.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are copper-riveted, and nothing is neglected to make the whole suit complete in every way.

This is what one of our best sportsmen says of it, writing from camp: "Although I had been nearly eight hours under incessant rain, laboring and striving along under adverse circumstances, yet I found myself comparatively dry, and my clothes without a tear. For the benefit of our brother sportsmen, let me advise one of Messrs Simmons' (of Boston, Mass.) Waterproof Suits. Oh! what a relief it was to find one's tobacco was dry, and that one could light a pipe; that you could laugh at your miserable friend, who stood shivering and shaking as if he had the palsy; and then, next morning, oh! what fun it was to see him mending his clothes, while I had not a tear to complain of! Ventilation, that great bugbear of waterproof suits, is legislated for in the most ingenious manner. No sportsman should fail to supply himself with a suit which is at once cheap, practical, and will last an almost indefinite time."

Our Flexible Tan-Colored Water-Proof

Leather Coats, Breeches, Vest, Leg-

gings and Caps are considered the finest

things ever made.

SCHUETZENFEST

The FOREST AND STREAM and ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A.M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of each team must belong to the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. RARENBURG, Treasurer of the Sharpshooters' Union, No. 190 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President. J. H. BEHRENS, Cor. Sec., 31 Bowery, New York.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Heel Verner Scale, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for P. WEBLEY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

HOMER FISHER, 260 Broadway, Cor. Warren St., New York.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time. Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the pailer, is now ready for the market. Price \$8. Old style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street, FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs, by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Logan Co., Ill. Dec6 tr

IRA A. PAINE'S FEATHER FILLED CLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 800. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £169, and a money prize of £705, was the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 2 1/2 yards. He won the second event, killing 5 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beat 107 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Pardey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

THE WAY I WON HER.

WE walked among the flowers and ferns,
Talking of things boate, and
When first my passion found release
In words and signs volcanic.

She was from Boston, so was I—
It was the same old story,
Of talent, beauty, love and youth
In a conservatory.

"Alice," I cried, "thy soul is pure
As yon white Phylloactis
And thy sweet lips are like the core
Of the red Leptomastus."

"Dearest to me are thy blue eyes
Than burrs concurbateous
And that rare plant Linum said
Had ovules clathrateous."

"No herb exalts, to my mind,
Hath odor so delicious
As thy sweet breath, like pinks in June,
Or leaves holosericeous."

"I cherish gorms of love for thee;
In thy heart I would plant them!
More rare than sepals pentafold,
Or bright Lixianthum!"

"Answer me, love, my living rose,
Dispel these vague doubts hideous
Let me but call you for all time,
My own Monochlamydeous?"

Blushing she reached a covert spot,
Where parents ne'er would think us;
And gave me with a charming smile,
A purple Leptorhynchus!

I knew its meaning well, and plucked
An Eucalyptus Willis,
Which she placed in her corsage, with
A yellow Macrophysine.

Among sweet Blepharidie,
And fragrant Lophostrie,
I won that learned Boston girl,
The blonde æsthetic Alice.

—Cupid Jones in N. Y. Sun.

For Forest and Stream and Rod and Gun.

Two Bear Stories.—No. 1.

BY PENOBSCOT.

THE true history of the bears has yet to be written. I believe that naturalists advance two theories to account for their existence through the winter without food. One is that they go into their dens extremely fat, and that this fat is slowly absorbed during the winter, thus sustaining life, and that the bear comes out in the spring in a lean and famished condition. The other theory is that the temperature of the animal's body, instead of being fixed like ordinary mammals, varies with that of the surrounding atmosphere, being always at a point a little above it, consequently when cold weather comes on it is cooled down to such a degree that there is no wasting of the tissues, and the animal remains dormant.

During my first winter in the woods I officiated as cook to a small crew employed by my father, and as the cooking did not occupy half my time I used to join the gang in the woods between meals. Coming to camp one afternoon to cook supper I was aroused by the well-known voice of "Old Tigress," a large, black slut, famed as a "moose dog" throughout that whole region. I knew by her bark that the game was at bay, and as she never deigned to notice anything small, I was all excitement in a moment. Hurrying into camp I seized my gun, and hastily providing myself with some buck shot, I ran down to where the dog was barking, scarcely twenty rods from camp. On reaching the spot I was greatly disappointed to see her standing alone and barking at a hole under the roots of an enormous hackmatac stub. Going up to her I was about to reprimand her for fooling me, when I caught sight of a lot of freshly picked boughs sticking out of the hole. I had listened to too many hunters' stories not to know at a glance what that meant. Only one animal in Maine has sufficient intelligence to stop up the mouth of its den with boughs after going in. Hurriedly drawing out the fine shot with which my gun was loaded, and putting in a charge of buckshot, I stepped up to the roots of the tree, and, boy-like, thrust the muzzle of my gun into the mouth of the den and pulled the trigger. The charge merely grazed the bear's

thigh, cutting a shallow groove in the fat with which it was overlaid. It was a very cold day in the latter part of December, but I never saw an animal any less dormant than that bear! With one movement of his powerful hind legs he forced himself through the aperture at the mouth of his den, throwing the earth outward in every direction, and in much less time than I have taken to tell it he stood before me, one of the largest bears ever seen in that country. It was the first I had ever seen, and his enormous size, so much larger than I had ever dreamed of, appalled me; but he was within ten feet of me, and I dared not turn my back on him. Coming so suddenly into the strong light seemed at first to blind him, and he stood for a moment motionless, winking incessantly. The dog, partly between me and the bear, but a little to one side, stood like a statue with hair erect and glowing eyes fixed on those of the bear, which commenced to turn its head slowly from side to side to discover the foe who had so rudely disturbed his repose. As his vision cleared he caught sight of me, and laying back his ears and opening a capacious mouth well garnished with yellow teeth, with a snort like the puff of a locomotive, the seemingly unwieldy animal bounded at me with the lightness of a cat. With a leap that I can truly say was for life, I placed nearly the same distance between us, as that which first separated us, and, dropping my gun, sprang to the foot of a scrubby spruce close at hand, and began to ascend it with all possible despatch. Fortunately for myself I was not pursued. Scarcely had the bear's feet landed in the tracks which I had so kindly vacated for them, when the dog, executing a skillful flank movement, fell suddenly on his rear, with a fury which completely turned his attention from myself and gave me ample time to ascend the tree, from the summit of which I watched the combat below. This, however, was all one way, as it consisted of a series of charges by the infuriated brute upon the dog, which did not attempt to bite the bear after the first rush, but contented herself with simply dodging its attacks. After expending his fury in a score of vain attempts to get the dog into his power, he desisted, and, walking toward the den, actually endeavored to re-enter it. Being again attacked by the dog, he turned and once more drove her back, and then sullenly retreated into the forest, closely followed by his tormentor. As they disappeared I descended from my perch, and, picking up my gun, proceeded to reload. By the time this was accomplished my drooping courage had wonderfully revived, and I started on the trail, determined to risk another shot, the hunter's instinct being, even then, strong within me. I soon overtook him, as he turned continually to drive back the dog, which of course rendered his progress slow. When I started I had made up my mind to advance within twenty feet of the monster so as to deliver a fatal shot, for sure. But the thought obtruded itself, as I came in sight of the huge beast, that my gun might miss fire. I confess that I had not the nerve to go so near. Turning to drive back the dog, he came within thirty paces of me. As he turned broadside to me to continue his retreat, I delivered the charge full at his right shoulder, and a tremendous charge it was, nearly knocking me off my feet. The heavy coat of hair and the thick layer of fat arrested the shot before they could penetrate to a mortal depth; but they wounded him quite severely and roused him to a pitch of fury impossible to describe. The roar of mingled rage and pain which he gave as the shot struck him I shall never forget to my dying day. When it struck on my ear I instantly sprang for the nearest tree. The brute bounded toward me with a speed no one would have believed him capable of, and although the dog fastened to him before he had made half the distance to the tree, he paid not the slightest attention to her, but swept her along as though she had been a feather, and gained the foot of the tree before I was well out of his reach. But although the dog could not prevent his reaching the tree, she did hinder him from making any attempt to seize me. The bear, indeed, seemed to think he had a sure thing on me, and, turning furiously on the dog, he drove her before him for several rods and again rushed toward me, but the noble brute fastened to the bear as often as he attempted to return to the tree, and invariably ran away from it when he charged on her. Being defeated in every effort to return to the tree, the contest ended as before, the bear slowly retreating followed by the dog. By this time I had come to the conclusion that bear hunting, as a sport, was not a success, and vowed if ever I reached camp with a whole skin to become one of the most exemplary cooks ever known on the river.

On again reaching terra firma, I could not, however, resist the inclination to follow the trail for a few rods just to observe the effect of my shot. He was bleeding slowly, and following the trail for a short distance I came upon a sausage-shaped substance nearly two inches in diameter and about six in length, evidently just ejected by the bear, and followed by a stream of fluid as black as ink, which extended for nearly a hundred feet; there must have been several quarts of it. My curiosity was greatly excited. This, then, was the "plug," as the hunters called it, which I had often heard them declare the animal provided itself with before going into winter quarters. I had always supposed it to be a fable; but here was proof positive of its truth. I examined it carefully, and tried to break it in pieces, but it was as tough as copper, and almost as hard, being evidently composed principally of pitch. Since that time I have had opportunities to examine a number by dissection, while in position. It is placed at the extremity of the rectum. It not only fills the passage, but adheres to it perfectly on all sides, rendering

it perfectly air-tight. I have always found the intestines empty, with the exception of the black fluid of which I have spoken, which appears to be extremely astringent in its nature. Whether it is secreted naturally, or obtained by the animal from some peculiar plant, I, of course, have no means of knowing. It is evidently slowly absorbed during hibernation, as it always occurs in less quantities as winter advances. In company with a companion, I once killed one in his den, the 18th of March. It was, I think, the fattest one I ever saw; a perfect mass of fat inside and out. As the animal would have left of its own volition in a couple of weeks, it will readily be seen that it had not existed by absorption of fat. There is not the slightest doubt but the animal comes out of his den in precisely the same condition in this respect in which he entered it. It is probably equally true that the bear could not exist without this mass of fat which envelops him, as it serves in some mysterious way to perfectly protect the tissues and muscles from any waste. Having served its purpose, it rapidly disappears when the bear leaves his den, and in two or three weeks after that event he is as lean as a rat, and correspondingly voracious.

Perhaps I ought to say in regard to the bear with which I began this article, that he was followed the next day by two of the crew a distance of six miles, and killed in a new den which he had dug for himself. The dog had followed him about half that distance. He proved to be one of the largest ever killed in that part of the country.

[TO BE CONTINUED.]

THE HUNTERS OF TOPEKA.

TOPEKA, Kansas, April 27, 1878.

MR. EDITOR

The sporting men of the city of Topeka will not only compare favorably with those of any other section of our country, but in many respects they excel. It must be understood that I am a New Yorker speaking of Kansas men, and I find them a class who may be designated as gentlemen in every sense of the word. They follow the game with a true relish for all that is noble in the sport. Among the more prominent I will mention Judge Morton, who is a dead shot and a jovial, whole-souled fellow, and who is well posted as to the best hunting grounds.

"Squire" Auter is another of the same sort who is thoroughly at home on the prairie in the game season. The "Squire" shoots over a pair of fine pointers of his own training. They are liver and white, very fast, staunch, and for prairie chickens can hardly be beaten. "Bob" Hawley also may be mentioned as one of the fine sportsmen of this locality who appreciates a good gun, good dogs and a good field. He has a fine and very promising young pointer over which he shot quail last fall, which was the dog's first experience. He will be used for chicken shooting this season, and promises well. "Bob" has also a young Irish setter by Thorstine out of Leo II, which is being trained now and will be put to work this season. Ward Burlingame and Judge Brookway are not a whit behind the others, either in their love of the sport or in the good taste which marks the true sportsman. They both have fine English setters which are much admired, not only for their beauty but for the work they can do.

The Rawley brothers, "Jim," Emmet and "Kirk," are all good shots, and it is difficult to tell which of them best enjoys the shooting season. "Jim" Rawley has an English setter, lemon and white, a beautiful worker, never makes a mistake and is always busy. "Kirk" Rawley has a red Irish setter of the finest blood, which can be traced back through some of the finest of his race.

There is another sportsman here whose name I must not forget to mention, and that is W. F. White, who, I believe, takes as much pleasure in giving information to Eastern sportsmen as to the best shooting ground, as he does in enjoying the sport himself. He knows a good gun, and he has two splendid dogs, the red Irish bitch Ruby by Rufus, and an English setter, young but well broke, out of Stewart's Bell.

Sportsmen from the East will find any of these gentlemen most willing to give all needed information as to the game of this locality and west of here. I will add that the chicken season commences August the 1st, and all are looking forward to rare sport, as the prairie fires have not been severe this spring, and the season being early the birds will be in fine condition for the early August shooting. This kind of sport is pursued here in what is to me a very civilized manner. A party of say five gentlemen go out in a three-wheeled spring wagon, which will hold all, including dogs and driver. When the ground is reached a pair of dogs are let loose—they have been taught to hunt ahead of the team—and when they point the hunters get out and shoot the birds, put them in the wagon, get in and go on. When the dogs get tired they are put in the wagon, a fresh pair let loose, and you go on as before. Considering the exceedingly hot weather in which the shooting season opens, a man can certainly appreciate this mode of doing it. Teams can be hired at any of the stations along the Atchison, Topeka and Santa Fe Railway, on the land grant of which company the best shooting is to be found for from \$2 to \$3 per day, and when you divide the expense up between five men this certainly is the cheapest hunting I know anything about. The railway company I have mentioned have a way of treating the hunter which to me has been very agreeable. They make no charge for carrying dogs, and do not under any circumstances permit the baggage

masters to accept anything unless it be for feeding. Guns, if they are in a case, can be taken in the passenger coaches, if not they are taken charge of by the baggage master, who gives a free claim check for them. This enables you to travel without annoyance, and you feel that you are among men who try to encourage gentlemen sportsmen to shoot along their line.

The chicken shooting ground is anywhere from Cottonwood Station to Great Bend. At Florence it is said to be fine, and at Eldorado still better. Quail shooting commences in this State very late, two late in fact to enjoy it to its full extent; the season does not open until December the 1st, but the next legislature will be asked to change it to a month earlier. The Cottonwood Valley has been the great quail ground, but last year they took a turn westward, and the best shooting was found at Sterling. They keep mostly in the timber along the streams, but in hunting them, by judicious management the first fire brings them into the open ground, where they can be hunted almost as easy as chickens. C.

Fish Culture.

NEW HAMPSHIRE.—There are to be two fish ways on the Nashua River at Nashua, thousands of salmon and shad fry having been placed in the waters of that part of the stream that flows through the northern part of Massachusetts by the Commissioners of that State. The Nashua used to be a famous stream for salmon and shad within the memory of many of our citizens. Wana.

CONNECTICUT.—Under the direction of the Waltonian Club, of New Haven, 165,000 land-locked salmon have been hatched in North Branford and distributed as follows: 5,000 to Valley Pond in Woodbridge; 15,000 to Willimantic in Rogers' Lake in North Branford, and 10,000 to lakes in Salisbury, Spectacle Pond in Kent, Squange and Green Ponds in Sherman, Long Lake in West Winsted, Gardiner Lake in Salem, Hog Lake in Lyme, Hampton Pond in East Hampton, Waramaug Lake in Warren, Bantam Lake in Litchfield, Snipsie Lake in Rockville, Stafford Springs, Wangamhog Pond in South Coventry, Thompsonville and Saltonstall Lake.

CONNECTICUT.—Fish Commissioners Hudson and Mr. Porter have put into Lake Waucumbaug, Coventry, Conn., 30,000 California salmon fry and 15,000 land locked salmon.

NEW YORK.—There have been distributed from the New York State Hatchery at Caledonia, during the past season, which closed May 1, the following: Two hundred and ninety-three thousand five hundred brook trout eggs to the streams of Greene, Westchester, Dutchess and Oneida counties and to the Adirondacks and Nevada; 610,000 brook trout fry to the streams of Oneida, Sullivan, Essex, Clinton, Livingston, Orange, Cayuga, Tompkins, Herkimer, Otsego, Wyoming, Albany, Jefferson, Rensselaer, Saratoga, Alleghany, Fulton, Westchester, Wyoming and Columbia counties; 536,000 salmon trout eggs to Fulton Chain and other lakes in the Adirondacks, Green and Longlokey lakes in Green County, and to Pennsylvania; 1,586,180 salmon trout fry to the lakes of Essex, Dutchess, Warren, Otsego, St. Lawrence, Fulton, Onondaga, Tompkins, Cayuga, Steuben, Saratoga, Washington, Orange, Oswego, Ontario and Monroe Counties; 68,900 California salmon fry to the waters of Livingston, Monroe and Tompkins counties. Many orders were yet to be filled at the date mentioned.

—The artificial culture of trout at Meacham is bearing excellent fruit. Large strings are taken, and the fishing is reported all that can be desired.

ANOTHER DELAWARE SALMON.—Fish Commissioner E. J. Anderson, of Trenton, N. J., tells us that a salmon was taken in the Delaware, three miles below Trenton, on the 7th inst., weighing twenty-one pounds, and measuring thirty-eight and a half inches. This is the fourth reported this spring. Some time a New Jersey reader of this journal will come across this item and say: "The 'fourth salmon'! Why, didn't we always have salmon in the Delaware?"

PENNSYLVANIA.—The Game and Fish Association of Johnstown have leased a stream in Yoder township, Cambria County, for the purpose of stocking it with fish.

VIRGINIA.—Two hundred thousand young shad have been placed during the past week, in the Mattaponi, near Milford. The joint operations in Albemarle Sound are reported by the Richmond *Whig* to have been quite successful, from five to ten millions of shad having been hatched and distributed in the waters of North Carolina, Virginia and Maryland. Col. McDonald has established a hatching station on the James River, at Berkeley, and another on the Rappahannock, at Tolbago Bay. The catch of shad in the Sound has been very small; but the herring catch, though late, was large beyond any of previous years. The Fish Commissioners are delighted over the discovery by the fish agent, Mr. Nicholas, of abundant ripe rock in Weldon. This is what they have been long wanting.

—Eight thousand California salmon fry have been deposited in the Shenango, at Greenville, Pa.

—Fifty thousand young shad have been placed in Smith's Creek, Va., which is one of the streams forming the Nanseemod River.

KENTUCKY.—The Fish Commissioners recently made the following shipments of native salmon: To Smithfield, 5,000; to Eminence, 15,000; to Frankfort, 11,000; to Midway, 12,000; to Lexington, 10,000.

FISH HATCHING IN WISCONSIN.—*Madison, May 6, 1878.*—*Editor Forest and Stream:* The State fish hatchery located at the "Nine Springs," three miles from our city, is in a flourishing condition. The State has forty acres of land at this point, and every effort is being made to make the hatchery second to none in the country. It is now two years since the hatchery has been located here. The other hatchery, located at Milwaukee, is doing good work. The Madison hatchery is used for the breeding of brook trout and California salmon.

The Commission have begun the distribution of 120,000 brook trout and 65,000 salmon, making a good showing for the Madison House. A few days ago 40,000 trout were placed in Beaver Lake by the State Fish Commissioner. The State Superintendent reports that 12,000,000 white fish have been planted this spring from the Milwaukee house. ROVER.

HABITS OF RUFFED GROUSE.

(Continued from April 25.)

IT will be necessary to know something of the habits of the "Ruffed Grouse" before you can expect to become successful in their capture. You will find this knowledge most useful in a country that you are unacquainted with, where you will be able if you have been a careful student to tell at a glance almost their usual places of resort, and by unfailing signs to determine if there are enough birds in the vicinity to pay for looking them up. For this wary bird, although so shy, leaves many "signs" of his presence, some of which you will not fail to see. The most prominent of these "signs" are their "wallow holes," which are small depressions in the ground made by them when they take their dust bath. You will most frequently find these holes in the debris of a rotten stump or an "ant hill." Often on the sunny side of woodlands you will occasionally see their droppings, or perhaps a stray feather, or the disturbed leaves where they have been scratching will proclaim at once their proximity. You must not expect to become proficient in discovering these indications without large experience and close application; then they will be to you as an open book that you may read as you run.

You should also become acquainted with the many varieties of food that this bird, not very fastidious as to diet, lives upon, as you will generally find him in the immediate neighborhood of his favorite dish in its season. Thus, in August and part of September, you will find them where berries are plenty, especially whortleberries and blackberries, for they are very fond of these. At the same time they take their daily rations of green herbage, consisting of tender leaves of many kinds, they also eat large quantities of grass, and season the whole with an infinite variety of insect life. A little later you will find them under the grape vines, and when the frost comes, and the acorns, chestnuts and beechnuts fall, you will be fortunate if you find them at all, for then they often take long journeys in search of their favorite food, and no matter how fresh the "trail" your dog will often be at fault, as they frequently take short flights, which is very reprehensible in them, as it leads to much vexation of spirit, and often the poor dog has to suffer in consequence. About the first of October, sometimes a little earlier, often later, occurs a very notable and curious episode in their life. This is called by some "running time" or "crazy time." Both are very appropriate, as they certainly run and fly in all directions, and have every appearance of being stark mad. At this season you will often read in the papers items about their flying against buildings or through a window, and many other queer antics that no sane bird would be guilty of. This season extends over a period of ten days to three or four weeks, during which time this proverbially uncertain bird is reasonably certain not to afford you much sport. Some writers tell you that this "spell" is caused by fear. "That the noise of the falling leaves fills their minds with apprehension, and in their imagination peoples the wooded aisles with foes innumerable." Now I don't believe this, for I have many a time seen these same "wooded aisles" pretty well sprinkled with deadly foes and have seen these same birds so deftly "sell out" the entire party that I cannot for a moment accept the proposition. I can also recall several seasons that entirely disprove this theory, as "running time" commenced, and in at least one instance, was over before the leaves began to fall. Nor do I believe that the all-wise Creator ever made such a mistake as this would appear to be. Just look at it a moment and see if it is rational that the God of nature should place these birds in their forest home and then implant in their breast a deadly fear at the fall of a leaf. A far more satisfactory solution of the problem to my mind is that this is a wise provision of the great ruler of the universe that this beautiful bird, when he arrives at maturity, shall seek a mate outside the family circle; that their descendants may not deteriorate through "inbreeding." I presume that I shall catch it for this, as many very able writers contend that inbreeding is not injurious. Now I abhor a newspaper controversy, and rather than bring on my devoted head their united wrath I will cheerfully admit that their inbred animals are just what they need, and I shall not try to induce them to part with them.

After a few hard frosts, our feathered friends who have been "so wildly roaming" begin to settle down to a more quiet life. You will now very often find them in moist alder runs, where the skunk cabbage grows in profusion, for they are very fond of the seeds of this highly flavored plant. They also eat with avidity the fruit of the common thorn, and occasionally they will visit the horders of grain fields where they are contiguous to their haunts and pick up the scattered grain. There are many other seeds and fruits that they often eat, as they are voracious feeders, and many things that are meat to them would be poison to us.

When the deep snows of winter cover the ground for weeks at a time, it may seem to you that they must suffer many a long fast, and perhaps perish of cold and hunger. Do not worry on their account, as they are abundantly able to take care of themselves, and when almost any other living thing would starve, they do not fail to find a bounteous repast whenever hunger calls. They eat the buds of several varieties of trees and shrubs, more particularly the different varieties of birch, poplar and apple. Some persons claim that they are very injurious to the apple tree. I have examined a great many birds in order to obtain light on this subject, and am fully satisfied that they very seldom touch the fruit buds, and as they only destroy the leaf buds, we can safely leave the tree to re-leaf itself.

It would be something unheard of to write an article on ruffed grouse and not devote a little space to their "drumming." Nearly every one has heard them, some favored ones have seen them in the act, and some, judging from their written descriptions, have not seen this peculiar performance.

It requires a vast amount of patience to creep up close enough to see an old cock grouse on his "drumming log," and nine times out of ten, when you do get close enough, there will be no bird there to see. If you should be so fortunate as to obtain an unobstructed view of him at his devotions, you will see him crouching, apparently asleep, close to the log, or stone, or perhaps the bare ground, as I have seen him in all these situations. Keep very quiet and you will soon see him raise up and shake himself together, as it were. His head will come up with many a jerk and twist, his feathers will each stand on end, and he will nearly double in size. His "ruff" will stand out, and his crest will be nearly erect. After a few preliminary steps, or rather struttings, he will suddenly erect himself to his full height and expand his wings to their greatest extent and bring them forcibly together, or nearly so, in front of his breast, making a sound similar to the boom of a distant gun. This is repeated at gradually lessening intervals until you cannot distinguish the strokes, and our friend looks like a bunch of feathers in a whirlwind. After his ecstasy is over he takes a general survey of the field, and generally subsides into the recumbent position in which we first found him, soon to repeat the performance, which he continues to do sometimes for hours. You will hear them drumming oftener in the early fall than at any other time, although I have heard them nearly every month in the year and at all hours of the day, and several times I have heard them late at night. The question is often asked, "Why do they do this?" Tell me why the cock crows and the turkey struts and wherefore the little birds sing, and then I will explain this to you.

A RARE BIRD AT CENTRAL PARK.

WE have at present on exhibition at the Central Park Menagerie for a short time, while in transitu for Europe, a specimen of the Megapodidae family—*Megapodius pritchardii*. This is the first specimen ever brought alive to this country, and will be the first living example of the species ever seen in Europe. It is a native of one of the East Indies, called Nina Fou or Proby Island, which is situated about half way between the Feejee and Samoan islands. The bird takes its name from Mr. W. T. Pritchard, who sent a skin to Europe in 1863. It is of a uniform blackish-brown color, cheeks and upper part of neck vermilion red, slightly festooned with small black plumes, bill bright yellow, tarsi and toes pale yellow, claws black; length from bill to end of tail about fourteen inches.

This is one of about twenty species that form the family of Megapodidae, so named from their large feet; a series of birds remarkable for the extraordinary contrivances resorted to by them to obtain the artificial heat necessary to hatch their eggs. They are found chiefly in the tropics, and inhabit dense forests and swamps generally in the vicinity of the sea beach. Some of them form mounds for the purpose of incubation, and hence are called mound-builders. The mound is composed partly of vegetable matter, which becomes rotten while the birds are engaged in laying their eggs, usually a period of two or three months. The materials used in the construction of these mounds, which sometimes reach to fourteen feet in height, with a circumference of 150 feet, are gathered by the birds, carrying a small quantity at a time in one of their large feet. In the middle of this mound, at various depths, from eighteen inches to several feet, the females deposit their eggs, some in the form of a circle, while others of a different species place them in an irregular manner. When all the eggs are deposited the centre is entirely covered in, and the mound raised several feet in the form of a cone. The heat produced by the fermentation of the vegetable matter is then retained within the mass, and brings the eggs to maturity. The Celestian megapode has a different mode of hatching its eggs. It is said to scratch out a hole in the rotten stump of an old tree, and there deposits its eggs, afterward covering them up with vegetable matter. Other members of this family burrow into the sand along the sea-shore to the depth of three or four feet, obliquely downward, and deposit their eggs at the bottom, afterward covering up the mouth of the hole, then trying to conceal its foot-marks leading thereto by scattering the sand about.

What is most remarkable about these birds is, that after all the trouble and care taken for the preservation of their eggs they should be so utterly indifferent to the fate of the young birds, leaving them to scratch their way out of whatever position the eggs were placed in, and take care of themselves afterward.

The exact period of incubation is not known. A Mr. Motley, writing from one of these islands, says: "Some eggs that had been buried in the sand for six weeks were found to contain merely the embryo of a chick as much advanced as a hen's egg hatched four days." Other eggs were brought to him, but he had no means of ascertaining how long they had been laid. He buried them in a box of sand about three feet deep, exposed to the weather, and at the end of three weeks a young bird came up, not downy, but covered with little shafts or pens ready to form feathers. One of the Malays employed by Mr. Motley saw it emerge, and said that it just shook off the sand and ran away so fast that it was with difficulty caught. On the next day, when Mr. M. saw it, it appeared to be about half grown. From the first it fed without hesitation, scratching up the earth like an old bird. Other birds afterward emerged in the same state.

The habits of the *Megapodius pritchardii* differ from the other species in some particulars. It scoops out its nest in the side of a little lake in the centre of the island, between one and two feet in depth, laying about forty eggs in the months of September and October. These eggs are very good eating, and are considered the property of the King or Chief of the island, and only by his permission can the birds or eggs be procured. In captivity it feeds on soaked bread, and

when it sleeps it places its bend on the back or interscapular region, covering it with the feathers. W. A. C.

SIXTH REPORT OF THE ZOOLOGICAL SOCIETY OF PHILADELPHIA.—Although with diminished receipts from admissions, thanks to greater thrift and economy the Philadelphia society is in an admirable condition. We have referred already to the decrease of visitors, and in studying the case of zoological societies in this country we are quite satisfied that they should be made independent of public patronage. The report of Mr. Arthur E. Brown, whose contributions have been published in our journal, is of a most interesting character. The exceedingly mild season may have, of course, in a certain measure, been the reason for the present excellent condition of the animals and the fractional loss. But a great deal may be attributed to the excellent care of the superintendent. Mr. Brown writes: "The estimated loss of the animals this year is about four per cent. on the value of the animals, a rate much lower than that of previous years, and which is believed to be as small a percentage of loss as has ever occurred in a garden of its character, and at the present time—the most trying season of the year—the collection is in a condition of health and vigor which it would be difficult to surpass. The collection, during the last season of 1877-78, has had added to it 237 mammals, 149 birds, 109 batrachians and 193 reptiles, making the total number of specimens now living in the garden 1,008, valued at some \$57,623. The following animals among many have been bred this year: Two Macaque monkeys, four common leopards, two black leopards, twelve dingoes, two coates, two capromys, one acouebey, one beaver, three deer, one zebu, Angora and Yemen goats, one Bactrian camel, two llamas, three kangaroos, etc., etc. One of the great items of expense has recently been diminished by feeding the animals on horse flesh. Crippled horses are purchased at a low cost, are slaughtered at the garden, and the skin, bone and refuse being sold, the cost of meat has been reduced to the lowest figure. The condition of the garden is admirable, all the improvements are of the most ornamental, lasting character, and Philadelphia may be truly proud of having the finest zoological collection in the country."

THE BIRDS OF CONNECTICUT.—All scientific work is, of course, praiseworthy, but that which is undertaken to fill some evident void, to supply some long-felt want in any department of science, merits our special approval. It is true that this is but another way of stating that, in science, judgment and common sense are as desirable as in the ordinary business of life, but the fact is too often overlooked, and therefore when a case is brought before us in which these qualities have been specially exercised, it is well to point it out and to emphasize it by a few words of notice. Such a case we have before us in a paper on the "Birds of Connecticut," by Mr. C. H. Merriam.

It is now thirty-five years since the last enumeration of the birds of that State appeared in the Rev. Mr. Linsley's "Catalogue of the Birds of Connecticut," and during this interval the advance in our knowledge of ornithology, though perhaps no greater than that in other branches of science, has been something marvelous. It was high time, then, that we should have some authoritative statement of the present ornithological standing of our neighboring State. Bird lists, more or less complete, of all her neighbors, had been published, but nothing had been heard from Connecticut. Yet, an inspection of Mr. Merriam's list shows us that nearly one-half the birds known to the United States are found in the territory, less than 4,700 square miles, included within her borders.

In preparing the present paper the author has relied for his facts, not alone on his own observations and on what had already been published, but has wisely drawn on the experience of all the ornithologists and collectors in the State, and has personally examined many of the collections. The list, notwithstanding its modest title, is thus a very complete résumé of our knowledge of Connecticut birds up to the date of its publication. It contains 291 species, several of which are new to the State. Among the rarer birds we may mention: *Polioptila cerulea*, *Parus hudsonius*, *Dendroica cerulea*, *D. dominica*, *Oporornis formosus*, *Mitulus forficatus*, *Empidonax acadicus*, *Nauclerus forficatus*, *Ibis alba*, *Ardea herodias*, *Porzana americana*, *Tachypterus alaudinus*, *Stercorarius buffoni*, *Sterna fuliginosa*, and others.

The special lists, which are appended to the paper of which we write, giving in tabular form the residents, summer and winter visitors, etc., add greatly to the value of Mr. Merriam's list, which is, in truth, a model of its kind. We should add that this notice, prepared immediately after the publication of the list, was unfortunately mislaid, and has been overlooked until the present time.

CARDINAL GROSBEEK (*Cardinalis virginianus*) IN NOVA SCOTIA IN WINTER.—Observing a note in your Natural History column, headed "A Cardinal Grosbeak in Central Park," stating that the writer had seen one of these birds in that locality on the 17th March, and expressing his surprise at the occurrence, I may mention that a pair of these birds were found in the spruce woods at Point Pleasant, near this city, on the last day of January, 1871. The male bird was preserved by Mr. T. J. Egan, our local taxidermist, and its perfect plumage precluded the idea of its having escaped from confinement. J. MATTHEW JONES.

Hatfield, N. S.

[This note is of unusual interest, as this is the northernmost locality on record for the species, we believe.—Ed.]

A PLAGUE OF FIELD MICE.—Mr. Stab, corresponding member of the Society of Arts, at Smyrna, reports that the plague of field mice, or rats, has again broken loose, and that they are wasting the fields far and wide, digging up the seed-corn, and devouring all they can. This is the plague from which Homer records that Apollo Smythius delivered the Greeks. As the Smythian Apollo no longer has believers, Mr. Stab wishes to know what remedy can be recommended.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, MAY 7, INCLUSIVE.—One pinche monkey, *Mitis edulis*, presented; one Virginia deer, *C. virginiana*, born in garden; one great kangaroo, *Macropus giganteus*, born in garden; one spotted sandpiper, *Tringoides macularius*, presented; two chimpanzees, *Troglodytes niger*, purchased; two gray foxes, *V. virginiana*, presented; one zebu, *Bos indicus*, born in garden; one lizard, *Holbrookia maculata*, presented; one lizard, *Crotaphytus coldrii*, presented; two Carolina parakeets, *Conurus carolinensis*, presented. ARTHUR E. BROWN, Gen'l Supt.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEQ. N. Y. HORTICULTURAL SOCIETY.

THE FLOWER GARDEN.

SUMMER is approaching, we are fixing up our gardens and what to plant and how to plant it is giving us some concern. At present fashion decides greatly in favor of "foliage" plants, that is, plants as Coleuses, Achyranthuses, Alternantheras, Centaureas, and the like, whose leaves and not their flowers are the main attraction. As edgings or otherwise sparingly used, such subjects are welcome on account of their aptness and contrast, but as the main composition of the flower garden we greatly prefer "flowering" plants. The oval, circular, diamond, square, and somewhat similar simply-shaped beds are decidedly superior for any purpose whatever to circuitously curved, acutely angled, or other intricately disposed shapes; for not only can the mowery plow around them easily, but they are much more readily filled to advantage, and when full, far prettier and more satisfactory than they could be in the other case. If we want a star-pattern, the same can be designed in a circle better than in a star-shaped bed, as can also almost any other design. A multitude of little beds either in proximity or spread about are an annoyance, as they admit of only a few—perhaps only two—kinds of plants being used in each of them, and even then look crowded. Goodly-sized beds when practicable are always advisable, with, of course, as place and taste may demand, a few smaller ones. Flower beds are prettier when displayed on grass than when intervened by gravel paths; but we cannot deprecate too strongly the mutilation of a croquet green or handsome sweep of lawn by their presence.

In planting the flower beds, no matter what design be used it should be clearly defined and as vivid in outline when seen from a distance as when close by. Complicated patterns should be avoided unless the ability to execute them be masterly, and the material used in their composition be choicely and suitable, and at no time will they be neglected as regards pinching into shape. In choice beds such transient material as Lobelias, or stunglers as Petunias had better not be used. Heliotropes and Verbenas too are such wide wanderers that they had better fill beds by themselves, being bordered with white or yellow. We like a border to every flower bed, but we cannot recommend ribboned flower beds, we prefer masses and panels.

It would be difficult to recommend what to plant in the flower garden, as the plants at our disposal may vary so much, and each of us will want to utilize our nurseries of the window, cellar, frame or greenhouse, but we append a few examples that existed last year, and which looked pleasing enough: 1st. Circular bed—Verbenas venosa, violet-purple, and Plumbago larperata, deep blue, mixed, banded with variegated sweet Alyssum, white, and studded over with Vallota purpurea, scarlet; 2d. An oval bed of Heliotrope, banded with scarlet Pelargonium, and studded through with Gladioli and Tigridias; 3d. An oval, banded with Centaurea gymnocarpa, white, then a line of Coleus verscheffeltii (crimson), and massed in the centre with scarlet Pelargonium; 4th. A six-angled star, banded around with variegated Mesembryanthemum (cream color), centred with a large specimen of Centaurea gymnocarpa (white), from which belts of Alternanthera paronychioides (reddish) radiate to the six inner angle corners, like the spokes of a wheel, thus dividing the bed into six diamond panels. Nos. 1 and 4 (the opposite ones) of these panels contain Centaurea candidissima (white); 2 and 5, Kleinia repens (blue), and 3 and 6, Golden Feverfew; 5th. A corresponding bed with the last was banded with Alternanthera amena (red), divided with Achyranthus Lindenii (crimson), centred with Coleus verscheffeltii (crimson), and the panels filled, 1 and 4 with Black Douglas broeze Pelargonium, 2 and 5 with variegated Stevia (white), kept clipped, and 3 and 6 with Abutilon vexillarium variegatum, pegged and pinched.

Flower-beds, centred with Palms, green leaved Dracaenas, Boucarnias, and the like, we consider more preferable than the flat representations first referred to.

Neither do we like ribbon borders, because we cannot see beauty of arrangement in long belts of plants of one kind, and to mix up several kinds would be confusion. But the effect can be brightened and the monotony destroyed by converting the ribbon into a chain pattern, making every link a panel of some different kind of plant or plants. If one bright edging stretches from end to end, it will add richness and finish to the design. The following are a few ribbon borders that existed last year:

1. A wide border with grass verge in front and evergreen hedge at back: First line, Alternanthera amena, red; second, Kleinia repens, blueish; third, variegated Stevia, white; fourth, General Grant Pelargonium; fifth, Coleus verscheffeltii, with alternate plants of Gladioli; and sixth, a row of Dahlias alternated with Hollyhocks.

2. A long, wide bed on grass-lawn, and forming side boundary to garden of flower-beds: First, or middle line, double flowering scarlet Pelargonium, interplanted with Gladioli; second, a line on either side of Centaurea gymnocarpa; third, a row on either side of the last, of Achyranthus Lindenii; fourth, the outside or border on either side of Golden Feverfew.

3. A long, narrow bed on grass: First (central row), Centaurea gymnocarpa; second (on either side), Master Christine Pelargonium; third (outside line on both sides), Alternanthera paronychioides.

CARPET BEDDING has become quite popular of late years; a style introduced from Europe, and rather naïf for this country. It consists of scroll or checked pattern work, the rep-

resentation of crowns, monograms, or any other conceivable device, painted or woven, as it were, into flower beds, using for the purpose very dwarf-growing plants of different leaf colors. We have not many kinds of plants suitable for this purpose, and such as we have are so determined of growth, beyond bounds, that the amount of labor expended in rigid shearing and pinching is far too cheaply wasted. And the least neglect murders the desired end, for if the limbs or leaves of the different plants intermingle, they will obliterate the pattern, and nonsensical confusion will reign. Besides, we question the beauty that can be presented in the closely-shaven components. For this purpose are used Alternantheras of sorts, Echeverias, Sempervivums, Kleinias, variegated Mesembryanthemum, Sweet Alyssum, Solanum, Stevia and Salum; Santolinas, Feverfew, Antennarias, and the like.

In England the Lobelias play an important part in carpet bedding, but they succumb before our summer's sun; therefore, the best reliable blue we have is the Kleinia repens.

SCROLL BEDS are more or less patronized in all pretentious gardens, and they are often so compiled by interlacement of Alternantheras, Feverfew, etc., scolloped and painted, as to aim at a compound purpose—carpet—succulent beds. They are usually banded, terraced, towered and turreted, and contorted beyond any conceivable idea of art or imitation of nature. The amount of Echeverias and House-leeks alone this idiosyncrasy requires is immense. But "succulents" are admirably adapted for summer gardening, as they grow so thriftily, look so fresh and withstand heat and drought so bravely.

But the most ludicrous notion we ever saw portrayed in a garden we saw in the garden of a wealthy Massachusetts gentleman last year. His "Echeveria garden" was a specialty, and, though quite extensive, contained little else than the commoner Echeverias so arranged as to represent scroll-beds, whose flat-deadness was brilliantized by inter-panels and scrolls of chopped brickbats for red, mired blue glazes for blue, and pounded crockery for white! In succulent beds all kinds of Echeverias, Sempervivums, Opuntias, Agaves, Cactuses and similar fleshy and fleshy-leaved plants are used.

Mixed Borders are so styled on account of the nature and distribution of their contents, and without, they are perhaps the most satisfactory. Into them we plant all odds and ends, flowering and foliage plants, and though as autumn advances the inmates may show one another for room, a little forethought at planting time may prevent all that. For instance, near rank-growing plants, like Cannas, Castor-beans, Abutilons, Tobaccos and Eucalyptus, we should place such plants as bloom early and are soon past, so that they may be crased as their mighty neighbors advance; and Pelargoniums, Vincas, Lantanas and other continuous bloomers should occupy the central and opener places. This is the place where plants can grow unchecked. Fuchsias can bloom to their utmost; so can Abutilons, and we can afford to wait for the Grape Myrtle, Lespedeza bicolor, Lemon-scented Verbena, and other subjects we wintered in the cellar. And, too, it is often a permanent border, with a selection of hardy shrubs, as Dentsias, Forsythias, Lilacs, Spiraeas, Japan Quinces, Bladder-Seena, Tamarix, Fringe Tree, Altheas and Roses, that yield a succession of blossoms all the summer through.

SUBTROPICAL GARDENING is the mixing of strong-growing, handsome leaved plants, so as to give a tropical, rather than a painted effect; and where tastefully done in a roomy and sheltered situation, the result is highly pleasing. There is no formality in the way of rigid lines, clipped leaves, or monotonous masses, but the Banana, Bamboo, Egyptian Paper Reed, Palm, India-rubber tree, and similar material are blended happily together, each having room to revel in luxuriance. This exuberance of leaves requires some enlivening brightness, and as Pelargoniums, Verbenas and the like, in their commonness, would be more prejudicial than beneficial, we prefer the introduction of Tritonias of different kinds near the outer edge, and a border of Plumbago larperata, deep blue, studded at intervals of two feet with Vallota purpurea, scarlet-red, or any other conspicuously brilliant blossomed plants, that are somewhat uncommon, may be used. We often see tall Opuntias, Century Plants, Cactuses, and other succulents employed in this kind of gardening, particularly as edgings, and diversified along the margin of the beds, but they are woefully out of place. The idea of a Cactus and a Bamboo growing side by side is like hunting deer in the Atlantic Ocean or catching salmon on the Illinois prairies!

Besides those mentioned, among the plants suitable for sub-tropical gardening are Cannas, plain-leaved Caladiums, Yuccas, Acaem lophantha, Castor Beans, Abutilons, Dracaenas, Eucalyptus, Nicotiana glauca, some of the most ornamental Solanums as robusta and marginale, Acalypha triepolor, Brythina of sorts, Monarda deliciosa, Arundo, Ferrula in variety, Arisa Japonica and papyrifera, Acanthus latifolius, etc. Many hardy plants are just as serviceable as tender ones—young plants of the Kentucky coffee tree, Spikenard, Hercules' club, Rhus glabra lucinaria, Boconia cordata, Statice latifolia and others. An interesting part of this kind of gardening is the isolation of specimen plants on the lawns, in sheltered nooks, or in groves under the trees. If it be not desirable to turn Bananas, Palms, Cycads, Strelitzias and the like out of their pots, holes may be dug in the grass, deep enough in which to sink the pots out of sight, replacing the turf again, and thus they will appear as in reality they were growing permanently there. In sheltered shady places, Ferns and the shade-loving plants may be introduced. Pampas grass, and the variegated and zebra Eulalias we prefer as isolated specimens rather than clumped together with other plants. W. FALCONER.

Botanic Gardens, Cambridge, Mass.

BEES AFLOAT.—The New Orleans Picayune has an account of a bee keeper who means to take the cream de la cream of the sweets of the spring, summer and autumn flowers:

At the foot of Burdett street, Carrollton, Mr. C. O. Perrine, of Chicago, has fitted up two barges as a floating apiary. Each barge has a capacity and convenience for 1,000 hives of bees. These will be towed up to Kennerlyville next week. They will start up the river with about 1,000 colonies on the two boats. Mr. Perrine has been in Louisiana eighteen months studying up the bee business and preparing for the grand onward movement for which he will be ready in a few days. His plan is to start with his bee palaces and his 1,000 colonies from Southern Louisiana when the honey flowers are in full bloom, to remain but a day or two at a landing, and move up each time to another landing and a fresh field. He thinks the bees of from 1,000 to 2,000 colonies will take the cream from the country around the landing from one to two miles distant in one or two days. In this manner he expects to move up the Mississippi to St. Paul, a distance of nearly two thousand miles, where he will arrive about the last of July. Returning, he will halt about two months somewhere above St. Louis, and will reach Louisiana with his palaces and bees in October.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, and of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 14, 15, 16 and 17. Dr. W. Seward Webb, Secretary.

THE NEW YORK BENCH SHOW.

WESTMINSTER KENNEL CLUB.

The Second Annual Bench Show of Dogs now in progress at Gilmore's Garden, this city, is entirely successful, in many respects superior to that of last year. The entries numbered one thousand and two, nearly all of which were in their places at the opening, Tuesday. The sporting classes, as may be learned from summary of entries, are well represented, and the display of non-sporting dogs is especially fine. Dog-fanciers and non-fanciers may all find something to call forth their admiration, and the thousands of people who are hourly pressing into the Garden attest the very general interest in canine matters. We doubt if even the "Bench Show of Intellect," suggested by the *World*, and in which it is proposed to exhibit all classes of poets and literary people in general, would call forth more interested, aristocratic or cultured throngs than the dog show audiences. As we go to press so early, we shall not attempt to particularize as to the merits and faults of the exhibition. We can only in this very general way congratulate the managers of the Westminster Kennel Club upon the success of their efforts.

Below we present the list of awards so far as adjudged at this time:

AWARDS.

Class 1—F N Owen's Major, 1st; P C Hewitt's Hereward, 2d; C W Norton's Boss, 3d; S P Shaw's Turk, C.
Class 2—F R Appleton's Juno, 1st.
Class 3—Le Roy Z Collins' Barry, 1st; A A Kingsland's Hans, 2d.
Class 4—Le Roy Z Collins' Nera, 1st.
Class 5—Miss Charlotte Pearsall's Fido, 1st; John P Haines' Don, 2d; E S Coe's Monk, 3d.
Class 6—No prize awarded.
Class 7—Frank Harris' Jack, 1st; J Springstead, Jr.'s, Fleet, 2d; C B DeKlyn's Jip, 3d.
Class 8—J W Jones' Bruce, 1st; E Bolinius' Guido, 2d; Al Watt's Norn, 3d; J P Weissman's Lion, H. C.
Class 9—Hall, Blair & Co's Guess, 1st; Mr Barber's Prince, 2d; W A Haines, Jr.'s, Max, 3d; Edmond Randolph's Frolic and Baron von Dalwig's Lulu, V h c; H W Livingston's Charlie, John Robinson's Hudibras, and W C Gulliver's Flora McFlimsey, H. C.
Class 10—Miss Barlow's Maida, 1st; Paul Dana's Loki, 2d.
Class 11—George C Colburn's Trumps, prize.
Class 12—J Weighall's Belle, prize; A E Godeffroy's Beauty, V h c.
Class 13—A C Mudge's Sam, 1st; T F Taylor's Turk, 2d; A F Copeland's Rake, 3d; W A Haines, Jr.'s, Regent, V h c; J Van Bockkerck's Wallace, H. C.
Class 14—A F Copeland's Nellie, 1st; L Curtis' Bess, 2d; James R Tilley's Grace, 3d; Fisher & Bickerton's Border Lilly, V h c; N B Martin's Rose, H. C.
Class 15—C Wisner's St Laurent, 1st; W J G Bearn's Don, 2d.
Class 16—C Wisner's Island Belle, 1st.
Class 17—Dr S F Speir's Jasper, 1st; Dr S F Speir's Buckingham, 2d.
Class 18—Dr S F Speir's Jaquette, 1st; D G Hart's Belle, 2d; C Wray's Cosette, H. C.
Class 19—St Louis Kennel Club's Berkley, prize; W N Callender's Rory O'More, V h c; B Bacheller's Duke, Jr, and Campbell Steward's Duke, H. C.
Class 20—St Louis Kennel Club's Loo II, prize; J Weighall's Breeze, H. C.
Class 21—Lincoln & Hellyar's Dash, 1st; W R Hobart's Boss, 2d; H Le Grand Cannon's Gny, 3d; John Fottler, Jr.'s, Red Hugh, A Bassford's Sunday Lawrence, T A Jerome's Moody, V h c; W C Harding's Barney Williams, H. C.
Class 22—Lincoln & Hellyar's Flora, 1st; M Seagar's Mag, 2d; Max Wenzel's Doo, 3d; H De W Smith's Fanny, Fisher & Bickerton's Belle Meade, S N White's Lady II and Everett Smith's Cora II, H. C; H Hunecke's Flora, C.
Class 23—C E Ketchum's Red Dick, 1st; Rev W Maginnis' Tara, 2d; C H Smith's Countess of Sligo, V h c.
Class 24—C L Ketchum's Red Gyp, 1st; Fisher & Bickerton's Primrose, 2d; V Miley's Nellie, V h c.
Class 25—E Lohman's Erwin, 1st; M Seagar's Jack, 2d.
Class 26—E Lohman's Quail III, 1st; M Seagar's Beauty, 2d.
Class 27—G G Hammond's Rose, 1st; G G Hammond's Ruby, 2d.
Class 28—G W Landenberger's Fury and Vixen, 1st; M Wood- en's Rover and Driver, 2d; G W Landenberger's Rattler and Chimera, 3d; G W Landenberger's Fury and Vixen, I Weighall's Joe and Mate, and Queens County Hunt's Nimrod and Crafty, V h c; Queens County Hunt's Regulate and Governess, G F Kel- ler's Sport and Lead, and I Weighall's Mack and Mate, H. C; L M Wood- en's Reno and Mate, C.
Class 29—I Weighall's Sport and Mate 1st; Queens County Hunt's Bouncer and Graceful, 2d.
Class 30—A F de Navarro's Bruno, 2d.
Class 31—W H Goetting's Walomann, 1st; G W Landenberger's Waldmann, 2d; T B Allen's Duke, 3d.
Class 32—T B Allen's Cora, 1st; W H Goetting's Waldina 2d.
Class 33—A Newbold Morris' Gamester, 1st; Dean Sago's Guy, 2d.
Class 34—C Walton's Tricksey, 1st; C Walton's Young Mettle, 2d; E M Talbot's Beauty, 3d; W S Wood's Beauty, C.
Class 35—J H Elliott's Nibs, 1st; E M Talbot's Flash, 2d; E M Talbot's Don, H. C; F Gebhard's Jack, C.
Class 36—J H Elliott's Pix, 1st; F Gebhard's Fannie, 2d.
Class 37—E M Goring's Fannie, 1st; F Pidgeon's Spot, 2d.
Class 38—D P Foster's Ben, 1st; G G Haven's Duke, 2d; W P Douglas' Cobler, 3d; D P Foster's Jenny, H. C.
Class 39—W Fanchaw's Victor, 1st; J G Coster's Lily, 2d; J G Coster's Spider, 3d; C Wolliffe's Prince, V h c; T Salmon's Nellie, H. C; C H Hays' Lad, C.
Class 40—Mrs F Neilson's Martha, 1st.
Class 41—R McLeellan's Tom, 1st; H Bamber's Tatters, 2d, W A Conklin's Brandy, V h c; Miss Breeze's Britton, H. C.

Class 77—Lloyd Aspinwall, Jr.'s, Puffy, 1st; E Brown's Wasp, 2d; T Kaalgher's Topsy, V h c; J Chipman's Rose, H. C.

" D—Best pointer dog, any weight, to be shown with two of his get.....	1
" E—Best pointer bitch, any weight, to be shown with two of her progeny.....	6
" F—Best pointer puppy under 12 mos old, dog or bitch.....	5
" G—Best setter dog of any strain bred in the United States from native parents.....	12
" H—Best setter bitch of any strain bred in the United States from native parents.....	7
" I—Best English setter bred in the United States.....	18
" J—Best English setter dog, to be shown with two, and only two, of his get.....	4
" K—Best English setter bitch, to be shown with two, and only two, of her progeny.....	3
" L—Best red or red and white setter dog, to be shown with two, and only two, of his get.....	3
" M—Best red or red and white setter bitch, to be shown with two, and only two, of her progeny.....	4
" N—Best black and tan setter dog, to be shown with two, and only two, of his get.....	2
" O—Best black and tan setter bitch, to be shown with two, and only two, of her progeny.....	3
" P—Best display of foxhounds, consisting of not less than three couples.....	20
" Q—Best mastiff, dog, bitch, or puppy.....	2
" R—Best St. Bernard, smooth-coated or rough-coated, dog, bitch, or puppy.....	7
" S—Best cocker spaniel, dog, bitch, or puppy.....	7
" T—Best fox terrier, dog, bitch, or puppy.....	15
" U—Best bull terrier, dog, bitch, or puppy.....	8
" V—Best Yorkshire blue and tan terrier, dog, bitch, or puppy.....	14
" W—Best pug, dog, bitch or puppy.....	10
" Y—Best collie dog.....	6
" X—Best pair of Japanese spaniels.....	2
" Z—Best Japanese spaniel.....	4

A HISTORY OF BENJAMIN FRANKLIN.

This is not The Sage, the philosopher who, when wandering through Philadelphia streets with a hunk of bread in his hand, first fascinated the future Mrs. Franklin. Neither did the subject of this memoir *eripuit fulmen*, or do anything of the electrical kind. The Ben Franklin, whose truthful history we give (which story shows evidences of some one having a true love for animals), was only a dog, and a female at that. We trust that the FOREST AND STREAM AND ROD AND GUN will help to preserve the memory of an honest sea-dog, who served her country on the quarter deck, with occasional visits to the galley. Having prescribed for Ben Franklin, and having, perhaps, done something in restoring her to health, be owner was good enough to give us the particular story of a dog, which had visited the four quarters of the habitable globe.

Any European traveler with a love for a mild climate and fine scenery, beautiful drives and walks, a well stocked market and an abundance of what we would call hot-house flowers, obtainable at all seasons of the year for the most trifling sums, in fact a little paradise for all who have leisure to enjoy it, should spend a winter in Nice in the south of France. It is generally the winter resort of the European squadron of the American navy, for the reason that one of the finest and safest harbors in the Mediterranean, that of Ville Franche, lies about three miles distant.

Here commenced the history of a dog, ranking no higher in birth than other curs that roam the streets, and possessing no extraordinary beauty of form or color, yet whose life of ease and comfort, travel and romance may well be envied by all dogs less lucky, whether they walk on two legs or four. Destined to travel to the four continents, to be petted and loved by hundreds of human beings, fed on the choicest diet, and allowed liberties unheard of in the pursuance of the slightest whim, one is tempted to wonder that the recipient of all these favors first met the view of her benefactors as a little, mangy, shivering pup in the pocket of a drunken sailor. Yet such is the fact, though it is evident that even under such disreputable appearances there lurked tokens of a higher destiny. When this unseemly object first appeared upon the neat deck of the flag-ship Franklin, the order was given to throw her overboard, for alas! her appearance almost justified the act; but, with a quick perception of her fate, the puppy rallied her sinking forces, sprang to the feet of one of the officers, and with a comical wag of her stumpy tail and a pathetic glance of her eye, so worked upon his feelings that her life was spared.

And now her palmy days began. She constantly gave evidence of great intelligence and a winning disposition, and, as any amusement is bailed with delight in the monotonous routine of ship life, she daily obtained a firmer hold upon the hearts and time of the inmates of the frigate. Under the doctor's care her loathsome mange disappeared and glossy, brindle-colored hair covered her little body, now grown plump with dainty food. She no longer shivered with the cold nor feared a watery grave, for Benjamin Franklin, as she was named, in honor of the ship, was now the pampered favorite of all, from captain to messenger boy.

No place was too good for Ben, when after her morning bath she desired a warm nook to rest in. Her choice generally fell upon the berths where some of her favorites were sleeping, and to them she would go wet and dripping, always certain that she would be lifted into the bed and covered snugly with a blanket so soon as the occupant felt the tap of her paw and saw her pleading eyes. Nor was she ungrateful for the favors she received. Docile, tractable and affectionate, and gifted with rare amiability of temper, she bore teasing with equanimity, acquired with ease many curious tricks, exhibited for her friends the most ardent attachment, and contrived to interest and amuse the most indifferent.

One young officer, whose name will always be associated with Ben, took her particularly under his care. She slept on his bed, cat from his hand and followed him about so continually that the two were rarely seen apart. Ben's kind friend has made his last voyage long ere this. Far from home and in the midst of strangers he breathed his last. He was a young officer of great promise, and more than usually beloved by his comrades; but he would not have scorned the sorrow of his little favorite had he seen her wandering in an aimless way about the deck, showing her grief so plainly that the Captain took compassion upon her and admitted her within the sacred precincts of the cabin.

To the Captain then, Ben gave the rest of her heart, and from that time she came to be considered as his property, yet she did not forget her former friends. Her visits to them were frequent, and though the inducements held out to her palate may have been the strongest attractions to her constancy (for Ben's capacity for dainties is unsatiable) still she had many winning and almost human ways of exhibiting her gratitude and affection that left no doubt that her heart was in the right place. Her intelligence often caused the greatest surprise. She had learned that every day at half-past three o'clock a portion of the dinner for the crew was brought to the mast to be inspected by the officer of the deck. On this occasion a morsel of food was always tossed to Ben, who never failed at the appointed time to walk gravely to the place, although the bell striking seven (ship time) was the only guide she had to the hour.

She also developed an ear for music. The order to lower the boats of the frigate from the davits to the water preparatory to going on shore, was always given in music. That is, each boat was known by a different tune, and each crew upon listening to the bugler knew without further orders which boat was to be manned. Ben very soon discovered the meaning of these tunes, and not only learned to connect them with the idea of going on shore, but contrived to distinguish one tune from another. She knew the tune played for the wardroom boat and for that of the Captain, for in these two boats she was accustomed to be taken on shore, and she never made a mistake in the matter. Often three or four boats have been called away while every art was used in the hope of deceiving her, but she would lie perfectly quiet until she heard the notes for which she was listening, when she would exhibit the greatest excitement and bark and leap upon her friends in the endeavor to show them her desire for a walk on shore, a pleasure which she greatly enjoyed.

Ben was always fond of play, and even now, although four years old, she is not averse to a romp. In those days ten or twelve sailors would get upon lands and kneel upon the deck while Ben, at a given signal, would leap over every man in the line and then return in the same way back to the starting place. She is very fond of being given a handkerchief, a

stiek, or better still, a rubber ball, and then having some one chase her about in the endeavor to get it again. She will ask for this game in the most knowing manner by a droll glance of her eye while the object is held in her mouth provokingly near some one, assuming at the same time the attitude of a child who says: "Catch me if you can."

She eats oranges and enjoys them. If an orange be thrown to her she will catch it in her mouth, then with her teeth remove sufficient of the peel to make a large hole from which she will suck the juice, forcing it out at the same time with her fore paws.

Whenever there was an entertainment on board the Franklin Ben was "dressed up," submitting apparently with pleasure to her decorations. Bright ribbons were tied about her body and a white shirt collar and cravat were placed upon her neck which gave her a most ludicrous appearance. She was then presented to the company and told to "sing." Her singing consisted of a singular whining noise ranging through all the notes of the gamut, and executed while she sat upon her hind legs. This performance was always greeted with shouts of laughter from her audience. Her voice is not now so clear as it once was, and she will only sing under protest, although she has not lost the art by any means. Ben's life has not been free from misfortune. She once fell through a hatchway and broke her leg, at another time her foot was terribly crushed, her teeth have been worn off in the effort to carry about huge stones which is one of her favorite pastimes, and she is now suffering from some disease which it was feared was paralysis, but from which she is slowly recovering. She remained for two years on board of the frigate Franklin visiting many lands of classic and historical fame. She has seen strange sights and curious people, and has stood in the presence of emperors and kings. She has even had the privilege of displaying some of her talents before the illustrious Mr. Tweed, of Tammany fame, during his homeward bound voyage from Spain; but in spite of all this greatness Ben is not spoiled, and although sick and well nigh helpless, she is still loved and cared for and still retains the reputation of being one of the most fascinating dogs in the world.

THE LINDSAY KENNEL.

BROOKLYN, May 2, 1878.

EDITOR FOREST AND STREAM:

Last week while in Scranton, Pa., I had the pleasure of calling upon Mr. R. M. Lindsay, of Green Ridge, who is the proprietor of one of the finest kennels of sporting dogs in Northern Pennsylvania. Mr. Lindsay is a true Scotchman, frank and open-handed, and to a sportsman he delights in showing up his stock. Mr. Lindsay apologized for his kennel, but not for his dogs. It was not necessary, for this kennel—while not a large one—embraces some stock not found every day. After opening the gate the first dogs that attracted our attention were a brace of fine lemon and white pointers. Upon further inquiry we found them to be celebrities, no less than Vice Count and Dolly. Vice Count is too well known for me to give a lengthy description here. Certainly he is a beautiful specimen of the pointer dog; strong in limb and very compactly built, with an eye full of intelligence and a chest which denotes ample lung room. Probably the weakest point in this dog is his head, which is too old-fashioned, quite broad and if anything too fat.

"Vice Count," said Mr. Lindsay, "is four years old. He was imported by Arnold Burges, and shows a record of sixteen prizes in England. He is by the celebrated pointer Sultan out of Pride. Vice Count took second prize in the open class, and was very highly commended at St. Louis in 1878." In my estimation the finest animal in the Lindsay kennel is Dolly, a young pointer recently imported to match Vice Count. Dolly, to my notion, is one of the most compact and practically built dogs I ever saw. She is lemon and white, very evenly marked, "clean cut" and well set upon her feet. She has powerful shoulders, a head that is almost faultless, lean and long in the muzzle, ears as soft as silk and set well down, and an eye that seems to almost speak. Said Mr. Lindsay, "Dolly was imported by me in January last, and is now about twenty months old. She is by champion Romp out of Prescott's June. She has won four prizes in England, and at St. Louis ('78) received the V. H. C., in the champions, and second prize in the open class." Mr. Lindsay has entered Dolly and Vice Count in the Westminster Kennel Club Show for 1878.

Passing on we came to imported Dash, a red Irish setter, and a great favorite with Mr. Lindsay. Dash is by Hutchings' Boh, out of Fan. In color he is perfect, but in head I think quite imperfect. Dash received the V. H. C. at New York, 1877, and will probably be again exhibited at the coming show. We were next shown Creena, a red Irish bitch imported by Mr. Jarvis, of Clermont, N. H. Creena in stature is, if anything, a little under size, of good disposition and in color fair. She is by champion Basto out of Lill II., and is two years four months old. Close by her is chained a splendid specimen of her get, by name Victor. "This dog Victor," said Mr. Lindsay, "I consider one of the most promising in my kennel. You will notice that in time his color will be superb, and his general make up about right. Victor is but eleven months old, by my imported Dash, out of Creena. He has seen but little of game, but is very knowing for his age. I have just entered him in the coming show at New York." To describe each and every dog in Mr. Lindsay's kennel would be taking up too much of your valuable space, and had better stop here. Before closing, let me say to those who are interested in fine sporting dogs that if ever they should happen to be in the vicinity of Scranton to give Mr. Lindsay a call. He will be glad to see you, and can show you not only dogs, but fancy chickens, pigeons, borses, and, besides, a lovely home. You will be welcomed at his house by the plaintive voices of twenty-two dogs and a general commotion in the chicken family. For this very enjoyable call I am indebted to Mr. Dewar, of Scranton, who is the happy possessor of Scamp, a fine liver-and-white dog, by Raymond's Pride of the Border, out of Dimity. CLINT. WISNER.

MINNESOTA KENNEL CLUB.—This club is decidedly a State institution, and all the prominent sportsmen in the State are interested in the movement. The following are the officers: B. Baupre, Pres.; H. H. Sibley and some eleven other well-known gentlemen of Iowa Vice-Presidents, with W. S. Timberlake, Secretary and Treasurer. The Executive Committee is a most efficient one. The show will take place at St. Pauls,

Minn., on the 2d, 3d, 4th, 5th, 6th and 7th of September next, Mr. G. Lincoln acting as superintendent. Between the New York show and the one to be held at St. Pauls, there will be time enough to renew interest in bench shows.

A FAITHFUL DOG.—A Canadian at Pembroke, Ottawa, who broke through the ice last month, remained struggling at the edge of the ice for nearly an hour. After this long delay, and when help was near at hand, the ice gave way. As he sank under the ice, his faithful dog who had been all the time whining piteously at his distressed master, plunged after him and was seen no more till dragged out of the river with the body of the unfortunate man.

NAMES CLAIMED.—Hornersville, May 12, 1878.—Mr. J. Otis Fellows claims the name of Queen Ruby for his Irish setter Gyp, red and white. Imported *in utero* from Ballymena, Ireland. Whelped Feb. 16, 1878.

VISITS.—Philadelphia Pa.—T. C. Steel's orange and white setter bitch "Zill" visited Major Brown's dog "Grouse" May 8. "Grouse" was a first prize at the Philadelphia Dog Show Nov. last, and is entered at Westminster Kennel Club Bench Show.

WHELPS.—Newark Lodge Kennels.—Mr. A. E. Goddard's Beauty, black and tan setter, whelped May 5, by red setter Frank.

DEATH OF DRAKE.—Mr. R. J. Lloyd Price's wonderful pointer dog Drake is dead. Drake's performance in the field have been celebrated the world over. Admirable himself, his progeny have not been, perhaps, always equal to the sire.

—The pointer Flake has a well-written obituary, which we shall print next week.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—Game—Wilson snipe, per doz., \$3.00; plover, \$2.50; bay birds, large, \$3.00; small, 25; wild pigeons, flights, \$1; do., stall fed, \$1.75; Philadelphia squabs, \$2.50; wild do., 75 cents.

Poultry.—Philadelphia and Bucks County dry picked chickens, per pound, 25 cents; do., fowls, 18; do., turkeys, 18; do., ducks, 20; State and Western chickens, 18; do., turkeys, 15; do., fowls, 15; do., ducks, 18; spring chickens, 40.

FOREST AND STREAM AND ROD AND GUN MEDAL.

The above is the gold medal presented by this journal to the person making the best score in the first three matches of the New York State Sportsmen's Association, and is mentioned in another column.

NEW YORK.—Kingston, May 7.—George Van Voorhis shot a wild cat on Buntion Point one day last week. Joe Bennet, of Saugerties, shot a black bear near the Gverlook Mountain on Wednesday last. It weighed 200 pounds.

GUR HARRY.

BROOKLYN GUN CLUB.—This flourishing club, of which Dr. Aten is the efficient president, has just completed its new club rooms, fitted up in the most approved style for the comfort of its members.

SHOOTING AT SHELTER ISLAND.—The spring fowl shooting on the east coast of Long Island is now over, and the birds have taken their flight for their northern breeding places, far away in the Northeast, and this year their migration has taken place much earlier than usual. Vast numbers of coot have remained in these waters throughout the winter months, chiefly in Gardiner and Peconic Bays, and on the eastern shore of Shelter Island. Great numbers of them have been killed by batteries, which is the only effectual mode of taking them, as it is difficult to approach them with sailing boat, and they are too wary to fly past a point of the shore within reach of the ambushed gunner. So numerous have they been on the eastern flats of Shelter Island, within half a mile of my window, that it has been common for a fowler to obtain as many as sixty fowl in a few hours' sport. But all these myriads have departed five weeks since, to be succeeded for a few days by the migratory flocks who have wintered in southern waters. The sheldrakes were the last to leave, but they have not been as numerous in former years. The spring months have been so mild that those fowl, instead of lingering a few weeks along those shores, have prematurely winged their way Northward, to Labrador and other favorite haunts, there to remain to hatch out and rear their young broods, to return again hither in October. The geese also have been early in their flight, and have not afforded much sport this spring, though Bill Lane and others have had some good sport in Shinnecock Bay. Montauk, once so beloved of fowlers, no longer maintains its reputation, and but few ducks and geese are now found there. The Great Pond there, once the haunt of thousands of geese, has been opened by eiders to the salt tides, and the succulent fresh grasses have been thereby killed out, and there is no longer feed for fowl or sport for gunner. Still, there is in some years good sport there with the plover, over the hill slopes and valleys of Montauk. We passed the months of August and September there last season, but the birds were scarce. ISAAC McLELLAN.

Shelter Island, May 7, 1878.

PENNSYLVANIA.—Pottsville, May 8.—A bald eagle was shot in this county the other day. It measured 7ft. 9in. from tip to tip of wings. DOM PIRONO.

Philadelphia, May 11.—A detailed trial of Sparks' chilled vs. soft shot is soon to be made in our city. Dr. Daniel Kassner and Mr. Charles S. Westcott will have charge of and superintend the arrangements. A number of prominent resident sportsmen will be invited to participate in the trial. The shells will be loaded under the immediate supervision of Mr. John Slier. Special targets will be used on the occasion, and so arranged as to eliminate as far as practicable all elements of chance. Mr. Thos. W. Sparks, the manufacturer, has recently added to his factory an entirely new set of machinery for sizing shot. It consists of a series of tables, admirably graded and adjusted, and so perfected in their working as to render it impossible for imperfect pellets to pass through the sieves. These improved tables are patented and are equally useful for soft and hard shot, consequently the manufacturer is not interested in the advancement of either, but is simply desirous of having a fair and impartial trial, feeling assured that in either event the general result will make a brilliant showing upon statistical tables for his improved shot. Your correspondent will forward a full report of trial. DOO.

MARYLAND.—Elkton, May 13.—Many woodcock have been found dead upon the railroad track, presumably killed by flying against the telegraph wires. These birds are more plenty than they have been for years, and the young ones are already three-fourths grown. J. T.

TEXAS.—Denton, April 4.—The mule ear or jack rabbit affords sport on our prairies. The average greyhound has to hump himself to gather him in. Plover have been plenty this spring, but very lean; a party of four of us drove out a couple of miles, and in three hours bagged an average of forty each: three breech-loaders and one muzzle-loader. The muzzle-loader, used by Dr. W. (of iron-grip cement notoriety), an old fogey of forty summers, knocked down more birds than his average; before that day's trip he was wavering a little in his views as to the merits of the breech-loader as compared to the muzzle-loader, but old broke-stock's performance that day settled the matter in his estimation, and he now hugs broke-stock and his other ancient theories to his bosom tighter than ever, and will never relax in his views until he reaches the "happy hunting grounds," where nothing but improved breech-loaders are used. Two buffalo hunting parties left here last fall for the buffalo regions, 250 miles west, and reliable reports have reached us that they are on their way home with big lots of hides and dried meat, the proceeds of which will pay them handsomely over and above their expenses. Comparatively few quail or chicken were slaughtered about here last winter, possibly owing to the mild weather. Next fall and winter we will make up for it if present indications for a big yield are verified. HENRY BOWNING.

ILLINOIS STATE SHOOT.—In the tournament of the Illinois State Sportsmen's Association at Chicago, June 1, the prizes of which have already been announced in our columns, only one day is taken up exclusively by the Illinois sportsmen. One of the pleasantest features of the meeting is the Strangers' Day, when there is an opportunity for the display of skill by experts from all portions of the country. There is also an occasion for the interchange of courtesies between sportsmen of different sections. Why can we not have something of this kind at the New York State convention? This is a Western wrinkle worth imitating.

AMENITIES TO SPORTSMEN IN THE INDIAN TERRITORY.—Those knights-errant who complain because they cannot overrun grain fields and fenced farms after game without a protest from the owner also bitterly denounce the Indian Nation as a close corporation, because hunting cannot be prosecuted without stint, let or hindrance over their Territory. For our own part we will readily champion the reds. We have hunted over their grounds and have been the recipients of their courtesies, just as we have been, and others may be, of the amenities of farmers who are liberal in bestowing privileges over their posted lands, when the privilege is respectfully asked. Below we give a letter from a near neighbor of the red men of the Nation, and are glad to receive such reliable testimony. We dismiss the complaints of those who denounce the Indians as arbitrary, and stand ready to defend the family of Lo as the best conservators of game in the region of game. The Indians destroy to use and utilize. The

—In a match, July 22, 1871, between the Monroe County club and the Forester Club, of Rochester, fifteen men to each club, the totals were: Monroe County Sportsmen's Club, 279; Forester Club, 260.

Brooklyn Driving Park, May 10.—Excelsior Club of Brooklyn, E. D.; pigeon shoot, H and T traps, 21 yds. rise:

Watts.....	0 0 0 1 0 0 0 1 0 1 0 1 3
Hedemann.....	1 1 1 1 1 1 1 0 1 1 1 1 9

Bodding.....	1 1 1 1 1 0-5
Baldwin.....	0 1 0 1 1 0-6
McMahon.....	0 1 0 1 1 0-6
Madison.....	1 1 0 1 1 0-5
Whitby.....	1 1 0 1 1 0-6
Bergen.....	1 1 0 1 1 0-6
Janney.....	1 1 0 1 1 0-5
Eddy.....	1 1 1 1 1 0-7

The club has sixty members, and recently held its annual meeting and elected Mr. C. Fish as President; Mr. A. Crook, Vice-President; Mr. A. P. Carolin, Secretary; Mr. H. G. Miller, Treasurer; and Messrs. H. Goodwin, W. Cleaver, J. Hanley, J. Randolph and Captain Hanson as Trustees.

JERSEY CITY HEIGHTS GUN CLUB.—Sweepstakes at wild birds, on May 8, at Jersey City, with the following result:

First Match—H and T traps, 18 yards rise, 80 yards boundary, usual rules.

Hughes.....	0 1 1 1 0 1 1 0 0 1 0 1 6
Baton.....	0 1 1 1 1 1 1 1 1 1 1 1 9
Bird J Coe.....	1 1 1 0 0 0 1 1 1 1 1 1 6
Levering.....	0 1 0 0 1 0 1 1 1 0 0 1 4
Heritage.....	0 1 0 0 0 1 1 1 1 1 1 1 6
Thomson.....	1 0 0 1 1 1 1 1 1 1 1 1 7
Burdett.....	1 1 0 1 0 0 0 1 1 1 1 1 6
Cummings.....	1 0 1 1 1 1 0 1 1 1 1 1 8
Quimby.....	1 1 0 1 0 1 1 1 1 1 1 1 6
Quimby.....	1 1 0 1 0 1 1 1 1 1 1 1 6
Remmy.....	0 1 1 0 1 0 1 1 1 1 1 1 6

Second Match—Five birds each, sweepstake, \$1 entrance, \$4 to first, \$3 to second, \$1 to third.

Remmy.....	0 1 0 1 1-3
Payne.....	0 1 0 1 0-2
Burdett.....	1 1 0 1 1-4
Hughes.....	0 1 0 0 0-1
Cummings.....	1 1 1 1 1-5
Baton.....	0 1 0 1 1-3
Cole.....	1 1 0 0 1-3
Thomson.....	1 1 0 1 1-4
Crouse.....	1 0 1 1 1-4

Third Match—Sweepstake, same terms, \$5 to first, \$4 to second, \$2 to third, \$1 to fourth.

Baton.....	1 1 1 1 1-5
Van Gelder.....	0 0 1 0 1-2
Remmy.....	1 1 0 0 0-2
Payne.....	1 0 1 1 1-4
W Toffey.....	1 0 0 0 0-1
Cummings.....	0 0 1 1 1-3
Thomson.....	1 1 1 1 1-5
Burdett.....	1 1 1 1 0-4
Quimby.....	1 1 0 1 1-4
Hughes.....	0 1 1 1 0-3
Cole.....	1 1 0 1 1-4

Eaton and Thomson divided first and second money, and Quimby, Cole, Payne, Burdett and Headden divided third money.

Fourth match; sweepstakes; same terms, \$6, \$4, \$3, \$1.

Thomson.....	1 1 1 1 0-4
Headden.....	1 1 0 1 1-4
Baton.....	1 1 1 1 1-5
Corbet.....	1 1 0 1 1-4
Cummings.....	1 0 0 1 0-2
W Toffey.....	1 1 0 1 1-4
Remmy.....	1 1 0 1 0-3
Burdett.....	1 1 1 1 1-5
Payne.....	1 0 1 1 0-3
Quimby.....	1 1 1 1 1-5
Hughes.....	0 1 1 0 1-3
Cole.....	1 1 0 1 1-4
Van Gelder.....	0 1 0 1 0-2
Heritage.....	1 1 1 1 1-5

Eaton, Burdett, Quimby, Cole and Heritage divided first money. Thomson, Headden, Corbet and Toffey, second. Other sweepstakes followed.

JERSEY CITY HEIGHTS GUN CLUB.—First competition, double ball badge. Grounds at Marion, N. J., May 11:

F M Thompson.....	15 yds.....10 01 10 10 00 01 10 10 00 10-2
J P M Richards.....	14 yds.....01 01 11 11 10 00 01 11 01 15
P W Levering.....	15 yds.....11 00 00 00 w
J B Burdett.....	15 yds.....00 00 10 00 00 10 w
F Cummings.....	16 yds.....00 00 00 11 10 11 11 10 01-17
A Heritage.....	18 yds.....10 11 11 10 11 11 11 11 01-19
Wm Hughes.....	17 yds.....10 10 11 11 11 11 11 11 10-17
J A Van Gelder.....	15 yds.....10 10 10 00 01 00 10 10 10-8

Match shot from one Bogardus and one Marshall trap, placed 10 yds. apart; both traps sprung at the same time.

Ties shot off at 3 pair balls.

A Heritage, 20 yds.....	10 10 11-4
Wm Hughes, 19 yds.....	11 01 11-4

NEWARK GUN CLUB.—Newark, N. J., May 13.—Twenty-five balls. Hobert, 16 yds., 19; Kay, 20 yds., 16; Leroy, 20 yds., 10; Cosier, 16 yds., 12; Van Volkenberg, 10 yds., 9; Decker, 12 yds., 15; Bruntall, 16 yds., 15; Sanger, 16 yds., 18; Duston, 12 yds., 21.

PALISADE GUN CLUB.—The formal opening of the Palisade Gun Club (West Hoboken) grounds will be held on Decoration Day. The grounds are situated on the West Hoboken commons, near the monastery; are 250 by 150 feet; the club house is fitted up with all facilities and conveniences. Amateur matches at glass balls will be shot on the day named and a full meeting is looked for. From New York the new grounds may be reached via the Barelay street or Christopher street ferries to Hoboken, thence Palisade avenue cars.

PENNSYLVANIA—Sharon, May 2.—Match; 18 yards; Paine's balls, Closson's trap; wind strong:

A E Carter.....	1 1 0 1 1-4
Jesse Reeves.....	1 0 0 0 0-1
H Crosthwaite.....	1 0 0 1 1-3

Second match:

A E Carter.....	1 1 0 1 1-4
Jesse Reeves.....	0 0 1 1 1-3
H Crosthwaite.....	1 0 1 1 1-4
C E Tribby.....	1 1 1 1 1-5

Third match:

A E Carter.....	1 1 1 1 1-5
Jesse Reeves.....	1 0 1 1 1-4
H Crosthwaite.....	1 1 1 1 1-5
C E Tribby.....	1 1 1 1 1-5

Jamestown, Pa., May 0.—The Natives' Shooting Club; second regular shoot, 4th inst., at glass balls; Bogardus rules; first shoot, 18 yards rise:

J Gray.....	0 1 1 0 1 1 1 1 1 1 1 1 8
J N Whiteside.....	1 1 1 0 1 1 1 1 1 1 1 1 9
H J Horner.....	1 1 0 0 1 1 1 1 1 1 1 1 8

Ties on eight.

Gray.....	1 1 1 1 1-5
Horner.....	1 1 1 1 1-4

Second shoot:

O D Richards.....	1 1 1 0 1 1 1 1 0 0-7
Dr Whiteside.....	1 0 1 1 1 1 1 1 1 1-2
J Gray.....	1 1 1 1 1 1 1 1 1 1-9
J N Whiteside.....	1 1 1 0 1 1 1 1 1 1-9
H J Horner.....	1 0 1 1 1 1 1 1 1 1-9
E Throop.....	1 1 1 0 0 1 1 1 1 1-3

Ties on nine—miss and out.

Dr Whiteside.....	1 1 1-4
Whiteside.....	1 1 1 0-3
Horner.....	1 1 1 0-3

Third shoot:

Richards.....	1 0 1 1 1 1 1 1 0 1-8
Gray.....	1 0 1 1 1 1 1 1 1 1-9
Whiteside.....	1 1 1 1 1 1 1 1 1 1-10
Horner.....	1 1 1 0 1 1 1 1 1 1-9
Dr Whiteside.....	1 0 1 1 1 1 1 1 1 1-9
J N Whiteside, first; Dr. Whiteside, second.	

Sweepstake match:

Dr Whiteside.....	1 1 1 1 1-5
J N Whiteside.....	1 1 1 1 1-5
Horner.....	0 1 1 1 1-4
Richards.....	0 1 1 1 1-4
Gray.....	1 1 0 1 1-4

First divided.

Iowa—Pomeroy, May 4.—Six single rises; Bogardus rough balls; 18 yards rise:

Alex Locke.....	0 0 1 0 1 0-3
James Dixon.....	1 1 0 1 1 1-5
Ed Troon.....	0 0 0 0 0 1-1
W Caldwell.....	1 1 0 1 1 1-4
C M Williams.....	0 0 1 0 1 0-2
T Briggs.....	0 1 0 0 0-2
Ed Hughes.....	1 0 1 1 1 1-5
S Lowrey.....	0 0 1 0 1 0-3
W T Ivey.....	0 1 0 0 0 1-1
W Parker.....	0 1 0 0 0-2
R M Whitby.....	0 1 0 0 0-1
F Field.....	1 0 1 1 0-3
J F Parker.....	1 1 1 0 0 1-4

Ties on four won by Caldwell; ties on five, Dixon. Several shooters used shot which proved too light.

St. Joseph Club.—Tri-annual contest for the champion badge of the St. Joseph, Mo., Sportsmen's Club, May 9. Badge held by N. E. Barnes. Ten single birds, 5 traps, 23 yds. rise, 100 yds. boundary:

N E Barnes.....	1 0 1 1 1 1 1 1 1 1-8
P G Hopkins.....	1 1 1 1 1 1 1 1 1 1-9
J W Batcher.....	1 1 1 1 1 1 1 1 1 1-9
W T O Denn.....	0 1 0 1 0 1 1 1 1 1-5
Paul Franke.....	1 0 1 1 1 1 1 1 1 1-9
B F Buzzard.....	1 0 1 0 1 1 1 1 1 1-8
G Knapp.....	0 1 0 1 1 1 1 1 1 1-5
L Ruebeling.....	1 1 1 1 1 1 1 1 1 1-8

Tie shot off; 23 yds., 100 yds. boundary, 4 single birds:

Hopkins.....	1 1 1 1 1-5
Batcher.....	1 1 1 1 0-4

—Dr. Carver has been giving exhibitions in many Western cities on his way East. At Des Moines, Ia., the other day, he broke, with a Winchester, 13 balls within 24 seconds.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, <i>Salmo fontinalis</i>	Salmon Trout, <i>Salmo confinis</i>
Salmon, <i>Salmo salar</i>	Sand, <i>Atosa</i>
Grayling, <i>Thymallus tricolor</i>	Land locked Salmon, <i>Salmo gairdneri</i>

FLIES IN SEASON IN MAY.

BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline.

COW DUNG, No. 10 and 11.—Body and feet, brownish yellow; wings, yellow-gray.

GREAT DUN, No. 9 and 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; sedge, dark brown annulated with gray.

RED SPINNER, No. 10 and 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; sedge, pale brick color.

YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; sedge, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; sedge, scarlet green and wood duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and Gray Palmer are made respectively of the different colored hackles that distinguish them.

FISH IN MARKET—RETAIL PRICES.—Bass, 20 cents; blue fish, 12; salmon, 75; mackerel, 15; Connecticut River, shad, 50; weakfish, 12; white perch, 15; Spanish mackerel, 75; green turtle, 15; terrapin, per doz., \$30; halibut, per lb., 15; haddock, 0; king fish, 15; codfish, 8; black-fish, 10 flounders, 8; porgies, 8; sea bass, 18; eels, 18; lobsters, 8; sheepsheads, 15; turbot, 20; Long Island brook trout, \$1; pompano, \$1; whitebait, per lb., \$1; hard crabs, per 100, \$3; soft crabs, per dozen, \$1.

CONNECTICUT SALMON.—The receipts have averaged about 8 per diem, making the total number which have been marketed in New York fully 100. Undoubtedly a good many more have been caught of which the count has been lost. The average is about 12 pounds, the heaviest was something over 19 pounds. On Monday a salmon of 10 pounds was caught off Orient, L. I., probably a fish making for the Connecticut River. We trust these fish are but the patterings of the future storm. Bluefish have been caught in very large quantities on the Sound, in the neighborhood of West Hempstead. The fish weighed some 4 pounds, which is extraordinary for the season.

MORE SALMON.—Professor Baird kindly informs us, under date of May 13, that he has received a splendid salmon from the Susquehanna, caught at Havre de Grace.

MAINE—Machias, May 1.—As it is quite rare to catch bass as far east as this, I wish to inform you that one was recently taken that weighed thirty pounds. It was a striped bass and a beauty. Also a sea bass that tipped the scales at twenty-five lbs.

NEW HAMPSHIRE—Dover, May 13.—The yacht *James Lawson* made her trial trip down our river last week, and after returning she was pronounced a perfect success. She will make her first pleasure trip this week.

Dover, May 13.—Trent fishing is in full blast, and some fishermen have very good luck. The chief hindrance to good sport here is caused by the farmers posting notices forbidding all persons crossing the land where the brooks flow through. Lobster fishing is very brisk along our coast. Such good catches and so early have not been known before for many years.

—A man while fishing recently in Winnipiscogee Lake, New Hampshire, caught a loon, which had dived and seized the hook on which a small fish was dangling at the end of a line forty feet long as bait. The bird was secured alive and will be exhibited at Boston.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been 36, as follows: 8 from the Banks, with 150,000 lbs. halibut and 150,000 lbs. codfish; 27 from Georges, with 400,000 lbs. codfish, and one from the South with 230 bbls. mackerel.—*Cape Ann Advertiser, May 10.*

New York—Adirondacks.—A correspondent writes from the Saranac, May 6: "Again in the woods. Leaving New York in the evening, the next morning at six you reach Keeseville, and the same evening, with Harper's team, you will reach Martin's on the Lower Saranac lakes. This is the only feasible route direct through at present. The season here is at least four weeks ahead of past season; leaves on the white birch as at June 1 usually. The lakes have been well patronized during the past winter by invalids, who now are starting out in their boats to take the trout, and they are taking vigorously. Dr. Lundy, last week at Bartlett's and in the Upper Saranac, met with fine success with the fly and trolling. Dr. and Mrs. Romney, accompanied by Miss Baber, of Keeseville, had unequalled sport trolling a day or two ago, taking sixty pounds of trout in six hours' work, the trout weighing from five pounds to fifteen pounds. I passed Dr. Trueman and party to-day on the lake. Col. Hoyt, of New York, G. E. Hart, of Newark, N. J., and others are expected here soon. My advice to sportsmen intending to visit the woods is to come soon, or they will lose the usual fine spring fishing. The houses are all in capital order. The season bids to be a good one, Mr. Martin informing me that appetitious exceed those of the past two years.

NUMBER FOUR.—Fishing is reported by Syracuse anglers to be fair this spring, though not equal to that of former years. The sport on Beaver River is good.

—"Resident" writes from Hrushton, Franklin County, that in the East Branch of the St. Regis River, and in the Middle Branch, at the sixteen-mile level, is reported good. The frequent large strings brought into town corroborate the report.

Kingston, May 5.—The catch of shad has never been better in this section than just at present, despite the howling of a few fanatics over Seth Green's rebel shad. J. T. Lowe caught a striped bass in the Hudson, near Esopus, on Friday, 3d, that weighed thirty-five pounds. Trout fishing in Ulster County has been rather dull this season on account of the number of persons who have been prosecuted for trespass. A party of three from this place caught eighty pounds of bass and perch on Thursday night in the Hudson, off Kingston Light.

Glen's Falls, May 10.—Just home from Lake George; self and friend took 65 pounds lake trout, trolling. They have just got to the surface.

Greenwood Lake, May 10.—Elias Zindle showed me a very nice mess of trout he had caught in a brook near Brown's Hotel, at the lower end of the lake, and he said he had caught the day before a mess of nineteen better ones. Elias is an old hand at both rod and gun, and rarely comes home empty handed. The indications of a good bass season are very promising, and there are more quail than has been known in five years. Mr. Wright, the owner of the steam-yacht *Florence*, is putting new machinery in her, and will run her for excursion parties this summer.

FISHING AT SHELTER ISLAND.—*Shelter Island, May 7.*—A good branch of industry on the east part of Long Island is the bunker-fishing, which gives employ to thousands of men in vessels and fish factories. Of the latter there are many sprinkled along the shores as far as Napeague Bay on Montauk. The chief of these are the Wells, Cartwright, Green, Horton and Fithian factories, each of which employ many men and boats in the business. These fish have reached these waters this year much earlier than common, and they are very abundant and in fat condition, and it is hoped that this will be a most prosperous season. There are a large number of sailing vessels engaged in the business, and several steamers, that are beginning to take the place of the sailing craft. The steamers are far more successful, as they can steam out far to sea and fill up several hundred thousand fish and return the same day to their factories; but the sailing vessels, dependent on wind and tide, have not that advantage, and so their cargoes often spoil before they can be delivered at the factories. One of these steamers, the *Morse*, Capt. Harkins, caught lately 354,000 fish in one day, a catch never before equalled. Three fish made between four and five gallons of oil to the thousand. On week before last, Capt. Downs caught 485,000, and Capt. Wilcox 345,000, and two other steamers, the *Prior* and *Lawrence*, caught about 550,000 each during the week. One steamer, the *Floyd*, caught 182,000 at one set. So you see, the fishermen are doing first-rate, and are in high glee, looking forward to plenty of silver for support of wife and child; and fish oil and fish scraps for manure will be most abundant. I have built a "bower," some fifty feet above the bay, on a high cliff overlooking many leagues of water, where I pass much time enjoying the view and solacing myself with book and paper, and pipe and spyglass, with daily rifle and revolver practice. A few days since while there I was treated to a fine piscatorial exhibition. A large school of porpoises came in within forty rods of my retreat, in pursuit of a school of big blue fish; the latter springing a foot or two clear of the water in escaping from their relentless foes. The bluefish are here much earlier than usual, and a number are caught daily. To-day we had a present from Capt. Hawkins of three fine bluefish, averaging 4 pounds each; all very fat and nice. The advent of the fish, and the blossoming of the fruit trees, and the growth of the wheat and oats are in advance of their usual appearance some two or three weeks, and the farmers and fishers are joyful.

Truly yours,

ISAAC McLELLAN,

NEW JERSEY.—Kinsey's Ashley House, May 10.—Bluefish very plenty, and parties making good catches. They run from 5 to 10 pounds. Last week the blue fish drove the moss-bunkers ashore in large schools. B.

PENNSYLVANIA.—White perch are now biting in the Delaware.

CHRISTIANA, May 10.—Fites Eddy, on the Susquehanna, is one of the best bass fishing places on that river, both for striped and black bass. Mr. Clarkson Bostie keeps the hotel, and the Columbia and Port Deposit railroad passes his door. A party of Lancaster gentlemen have bought an island in front of his hotel and are going to build a club house and have a place for Summer resort.

SOUTH CAROLINA.—Charleston, May 13.—Harbor fishing has been excellent for the past two weeks, and several splendid catches have been reported. A party of five were out last Wednesday and brought home 573 fish—whiting, sheephead and blackfish—in a few hours. YENOTS.

MISSOURI.—St. Louis, May 8.—The King's Lake Fishing Club have made extensive repairs and additions to their clubhouse. Bass and crappie fishing reported good there this spring.

CANADA.—Watertown, Ont., April 8.—The trout fishing (*Salmo fontinalis*) commenced on the 1st inst., but owing to recent heavy rains sport has been indifferent. The best catch I have yet heard of was made by a clergyman on Saturday last—150 in an afternoon's fishing, some of them weighing to a pound, but the average being about five to eight ounces. St. G.

BIG WALL-EYED PIKE.—Our Montreal correspondent says that the pike perch, or wall-eyed pike, of Quebec Province, Canada, grow to a weight of fifteen pounds, and that ten or twelve pounds weight is not uncommon. The pike perch is identical with the "salmon" of the Western rivers, where they grow very large. Dr. D. C. Estes, of Lake City, Minnesota, has the jaw of one which weighed forty pounds.

MUSCALLENGE.—In an official Minnesota pamphlet we find the name of this fish spelled muscalonge! This is the latest orthography. It is altogether an innovation upon the old-time spelling of muscalonge, maskenonge, musquelonge, muskalunge, *et al*, and cannot be regarded as an improvement.

—The Alexander House is a first-class summer resort for anglers, located at Grosse Ile, Michigan.

OUR NATIVE SILK-WORMS.

EDITOR FOREST AND STREAM:

In my last I gave a brief description of one of our four native silk-worms, the *Attacus promethus*. I now give a description of two others—first, the *Attacus polyphemus*, named after one of the Cyclops, like the last one described. The larve of this moth is large and spins a large cocoon of strong silk, but, owing to its scarcity, I do not think, with our present knowledge of its habits, it can be made available for silk gut. The moth is a splendid fellow, wide spread of wings, and beautifully marked. Among the markings are perfect pictures of the human eye. I have never seen the larve of this moth, and am not certain on what it feeds, but think it feeds on the Osage orange for one thing, as I have found its cocoons on the Osage orange hedges in this neighborhood. But it is a careless insect about spinning its cocoons, frequently spinning them on the ground, among little twigs.

With this brief account we will dismiss him, and take up the *Attacus luna*, a beautiful moth, of a pale green color, with a few markings on its wings, one of which in shape resembles the moon in its first quarter. The larve and moth are both large. The larve feeds on the leaves of the hutter-nut, and also on the leaves of the hickory tree, and always spins its cocoons on the leaves of the trees on which it feeds, folding over the edges of the leaves, but does not, like the *A. promethus*, fasten the leaf to the twig on which the leaf grows; consequently the cocoons fall to the ground with the leaf, and a great majority of them perish during the winter, which accounts for their scarcity. The cocoon is large and composed of beautiful, strong white silk, which can be reeled from the cocoon in the same manner as the Italian silk. Its scarcity renders it unavailable for silk gut. The *Attacus Cynthia*, mentioned by Prof. J. H. Richardson, of Toronto, which feeds on the *Ailanthus*, is a foreign silk-worm, from Japan. The larve and moth are very large, as is the cocoon. This silk-worm could be made available for silk gut, which could be drawn out from five to six feet long, and of sufficient strength for salmon fishing.

This finishes up all that I have to say about our native silk-worms, with the hope that some one will experiment with them as I have. The two first ones described are the ones to be used, as both can easily be procured in great numbers, the *A. cecropia* preferable to all others.

Very truly yours,

T. GARLICK.

Bedford, O., May 7, 1878.

AMATEUR WHALING.—An oyster knife is a good enough tool in its way, but for killing a whale give us something else. That was what George Pope, a Raritan Bay fisherman, thought last week. Wednesday, after he had been plunging his oyster knife without effect into a big whale on the Port Comfort shoals. So he went back and sought out a companion, and, armed with an ax, the two returned to the charge. They chopped away at his head until he began to flounder and roll, and finally getting off the shoal, he started for Sandy Hook. The fishermen followed and tried to catch the fish by throwing their anchor into its blow-hole. Finally, with the aid of a rapidly recruited fleet of whalers, the whale was driven ashore and killed with a farmer's scythe. When stranded the captors found their trophy to be a cow whale thirty-five feet long, nine feet in diameter, and yielding about thirty-two barrels of sperm oil.

BLACK BASS TACKLE.

CYNTHIANA, Ky., May 4, 1878.

EDITOR FOREST AND STREAM:

As the season for black bass fishing is so near at hand—already begun, in fact, in some localities—I am induced to offer the following observations on the proper tackle to be employed

in order to lend a helping hand to any one seeking such information or instruction.

LINES.

The perfect line for black bass bait fishing is yet in the future. The best manufactured at present is the hard braided silk line, not waterproof; it is mottled in color, and keeps its tints quite well. The smallest size should be selected, and it should be carefully dried after use or it will soon become rotten; and, in fact, with the best care, is reliable only for one season. Loosely braided lines should be avoided, as they absorb water too freely, and thus develop an annoying habit of clinging to the rod. The smallest size braided linen is a good line, but hardly small enough for long casts; it is stronger than the silk line, and is preferable when the bass run large, averaging three pounds. Twisted or cable laid, linen or cotton lines, should never be used for reel lines in black bass fishing where much casting is practiced; their tendency to kink and snarl can never be reformed, and if by the most approved means this "kinking quality" seems to have been remedied, a few subsequent casts will demonstrate that the kinks are still there, and no amount of manipulation will remove them effectually. The twisted grass line is open to the same objection, though in less degree, and were it not for this it would take precedence of all other lines. The smallest size is the best line made for casting a natural bait; it absorbs less water, clings less to the rod, and leaves the reel more freely than any other line, and, notwithstanding its kinking, is the favorite line in Kentucky, Tennessee and other Southern States. A small-sized, tinted, closely braided grass line, were such a line manufactured, would be the line *par excellence* for black bass, and would rank in bait fishing as the tapered waterproof silk line does in fly fishing.

About fifty yards is the right length for reel lines, which should be always well dried after fishing and before putting away. Beware of waterproof lines for bait fishing, they will not answer. Use small-sized lines, they are strong enough with a pliant rod. A line that will hold up two pounds, dead weight, will land the largest black bass that swims, when used with a proper rod. Indeed, I have often used a line which, toward the end of the season, when tested, would scarcely hold a pound dead weight, but which would safely land the largest bass or even pickerel of fifteen pounds or more.

HOOKS AND SNELLS.

The Sproat bend, the round-bend Carlisle, and the round-bend Aberdeen, medium sizes, are the best hooks for black bass; hooks with the Kirby or side-bend should never be used when either of the others mentioned can be procured. The Sproat hook, having the most even temper, the most scientific and practical bend, and the most approved form of barb, is justly considered the best in use. Hooks should be small rather than large, except when the Oswego or large mouth variety of black bass—*micropterus pallidus* (Raf.) Gill & Jordan—and pickerel predominate, in which case larger hooks can be used; they should be tied on strong single gut snells always, except in waters where pickerel or pike-perch are very numerous, when gimp snells may be substituted. Hooks should be kept sharp by means of a small file; the Sproat hook, having a short barb, keeps its point better than any other hook, and should be used in preference.

FLOATS, SWIVELS AND SINKERS.

The float should never be used when it can be dispensed with, as it is detrimental to good casting, and is always in the way. It becomes necessary, however, in rapid, shallow streams, where the bottom is covered with snags, roots and other obstacles, but when used it should be as small as possible, consistent with the weight of the sinker required, and should be employed for the sole purpose of keeping the hook away from the bottom, and not as an object of intense and constant observation to indicate a bite. A small swivel should always be used—the line tied to one end and the snell looped in the other; brass swivels are best, as they do not rust. In lakes, ponds and quiet streams, no additional sinker will be required, unless very large and strong minnows are used, when the smallest-sized ringed sinker should be added to keep the bait below the surface. In swift streams a sinker will be necessary, large or small, according to the strength of the current. Ringed sinkers are preferable, as they can be attached, taken off, or changed by looping, and without removing the swivel or hook.

LANDING NETS.

The landing net should be of good depth, with a brass hoop or ring from ten to twelve inches in diameter. It should have a long, light handle; bamboo is best. Those made with a folding ring, and jointed handle are very portable and convenient. For fly fishing a short-handled trout net is to be preferred.

FOR FLY FISHING.

The enameled waterproof, braided and tapered silk line has superseded all others for fly fishing for black bass, speckled trout, etc. It is of a good color, strong and serviceable; is largest in the centre, and tapers toward each end, and is made in lengths of from twenty-five to fifty yards. This line must not be confounded with the oiled silk line, which is a sticky abomination until the oil wears off. The old silk and hair line answers pretty well. Leaders should be nine feet long, of strong, single silk worm gut, tapered, and if not tinted should be stained with strong green tea. Bass flies should always be tied on sproat hooks. Most of the flies manufactured are quite large and gaudy; they answer very well, but I have been more successful with large trout flies of a more sombre hue, as the large husby hackles, etc. Whitish or grayish flies, as the "millers," are best for evening fishing. It is well, however, to stock the fly-hook with a good variety, as bass are as dainty and fastidious in regard to flies as brook trout, if not more so. The old rule of bright colors for cloudy days or turbid water, and sober colors for bright days and clear water, is a safe one to follow. A rather heavy trout fly rod, weighing from eight to ten ounces, is the proper rod for fly fishing for black bass; its length should be from ten and a half to eleven and a half feet. Split bamboo is best, but ash and lancewood is good enough, and will last longer, beside being one-third less in price. A click reel should, of course,

be used, and the Orvis reel answers as well as any. There are quite a variety of click reels manufactured, made of German silver, brass, vulcanized rubber or celluloid—"You pays your money and you takes your choice."

J. A. HENSHALL, M. D.

—Mr. James S. Whirt, of the Astor House coach firm of Whirt & Mumford, has just opened the newly furnished and refitted Mansion House, Mauch Chunk, Pa., which is celebrated for its romantic and picturesque situation.

Rational Pastimes.

WALKING CHAMPIONSHIPS.—The series of walks at the Rink, this city, last week, were contested by a large number of amateur and professional pedestrians, and the work accomplished was very creditable. The entries for the professional 36 hours' walk were: John Ennis, of Chicago, Ill.; Charles A. Harriman, Haverhill, Mass.; George Guyon, Chicago, Ill.; Frank Clark, Philadelphia; W. S. O'Brien, New York; George Coyle, New York; E. Wiggzell, Ravenswood, N. Y.; John Haydock, New York; James L. Downey, New York; J. C. Moore, New York; Peter Rice, Vermont; Ben Curran, New York; Peter Van Ness, New York, and R. Campbell, New York. The course was 8 laps to the mile for professionals, and 9 laps for amateurs. The start was made at 11 o'clock Friday morning, and the first 25 miles were finished: Wiggzell, 4h. 26m. 25s.; Van Ness, 4h. 32m. 41s.; Ennis, 4h. 33m. 28s.; Harriman, 4h. 35m. 43s.; Guyon, 4h. 36m. 30s.; Rice, 4h. 39m. 21s.; Downey, 4h. 45m. 36s.; O'Brien, 5h. 0m. 05s.; Moore, 5h. 04m. 43s.; Coyle, 5h. 08m. 38s.; Curran, 5h. 09m. 35s.; Campbell, 5h. 45m. 17s.; Clark, 5h. 45m. 45s. Haydock gave up on the fourth lap of his eighteenth mile. Fifty miles were credited to Harriman in 9h. 28m. 35s.; Ennis, 9h. 33m.; Guyon, 9h. 37m. 20s.; Rice, 9h. 42m. 30s.; Wiggzell, 9h. 55m. 20s.; Van Ness, 10h. 26m. 30s.; O'Brien, 10h. 34m. 15s.; Coyle, 11h. 16m.; Curran, 11h. 50m. 32s. Clark stopped at the end of 28 miles, 6 laps; Downey, 55 miles; Campbell, 59 miles; Van Ness, 63 miles; Ennis, 61 miles, 5 laps; Wiggzell, 67 miles; Rice, 68 miles; Coyle, 92 miles; Curran 106 miles, 2 laps. There were then left Harriman, Guyon, and O'Brien, Harriman showing himself the best of the lot. He took the lead at the 50th mile, and maintained it thereafter. The 100 miles were made in 19h. 36m. 52s.; 125 miles in 25h. 18m. 7s.; total distance, 136½ miles, in 34 hours and 29 minutes, and in this time he only rested 17 minutes, this being at the end of his one hundredth mile. What little food he took was eaten on the track. Only a perfectly healthy organism could stand such a severe strain without fatal injury. He won the first prize, \$200, and the championship belt. Guyon made 151 miles and 5 laps in 23h. 48m. and took \$100, second money, while O'Brien, with 132 miles in 34h. 7m. 53s., received the third prize of \$50. At 11 p. m. the following amateurs entered the lists: T. H. Armstrong, H. A. C.; E. C. Holske, H. A. C.; J. W. Goodwin, A. A. C.; J. B. Gillie, S. A. A. C.; J. Stern, A. A. C.; R. H. Pelton, G. A. C.; J. V. Woolcott, M. A. C.; H. Weise, Western Union Telegraph Company; G. Cook, Brooklyn; J. Dugan, New York; J. Byrnes, Babylon, L. I.; J. P. Mackay, A. A. C.; H. Foster, New York; J. Schmidt, Brooklyn; F. L. Edwards, S. A. A. C.; Charles Conner, S. A. A. C.; W. Wilson, New York; J. Holzman, New York; M. J. Ennis, H. A. C.; W. A. Clark, New York. Woolcott led for 13 miles, making them in 2h. 10m. 26s. Holske then led to the end of the 25th mile, completing this in 4h. 16m. 49s., after which Armstrong went ahead for a mile, finishing 26 miles in 5h. 30s. Then Byrnes went to the front and kept his place to the finish. His time was: 20 miles, 3h. 51m. 55s.; 50 miles, 10h. 47m.; 60 miles, 11h. 48m. 53s.; 70 miles, 15h. 57m. 40s.; 90 miles, 19h. 48m.; 100 miles, 21h. 42s.; 105 miles, 22h. 11m. 10s.; total distance, 108 5-9 miles, 23h. 4m. He received the well earned first prize, and is now to be known as the amateur champion of America. M. J. Ennis, H. A. C., received the second prize, a gold medal, having made at 10h. 10m. 101 miles in 23h. 08m. 49s., and was still walking, with the prospect of still adding a mile or two to his score. J. Schmidt received the third prize, a silver medal, having completed nearly one hundred miles. J. V. Woolcott, M. A. C., retired after walking thirteen miles; E. C. Holske, H. A. C., when his twenty-fifth had been scored; J. P. Mackay, A. A. C.; F. L. Edwards, S. A. A. C.; W. Wilson, New York; W. A. Clark, New York; G. Cook, Brooklyn, and J. Stern, A. A. C., at the end of fifty; T. H. Armstrong, Jr., H. A. C., and J. Dugan, New York, at fifty-five; J. Holzman, New York, at fifty-nine; H. Weise, Western Union Telegraph Company, at sixty-six; J. W. Goodwin, A. A. C., at sixty-eight, and H. Foster, New York, at seventy-five. Gillie rested only twice—twenty minutes at the end of his fiftieth mile and half an hour at the end of seventy-fifth mile.

COACHING CLUB.—The spring parade of the Coaching Club takes place May 25th. The drags meet as usual on the west side of Madison Avenue facing Twenty-third street, at 4:15 P. M.

WESTCHESTER POLO CLUB.—The formal opening of the Westchester Polo Club grounds at Jerome Park, next Saturday, offers an interesting programme. Among the features of the day's sport will be an introductory game of polo by the members, among the players being Messrs. Herrman Oelrichs, Harry Oelrichs, F. Gray Griswold, August Belmont, Jr., S. H. Robbins, George R. Fearing, Pierre Lorillard, Jr., and others. A game of foot-ball between the rival teams of Yale and Princeton will, no doubt, be a hard fought contest, and excellent playing may be looked for. A match between the New York and Ravenswood Lacrosse clubs will be contested for an elegant cup, presented by the Polo Club. The concluding event will be a polo game between New York and Newport players.

N. Y. A. C. GAMES.—In the games of May 30 the club will give a special prize to the competitor making the fastest time in the handicap one-mile walking race. This is in addition to the other prizes already announced.

CRICKET NOTES.

—The Staten Island Club has refused to join the "Cricketers Association of the United States," recently organized at Philadelphia. The Manhattan being the only club in this vicinity which belongs to the association, some difficulty in arranging matches may be experienced.

—The St. Georges will probably visit Syracuse this summer.

—The St. Georges opened their season yesterday with a club match on their grounds at Hoboken.

—The Belmont Club have ratified the action of the Philadelphia Convention, as also the Young America, Merion and Chestnut Hill clubs.

HENDERSON THE CIRCUMAMBULATOR.—James D. Henderson, the Canadian walker, who started May 1 on his pedestrian trip of 25,000 miles, a distance equal to the circumference of the world, is twenty-eight years of age, stands six feet in his stockings, and is in excellent physical condition. The development of his loins, thighs and forelegs is described as magnificent and upon a scale of physical grandeur. He is a Scotchman by birth, but has lived in Canada since he was six years of age. When walking at the rate of four and one-half miles an hour, his stride is forty-six inches; and he covers forty miles in eight hours without showing any fatigue. To accomplish his task in the prescribed time of two years, he must walk forty miles per day for 313 working days.

Answers to Correspondents.

No Notice Taken at Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

J. R., Sag Harbor.—Take your broken reel to some ingenious dentist.

J. G. S., Oswego.—See advertisement of wild pigeons in our issue of to-day.

R. S. M., Burlington, Kans.—You will find it very difficult to get Gallagher carbine shells.

MAJOR.—Your dog has lice, probably. Smear him with lard for 24 hours, or use kerosene oil.

J. W. C., Williamstown, Conn.—For fancy rabbits address Chas. Reiche & Bro., Chatham st., New York.

MONROE, S. C.—Aim slightly in advance of swiftly flying birds. The powder measure is really arbitrary.

DOCK HUNTER.—To rid your dog of wood-ticks use a little kerosene and pick out ticks half an hour afterwards.

SEA GULL.—See answer to W. B. S. Forty miles a day is a fair average, but it depends largely upon circumstances.

T. M., Washington, N. J.—We have already given our advice not to buy those \$6 rifles. They are old Government arms.

K., New Brunswick.—The habit of rubbing themselves in dirt is a peculiar and unconquerable habit on the part of all dogs.

DR. OLNEY.—We have failed to learn anything of this lecturer. Lecture and literary bureaux in this city know nothing of him.

W. H. C., Beloit.—For duck, goose and swan shooting go to the lakes in Northwestern Iowa, described in our Sea and River column next week.

S. B. W., Sandy Spring.—You can get express bullets at Squires, No. 1 Courtland st., N. Y. We have never seen the gun you speak of.

C. R. T., Painesville.—We think the recoil pad would remedy the difficulty. You would appreciate no difference as to lengthening of stock.

E. C. B.—Want a small watch dog, slow to make friends with strangers. Ans. A rough-coated terrier, Scotch or Irish, is the dog you want.

NAVY, Key West, Fla.—The glass balls ordinarily break when hit by 1½ oz. No. 8 shot, ¾ drs. powder. Of course there are exceptions to the rule.

R. M. W., Pomeroy, Ia.—Bogardus trap springs are about two feet long. Send to Hart & Sloan, Newark, N. J. The pitch balls are no longer made.

WILL LAKE.—The best bait for bass is minnow or dobson. Use a hook a half inch between the shank and point. We know nothing of the Agency mentioned.

WIDGON, Cairo, Ill.—In making your challenges for glass ball shooting name all the conditions in the challenge. There will then be nothing to quibble over.

Cocker, Hayville, Canada.—Your suggestion of having some one in Canada to represent American goods is excellent and we will at once see if something cannot be done.

C. L. P., Wellsville, N. Y.—A recoil pad is a pad of rubber, which fits into the butt of the gun, and by its elasticity breaks the shock of the recoil. You can use it in the field.

POINTERS' EARS.—The absolute length of ear depends much on the size of the dog. A good pointer of 60 lbs. weight may have an ear nearly 6 in. long if otherwise well formed.

C. C. T., Malden, Mass.—Where can I procure a list of Frank Forester's writings, with prices? Ans. Orange Judd & Co., 245 Broadway, New York. The prices average about \$2.50.

J. S. C., Jr., Savannah.—The planking of the "Skip-Jack" boat is run fore-and-aft, not athwart ships. The garboards having most rise or twist are consequently the most difficult to fit.

B., Columbus, Wis.—We do not think that rifle equal to the Winchester, model of 1876. Experiments published in our issues of Nov. 1 and 8, 1877, perfectly demonstrated the safety of the latter.

RACQUET CLUB, City.—For brook trout fishing go to the streams about Milford, and the neighboring towns. The route is via Port Jervis, on the Erie Railroad. See also editorial columns this week.

A. P. N., New York.—What is the scientific name of a shore bird called a "creaker" on Long Island and in N. J.? Ans. We do not know the bird by that name, perhaps *Totanus melanoleucus*.

KEEL, New York.—A yacht 26 ft. long will cost about \$600; price depends on finish. You can use overhanging stern to advantage in design published in issue for April 11. Send address to this office.

H. HUNTER.—Improve your arithmetic. You are not the first one who has blundered over that cat and rat puzzle. Any schoolboy ought to work it out without difficulty. Will stake our reputation on that answer.

N. W. A.—To measure the "drop of stock" of a gun, lay a straight-edge on the rib of the barrels, and measure the distance between the extreme butt of the gun and the straight-edge. The usual drop is 2½ in.; 3½ in. is rather crooked.

DENNIS, Greenville, Ala.—The Cedron ant or seed (*Sinaba cedron*) grows in Central America and is said to be a true antidote to the bite of snakes. See Pharm. Jour. and Transactions X, 344, and XII, 63; U. S. Dispens. p. 1659; London Jour. Bot. V. 566.

S. L., Belleville, Ont.—You can find good trout fishing in the Eastern Townships at Michilicaton Island, reached via the Collingwood steamers, in the Nepigon River; all through the Muskoka District, especially in the south branch of the river. Joseph Scott, Gravenhurst, will furnish all desirable information.

W. R. H., Ablon.—You will find the "lines" of a left, sail and row-boat in our issue for Nov. 1, 1877. If you want to sail chiefly give the plans about 8 inches more beam and strike in curves for sections similar to those shown in print. To get you up a special set of curves would take more time than we can spare.

J. D. B.—My pointer catches birds in retrieving. Ans. There are special instructions for breaking a dog of this habit in works on training the dog. A very good plan is to make him retrieve birds that have needles run through them at various points. If you look at our advertising columns you will find answer to other questions.

W. L. W., Jr., Council Bluffs.—What make and kind of rifle, and size of cartridge was used in your gallery in shooting for the Blydenburgh Badge? If different kinds were used, what do you generally use? Ans. Ballard rifle, .22 cal.; weight, 9½ lbs. Cartridge—Union Metallic Co., short .22. Schoverling & Daly, New York, will sell you the rifle.

CARRA, Dedham, Mass.—Being in the habit of swimming daily through the summer, I am much troubled in diving with buidies in my ears. Can you inform me of any way to prevent them or make them burst? Ans. The old plan to break them is to jump heavily on the foot on that side where the bubble is. You can prevent them by stopping the ears.

EXE, Troy, N. Y.—Will you please inform me through your paper how far from St. Paul, Minn., I would have to go to get good duck shooting, and also the best month to be there in the fall? Ans. Excellent duck shooting in Rice Lake in November, about twenty miles from St. Paul, and in many other localities about as near. The latter part of October is good for mallard and teal.

T. J. L., Inspruck, Tyrol.—How do you shoot for the running deer at your rifle range at Creedmoor? Ans. Distance is 100 yards. Deer is run by a signal. Any rifle used, but sights to be over the centre of the barrel. Highest score wins. Flues are charged on those making entries if the deer is hit on the hunch, or when out of bounds. The mechanism is quite simple. The deer of sheet iron is run on a railroad.

W. B., Sangatuck.—I have the habit of flinching or shutting both eyes when firing. Do you think the use of a hammerless R. L. shot-gun, advertised by W. W. Greener, would remedy the fault? Ans. We really believe a hammerless gun would suit you. We have been informed of the case of a gentleman, who, having been hurt in one of his eyes by an exploding cap, could not shoot with the ordinary gun, but who uses, without flinching, the hammerless.

LEZOR, M. A. S., Louisville.—I have a — gun, 30 in. barrel, breech-loader, 8½ lbs., 10 gauge, modified choke. At a trial, shooting under the supervision of two of my friends, shooting with ¾ drs. powder, 1½ oz. No. 10 shot, 40 yds., 50 in. circle, gives a pattern of 484, good penetration. Is the above a good average? Ans. Only a fair pattern, you ought to have fully 600. We would advise diminishing powder. Try ¾ drs. See the question put to us by G. W. H.

A. H.—How can I take the lead out of the inside of the barrels of fine breech-loader without injuring the barrels? Have a gun that has been worn bright in places along the barrels by much handling, and the figure, shown by the barrels in their brown state, has disappeared, so that the worn places represent nothing but plain, bright steel. Ans. 1. Nothing better than a fine wire brush with plenty of oil. 2. Re-brown the barrels, and the figure will appear again.

J. B. H., Selma, Ala.—Give me your opinion of the safety, advantages and disadvantages of the hammerless breech-loader, and, also, whether in your opinion, it is safe to use chilled shot in a full choked breech-loader? Ans. Cannot discuss it under a column. We have a great belief in the hammerless—of course, people must get used to it. Expect to see a long discussion on it before long in the F. and S. There is no possible danger in using chilled shot.

J. H. S., Philadelphia.—Go to Julius & Anderson, shiphandlers, Delaware ave. and Lombard st., who will gladly give you all the information required concerning provisioning for your intended cruise. Belug always near shore you should have no difficulty getting plenty of fresh grub from day to day. Your steward or cook will be able to look to that. Take along some stewed prunes and canned fruit to aid digestion. Ought not to cost you over \$1 a day per capita.

H. M. H., Augusta, Me.—My St. Bernard is four months old. Lately his eyes have been sick looking; the flanks seem drawn in; breathing is labored with taking least exercise; bowels are in good condition; appetite changeable; is continually biting his sides. Twice worms, six inches long, with white, tough, transparent bodies, have passed him in bunches knotted together. Is he old enough to take area nut? If castor oil is given, too, how much should he take? Ans. Give a few doses of area nut, and follow with a tablespoonful of castor oil.

C. G. J., Howell, Mich.—A, B and C tie on highest scores in glass ball match. Should they shoot off for first prize only, or first, second and third prizes? D scores one less in the match; is he entitled to shoot in the shoot-off for second prize after first has been won? Ans. If classified, shoot off; if not classified, the highest scores take the highest prizes, and on average and divide equally, or shoot off, at option. If classified, D would take second prize; if not, he is not entitled to shoot off.

DOX PEDRO, Pottsville, Pa.—Mr. Morgan, of Minersville, a neighboring town, shot in that place a few days since a singular looking bird which stands a little over two feet high and its neck measures eighteen inches and its bill (which is almost as sharp as a needle) is six inches in length. The wounded bird is yet alive and is of a very aggressive nature, and all who have seen the bird are unable with what species to classify it. Ans. The bird belongs to the crane family *Aletridae* and is perhaps a sandhill crane. If you will tell us the color we can form a better judgment.

C. W. B., Cambridge.—Is there any guide to the Canada woods and hunting country, or any book which will give me information upon the subject, especially the Ottawa River region? Ans. Osgood & Co., Boston, publish a complete handbook of the Maritime Provinces. Lowell's "Gazetteer of the British Provinces" contains a valuable table of routes, Adams, Stevenson & Co., Toronto. The only complete information printed respecting the Ottawa District is found in the earlier volumes of FOREST AND STREAM. Hallock's "Gazetteer" gives fullest routes to all parts of Canada.

W. H. A., Gosport, Ind.—To make birdlime: Boil linseed oil of the best quality until it becomes thick and glutinous. Should be hotted in an earthen pot in the open air for two or three hours. If hotted in an iron vessel it takes fire, and is useless for this purpose. The pot must also have a tight fitting cover. Then set away the oil thus prepared in a tin box or can, with a tight fitting cover. To use it, select dry sticks eight inches long, and as thick as a straw. Drive a stake into the ground, and fasten these small sticks into it by inserting them into cuts in the side. Then place a "call bird" to attract the other birds.

C. W. H., Machias, Maine.—Please inform me the difference between a sea bass and striped bass? Ans. All the difference imaginable. One belongs to the family Serranidae and the other to the family Labrache. The sea bass is blue-black, with very long pectoral fins, chunky in shape, and huge mouth. An inshore fish feeding on reefs and mussel beds, and caught on the bottom. The striped bass is a slinky fish, with belly dull white, and is marked with seven or eight longitudinal stripes on the sides which are a coppery brown in salt water and dull black in fresh. It is taken chiefly by trolling on the surface. Its shape is more graceful than the others.

W. B. S., New Haven, Conn.; C. P. W., Jr., and W. H. C.—You can get any kind of a canoe built by James Emerson, 485 First st., Brooklyn E. D. L. I. His Nanillus style will cost you from \$35 up, according to finish; sails, \$15 extra; the Shadow style from \$115 up. These prices include best of workmanship, copper fastening throughout, brass fittings, watertight compartment, paddle and hatches, etc. The Herald canoe will cost about \$50, but requires extra outlay to fit it up like regular Shadow model. Canvas canoes are lighter and cheaper, but have not the same finish at lower figures. For up-river hunting the Herald is excellent, but for yachting we prefer Shadow model.

R. H. D., Canandaigua, N. Y.—What is the comparative speed of canoe and paddle with boat and scull? In cruising can you work against a strong head wind (in a day's work) as easy with former as with latter? Is not the boat the safest and driest in rough water? Ans. An expert can make better headway in open water with canoe and paddle, but he must trim his canoe just right, and operate by a system of tacks. If the paddler sits in the stern, the bow will be thrown high out of the water, and taking the wind on the quarter act as a sail, while the paddler working on the lee side keeps her head up and thus makes headway. A canoe is the safest craft imaginable for one who understands it, and the crankiest for a tyro. It will stand rougher water than a skiff.

G. W. H., Goshen.—1. Do you advise using the charges usually given for 10 and 12 bore guns for all guns of that calibre? 2. Does an over-charge of powder cause shot to scatter more than would a proper charge? I have an English, also a Lefever, both No. 12, also a new Lefever No. 10; neither will make better penetration or one-half as good target, using the usual amount of powder—1 to 6 drs. powder for 10, 3 to 4 for 12—as by using from ½ to 5, the amount. I use American Powder Co's FG, "Dead shot," 1 to 1½ oz. Should I use more powder and more shot? Ans. 1. Yes. 2. Makes shot scatter, and your conclusions are correct. To overcharge is a common error.

G. E. M., New York.—How can I get from New York to Lake Sandford, Hamilton Co., N. Y.? Is there any good fishing in the vicinity, river fishing preferred? Is there any hotel there, and what are the charges per day or week? Would you advise going to any other part of Hamilton Co. for fly fishing in rivers during first half of July? It so, where? Ans. Adirondack R. R. from Saratoga to North Creek; stage to Lower Iron Works 29 miles, and thence wagon or boat up the East river to the Lake, about 4 miles farther. The region is a noted resort, and we cannot recommend a better. We believe there is no hotel at Lake Sandford. Why don't you buy Wallace's "Adirondack Guide" with complete map? For sale at this office, price \$1.60.

P. A. M., St. Joe Lead Mines, Francisco Co., Mo.—About two months ago I thought a fine pointer to the "Mines" and several of my friends informed me that I could not keep him here, for all dogs (unless raised here) would have blue sickness, or spasms and die from the effects. Yesterday he had a spasm. His appetite is good. Does not eat much meat; sleeps in the store. When taken with a spasm he runs until exhausted. Bowels not regular; inclined to be bound. Fainting off in weight very fast. Ans. Dogs and cats are very susceptible of lead poisoning. The best treatment is probably small doses of mix. vomica (1-16th to 1-8th gr.) three times a day and about 5 to 10 grs. of the bicarbonate of potassium dissolved in a little water and given after each meal. The bowels should be opened by castor oil and laudanum every few days.

PRAX, Louisville, Ky.—1. In a match at birds, class shooting, A and B tied for first money. C, D, E and F each killed four birds. The match was at five birds. G and H killed only two birds each. I who was last to shoot had killed three out of four rather than kill his last bird; he palpably shot to miss and took third money. Did he do right? 2. If he had killed the fourth bird and gone in with the second class would G and H be entitled to the third money? 3. Nine shoot. Three kill two birds each, four kill four birds each and two miss all their birds. The judge decides the ones missing all their birds are not entitled to any of the money and divides the third prize with the other two pro rata. Was he right? Ans. 1. I won his money at the expense of his score. In fame vs. cash fame goes to the wall. We have seen men miss all their birds for the sake of third or fourth money. 2. Yes. 3. The men who missed all their birds should claim third money; they made third score, though it was poor.

W. A. M'C., Milwaukee.—1. Can you supply me with the pictures of the British team that were published with the number of October 4, 1877? If so, at what price? 2. I have half a dozen shells, taken from the stomach of a fowler, one of them, a periwinkle, containing a young hermit crab, and another about an inch and one-eighth in length, corresponding to the picture of a wenditrap. Is the latter ever found outside of Chinese waters? 3. What is meant by shot chambering in the barrel? 4. Can buckshot be used in a 11 gauge, 1½ lb., muzzle-loading gun? If not, what is the largest shot that can? 5. Which has the longer range, the .32 or the long .22 cartridge? 6. Would it be safe to have a — pocket rifle, 10 in. barrel, taking a short .32 cartridge, chambered to receive a long .32? Ans. 1. Yes, we could; cost of number, 10 cents. 2. We cannot make out what you call a Wenditrap. Can you not get the naturalist's name for it? We should like to know what it is ourselves. Repeat the question—or, better, send it on to us, when we will examine and return to you. 3. By chambering shot is meant the number of single pellets which will exactly fill a certain space. 4. We are not advocates for the use of buckshot in 14 guns. Try BB. 5. The .32. 6. Yes.

SMALL BONE, Truro, Nova Scotia.—1. Which target do you consider the best for all uses of a country club where both are obtainable, iron or canvas? We have used both, but this year there is a difference of opinion; some say that canvas requires too much care, while others claim the iron target unsafe on account of "spatters." 2. Would you not publish some suggestions for the building of a safe bait and the care of targets for long-range clubs, at an early date? Ans. 1. Open still to a great deal of discussion. Our leading authority, to whom we have put this question, replies: "Canvas targets are inferior to iron ones; the inconvenience arising from the splash is more than counterbalanced by the superior accuracy of the marking. As to the expense, the iron target costs more in the beginning. They probably cost more to operate. (See discussion on this matter in Report of Range Committee, Annual Report of N. R. A., 1876.) The form of butt is covered by pages 12 and 13, Wingate's 'Manual,' giving all the information that is likely to be needed." Another very well known rifleman, who is now about constructing a range in an adjacent State, is in favor of paper targets—that is, pasted on canvas. "They are," he says, "easily procured, in proportion to cost are lasting, and there is no splash." We send you the last facts as issued by Col. Wingate. 2. We shall be very glad to do so, and thank you for your suggestion.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.
(Post Office Box 232.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 16, 1878.

To Correspondents.

All communications, whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS,
Business Manager.

S. H. TURRILL, Chicago,
Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 17.—New York Bench Show. Base ball: Buffalo vs. New Bedford, at New Bedford; Tecumseh vs. Live Oak, at Lynn; Allegheny vs. Star, at Syracuse. Trotting: Goldwater, Mich.; Meadville, Pa. Running meetings at Lexington, Ky., and Washington, D. C.

Saturday, May 18.—Quincy (Mass.) Yacht Club Opening Regatta. Inter-Collegiate Annual Games at Mott Haven. Cricket: Young America vs. Germantown, at Turnpike Bridge; Belmont vs. Philadelphia, at West Philadelphia; Dorlan vs. Merlon, at Haverford. Base ball: Star vs. Utica, at Utica; Buffalo vs. Springfield, at Springfield; Rochester vs. Hornell, at Hornellsville; Allegheny vs. Erie, at Binghamton; Tecumseh vs. New Bedford, at New Bedford; Harvard vs. Yale, at New Haven; Amherst vs. Trinity, at Hartford. Trotting at Meadville, Pa.

Monday, May 20.—New York State Sportsmen's Association at Buffalo. Base ball: Tecumseh vs. New Bedford, at New Bedford; Allegheny vs. Cricket, at Binghamton; Buffalo vs. Utica, at Utica; Racine vs. Chicago University, at Chicago. Trotting at Beacon Park, Boston.

Tuesday, May 21.—Worcester Dog Show. Base ball: Tecumseh vs. Springfield, at Springfield; Buffalo vs. Rochester, at Rochester; Allegheny vs. Hornell, at Hornellsville. Trotting: Belmont Park, Philadelphia; Beacon Park, Boston; Butler, Pa. Running meetings at Baltimore, Md., and at Louisville, Ky. New York State Sportsmen's Association at Buffalo.

Wednesday, May 22.—Worcester Dog Show. Base ball: Allegheny vs. Hornell, at Hornellsville; Star vs. Cricket, at Binghamton; Tecumseh vs. Utica, at Utica; Rochester vs. Buffalo, at Buffalo; Harvard Fresh. vs. Brown Fresh, at Providence. Trotting at Belmont Park, Philadelphia; Beacon Park, Boston; Butler, Pa.; Hillsdale, Mich. Running meetings at Baltimore, Md.; Louisville, Ky. New York State Sportsmen's Association at Buffalo.

Thursday, May 23.—Worcester Dog Show. Base ball: Utica vs. Springfield, at Springfield; Allegheny vs. Rochester, at Rochester. Trotting as above. Running meeting as above. Creedmoor: Leech Cup Match, at 10 A. M.; Frazier Match at 1 P. M.; Soldiers' Match at 1 P. M.; Skirmishers' Badge Match at 4 P. M.

COMPLIMENTARY.—The increased demands of this journal having necessitated the removal of its business manager from his old home in Wallingford, Conn., to Brooklyn, L. I., that gentlemen in receipt of an elegant silver *tabatiere* from the well-known firm of Simpson, Hall, Miller & Co., and presented as a token of esteem and good wishes on the part of former townsmen. May it never be empty.

SUMMER JAUNTS.

WITH the lapse of spring, preparations come for summer pastimes, and already many of the popular hotels are ready for guests; the rest will be open by the first of June. Steamboats have been put on the interior lakes and seaside routes; railroads are presenting their respective attractions in seductive illustrated pamphlets; and the general activity among the trunk makers betokens the approach and flight from town of the summer tourist. Last week the festivities of Coney Island were resumed for the summer, Rockaway Beach is completing extensive arrangements, and soon all the popular resorts in the immediate vicinity of New York will be in full feather and thronging with visitors.

Greenwood Lake is the most attractive resort within forty miles of this city. Frank Forrester wrote dispassionately in its praise, and the sportsmen of the present day are represented by two clubs, which will have houses on the border of the lake. There are half a dozen or more hotels, of varying size and pretention, three of which now advertise in our paper, and the rest will follow soon. (Parenthetically, the hotels of Greenwood Lake show their sagacity in advertising in FOREST AND STREAM, and if hotels elsewhere would follow their example they would make more money.) Many improvements and renovations have been made since last season, and we have no doubt that Greenwood Lake, having been adopted as a regatta course, will be unusually popular and well patronized in the months to follow. It is reached by the Montclair Railroad.

The Erie Railroad claims precedence in the issue of its annual illustrated guide-book, entitled, "Where to Spend the Summer," from which the tourist can readily make his election.

The Pennsylvania Railroad gives access to the finest mountain scenery and the best angling resorts. So also the Boud Brook Road presents a great number of choice localities for rural rest and pastime. With the admirably arranged schedules of fares and time-tables to various points, we can arrange a jaunt of a few days or weeks to a minute and a dime.

The Chesapeake and Ohio Railroad opens up one of the most romantic sections of America. As many of our anglers will, doubtless, wish to avail themselves of the facilities thereby afforded, we will do them a favor, no doubt, by indicating some of the best fishing places on the route, namely:

"Clifton Forge."—Bass fishing in headwaters of James River immediately at station.

"Jackson River."—Fine trout in Craig's and Dunlap's Creeks. Hotel accommodation at Covington, ten miles distant. Trains leave Covington after breakfast and return in time for supper.

"Covington."—Trout fishing in neighboring creeks.

"Paw Paw."—Trout in abundance in Laurel Creek, just across New River from Station. Hotel accommodation at Quinimort, five miles below, near which there are several other trout streams.

"Sewell."—Good trout fishing in Mann's Creek, one-fourth of a mile below station.

"Kanawha Falls."—Bass and salmon or pickerel in the Kanawha River, and up the Gauley, some ten or fifteen miles—finest trout fishing in the State of Virginia. Good hotel at "Falls."

"St. Albans" (at the mouth of Coal River).—Fine bass fishing up Coal River.

Besides places merely charming to the angler, the Chesapeake and Ohio Railroad gives easy access to the finest mountain scenery of Virginia and the famous Virginia Springs, whose ancient prestige, as the most fashionable of American watering places, is fast returning. By taking the Old Dominion Steamship line to Richmond, and the railroad there, the journey can be most agreeably varied and enjoyed by all who are not subject to sea-sickness; and in June, July and August there is little rough weather.

In addition to the older routes to the Adirondacks, the Adirondack R. R. opens a new and attractive way via North Creek to many of the most virgin haunts of the great Wilderness. The People's Line of steamers to Albany make close connection, and also offer the most agreeable route to Montreal and other parts of Canada. For Nova Scotia and the eastern provinces, as well as Maine, the Stonington and Fall River steamers afford a delightful voyage. The fares on these steamboat lines are surprisingly low.

The Grand Rapids and Indiana R. R., favorably known among anglers as the "Fishing Line," reaches the innumerable trout, bass and muscallonge region of Michigan, whose charms were so agreeably set forth last year in a series of letters by the editor of FOREST AND STREAM, that the railroad company has embodied them in a pamphlet as affording the best means of bringing these delightful resorts into notice.

The Chicago and Northwestern Railroad, with its 2,800 miles of line and branches, covers the whole northwest like an extended palm and fingers; the Chicago and Alton road leads also through a great game country; so does the St. Louis, Minneapolis and St. Paul Line; and all these will be extensively patronized from August 1 to January by sportsmen who shoot. Meanwhile, if the tourist wishes to be astonished at the amazing growth of the West, which he can never otherwise comprehend, let him take a summer jaunt over this hucolic land and see the thousand-acre grain fields and count the cattle on a thousand hills.

The Wisconsin Central Railroad traverses a most picturesque country, abounding in dense forests full of game, and lakes and streams whose waters contain rare fish worthy of the most skillful angler's attention. Many of the particular points for sport on this road were recently noticed in this journal in the series of "Editorial Rambles," contributed by the Editor-in-Chief, and embodying the favorable impressions

made by a personal visit. Menasha and Neena, Green Bay, Butternut Lake, Silver Creek, White River, Ashland, and a dozen other places famous for their piscatorial attractions, have all been noted in these columns. This road—as do most of the others—publishes and distributes gratis an illustrated guide, which they supplement by personally replying to all queries of inquiring sportsmen, and excellent care is taken of man and dog.

With all this array the pleasure seeker is inexcusable if he finds nothing to his taste; he is, perhaps, to be treated with indulgence, if in the multiplicity of good things he is at a loss which to select.

THE DEATH OF GEN. T. S. DAKIN.

GENERAL Thomas S. Dakin died on Monday, May 13. Through the length and breadth of the country, both here and abroad, General Dakin was well known as a rifleman of the most distinguished skill. To great personal proficiency with the rifle General Dakin united administrative power of rare merit, and was more than once captain of teams. As early as 1872 General Dakin became interested in rifle shooting, and with untiring zeal ever since that time devoted his leisure hours to rifle practice. It was in 1873-74 that his skill became fully developed. In the first International contest held at Creedmoor, when the American team first won distinguished position against the Irish riflemen, Gen. Dakin's score was among the best. In the Dollymount contest, the return match, Gen. Dakin also distinguished himself. The last contest between the American and English teams was the crowning triumph in Gen. Dakin's rifle annals, our lamented friend commanding the American riflemen, with Sir Henry Halford leading the Englishmen. It may be said that Gen. Dakin's love for rifle shooting amounted almost to a passion. It was but the other day, it seems to us, that we met Gen. Dakin well and hearty on the occasion of the presentation of the FOREST AND STREAM AND ROD AND GUN medal to our German riflemen. In this contest Gen. Dakin had taken a warm interest. He was to have assumed a leading position in the coming German Schutzen Fest in June next. But now, alas! his handsome face, his stalwart form are to be seen no more! It was not alone as a rifleman that Gen. Dakin leaves a brilliant record. As an officer, as a gentleman, as a good friend, as an honest man his memory will long be remembered.

Attacked on Sunday evening last, after attending church, he expired very suddenly on Monday morning, struck as if by paralysis. We, with many others, mourn his loss and desire to express here the sincere respect we felt for the man whom God has taken away from us in the prime of his life.

PROFESSOR JOSEPH HENRY.

The whole scientific world has met with a loss in the death of Professor Henry, so long known in connection with the Smithsonian Institution, of which he was the governing officer. Born in 1797, Professor Henry had completed his eightieth year. Educated in the Albany common school, his entry into life was as a watch maker, but showing a great love for the sciences, his first position was that of a Professor in the school he had graduated in. This was in 1826, and only one year later he commenced that brilliant series of investigations in electricity which made him so celebrated. In 1832 he was appointed Professor of Natural History in the College of New Jersey. In 1846 he was placed in charge of the Smithsonian Institution. Here his true intellectual life had its fullest scope, and the prominent position this admirable institution has taken in America as the fountain head from whence the study of nature history ebbs and flows, is due in great part to the wonderful zeal and administrative power of the first of our scientific men, whose death we now notice. Full of honors, sure to be cited in future days as the real father of scientific research in the history of our country, Joseph Henry departs from this world with an unblemished history and a lasting record.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

A SPORTSMAN'S DINNER.

When Wordsworth sang:

"A creature not too bright or good
For human nature's daily food,"

could the poet have meant trout? Wordsworth was a Lakeland, and Cumberland did in his time abound in trout. Though no commentator (and commentators are so neglectful) has ever mentioned it—as no man is a poet who is not fond of his stomach—it must have been that Wordsworth lingered by a brawling stream and saw a crimson spotted trout flushing through the water and thought how really good it was to eat. When, then, at Miss Corson's cooking school one evening last week, a most appreciative assemblage of gentlemen and ladies saw placed on the table superb trout, wonderfully cooked, the gastronomic delights of the Adirondacks were renewed. Hypatia discoursed in the Alexandrine Academy the past symbolic lore of the Greeks, as Miss Corson teaches in New York to day the practical good lessons of the present. Now, to see a fair lady, knife in hand, in charming costume, lay down the law and teach how to broil, roast, to stew, to flavor, to garnish, is indeed the true poetry of the *cuisine*. One mission this lady has is to show people, the ignorant ones, how many good things the Lord provides us with, and how to dress them. Now there is the flounder, the much despised dolt or lout fish. You can buy flounders for a song, because almost everybody turns up their noses at them. Now do you, lady reader of this journal, just follow Miss Corson's method. Lay your fish flat on a board. Take a sharp knife and make a straight cut down in the middle of the fish from where his gills start to his tail. Then put your knife parallel to the fish, and passing along the bones, detach the two fillets. Turn him over and proceed the same way with the back of the fish. Now you have four fillets. Take off the skin, by pulling the fillet with the skin side flat downward, and placing the knife flat on the table, taking an end of the skin and pulling it towards you, and the tough epiderm will be detached. Trim off the edges and cut the fillets bias. Then have some yolk of egg, pour your fillets into it and roll them in cracker powder, and, having a pan with hot boiling sweet oil in it, fry your fillets a light brown and eat it with sauce Tartare. If then your husband does not applaud your dish he is deficient in all gastronomic sense.

Here is the bill of fare which was partaken of, all cooked before the party by Miss Corson:

Paree of Salmon.
Fillet of Fish, with Tartare Sauce.
Ly onaise Potatoes.
Broiled Trout with Dutch Sauce.
Matzoes, with Auchoy Butter. Lobster Salad.
Sardine Sandwiches.
Pretzels. Olives.
Game Sauce, a la Marengo.
Petits pois au Naturel. Corned Rice. Broiled Birds, with Maitre d'Hotel Butter. Wat-rouses, with French Salad Dressing.
Omelette Omelette.
Assorted Fruit. Sweet biscuits.
Roquefort and Cream Cheese. Coffee.

Now there is really nothing impossible in this bill of fare, and such extraordinary things as are not found in the woods, as sweet oil, sardines or anchovies, though they may be brought to camp in cans, might be dispensed with. If good bacon fat can be used as a substitute under proper precautions in lieu of sweet oil, which is perfectly possible, the whole cuisine is rendered possible. Around a camp-fire, though appetites are keen, the bad cook comes in for no small amount of deserved abuse. Cooking may be, according to Brillat Savarin, an inspiration, but a little thought given to baking-pans, gridirons and skillets accomplishes wonders.

Among the invited guests were His Honor Mayor Ely, the Honorable R. B. Roosevelt and Mr. E. G. Blackford. As President of the Fishcultural Association, in addition to his ichthyological lore, no one has a more thorough acquaintance with the *refinerie* of the hunter's cuisine than Mr. Roosevelt, as his books on fishing show. If, then, Mr. Roosevelt has a mission, it is also to convince people how much excellent good food is lost through their stupid prejudice. This economic problem, it is quite possible, Mr. Roosevelt will solve some day by having a dinner composed of the fish "which people do not eat." The nutritious squid, the succulent dog-fish will certainly figure on this occasion.

Miss Corson's dinner was admirable in every way, and her perfect *cuisine*, her skill, her thorough knowledge of the whole subject, her deftness in handling a cook's knife or a *casserole*, were only equalled by her pleasing grace as a hostess. If Miss Corson would write some small book adapted to the requirements of sportsmen we are quite certain that it would be fully appreciated. We see now in our mind's eye men seated of nights in the wild woods, by the light of smouldering fires, conning over this coming volume, and at the very next breakfast putting into practice all Miss Corson's secrets. The only trouble might be that a man in coming back, a thorough graduate in the better school of camp cookery, would be dissatisfied with the tamer fare provided by his wife.

KILL THE FISH YOU CATCH.

A Cincinnati correspondent sends the following considerate letter:

EDITOR FOREST AND STREAM:

Nobody would like to eat beef taken from a drowned animal, but when we take fish alive out of the water we string them, and, when satisfied with the sport, we sling them over our shoulder and wander toward the kitchen, without thinking of killing them. That is a general rule. Is it not very cruel to deal with the poor fellows in such a manner? I think it ought to be the rule among true sportsmen to have a little more humanity, and to kill a fish in a quick way instead of suffocating them. But not only for humanity's sake should we kill our table fish. The killed fish is a better flavored dish. A dead fish which

has been killed will have his mouth shut; but, if he has died by being taken from his element and allowed to slowly suffocate, his mouth will be wide open. In some countries a dead fish with open mouth is considered unmarketable. If you think this question important enough, I am sure to see something about it in your very valuable paper.

Respectfully,

CHAS. ROZELL.

We are indebted to our correspondent for bringing this subject so opportunely and pertinently to the attention of anglers and eaters of fish. Its scope is wider than would casually appear at first sight. The whole matter should engage the attention of our marketmen, fishermen, physicians, and makers of sanitary laws and regulations. Two years ago or more, we introduced these suggestions into our columns with reformatory purpose, but our effort was suffocated or nullified by the careless idiocy of the printers, who, being men of letters, and having the whole English language at their fingers' ends, are prone to make nonsense of written utterances which thinking men are compelled to place at their mercy. We stated as a postulate, that "fish will keep twice as long by being killed by a blow on the head directly after being caught, than if left to die a natural death." Now, what does the artless reader who has so often complained to the editor about the mutilation of his manuscript and the perversion of his meaning, suppose the intelligent printer made us say? Why—he told the public (in our behalf, as our spokesman, of course,) that "fish would LIVE twice as long if killed by a blow on the head when caught, as when left to die a natural death!" Fortunately the public were content to consider the solecism an intentional perpetration, and newspapers so quoted it; but the editor has carried the clipping in his pocket ever since as a successful liberal-cism as well as a sample of the kind of weapons which Faust employs upon occasions in his tilt with the Devil.

Howsoever, our statement as originally made contains a physiological fact which is worth considering from several points of view. Economically, it doubles the profits of fish-mongers, adds quantity to the larder, extends the beneficence of fish food to interior localities doubly distant from the sources of supply, and may even save from starvation by giving a man respite; for if the fish keep twice as long in condition for food, the man's lease of life is by so much extended, supposing the fish to be his only sustenance during the time being. With regard to the improved flavor of a killed fish, there can be no question; while the appearance of a fish decently composed and laid out on the market slabs, with his mouth closed, is seemly and conspicuous in contrast with one whose mouth is gaping and distorted. The same is true of any corpse of man or beast. Being more attractive to the purchaser, the fish would certainly bring a better price. Its texture is firmer and its flesh harder. On the ground of humanity, let the appeal be strong. As boys, we were taught that fish had no feeling, and we believed that what might be cruelty to a dog was harmless pastime as respects fish. But autopsy and science have proved our belief an error, and we discover that contortions and gaspings are evidences of pain and distress, though we assume that their nervous system is comparatively of a low order. That fishes have intelligence and can be taught; that they have memory; that they have discrimination and discernment; that they possess the five senses, each to a great or small degree; that they are to a limited extent sentient and reasoning creatures—all these have become evident. If it is a law of nature that all creatures shall pursue and prey upon each other, either for pleasure or profit, let us ameliorate the suffering of the pursuit. Let it not be wanton and merciless. The beasts are not wanton. The cat toys with the tremulous mouse; but the mouse, not positive that death is certain, and conscious that while there is life there is hope and possibility of escape, perchance enjoys the prolonged period of apprehension and the play of its own artifices to circumvent and extricate itself, just as gladiators in combat, or men at arms, are exhilarated by the dangers and desperation of the conflict, and are happy to carry off wounds and mutilations as trophies of prowess and evidences of great straits! If it is ordained to us that we are to derive sport from the prolonged apprehensions of the fish while hooked (not from his bodily pain, for the mere prick of the hook gives little, and often none at all), then let us handle him mercifully after his torment begins, and it begins after he is withdrawn from his native element. If he is small, take him around the body and considerably rap the top of his head upon a stone or the thwart of the boat; if large, rap his head with a heavy stick; or, what is more genteel and to the point, pierce the cervical column at the base of the brain with a sharp knife. This produces paralysis and almost immediate death. It leaves the corpse in a shapely and seemly condition. Admiration of its unabated beauty is added to the pleasure of capture, and your fish remains a proper subject for the market or the studio. Brother anglers! learn to be humane.

ZOOLOGICAL SOCIETIES.

THE recent report of the Zoological Society of Philadelphia, as furnished by John Samuel, Esq., their Secretary, is quite interesting at the present moment in view of the efforts now being made to start similar societies both in New York and Brooklyn. The report shows quite conclusively that although a zoological society may have its years of large attendance, there may yet come seasons when the public, from stringent times, do not patronize such places of resort with the same liberality as in prior years. Of course from all this question of attendance some mean can be arrived at which would represent the probable attendance in a series of say ten years. The upshot of all this is that for the proper maintenance of any zoological society, whether in New York, Philadelphia

or Cincinnati, such an institution must be perfectly independent of possible revenues to be derived from public attendance. We are quite of the opinion of the Secretary of the Philadelphia society, that to remove the fortunes of a zoological collection from the somewhat precarious condition which must always attend a support based entirely on receipts from admissions, a permanent fund should be established, which, when securely invested, would derive such interest as could be applied to the maintenance of the society. Mr. Samuel cites the case of the London Zoological Garden, which derives a major part of its means from the interest on bequests and legacies. The general idea of the founders of a zoological society has been so far, that from public patronage it could be made to be self-supporting. Quite the contrary is apparently the fact. These data are derived not only from the experiences at home (which are somewhat limited it is true), but certainly from foreign sources.

Why should, then, zoological societies be started differing in the least from public libraries? The information from books and the study of animals both tend to public culture, and gifts for the maintenance of libraries ought to be equally given to zoological collections. Before, then, any zoological garden should be started in New York, ample funds must be on hand, not only for the purchase of the animals, the laying out of the grounds, but for maintenance. City appropriations are but precarious things. Political disturbances play and have with private organizations. Such a society ought to be certainly removed from party thralldom. Of course, as in Philadelphia, the city authorities should be looked to for the ground of a zoological exhibition, and some small fund for maintenance might be expected, but we should be opposed to the receiving of a fee for admittance. The policy of our Park Commissioners has always been conceived in the widest spirit, and they have always held that the ground of the park belongs to every citizen in New York, and that there is not a square inch of it over which a man had not a right to place his foot without the payment of a cent. The *quid pro quo* for a certain portion of ground given by the city is returned by an association who furnishes the buildings and the animals, and attends to keeping grounds, houses and the animals in good order. Such independence would prevent the city authorities from imposing on the society any officers, such as of a superintendent who might be ignorant of the business confided to his care, for politics and zoology do not go together. We believe that if a society, as indicated by us, started squarely with the idea of having money enough to maintain their enterprise, such zoological gardens, either in New York or Brooklyn, would add immensely to the attractiveness of the parks, and in an educational point of view would be of untold benefit to the people.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

New York State Association for the Protection of Fish and Game, Buffalo, May—; Sec'y, John B. Sage, Buffalo.
Connecticut State Sportsmen's Association, Hartford, May 15.
Iowa State Sportsmen's Association, Des Moines, May 28.
Nebraska State Sportsmen's Association, Fremont, May 21st and 22d.
National Sportsmen's Association, Wilkesbarre, Pa., June 11.
Illinois State Sportsmen's Association, Quincy, June 11; Sec'y, Geo. E. Wheeler.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sec'y, Benj. F. Duwanco.
Ohio State Sportsmen's Association, Cincinnati, June 15; Sec'y, Willbank, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2; Sec'y, Clark Fritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President.
Missouri State Sportsmen's Association.

NEW YORK ASSOCIATION.—The New York Association for the Protection of Game held its closing meeting for the season last evening. Complaints were made of the presence of pound nets at Babylon, Long Island, in violation of the law, and of the erection of nets and stakes in Great South Bay, Long Island. The legal counsel of the association was directed to take immediate action in the matter. After the transaction of considerable routine business the members were entertained at supper by Mr. Clinton Gilbert, at whose residence, No. 20 West Tenth street, the meeting was held.

PROTECTION FOR FISH IN SOUTH CAROLINA.—After thirteen years' endeavor to straighten out the politics of the State, time and opportunity have at last been found to look after its ichthyic interests. The following fish law has been enacted, and was approved March 1, 1878:

An Act to Prevent Fishing with Nets in the Fresh Water Streams of this State at Certain Seasons of the Year.

Sec. 1. Be it enacted by the Senate and House of Representatives of the State of South Carolina, now met and sitting in General Assembly, and by the authority of the same, that it shall not be lawful for any person in the Counties of Marion, Horry, Darlington, Clarendon, Georgetown and Williamsburg to fish with nets and gigs or set traps in any of the fresh water rivers, creeks or lakes in said counties between the 15th day of April and the 1st day of September in any year hereafter.

Sec. 2. That any person violating the provisions of the foregoing section shall be deemed guilty of a misdemeanor, and upon conviction thereof by a court of competent jurisdiction shall be fined in a sum of twenty dollars or imprisoned in the county jail for a period of thirty days.

Sec. 3. This act shall take effect from and after its passage.

Now, although the whole commonwealth does not come within the provisions of the act, what has been done is important. It is a proof that the people of South Carolina are at last realizing that the supplies of fish in their rivers and streams are not exhaustless, and although it is late in taking a

step which should have been taken years ago, it is to be hoped that a strict observance of the law will soon bring up the supply to what it was in ante-bellum days. Encouraged by the protection thus afforded, and influenced by Senator Butler, Prof. Baird has determined to send several thousand shad for the streams in South Carolina. The fish will likely be planted in the Savannah, Broad and Catawba rivers, and the streams tributary to these in South Carolina.

PROTECTION NEEDED IN GEORGIA.—There is urgent need of a general State game and fish protective law in Georgia. In some counties the local laws are doing much good, but in many localities the shooting of game at all seasons, trapping of quail, indiscriminate use of strychnine, and other practices equally reprehensible, are effecting an unwarranted diminution of game. The readers of this journal in that State should now have an intelligent conception of the need of legislative action, and we urge upon them the desirability of moving in the matter at once.

THE SWEDISH GRAY PARTRIDGE.—A correspondent is desirous of importing some of the gray partridges from Stockholm. Parties wishing to co-operate with this gentleman will please address us.

The Rifle.

NEW HAMPSHIRE—Dover.—Capt. John S. Dame made a target of twelve shots at twenty rods (110 yards), with an average of $\frac{1}{2}$ and 1-16 in., and this with a rifle made by a gunsmith of our place—Eugene Smart—common open sight.

WALNUT HILL, May 8.—Spring meeting; scores; match No. 2, at 200 yards.

Totals.....		795

In the team match between Co. of First Regiment and

Co. K of Second Regiment, the Second again won with 593 against 543. In the military, in a possible 35, J. Tinkey won with 31, Nichols second. In the 200-yard all-comers, Mr. W. E. Story won with 32 in a possible 35, Major Hassan second. In the 500-yard military match, F. J. Colvin won with 30. In the 500-yard all-comers, Mr. W. E. Story led with 31.

SCHUTZEN VEREIN IN BOSTON.—The Schutzen Verein No. 1 held a practice shoot at Schutzen Park, using a ring target. The following are the best scores made out of a possible 72: A. Hagenunger, 66; A. Matthias, 63; A. Schreck, 63; Wm. Schleim, 58; Geo. C. Reif, 55; J. Widman, 50; Geo. J. Faulhaber, 49; F. Maurer, 47; E. Traeger, 44; F. Brinkmann, 42; E. Rashe, 41; E. Buxbaum, 40; J. Korber, 35.

—Stafford Guards had a match last week, with the following results: Best average shot, No. 15, Private James Harrison, 3 shots, 3 $\frac{1}{2}$ in.; second, No. 34, Private John P. Hughes, 3 shots, 6 $\frac{1}{2}$ in. Best single shot, No. 1, Orderly Sergeant John Sherry, 3 $\frac{1}{2}$ in. After this exercise the Honorary members took the field, and the following was the result: Best average shot, No. 32, John S. Dame, 3 shots, 3 in.; best shot, No. 81, Chas. E. Smith, 3 $\frac{1}{2}$ in. Arm, Springfield rifle. This was the fifty-fifth anniversary of the Stafford Guards.

CREEDMOOR—Wednesday, May 8.—Seventh competition for the Ballard prize. Condition—Open to all comers; 15 shots at 200 yards. The following is the record:

F H Holton.....	50	4 4 5 3 4 5 4 5 6 5 4 4-67
C E Blydenburgh.....	50	4 4 4 4 4 4 4 4 4 4 4 4-66

J W Todd.....	50	4 4 4 4 4 4 4 4 4 4 4 4-60

Mr. Holton, by winning in this match, becomes the final winner of a gold badge presented to the New York Rifle Club by their captain, Mr. C. E. Blydenburgh. Mr. F. H. Holton was also winner of the Schoverling & Daly badge. The match was of seven shots each, at 200 and 500 yards; winning score, 54. The Stock Exchange Rifle Club medal was won by R. W. Dimock, with 42 out of a possible 50, at 200 yards. For the Douglass cup, a leading contest of the Eighth Regiment Rifle Club, Mr. J. C. Clark was winner, with a score of 89 out of a possible 100, at 200 and 500 yards. This club uses the military rifle.

May 11.—Second competition for the Waters' long-range prize, \$50 gold. Conditions, thirty shots at 1,000 yards. The following are the scores:

N Washburn.....	113	B G Doughly.....	98
B Fisher.....	108	T Lamb.....	98
I L Allen.....	107	N D Ward.....	75
R Ralibone.....	105		

MODERN OBSERVATIONS ON RIFLE SHOOTING.—We beg to acknowledge from Mr. Edwin A. Perry his improved system of score-book, with the silicate slates for use on the range. We shall be glad to give this most useful score-hook a more extended notice in a subsequent issue. Orders may be sent either to the publisher in New York, or to Mr. E. H. Madi- son, 564 Fulton street, Brooklyn.

If I were going expressly in pursuit of very large, and possibly dangerous game, and especially in dense forest where there would be little chance of getting a long shot (as for instance, for moose, caribou or bear in the woods of Maine), I would prefer as large a calibre as half an inch, but for any ordinary service, even with a probability of an occasional encounter with the larger animals, I would carry nothing larger than a 4-10 or 44-100 calibre, which is a much pleasanter size to use, and is more reliable for anything beyond fifty or seventy-five yards. I should always use cylindrical rather than conical bullets, however, with spherical or flattened end, and would always be provided

The Empire Club is fortunate in the location of its clubhouse. On the New York side, opposite Ward's Island, the cove below affords a sheltering harbor and anchorage clear of all steamboat travel, while the view from the pier leaves nothing to be desired. The fresh green of the islands brought out against the bluish-gray tints of the sky to the northward, and the Big and Little Mill Rocks on to the southward, with Hallet's Point to the eastward, inclosing a stretch of water, form as pretty and charming a picture as one can wish for. But not only in beauty, but also in usefulness, does the locality excel. It is a splendid place to start sailing and fishing parties from for a trip up the Sound. There is College Point, Fort Schuyler, Sand's Point, Pelhamville, of coaching fame, and many other spots of interest to the suburban tourist, at which he will find shade and refreshment, and the bass and bluefish running thick. Boats, lines and bait are to be had at the club-house, and a few minutes' chat with such veterans

fishermen and Hell Gate pilots as Mr. Philip Jonas, familiarly known as "Uncle Phil," or Nathaniel Lockwood, the President of the club, or Wm. McManus, and others, will give you an amount of valuable information concerning good "holes" and still water to drop your bait in that could not be gleaned elsewhere. Uncle Phil, who, by the way, is truly an illustration of civil service reform—for over thirty years an officer of the Supreme Court of N. Y.—has done some tall fishing in the "Gate" all his life, and, what is more, in the spirit of the true sportsman only. For fifty years he has pulled his boat and dropped his line or trolled for bass with squid caught at night time around his scap net, and he is at the present day as ready as ever to go on a hunt for the finny denizens of the deep. Mr. Jonas keeps a weather-eye on the infringements of the game laws of the State, and in connection with the Rod and Reel Club of Harlem, of whose counsel committee he is the chairman, is ever ready to prosecute all who break the laws by the use of fykes or nets for capturing bass within five miles of the Gate and its estuaries. Many years ago this gentleman commenced and won an action against the gas companies, compelling them to desist from their practice of poisoning the water with refuse coal tar from their works. For this and many other steps in their interests the salt water fishermen of the Gate have to thank the sporting spirit of Mr. Jonas and his confederates. Corniel Finch, an old Harlem puller, whose hands no longer blister when he takes to the paddles for an hour or two, is in charge of the club-house, keeps the boats in order, and is always on hand to give a helping hand to anyone requiring it.

YACHTING NOTES.

THE INTREPID.—On Tuesday, May 7, this schooner was got under weigh and headed for the Hook. She had on board her owner, Mr. Lloyd Phoenix, and Mr. A. Cary Smith, her designer. Below Governor's Island the tug's hawser was cast off and the big schooner left to shift for herself. Belmont, her captain, then put his craft through a series of manœuvres to test her qualities. She was tacked and wore round, sailed close hauled and with a free sheet and in smooth and lumpy water. Under all circumstances she proved a thorough success and fully came up to the most sanguine expectations. This much was to be expected from a carefully prepared scientific design as well as from the well known ability of Mr. A. Cary Smith, the St. Clare Birnie of America. Some few would-be critics, who saw all kinds of sharp angles and centres out of balance, peculiarly novel principles of mechanics, etc., in her while on the stocks, will now probably wish they had not rushed into print quite so readily as they did. Their crude guesses and smatterings of knowledge called down upon them the ire of several, who, in their desire to set matters right, forgot that naval science requires no defence, but can stand by itself upon its merits. The man who throws science to the dogs and falls back on jack-knife art, is simply an ignoramus, and his lucubrations call for no remarks. The *Intrepid* had only one chance of testing her speed on her trial trip, and the ready manner in which she made way with the pilot-boat *Fish* will be unwelcome news to the holders of challenge cups for ocean matches. The success of the *Intrepid* will do much to advance the art and develop a taste for able sea-going yachts.

THE KNICKERBOCKER REGATTA.—The match of this Harlem Club has been postponed from the 15th to the 30th inst.

THE FEVER SPREADING.—When staid old conservative Britons take to such newfangled concerns as catamarans there is a future for such craft. Indeed, Herreshoff, of Bristol, is building a 39-foot one for parties in England.

PETROLEUM FUEL.—Mr. J. B. Smith, of East Providence, has launched a yacht, 30ft. 6in. long, 7½ tons burden, which will be driven by the combustion of petroleum and air, without developing steam or the use of a boiler. We hope to give further details of the experiment shortly.

ESTELLE-GRACE MATON.—This schooner and sloop will try their speeds over the N. Y. Y. C. course for \$500 a side, some time in June. Capt. Briggs will command the *Estelle*.

PROVIDENCE YACHT CLUB.—Our Providence correspondent sends us the following items concerning yachting matters on Narragansett Bay: The club will hold its annual review and dinner at Bullock Point, May 30. The race for the Harvey J. Flint cup will be sailed in June, besides which there will be two other races during the season. The commodore also proposes giving a cup, while the catamarans will have a special brush on the waters where they first originated. Yachting affairs in and about Providence are lively.

JERSEY CITY YACHT CLUB.—The twentieth annual regatta of this flourishing club takes place June 11. Course, for first three classes, from stakeboat off club-house to buoy 8½ and return; fourth and fifth class sail to buoy off Robbins Reef and return, twice over. There are already twenty-four entries.

BAY OF QUINTE YACHT CLUB.—Under its auspices a match will be held at Guanajuato, on the St. Lawrence.

NARASSET YACHT CLUB.—Our advices point to an exceedingly spirited season among the members of this club. They are all active working amateurs. The rule compelling members to steer during matches has been abolished.

SAN FRANCISCO LEADS.—The yawl rig has been adopted on several yachts at the Golden Gate. Must Eastern yachtsmen travel all the way to the Pacific for an improved cruising rig? The yacht club will open the season with a sail to Vallejo on the 27th inst.

KINGSTON, N. Y., May 7.—Dwight Knapp, of Roundout, has been overhauling his yacht *Annie*. He has added nine feet to the topsail and twelve feet to the jib, and has been setting the mast back three feet and been putting in a new bowsprit.

YACHTING DRIFT.

San Francisco yachting is lively and the sport rapidly gaining fresh members. The yawl rig gives satisfaction on the coast. Dr. Seudder will sail the *Only Daughter* with a Christy spirit this season. Long Island Yacht Club has thirty yachts enrolled. *Nereid* comes out with three hulls this summer. *U* this many barreled schooner more anon. *Palmer* will not be out. *Regina* is the prettiest of her class, inside and out. Geo. Cooley will tool her. Catamarans are being black-headed. Competition between them runs high. *Sloop Gracie* is having 6ft. added to her spar. This will make her a formidable rival to the other first class sloops. *Schooner Ambassadors* will probably not race, though she could not be speedy, from the looks of her. Jacob Smith will be skipper of the *John Gilpin*.

THE OAR AND PADDLE.

ST. LOUIS BOATING.—The four-oared race for the St. John Cup, now held by the St. Louis Club, will take place June 30. Four clubs will compete—the Modocs, Westerns, St. Louis and Mississippi. The match will be pulled under the aus-

pices of the Mississippi Valley Rowing Association. Course from Pittsburg dyke to North Market Street and return to Chouteau avenue. The Mississippi Valley Amateur Rowing Association also met at Peoria and laid out the course for their regatta at that place. It will be a straightway mile and a half, starting from upper end of the lake and ending at boat-house of the Peoria Club.

HANLON-PLAISTED RACE.—The last deposit of \$1,000 in this race has been placed in the hands of the stakeholder, the Mayor of Toronto. The race comes off on the 15th inst; both men are in good condition. Betting in favor of Hanlon.

WATKINS REGATTA.—The date for closing entries has been deferred until May 18. The event promises to be one of the most brilliant ever held in this country.

PACIFIC AMATEUR ROWING ASSOCIATION.—The knights of the oar in San Francisco and neighborhood have organized under the above title and have adopted the rules of N. A. of A. O. with the exception of substituting the date of Jan. 1, 1878, for Aug. 19, 1872 in the clause concerning amateurs. President, Chas. G. Yale; Secretary, Will Brooks; Treasurer, Val. McClatchy.

CHARLESTON, S. C., May 4.—As the time for our annual regatta draws nigh, the interest in boats and boating is rapidly increasing, and it is to be hoped that by the 30th we will have as large and enthusiastic a crowd with us as every annual regatta heretofore has brought together. The "Palmettos" have made up their first crew as follows: H. Nott Parker, stroke; Wm. M. S. Lesesne, No. 3; H. B. Ball, No. 2; H. C. Cheves, bow. Messrs. Parker, Bull and Lesesne are three of the original crew of the Palmettos and have won the largest number of races, perhaps, of any amateur crew in the South. Mr. Cheves is a splendid oarsman, and is the gentleman who won the single scull race in New Orleans in such beautiful style about two years ago. Besides the Palmettos, the Carolinas, Electrics, and we hear the Queen Cities will enter crews for the four-oared shell race and "English Challenge Cup." It is with regret that we hear that there will be no crews from Savannah this year, but there are to be two or three of their best yachts over on the 30th, and, if reports are true, they will no doubt give our yachtsmen a sharp fight for first and second prizes.

CANOEING.—Mr. Chas. Chase started on his trip up the Hudson, May 7, in his canoe *Bubble*. She is of the *Shadow* model, was built by Everson and is 14ft. 4in. long; beam at sheerstroke, 28in.; at bottom, 31in.; depth, 10½in.; weight 65 lbs. Her rig consists of mainsail, jib and dandy. Mr. Chase will proceed up the Hudson through Lake Champlain down the Sorel River, thence via the St. Lawrence and canal to Kingston, Ont. From that city to Quebec, passing the Thousand Islands on his way, up the Chaudiere to Lake Megantic, and by portage to headwaters and down the Connecticut River, through Long Island Sound back to New York. This will afford a fine test of Mr. Alden's *Shadow* model.

ROWING RIPPLES.

Ariel Club of San Francisco and Undines of Sacramento are alive and flourishing. Waters, of Troy, is building a paper eight for the Yale University crew. Hanlon will pull a shell by Elliott of Greentown in his race with Plaisted. Odds 100 to 70 against the latter.

New Publications.

A KENTUCKIAN'S OPINION OF THE "SPORTSMAN'S GAZETTEER."—We copy the following letter, dated

LOUISVILLE, Ky, Feb. 27, 1878.

Dear Sir—I wish I had time that I might, as far as words go, pay off a part of the debt of gratitude I, in common with all sportsmen, owe you for your "Gazetteer."

I suppose I know as much about sporting matters as the generally of men of my years and opportunities. I have never been without a double gun these thirty years; my dogs have a good local reputation; my fishing tackle is referred to as the best; I have shot and fished from Canada to the Gulf; I have camped out in all styles, from on the bare ground to the luxurious shooting box, and got along somehow—comfortably or otherwise; but, now that I have your book, after reading it I see so many things opened up to me, so much information, so many things, small in themselves, but which go so far to make up a sportsman's life and comfort, I wonder how I did get along. If not so, your book deserves to be in the hands of all true sportsmen. It is practical, it is really the only practical work of the kind I have ever seen. I have had many "Shooting and Fishing Books" in my time, but they have never suited the wants of the general sportsman of the present day. Somehow or other they never "consol." I will not be invidious, nor will I name or classify these books—you know them as well as I do; but nine out of ten of them might as well be written in Choclaw for all the good they do, and are of no use whatever to a sportsman. For invalids and those who do all their shooting and fishing in their "mind's eye, Dorrit," they may serve the purpose to give them something to talk about and appear learned to the unlearned. Now, in your book there is a breezy, outdoor, "been there" style that is particularly charming to one who has been there himself and knows that you know what you are talking about, and sees that you talk it in a terse, vigorous, concise, though comprehensive, manner.

FRATERNALLY YOURS,

J. V. C.

The writer of the foregoing adds:

In regard to our club, we have a first-class one, numbering nearly one hundred members. There are many extra shots among us. We are doing our best to preserve our game and have now before our Legislature Solons the draft of what I consider a good law, with every indication it will pass.

CANOEING IN KANUCKIA, by the Commodore (C. L. Norton) and the Cook (John Habberton). Illustrated. G. P. Putnam's Sons, New York.

In this book, which, by the way, appears very seasonable with the first break of real summer, the public is let into the heretofore unfathomed mysteries, dangers, adventures and delicias of a sport comparatively in its infancy yet in America, but destined ere long to count among its devotees many thousands of the most conservative stay-at-homes of the day. The title has been chosen in accord with the subject matter, though had there been added to it some such explanatory hint as "a homeopathic device how to cure dyspepsia and the blues" it would have been additionally elucidating to the average individual who chums the water as he would poison of the most virulent kind. Since two heads are universally presumed to be better than one it is natural to expect in this little volume a sketch of events and transactions of an interesting kind, and in this the public will not be disappointed, especially when we add that among the enterprising party of adventures no less than two, welded besides the paddle a mighty pencil. The latter was exten-

sively called into play and every eventful incident has been handed down to posterity in the sketches literally intermingled with the type. To be sure, once in a while the pencil falls behind the pen; for example, where an angelic form, probably some country governess, appears within the horizon of the gallant four; but the flutter caused in mainly bosoms by its maiden, fancy-free—for such she was to the heat of the author's knowledge—or else the hasty manner of her disappearance may be taken in extension of the not over-complimentary likeness. The cruise was undertaken by four members of the New York Canoe Club in search of health and recreation, and is both interesting and instructive in its results to others proposing to go and do likewise; while to the novice the perusal of this volume will open up a new field, perhaps unthought of, in which he can, at very moderate cost and an amount of time to suit his convenience, enjoy fresh air and nature to his heart's content and return to the tedious grind of the daily mill in the city with renewed vigor and hope. The cruise extended from the headwaters of a tributary of the St. Lawrence across the boundary line into the primitive regions of Acadia, thence down to the "Great Lone River of the North," where the canoes were finally slowed and aed home by rail, while the tourists took steamer to Montreal. Of especial value to the lovers of the sport are the pages of the appendix which contain full information about canoes, where to get them, how to rig and equip them and how to take care of them. We doubt not this pleasantly written volume, replete as it is with the many "hops and mishaps of the statesman, editor, scribbler and artist," will be read with pleasure and profit by the public in general and will conduce materially to the widening of the circle of canoeists throughout the land.

VOYAGE OF THE PAPER CANOE, by Nathaniel H. Bishop. Lee & Shepherd, Boston.

To the public at large Mr. Bishop's name is already familiar through his travels in South America, and the book describing his adventures and miles walk across the Andes and Pampas. In his new work, the second on travel he has sent forth, we are given a very graphic and instructive account of a remarkable voyage 2,500 miles from Quebec to the Gulf of Mexico in a paper boat. Having left Quebec, Mr. Bishop proceeded down the Richelieu River, often called the Sorel, which erroneously so according to the author, thence through Lake Champlain, the canal and Hudson to Troy. There his old wooden boat, weighing some 800 lbs., was discarded for a paper canoe of only 55 lbs. weight. The latter was built by Waters & Sons, of Troy, and was found after the long voyage, concerning which the public has been informed in detail in the columns of the *FOREST AND STREAM*, to have fully gone through the most severe and prolonged trial with gratifying success. Mr. Bishop speaks highly of paper as the material of construction for boats, and his varied experiences on his journey certainly entitle him to claim authority on this point. In connection herewith the reader of this volume is let into the secret of discovery of paper boat-building. Young Mr. Waters desiring a mask for an evening's entertainment, but finding the price too high borrowed one and took a cast of it in paper. This set him to thinking, and ere long his genius and efforts were rewarded by the production of a shell boat, which has been the forerunner to the large fleet of this class of craft now to be met with on all our rivers. Mr. Bishop sailed down the Hudson in his new boat fourteen feet long, thence through the canals to the Delaware and Chesapeake Bay. In his book, besides an interesting account of his own personal adventures, his readers receive the history of all places passed and important events or the turning points in the industries or customs of town and country are brought out in relief. Thus while in metropolitan waters the old story of the first steamer's trip to Albany is reverted to and the reader of the present day can pause and reflect upon the wonderful progress made in the last century in the means of travel. While in Delaware that peculiar and ancient institution, the whipping post at Newcastle, comes in for a rebuke from the author in the shape of a letter from a resident. About this method of punishment people are apt to stray off into theory and sentimentalism too much. It is the most effective, cheap and just method of punishment in practice. Nothing is here intended to be said about the advisability of making a public show of the execution of the law and, so far as the prison yard is opened to the curious on days when the majesty of the law asserts itself the exhibition can only be demoralizing. But Delaware does not find herself retrograde under this "barbarous," i. e. effective, method of punishing for crime, and so has the temerity to maintain in the face of the "civilized" world the result of her experience. In the lower part of Delaware Bay Mr. Bishop met with a capsize, and his accounts of how invaluable he found a flask of brandy upon that occasion will furnish food for reflection for overzealous lights of the Blue Ribbon. Concerning his reception in the South Mr. Bishop has but one opinion. It was open-hearted, generous to a degree, and thoroughly honest. In fact, operated so favorably upon him as to almost change his views as a Northern man. If the testimony he bears to the good will and intentions of the southern half of the Union serves to draw tighter the bonds of friendship and respect among our people, his book will not have been written in vain. The mechanical portion of the volume leaves nothing to be desired, the paper is excellent, the type clear, and the illustrations finely executed.

THE DOG, With Simple Directions for his Treatment, and Notice of the Best Dogs of the Day and their Breeders or Exhibitors, by Idstone. Twelve engravings; fourth edition. Cassell, Petter & Galpin, New York.

With the current dog-show in New York, the use of a book of Id stone's requires no comment. There are two names in canine literature which are most conspicuous, Stonehenge and that of the author of the book under review, and their opinions are considered as positive. The book consists of some forty-two chapters (there are about forty distinct breeds of dogs known in England), so that every dog has a chapter of the most exhaustive character devoted to his description. Suppose, as a sample of the book, we give somewhat in detail, the foxhound as Idstone treats him: Firstly, the system of hunting the dog is fully discussed, which leads to the history of the dog himself, traced back from the sixteenth century; next, the authorities on the form of the dog are given, with descriptions of standard animals of present and former times, with exact measurements. The utmost care and judgment are conspicuous in the treatment of every subject, and though Idstone is quite positive as to some of his opinions, they are always advanced with a host of strong arguments. In the introductory chapter, which treats of breaking, the advice given is of the most useful and practical character. "It is not every man who understands even the common everyday handling of a young dog. It is partly a gift, a good deal the result of love for the dog, and an appreciation of his character, and partly, it is the result of patience. . . . In reality, the handling of a dog is a very simple business—a union of firmness and kindness, and a thorough control of temper under trying circumstances. When a dog has a blow let him feel it, but don't kick and 'worret' him all day. Let the whip be used after all other means have failed. Let it be the word *first*, and the whip *last*." In this same introductory chapter, how a dog should be kneed and bedded is given, with excellent advice on the feeding and rearing of puppies, with a general method of treatment for canine diseases. It is quite unnecessary for any reviewer to expatiate on the merits of Idstone, whose name is familiar to every one owning a dog. As he is authority in England and is Idstone accepted in the United States. If our recommendation in such a case is worth anything, should a gentleman's library be without Idstone, we advise the purchase of the book.

FEEDING FOR EGGS.—For the production of eggs the food should contain an ample supply of those ingredients that make up the egg. An average egg weighs about 1,000 grains, divided as follows: Shell, 107; white, 604; of yolk, 289. The shell is composed 97 per centum carbonate of lime, one per centum phosphate of lime and magnesia, and and two per centum albumen; the yolk of 54 per centum water, 2.86 per centum yellow oil, and 1.74 per centum albumen; and the white, 85 per centum water, 2.7 per centum mucus, 0.3 per centum salts and 12 per centum albumen. Therefore a food containing albuminoids and fats should be employed. The natural food of the fowl consists of insects, seeds, vegetable matter, etc. Therefore there should be a variety of grains, animal matter in the form of scraps of meat, etc., or pressed scraps, chopped cabbage, apples, etc., or, as has been practiced, finely cut and steamed clover hay. There should be variety at all times, and Indian meal scalded and well seasoned with pepper, or chopped horse-radish will be very effective. A recent writer prescribed scalded Indian meal made into a mush, which was cooked an hour or two and then fed hot, with horse-radish. It was recommended to cook food of all kinds, and feed hot. This might be well as a stimulant, but corn meal must be combined with animal food to produce eggs. A supply of powered shells or bone should be provided, not only to aid digestion, but furnish egg shell material. A correspondent of the *Plymouth Chronicle* mixed hog's lard with the dough he gave his hens, and asserts that a piece as large as a hickory nut will set a hen to laying immediately after she is broken up from sitting; and that by feeding a little occasionally hens may be made to lay all winter.—*Live Stock Journal*.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

EDITOR FOREST AND STREAM:
Dear Sir—I distinctly repeat what I said in my advertisement of May 2: That Mr. H. I. Brown has no idea of my manufacture for sale. Neither has he any authority to use my name in his advertisement to convey such an impression. I do not know what he denies by his "absolute denial of the same." Will he kindly explain?

AND

SPORTSMAN'S GLOSSARY.

"This very much-needed Pocket Companion is edited and prepared exclusively by Chas. Hallock, Esq., editor of *FOREST AND STREAM*, and author of the 'Sportsman's Gazetteer' and other works on Field Sports. It includes a list of several thousand clubs, embracing the principal Gun, Ride, Cricket, Chess, Tennis, Athletic, Yacht, Boat, Hume, Fish, and miscellaneous Field Clubs in the United States and Canada. It must prove of invaluable constant service to all Sportsmen and Dealers in Sporting Goods.

The Glossary comprises 700 words in local use by sportsmen throughout the country. It will prove useful to those visiting a strange region for the first time, as it will tend to prevent mistakes, and thereby save personal trouble, mortification, expense, and sometimes bodily risk.
Issued in pocket form. Cloth, price 60c. Every member of every club should have a copy. Clubs supplied at trade discount. For sale at the rooms of the

THE
HAZARD POWDER CO.,

MANUFACTURERS OF

GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFO are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

FLYING TARGET.

(Patented August 7, 1877, No. 193,579.)

The way it came to pass was this: I to a sporting club belong; I love to shoot; I love to see the long-bill topping to the coope from whence 'twas dashed, or in its whirling flight the goodly grouse come fluttering to the ground, and hence to make myself proficient in the many sport, I joined the club, and practiced at the gym, glass ball, and the living bird, and as a substitute therefor the CHEAPEST and the BEST, the Flying Target, I've contrived. EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner that any ordinary stable or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed free, upon application, our book, "How Every One Paint and Select Harmonious Colors." Ad INGERSOLL PAINT WORKS, South and Dover streets, New York.

NICHOLS & LEFEVER,

SYRACUSE, N. Y.,

MAKERS OF

FINE SPORTING GUNS.

Winners, at the Great St. Louis Bench Show and Exhibition of Sportsmen's Goods, of the only two Gold Medals given—"For the Best Gun of Any Make," and "For the Best Gun of American Make"—fourteen foreign competitors and seven American, sustaining our assertion of making the best gun in the world.

IN ORDERING SEND LENGTH OF GUN BARRELS.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44 as desired. Length of barrel, twenty inches. The ancilla used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR

(Mackinaw, Grand Rapids & Cincinnati Short Line.) Sportsmen who have cast a fly, or trolled a spoon in the

Grand Traverse Region will come again without solicitation. All other lovers of the Rod are invited to try these waters, wherein the fish named above, as also Muscalonge, Pike and Pickerel abound.

In no other streams east of the Rocky Mountains is the famous AMERICAN GRAYLING found in such numbers.

BROOK TROUT Season opens May 1. GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1 Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns and Fishing Tackle Carried Free, at owner's risk.

Camp Cars for fishing parties and families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, etc., and accurate maps of the fishing grounds, send to A. B. LEET, G. P. A., Grand Rapids, Mich. A. HOPPE, Eastern Agent, 116 Market St., Phila., Pa. Nov 25 1893

Sportsmen's Goods.

Eaton's Rust Preventer.

For Guns, Cutlery and Surgical Instruments. Safe to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns."

The trade supplied by sole manufacturer, GEO. B. EATON, 510 Pavonia Avenue, Jersey City, N. J.

Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kirtland & Co., Cincinnati, Ohio; E. E. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo. CANNOT BE SENT BY MAIL.

Sportsmen's Goods.

A WHITE RIBBON, Blue Ribbon AND SILVER MEDAL

Were awarded to Messrs. G. W. SIMMONS & SON, of Boston, Mass.,

Through their agents and exhibitors Messrs. Brown & Hilder, of St. Louis, Mo., at the Exhibition of the "St. Louis Bench Show and Sportsmen's Association," for an unusually fine display of Duck, Mole-skin, and Leather

HUNTING SUITS,

which attracted great attention and were much admired by all Sportsmen.

THE BOSTON

SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON.

BOSTON, MASS.

NEW YORK AGENTS:

Fowler & Fulton,

300 BROADWAY,

The Best in Use.

ONLY ONE QUALITY MADE, AND THAT IS THE VERY BEST.

Flexible Waterproof, Tan-Color Duck.

Each article—coat, trousers, vest and hat cap—has the name and manufacturer's address stamped upon it, and no suit is genuine without it bears this imprint.

We make no discount except to the trade. The price of the suit complete is \$13.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are copper-riveted, and nothing is neglected to make the whole suit complete in every way.

This is what one of our best sportsmen says of it, writing from camp: "Although I had been nearly eight hours under incessant rain, laboring and striving along under adverse circumstances, yet I found myself comparatively dry, and my clothes without a tear. For the benefit of our brother sportsmen, let me advise one of Messrs. Simmons' (of Boston, Mass.) Waterproof Suits. Oh! what a relief it was to find one's tobacco was dry, and that one could light a pipe; that you could laugh at your miserable friend, who stood shivering and shaking as if he had the palsy; and then, next morning, oh! what fun it was to see him mending his clothes, while I had not a tear to complain of! Ventilation, that great bane of waterproof suits, is legislated for in the most ingenious manner. No sportsman should fail to supply himself with a suit which is at once cheap, practical, and will last an almost indefinite time."

Our Flexible Tan-Colored Water-Proof Leather Coats, Breeches, Vest, Leggings and Caps are considered the finest things ever made.

SCHUETZENFEST

The FOREST AND STREAM AND ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be of the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. HARENBERG, Treasurer of the Sharpshooters' Union, No. 190 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President. J. H. BEHRENS, Cor. Sec., 31 Bowery, New York.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Heel Vernier Scale, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for P. WEBLEY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

HOMER FISHER, 260 Broadway, Cor. Warren St., New York.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old Style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street, FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Logan Co., Ill. Dec 6

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at \$160, and a money prize of £105, was the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Pordey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using one barrel only.

The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

**HUNTING THE ROCKY MOUNTAIN
GOAT (*Capra montana*).**

ON Rocky Mountain cliff and ridge,
Along the shelving Western slopes,
Or in deep valleys at their base,
Where range the slender antelopes,
The Rocky Mountain prong-horned goat
Feedeth and gallops o'er the hills—
Browsing on juicy grass and shrub,
And sipping the pellucid rills—
So wild, so shy, so fleet are they,
Surpassing speed of horse or hound,
That scarce the Indian's shaft may slay,
Or frontier rifle check their bound.
Where the Columbia River turns
Its North Fork, near its water's head,
Their bleating numbers love to feed,
Cropping the pastures there outspread;
And here the skulking Indian's spear
Drips blood, to feast the starving year.
But seldom do white hunters come,
Or skin-clad trappers urge the sport,
Save when from out-post garrison
Comes wandering soldier from the fort.
And then for days the cliffs resound
With a gun report and echoing call,
With full month'd bayting of the hound,
With gallop down the mountain wall;
Far then o'er granite peak and ledge,
O'er gorge and gulch and canyon rude,
The hunters clamber, climb and cling,
Alarming all the solitude;
And at each day-close, worn with toil,
Rein in with wealth of shaggy spoil.

ISAAC McLELLAN.

For Forest and Stream and Rod and Gun.
**An American Sportsman in
Caledonia.**

LATE in the month of August, 18—, I was whirled out of London by the fast-mail train on the North British Railway, at the rate of forty-five miles an hour, which soon carried me where I rested my eyes, as I had not for many weeks, by gazing upon a broad expanse of fields that afforded an agreeable contrast to the dirty pavements and solid, he-grimed buildings of the city. The constant succession of highly cultivated fields and well-kept hedges did not become monotonous to me, and the occasional sight of a covey of partridges, a cock pheasant, or sportsmen in the fields with their dogs, was of especial interest. There are few routes in America that will carry the traveler through such an extent of country made beautiful by high cultivation, although the country between New York and Philadelphia, for instance, is very beautiful in this respect. Yet the American custom of indicating the division lines by fences, which occurs so frequently, renders the landscape less pleasing than it would be were hedges substituted for the fences, even where the latter are kept in good repair and neatly painted. But we are now on the North British Railway, the occupants of the car being English, Scotch, American, Welsh and German. We go on rapidly and pleasantly, with but one halt ere reaching York, about half way from London to Edinburgh. Here we take

advantage of the fifteen minutes' halt for lunch, and then are whirled on again, stopping only at Newcastle-on-Tyne and Berwick-on-Tweed, ere arriving at Edinburgh, just nine and a half hours after leaving London. Thirty minutes of this time were used in making the four halts en route, so that the running time was but nine hours for a distance of 400 miles. If we could travel at this rate of speed, which is nearly double the average of American passenger trains, how much nearer would San Francisco seem to be to the Atlantic coast! The high rate of speed, fine condition of the railway, relief at getting out of London, pleasant traveling companions and anticipation of the pleasure to be obtained in the near future, all contributed to make the journey seem a short one; and after dining we were sufficiently rested to enjoy witnessing the opera bouffe of "The Princess of Trebizonde," quite a lively play for staid old Edinburgh. While remaining here enjoyable visits were made to the Castle, Holyrood Palace, the Royal Infirmary, Greyfriar's Churchyard, and other places of interest, strolls to the top of Calton Hill, or drives around the Salisbury Craigs, and a visit to the rifle range on the "Hunter's Bog." Climbing up to "Arthur's Seat" one may get a fine view of Edinburgh. Leth and the Firth of Forth, and gather a handful of the blue bells of Scotland on his return. Although frequently eating the national "parritch," we did not try the cockles and snails that were exposed for sale in huge baskets on some of the streets, and are eaten by the poorer people.

It was in Edinburgh that John James Audubon commenced the publication of his great and unequalled work on ornithol-

THE BLACK COCK.

[We are indebted to the "Scientific American" for this beautiful cut.—Ed. F. and S.]

ogy nearly fifty years ago. Of his many notes of interest written while in Edinburgh, he refers to the lower class of women ("fish-wives") as resembling the squaws of the West: "Their rolling gait, in-turned toes, and manner of carrying burdens on their backs, is exactly that of the Shswane women. Their complexions are either fair, purple, or brown as a mulatto."

Although there is much poverty in Scotland, the school system, combining, as it does, charity with instruction, renders the people very generally educated. It is a curious fact that the amount of compensation received by school teachers for their services depends somewhat upon the price of oatmeal. The motto, "*Tenui Musam meditumur avena*," proposed for the Edinburgh Review, was translated by Sidney Smith—"We cultivate literature on a little oatmeal." Excepting London, Edinburgh with its literary and historical associations, its many points of interest in and about the city, and picturesque location, is the most interesting city in Great Britain. But as there were friends awaiting at Inverness, we bid farewell to "Dinn-dine" and started on our tortuous route toward the north.

"Ask where's the north? At York 'tis on the Tweed;
In Scotland at the Orkneys; and there,
At Greenland, Zembla, or the Lord knows where!"

We make a long pause at Stirling, which is an interesting city on the river Forth, a salmon stream. The old castle here, supposed to have been built by the Romans, is a conspicuous object on the rocky height; and near the city is a monument erected to the memory of William Wallace, that may be seen from the railway. A halt at Perth gives one time to get a drink of *Tay* if he wishes it, the river being close alongside. Leaving Perthshire and the Lowlands we cross the Grampian Hills into the Highlands, where there is much desolate country, but the scenery is interesting from its novelty. Along the route were seen many plover, or lapwing plovers, and pigeons in the grain fields, and among the hills grouse were frequently flushed by the train. One old black cock rose from almost under the train and flew straight and swiftly away a half mile ere alighting. At Inverness I join my friends, and we enjoy some pleasant drives about the surrounding country ere proceeding further toward our final destination. Inverness, the capital of the Highlands, is on the river Ness, a fine salmon stream, upon a portion of which the fishing is free at stated times. I saw several gentlemen whipping the stream for the river gods, as I may call them, since they have so many devotees. On a level plain near Inverness is a singular high oval mound, from which a fine view of the surrounding country may be had. The regular symmetrical form of this mound gives it the appearance of an artificial formation. There is a pretty little cemetery on the summit, and a few centuries hence this mound may be the subject of as much speculation as the mounds of Florida or the Western plains. From Inverness there is water communication from the North Sea to the Atlantic Ocean by the Caledonian Canal and the lakes which it connects. This is a favorite route for tourists who go so far north. The largest of this chain of lakes is Lake Ness, over twenty miles in length, and of great depth.

Leaving fair Ness Bank we go on through Ross-shire, in the midst of which we come upon a hunting lodge, beautifully situated on a gentle slope near a small lake; and in one of the yards of the well-arranged kennel a fine Scotch deerhound was basking in the sun. I was much amused at the appellation "deer forests," used to designate a tract of country abounding with deer, but upon which perhaps not a tree is to be seen. There is now no such wonderful abundance of deer as in the days of Percy, Earl of Northumberland, when

"The gallant greyhounds swiftly ran
To chase the fallow deer.
On Monday they began to hunt
When daylight did appear,

And long before high noon they had
An hundred fat bucks slain;
Then having dined, the drovers went
To raise them up again."

And in the present day there would be less likelihood of a deer hunt terminating, as on the occasion described, in a slaughter of the huntsmen. We eventually arrive at Stromc Ferry, which is at the western terminus of the Highland R. R., and here we embark on a small steamer, finding as a fellow passenger a live deer, intended for my future host as an addition to his depleted stock. On board the boat we are enraptured by the national music of "the pipes," which were alternately played by several persons, and being courteously tendered from one to another, the instrument seemed to serve as a "pipe of peace."

Steaming down the picturesque Loch Carron, inclosed by the bold, black hills of Ross-shire, upon many of which even the heather refuses to grow, we soon have a more extended view over a wide expanse of blue water, and are joined by some gulls which follow us for miles in numbers constantly increasing, they being so bold as to fly over the vessel but a few yards above the deck. As the law prohibits the discharge of firearms from a vessel, I was unable to gratify my desire of obtaining some specimens, although I could have easily shot many that would have fallen upon the deck.

Reaching the Isle of Skye, we follow along its northerly shore, admiring the wild beauty of its hills, purple with heather in blossom, and the fine effects of light and shade. Soon we reach the Isle of Raasay,

"A happy island in a sea of green,
Smiling, it lies beneath the azure heaven,
Well pleased, and conscious that each wave and wind
Is leapt red kindly, or with blessings rich."

Approaching its southern point, we were greeted by a scene that was indeed "perfectly charming" as the ladies exclaimed, its effect being heightened by the contrast with the wild scenery upon which we had been so long gazing. The steamer moved slowly into a deep cove, at the head of which was a miniature fortification, with mounted guns and a flag-staff with waving ensign to herald our arrival. From the shore there was a gradual ascent of well-kept lawn to the light colored mansion, with its background of dark green firs, beyond which rose the heather-covered hills. The whole scene, lighted by the rays of the setting sun, was very beautiful. A gem of civilization in a rough setting of bold hills and rocks. A small boat now shoots out from the pier to take us ashore, and we leave the steamer to proceed on her voyage to Portree.

As the sun drops below our limited horizon, we stroll up across the lawn, frightening rabbits and pheasants to their retreats. Pausing a moment to look back at the dark hills of Skye, and the intervening water that now appears black and cold, we turn to the cordial greetings that await us. After dining, and a pleasant evening of conversation and music, I retire to dream of coming pleasures, and the last of which would be the shooting. And in the land of Ned I found legions of game, of many unknown varieties. The following day, bright and beautiful, was spent in making a tour of the

island. Along the two avenues that led from the grounds were hedges of fuchsia upward of eight feet in height, laden with the beautiful purple blossoms so rich in color and graceful in form. These hedges surpassed in beauty any that I had ever seen in nature or imagination, and one might truly remark they would be worth many thousands of pounds in London could they be made to flourish there. The soil and climate of Raasay must be extremely favorable to this shrub to produce such an exuberant and extraordinary growth. These were not pot-plants, but remained where growing, in the native soil, throughout the entire year. The ground is bare during the winter, such snow as falls rarely remaining more than twenty-four hours, although the neighboring hills of Skye are frequently white with snow for a long time. Raasay is about thirteen miles long by two or three miles in width, its highest summit being several hundred feet above the sea. Near the northern extremity are the remains of a ruined castle, but I learned little of its history, there seeming to be a lack of the usual legends concerning so many similar sites in Scotland. Had I been able to converse in the Gaelic language, I might have received much information of the legendary sort.

We halted near the centre of the island, at a spot where the road crossed a small stream, which tumbled down through a gorge until it reached a little bench, where it emptied into the sea. There was a path the entire length of the gorge, and midway between the road and the sea a clearing had been made for the site of a shooting-box. This spot was a favorite resort of the woodcock and black game, while close by there was a little loch abounding with trout. At the mouth of this stream sea trout were to be caught in the season, and it was a fine spot for fishing. Returning homeward by another route, we drove through the more cultivated portion of the island, and I had an opportunity to form a conception of the extraordinary numbers of rabbits on the island. Rounding a turn of the road, just at the time of day that "light thickens, and the crow makes wing to the rocky wood," we came to a field of a few acres in extent, bounded on the side opposite the road by woods.

This field was fairly alive with rabbits of various colors, light brown being the prevailing hue, but many were brown and white, some gray, and a few entirely black. As the first sound of the wheels reached their ears nearly all of them sat erect on their haunches, and the next moment scampered in a swarm to the woods, whence, however, in a few minutes after our departure, they would return to continue their evening repast. As curried rabbit and pot-pie were favorite dishes at the table, on several occasions I took an hour's stroll for rabbits, accompanied by the keeper, with his large game-bag, one of the small housedogs for a snorter, and a retriever from the kennels. A favorite place for shooting rabbits was on a straight bit of road that ran through a growth of small birches. It was here that I shot my first rabbit. Reaching our ground, the starter was sent into the cover, the retriever being kept at heel.

"Look sharp now, sir!" cries the keeper, as the dog in cover gives voice; and immediately a rabbit leaps out from one side of the road to be stopped dead on the other side. "Fetch!" and the retriever bounds forward and brings in the game, to be bagged by the keeper who remarks, "A young one, but well grown. We do not kill the young ones, sir!" The road was barely wide enough for two carriages to pass each other, and as the rabbits were fleeing from the dog at the height of their speed, it required a quick shot to knock them over. I was well enough pleased at my first shot being a clean one, until the keeper's remark showed me the mistake I had made. But this was my first rabbit, and it was owing to my inexperience that I failed to distinguish while on the jump a three-quarters grown one from an adult. However, I did not again make such a blunder, and soon the keeper had a backlog of rabbits. At the first sound of the gun a dozen rabbits appeared in the road at different distances, out of range, looking about with curiosity and astonishment, but after a few shots they became so shy from fright that none were seen except those driven out by the dog. During my hour's stroll, I saw no less than two hundred rabbits, and by spending the same time at sunset in visiting their favorite feeding places in the fields and openings in the woods, I could see very many more. I had on many occasions shot hares, and we occasionally saw them here; but this was my first experience at rabbit-shooting, which, from its novelty, afforded good sport for the nonce, yet I should never sacrifice to this purpose any time from other field sports.

Besides the rabbits, which should be placed last on the list, the game of Raasay consists of black grouse, designated according to sex as black-cocks and gray-hens; the more abundant red grouse, called moor-cocks and moor-hens; pheasants, which are polygamus, and only the cock birds are shot; snipe, woodcock (in winter), hares and deer, the latter being preserved for propagation. In addition to the game there were many birds of ornithological interest to me.

There were two varieties of pigeons, the field pigeons and the rock pigeon "blue rocks," curlews and other shore birds, guillemots, the scorch or Cormorant, and other seaweal. It is said that the capercaillie, *Tetrao urogallus*, had been known on the island. Before going into the field with the dogs let me make a visit to the kennel. And here let me mention the fact that in Great Britain sporting dogs are generally exceedingly well cared for, no matter in whose possession or care they may be. I remember once alighting from a train, the better to admire a fine brace of setters and the excellent accommodation for their comfort and safety while traveling by rail. There was a compartment under the luggage-van wherein the dogs were locked, safe from the danger of being smothered, crushed by luggage, abused by a brutal railway employee, or of being stolen. And they were made comfortable by an abundance of clean straw and a supply of water. To sportsmen in America who travel long distances with their dogs, the lack of accommodation and the exorbitant charges for the transportation of their pets, are sources of much vexation. With the increasing frequency of trips to the West by Eastern sportsmen, and the growing interest in bench shows, there will come, no doubt, better facilities for traveling with dogs. At least this must be the case on such railroad lines as have competition—gentlemen would prefer to patronize the railroad company whose rates and accommodations for their dogs best pleased them.

In a grove of trees beyond the stables we find the kennels where the useful dogs are kept. The pampered house pets are allowed to frequent the ball of their master's mansion. Among the trees near the kennels an odd assortment of vermin was hanging. The extermination of vermin, as all predaceous birds and animals are here termed, forms an important part of the gamekeeper's duties; and there were to be seen the remains of owls, hawks, ravens, hooded crows, weasels, etc., that the keeper had killed and hung in a conspicuous place to meet the eye of his master, to show that his duties were not neglected. On looking at the dogs I did not find a pointer

among them. The subject of the comparative merits of pointers and setters is much discussed among sportsmen, but to my mind there is no question as to setters being the better adapted to a northern climate, and particularly for work on the moors.

In America I should prefer the setter for shooting in Canada, New England or any of the Northern States. But in the West or South my preference would depend upon the locality. For shooting partridges from horseback in the cottonfields, the pointer is preferable. As a rule, in a hot climate with a scarcity of water the setter would succumb sooner than the pointer. For shooting pinnated grouse or "chickens," many prefer the pointer, especially early in the season. But those who reside in the Western States and shoot grouse in August, usually require the same dogs not only for grouse, but later in the autumn for snipe, and the incidental duties of retrieving waterfowl, as also again in the cold wet spring when the best snipe shooting is usually obtained. A high-spirited pointer will do all this, but not being so well adapted by nature as the setter to cold wet work, will suffer more, and thus materially detract from the pleasure of a humane master who regards his dog not alone as a slave to do his bidding, but as a companion and friend. As we are to make an early start for the moors to-morrow, we examine the feet of the dogs that are to be shot over, and give them a little run. Visiting the gun room we find everything in order and plenty of ammunition prepared, and on retiring are filled with anticipations of the morrow's sport. A clear sky the next morning betokens a fine day, and donning knickerbockers we are soon off for the hills accompanied by the keeper with the setters, Bob and Ranger, whose departure from the kennel was the signal for a chorus of howls from the dogs compelled to remain behind. Alas for the fickleness of Scotch weather. We were well dispensed by rain within an hour and the morning proved cloudy and wet. Occasionally the clouds would break away and give us a few moments of sunshine to be followed by rain or fog, but when the shooting commenced we forgot about the weather.

As we reached the vicinity of our initial point, and were crossing a low wet spot to ascend the hills, the young dog Ranger suddenly stopped to game, which he "set," crouching low with the body barely clear of the ground. Bob came in and backed, but, instead of standing, imitated Ranger and crouched in like manner. The keeper walked up a brood of young pheasants from under the dogs' noses, but we allowed the birds to go off unharmed, it still being close season for pheasants (Aug. 30). The dogs still remained, but thinking it to be the fresh scout that kept them, they were called to heel. The call was in vain, however, for they refused to stir, and as the keeper beat the ground before them a snipe was flushed and brought to bag. The dogs were then made to quarter the ground systematically, ranging wide and going at a gallop. Beautifully they worked; now beating out, at the signal they turn in and pass each other, to be again turned when two hundred yards apart, and beating in are again turned by a signal when at full speed within a few feet of each other.

Thus we go on, and, not soon finding game, allow the dogs to range wider to cover more ground. As we follow up one side of a ravine the dog Bob is sent across to heat the other side. Soon he stands game, and we rush down into the ravine, through a clump of bushes and briars, and up the other side, where we arrive in season to see Bob, a hundred yards away, draw out and flush a cock pheasant. Out comes the whip and master Bob receives his merited punishment, the keeper remarking that this is Bob's only fault, and a bad one. Bob had a fine nose and would not run up birds, but if allowed to stand for any length of time would get impatient, draw out and flush the game. "I whip him from habit, but know that he'll do it again," remarked his breaker.

Remaining on that side of the ravine we push on again up the hill, and soon Bob again finds game. Through lack of confidence in Ranger, he had been called to heel on the previous occasion, but now he comes over the crest of the hill and backs Bob in due style. Both drop to wing and remain motionless while the birds are retrieved, three of the five being bagged. These are the first grouse we have yet found, but now the hall is opened and the sport is continuous. There is no wind, and the air is so laden with moisture that often the smoke remaining before the gun prevents the use of the second barrel. Later on, when high up on the hills, a breeze comes out of the West, there is no more fog, and we have fine sport. This was Ranger's first season with the gun, but he behaved so well as to give no occasion for correction during the whole day. This was a pleasant surprise to his breaker, who said that Ranger acted so badly when in the field a few days previous, that, although the dog was thoroughly yard broken, he feared it would never be good for much in the field. I remarked that I would choose Ranger in preference to old Bob. "And so would I to-day," he replied. Once when Ranger was on a point Bob crossed immediately before his nose, then turned and backed him. Upon taking the scent Bob began to draw on the birds, and, passing within six feet of Ranger, left him staunch and immovable as a statue a dozen yards in the rear, ere settling down to a point himself. I was warm in my praise of the young dog Ranger behaving so well under such trying circumstances. The birds were well in advance of Bob, scattering as they all rose together, but we were prepared for them and each got in both barrels.

"Well done, gentlemen!" cried the keeper, as he stepped forward and picked up two birds on the right, and one on the left. "Look further to the left for another!" I cried to him. Turning as I directed he found the fourth dead bird, which he had not seen fall on account of the smoke, and the reports of our guns having been simultaneous he did not know how many shots were fired. We shot very well throughout the day, with one exception. I think it was just after the double shot just referred to, that we walked up a single bird which rose from nearly under our feet and flew straight away. We blazed away at it with four barrels, but apparently all four of the shots were clean misses. Bob showed his weakness once more during the day. We were proceeding along a ridge, when Ranger found game on one side half way down to the bottom of the ravine on our left, and down we went for a shot. I was on the left, and when the birds rose, one flew on my side and I stopped him. Two of the birds wheeled around behind us, and coming back on the left I dropped them both with my second barrel, and they reached the ground at the bottom of the ravine. Ranger was still lying where he had dropped at the first shot, but Bob had not put in an appearance. Telling the keeper to look sharp for the last two birds, which I feared were not dead, I ran back to the top of the ridge to look for Bob. There he was, standing game on the other side of the ridge. But he had stood his time, and I arrived in sight just in time to see him draw cautiously upon the birds and flush them.

Once the dogs pointed while at the top of a slope so steep as to be almost a precipice. No birds could be found, and

yet the dogs refused to budge. We threw handfuls of stones down without any result, and finally the keeper descended by clinging to the tufts of grass and heather. Soon we saw him attentively examine a tuft of grass, and then stooping, literally boost a bird out with his hand. A quick shot at short range made that a very tender bird. Although some black game was found we brought but one bird to bag. They are very shy, and even when lying well to the dogs are apt to rise out of range. When a half mile away from a birch covert on a side hill, we saw an old black cock fly out and alight upon a grassy spot, where we could plainly see him strutting about, but we made no attempt to approach him, knowing it to be useless on account of the well known wariness of the old cocks and the entire absence of any covert where he had alighted. Having occasion to cross a wooded ravine, we flushed a woodcock, and it was the subject of some speculation as to whether this bird had bred on the island or was an unusually early arrival from Scandinavia, it being generally supposed that woodcock do not breed in Great Britain. A few days later, while on a special trip for black game, several woodcock were obtained, whose appearance seemed to indicate that they had bred on the island.

Our day's sport terminated in an unfortunate accident. As we were descending a hill Mr. S— caught his foot in the heather in such a way as to be unable to disengage it. His leg was so twisted that as he fell it was broken, the tibia snapping short off about four inches above the ankle joint. We were then four miles from home, but fortunately within a quarter of a mile of a road. I immediately dispatched the keeper for assistance, and placed my friend in as comfortable a position as possible under the circumstances. Not a tree or bush was to be seen within a mile; but running down the brae to the burn, I there found a stunted birch hush, from which, with my pocket knife, I fashioned some splints, and, having set the broken limb, awaited the return of the keeper with the cart, mattresses, etc. Upon his arrival my impatient patient was carried down to the road and conveyed slowly home to the care of loving hearts and tender hands. As surgery is not my profession, I am pleased to relate that my patient lived to report a speedy and perfect recovery.

A brief description of some of the game birds of Scotland, familiar by name to American sportsmen, may be of interest. As I write I have before me a beautiful mounted specimen of the black cock, standing in a natural erect position fourteen inches high. The purple-black plumage, the peculiar form of its black tail, of which the three outer feathers (retrices) each side curl outward at the ends, the end of the outermost rectrix being two inches at right angles from its shaft, and the very gamy appearance of the bird, render it a striking object. The wings are very long for a grouse, being in the specimen before me ten and a half inches from the flexure to the tip. The black grouse is a very hardy northern species, and I have no doubt could be successfully introduced into the United States, and it would be a desirable addition to our game birds. In form it resembles the capercaillie, and I have seen a most perfect specimen of a cross between the two species. In fact, this cross has occurred so frequently as to be described as distinct species, *Tetrao hybridus*, Linn.

The capercaillie, largest of the grouse family, weighs about twelve pounds. The adult black cock weighs four pounds or less, the "gray hen" or female of this species being considerably smaller. The red grouse are smaller than the American ruffed grouse, and by the natives of the region in which they abound are called "moor-cocks" and bens. The "moor-hen" resembles in size and plumage the female Canada grouse "Spruce partridge" or "heath-hen." The red grouse is classified with the ptarmigans, and there is little difference in the plumage of the sexes. The gray hen or female of the black grouse is, however, much unlike the male, being of noticeably smaller size, is of a dusky brown color, and has a straight tail. Like the capercaillies, the black grouse frequent wooded districts and perch on trees, but they also frequent the open side hills and feed in the heather. The pheasant is so familiar to Americans as a domesticated bird as to need no description in this connection. The European woodcock (*Scopolax rusticola*) is, however, a bird not known in America. Some authorities state that there are a few authentic instances of stragglers having been taken in North America. Several reported instances have come to my own knowledge, but in each case the bird in question proved to be merely a very large American woodcock (*Philohela minor*).

The *Scopolax rusticola* is a larger bird, but cannot be identified by its weight, which is from twelve to sixteen ounces, for the *Philohela minor* sometimes attains a weight of twelve ounces, although the average weight of the latter will not exceed seven or eight ounces. The European bird never acquires the clear red color of the underparts of its American cousin, the feathers of the sides and belly being of a dirty white, barred with brown. The markings of the heads, backs and rectrices or tail feathers of the two birds are very similar. One should not depend upon size or color of plumage for identification, but an examination of the wings will at once determine the species.

The whistling that betrays the flight of the American woodcock, and which is so clear on October days when the bird is in prime strength and condition, is owing to the three outer feathers of the rapidly-moving wings being very narrow and stiff. These three feathers, which would be ornithologically described as "first three primaries attenuate," are each less than a quarter of an inch in width, while the remaining wing feathers are broad. None of the wing feathers of the European woodcock are thus attenuate, and its flight is not marked by the loud clear whistle peculiar to the American woodcock. In addition to this marked difference, by which the birds can be most readily distinguished upon careful examination, the measurement from the tip to the flexure or "bend" of the wing of the American woodcock is about five and a quarter inches, but fully two inches greater with the European bird. The home of the *Scopolax rusticola* is northern Europe, and notably Scandinavia, from whence, however, it is obliged to migrate in winter to seek a subsistence not then afforded by its native land. I have alluded to the abundance of rabbits in the Isle of Raasay. Owing to their presence it was found necessary to surround the flower garden with a network of wire several feet high and extending below the surface of the earth, yet, notwithstanding this precaution, bunny would sometimes manage to obtain entrance, and in a single night commit great havoc among the rare plants therein. Many of the flower beds were inclosed by a novel border of fossil shells, and the basin of a fountain was paved with similar fossils, which abound upon a portion of the shore of Raasay. After a day's sport on the moors, how pleasant to sit and watch the lights and shadows on the purple hills of Skye, and the bright waves beneath; and when the sun is setting, the rabbits and pheasants timidly come forth upon the bright green lawn from the groves on either side.

Thus I spend my last eve at Raasay, surrounded by kind friends, whom I must leave ere the sun rises again and weud my way southward alone. So now I bid farewell!—a word that hath been and must be a sound to make us linger. At the "ereck o' day" I board the steamer Clydale, en route from Portree to Oban. After an interesting day on a picturesque coast, I arrive at the latter port, and learn that this day is the occasion of the annual "gathering of the clans" of Argyllshire. In the harbor are no less than sixteen fine yachts. Highland games have prevailed throughout the day, followed by a ball in the evening, which is rendered particularly attractive by the number of highland costumes to be seen. Fireworks and music from the yachts, as well as on the shore, furnished entertainment for the multitude not fortunate enough to gain admittance to the ball.

The following day I proceeded by steamer to Crinan, thence through the Crinan Canal to Ardrishaig, and there boarded the steamer for Glasgow. Learning that the steamer "Camel" would leave Glasgow for Belfast the evening of the same day, I resolved to stop at Greenock and intercept it en route. This I did, and after spending several hours pleasantly in Greenock, bid farewell to the "land o' cakes and ale" and was off for the Emerald Isle. The interesting soil up the Clyde ere reaching Greenock, about which so much has been written, I will not attempt to describe—

"But all around us, heavily indented,
And story and old tradition visit
Which should be minister of most delight,
And preached from side to side;

"Till Greenock's noisy piers lay on our beam,
And luggage dragged us back to common earth,
And finger-pointing porters broke our dream
Of sailing up the Firth."

EVERETT SMITH.

Fish Culture.

THE CARP FISHERIES IN THE PEITZ LAKES.

THAT "carp in beer" is a favorite dish in Berlin is sufficiently proved by the fact that about 500,000 pounds of this fish are annually consumed in this city. It will therefore not be out of place to give a brief account of the famous Peitz Lakes in Lower Lusatia, which mainly supply Berlin with carp, and which were well known even in the time of Frederick the Great.

The Ural-Baltic plateau, which includes a portion of Lusatia, contains a very large number of lakes and ponds. Of these the Peitz Lakes are the most important. These lakes, seventy-six in number, and forming a water area of almost 5,000 acres, are a Royal domain, and are at present rented to Mr. Th. Berger. They produce a very large number of carp, and the annual fishing days in October, especially that of the Devil's Lake, having an area of about 900 acres, form important and interesting events, genuine popular holidays, not only for the inhabitants of Peitz and the surrounding country and the people of the neighboring city of Cottbus, but because easy of access, likewise to many inhabitants of the capital. It must, however, be borne in mind that these great fisheries and each one of the sixty or seventy thousand carp caught during this season have a previous history extending over a period of about four years; for those well-fed, golden-scaled government fish, resembling each other in size and shape as much as eggs, have not sprung into existence suddenly like the armed men who rose from the dragon seed sowed by Cadmus, but it required great work and care and trouble to develop them so far; and in order to understand all this we shall have to become acquainted with the details of this industry and gain some entirely new ideas with regard to the carp and its life. We here see not a fish rapidly parting the waves with its fins, and in undisturbed liberty now diving into the deep, now rising to the surface, always timid and flying from the terrible fish of prey, but a well-cared for domestic animal, constantly guarded by and accustomed to human beings; a very peaceful, plegmatic animal, with a predilection for muddy bottoms and slow flowing water, growing more comfortable and gentle in its ways by its "education," which has been going on for generations, all this tending to make the fish fat and comfortable looking and giving to its flesh a most delicious flavor. The life of the carp, which really may be termed a "jolly sort of imprisonment," commences in the hatching-ponds, varying in size from one to ten acres, in which as many as twenty pair of well-developed milers and spawners are placed in spring there to spawn under the genial rays of the sun. It is characteristic of the slow nature of the carp not to do this spawning business at once like other fish, and so far all attempts at artificial impregnation have failed. But if the water during the spawning season has been kept at an even height, and the frogs do not devour too many eggs, young carp are produced in great numbers, as they are very prolific, one pair alone producing several hundred thousand eggs, from which, even under the most unfavorable circumstances, about 25,000 young fish may be counted on. During their earliest infancy these fish live on infusoria, as their little mouths will not allow any other food to pass. The summer goes by, the new year comes in, and in spring the little one-year-old carp—which at this age are very suitable for the parlor aquarium—are placed in larger ponds (generally covering an area of 30 acres each) at the rate of 300 to 600 fish per acre. After they have stayed in these ponds a year, the fish (now two years old) are placed in still larger ponds (generally covering an area of 400 acres each) at the rate of 180 to 360 per acre. After another year has passed, the fish (now three years old) are placed in the large ponds (generally about 900 acres each) in which they

stay another year and reach an average weight of 2½ to 3½ pounds and thus attain their maturity.

Loneliness produces melancholy, and in order that the carp may not lead a too idyllic sort of dream life after leaving those ponds where they spent their first two summers, and which are absolutely free from fish of prey, quite a large number of other considerably smaller fish, such as tench, candians, pike, and even perch—which have been specially raised for this purpose in separate ponds—are during the third year placed in the same ponds with them. These fish give the carp some idea of life in the great world, and by their constant attacks, which, however, are generally harmless, bring a little life into the quiet society of philosophers, and, to some extent, act the part of shepherd dogs. But there are other enemies of the carp which tend to make the carp livelier, reminding us of those persons in "Gulliver's Travels" who had constantly to use rattles to rouse the Lilliputians from their day dreams; and these are otters, herons, wild ducks and geese, fish-hawks, and human beings—poachers, who rob the ponds during the night.

Thus the day of harvest comes at last. Three weeks beforehand they begin to let the water flow off, and the carps gradually gather in the deep ruts or holes of the bottom. On the morning of the great fishing day they are driven into a basin about the size of an acre and about one metre deep. This is done by the fishermen, who, armed with purse-nets, wade, often with half their bodies in the muddy water, and, shouting and yelling, drive the fish before them. Slowly the great mass of fish comes rolling on, making the water of a dark, muddy color, and throwing great quantities of mud-like clouds in the air. No one could tell that there are carps, for the dark, round backs, which in innumerable places become visible among the seething mud and water, rather resemble eels or similar fish. The whole spectacle, which is quiet in the beginning, reminding of the driving of a flock of geese or a drove of sheep, gradually becomes quite exciting, especially toward the end, where from 60,000 to 70,000 pounds of carp are crowded together in a narrow space scarcely twenty paces square. Two simple nets are nevertheless sufficient to close up the two channels leading into the basin, which now resembles a cauldron full of boiling mud and water. In this turmoil the pikes fare worst, for some of the carp, which, like tame steers, seem in the last moment to remember that after all they possess considerable strength of muscle, are continually dealing powerful blows with their tails, which the sensitive and cowardly pikes cannot stand very well, so they endeavor as much as possible to crowd into a distant corner. Now, the fishing itself commences, and a number of men with two drag-nets, each holding about 5,000 pounds of fish, slowly haul that quantity on shore. Here everything is activity and bustle. Under an open shed we see a large pair of scales with a 100-lb. weight. The carp are uninterruptedly brought up from the pond in immense buckets, each carried by two stout men, and thrown on boards by the side of the scales. With lightning-like rapidity, one fish after another is seized by men standing there for the purpose, counting, "One, two, three, four . . ." until the scales are evenly balanced. Thirty-one to thirty-three fish generally make the hundred pounds. The full scale is then immediately seized by two men, whilst an empty one is being filled, and the fish are placed in large casks on one of the many wagons which hold at a short distance. As soon as the three casks, which every wagon holds, are filled, the wagon is rapidly driven along the turnpike, near which the whole transaction takes place, to the Hammer canal, distant about one kilometre (3,280.709 feet), where the fish are immediately placed in the holds of boats, which contain water. Each of these boats carries 2,500 pounds of fish.

Thus the carps are within a few minutes transferred five times, without having suffered in the least. Near the scales stands in his rather overcoat, a water-brook in his hand, Mr. Fritsche, from Frankfurt-on-the-Oder, a well known fish dealer, called the "carp king," and with Mr. Berger's agent calmly notes down the number of fish to every hundred pounds, whilst Mr. Berger himself is busy arranging things, giving orders, and satisfying the many private buyers, male and female, young and old, farmers and town-people, who have come with bags, sacks and baskets to buy single fish or small quantities up to 200 pounds. Mr. Berger also attends to the picking out of other fish such as tench, pike, perch, etc., which have been caught in the net. A large quantity of still smaller fish, so-called "spoonfish," because they have to be eaten with a spoon, are likewise brought up in the nets, many of them almost washed by the heavy weight of the carp, and dead a few minutes after they have left the water. These are thrown in large baskets and are viewed with eager and longing glances by the many poor people standing round, who here, for a few cents, might procure more than one good meal, and not Mr. Berger perhaps \$24 extra. But we be unto him if he should dare to sell these fish; the inexorable police officers would at once refer him to a paragraph of the fishery law, according to which these fish dare not be sold, as not having the required size.

Meanwhile the hour of noon comes, and the ardently longed-for lunch time, doubly welcome on account of the pouring rain and the cold, is fast approaching, and Mr. Berger invites his guests to his house near by; among them we see, besides some landed proprietors from the neighborhood, men of inexhaustible good humor and unlimited capacity of stomach, the well known Lusatian anthropologist and reporter of the *Gartenlaube*, Dr. Veckenstadt. In the hospitable mansion we are regaled with the products of the elude, snipe, ortolans, ducks, partridges, etc., and one of the Epicureans present makes the remark, which may be taken to heart by all good housewives, that the flesh of the pike becomes infinitely more delicious if it has lain in brine for twenty-four hours. The fishermen and drivers are meanwhile taking their lunch in the sheds near the ponds, and after a short pause the work begins anew until late at night, when about 60,000 pounds of carp have passed through the hands of the weighers. As regards the further transportation of the carp, which are the property of Mr. Fritsche the moment they leave the scales, they first go to the Schwieloch Lake, reaching it in five to fourteen days, going through the Hammer Canals, the Spruce and the Spreewald. The difficulties of their route are considerable, for the water is often so low that the boats have to be placed on rollers and conveyed for short distances in this manner. Arrived at the Schwieloch Lake, the fish are transferred to larger boats, each holding about 10,000 pounds, and, placed in the care of reliable persons, they go down the Spruce to Berlin, which place they generally reach after eight days, or they go still further to Hamburg, where they arrive after a journey of four to five weeks, and other places. The total annual rent of the domain is \$12,870; the expenses for salaries, wages, wagons, etc., amount to about \$7,150, so that Mr. Berger must make at least \$5,000 just to meet his expenses. But it is said that he makes a little more.

CORRESPONDENCE

Between the Department of State, British Foreign Office, and the Government of New Zealand, in Reference to the Transmission of the Eggs of the California Salmon to the latter Country by the United States.

DEPARTMENT OF STATE, Washington, D. C., April 20, 1878.

Sir—I enclose herewith for your information, copy of a note of the 15th instant, from the British Minister at this Capital and of its enclosures, relating to the manner of the shipment, under your direction, of salmon ova to New Zealand.

I am, sir, your obedient servant,
SPENCER F. BAIRD, Esq.,
Commissioner, etc., etc., etc.,

WM. M. EVARTS.

Enclosure—Sir Edw. Thornton to Mr. Everts, April 18, 1878, with accompanying documents.

WASHINGTON, April 18, 1878.

Sir—in compliance with an instruction received from the Earl of Derby, I have the honor to inform you that the Governor of New Zealand, at the instance of his ministers, has requested that the thanks of the Colony may be conveyed to the Government of the United States for the very handsome and effective manner in which the salmon ova have been shipped to New Zealand by the Fishery Commissioner of the United States under the direction of the Chief Commissioner, the Honorable Spencer F. Baird.

I have the honor to transmit herewith copy of the despatch, and of its enclosure upon this subject from the Governor of New Zealand to the Secretary of State for the Colonies.

I have, etc., etc.,

EDWD. THORNTON.

THE MARQUIS OF NORMANBY TO THE EARL OF CARNARVON.

WELLINGTON, Feb. 1, 1878.

My Lord—I have the honor to enclose a memorandum which I have received from my Government, by which you will see that they are anxious to convey the thanks of this Colony to the Government of the United States for the very handsome and effective manner in which salmon ova has been shipped to this Colony by the Fishery Commissioner of the United States under the direction of the Chief Commissioner, the Honorable Spencer F. Baird.

I venture also to express a hope on my own part that your Lordship will see no objection to adopt the course proposed by my Government, as I think that the action of the American Government has evinced such a feeling of friendship and generosity towards New Zealand in a matter in which deep interest is taken, as to demand a special mark of acknowledgment and thanks on the part of this Colony.

I have, etc., etc.,

[Signed] NORMANBY.

MEMORANDUM FOR HIS EXCELLENCY.

Ministers desire respectfully to inform His Excellency, the Governor, that the half-million salmon ova, which arrived by the mail steamer from San Francisco in November last, have been successfully hatched and distributed to the various rivers in the Colony, and that by information which has reached the Government from various directions, it has been demonstrated that, owing to the extreme care with which the ova was packed in America, the very satisfactory result of about 95 per cent. of live fish has been obtained.

In addition to the half-million sent at the request of the Government an equal quantity has been sent to the various acclimatization societies in the Colony, and this handsome gift of salmon ova has been made to the Colony without charge, except cost of packing and transit, by the Fish Commission of the United States under the direction of the Honorable Spencer F. Baird as Chief Commissioner.

Ministers venture to thank that so generous an action on the part of a foreign nation is worthy of being acknowledged in a special manner. They would therefore respectfully ask His Excellency to bring the matter under the notice of Her Majesty's Government through the Secretary of State for the Colonies, in the hope that Her Majesty's Government will permit a communication to be made to the Government of the United States of the thanks of the Colony of New Zealand for the generous and valuable gift of a million salmon ova to the Colony.

[Signed] G. S. WILKINSON.

Wellington, February 1, 1878. (In the absence of the Premier).

SALMON IN THE DELAWARE.—Benj. W. Richards, Esq., of Philadelphia, writes us that a salmon, weighing 21½ pounds, was caught in the Delaware River, off Cooper's Point, on the 18th of May. It was purchased by the Aldine Hotel for the dinner of the Piscicultural Society of Cincinnati, on the 23d inst. Mr. Richards, who is President of the N. J. Game and Fish Protective Association, has kindly sent us the following statement of the catch of salmon in the Delaware:

EDITOR FOREST AND STREAM:

The following is a statement of the salmon that I have been able to learn of as caught so far in the Delaware:

April 6.—One at White Island, two miles above Trenton, weighing 23½ lbs., taken by Jacob Boge.

April 24.—Two near Salem Cove, N. J., one weighing 22 lbs. and the other 13½ lbs., taken by John Perrine.

About May 1.—Two at Billingsport, Gloucester County, N. J., one taken by Jos. Devanil, Jr., weighing 13½ lbs., the other taken by Daniel T. Davis, and weighing 21 lbs.

About May 1.—One taken near Petty's Island, weighing 10½ lbs.

May 7.—One taken three miles below Trenton; weight, 21 lbs.

May 10.—One at Iven's Fishery, at Penn's Manor, weighing 17½ lbs.

May 11.—One at Pennsgrove, but no weight given.

May 18.—One, of 21½ lbs., at Cooper's Point.

Others have been taken, but I have not been able to learn the particulars in regard to them. Some were sent to Professor Baird, and he states that "all the salmon that have come to me from the Delaware River are of the Eastern or Atlantic species, and I think it not unlikely that the big ones, especially the 23½-pounder, belong to the stock that Thaddeus Norris had charge of."

Any others I learn of it will afford me pleasure to inform you of. Yours truly,

Philadelphia, May 19, 1878.

BENJ. W. RICHARDS.

SALMON IN THE CHESAPEAKE.—Here is another bit of gratifying news for the fish-culturalists. Under date of May 14th, Professor Spencer F. Baird writes to us from Washington:

"I am happy to inform you that a salmon was received yesterday at the Smithsonian Institution, caught by Messrs. Sparr and Hamby in a drift-net on the east side of Spotsylvania Island, in Chesapeake Bay, near the mouth of the Elk River. The fish is of the eastern variety, *Salmo salar*, in magnificent condition and weighing about 20 pounds. It was obtained

from the fishermen by Mr. Milner, who is at present engaged in hatching shad in behalf of the United States in that vicinity."

ARKANSAS SHAD.—Hot Springs, Ark., May 14.—When the Marooner Club, of Vicksburg, began their efforts, which have since proved successful, to have the Snodgrass and other tributaries of the Yazoo stocked with shad, some of the members wrote you on the subject. Just before leaving Vicksburg, a week ago, I saw a printed letter, written by Dr. Lawrence, of this place, dated in 1872, and published in a public document, issued, I think, from the Smithsonian Institution, in which it was stated shad were caught in the Ouachita, some five miles from here, one of which had measured 20½ inches in length. On coming here I called upon the Doctor, and he assured me this was perfectly correct, and that the supply had been increasing annually. The very next day I had the pleasure of seeing one in the hands of its captor, which I judged would weigh near four pounds. This leads me to feel much encouraged over our efforts at Vicksburg, as this point is farther from the sea than the points at which our little fellows were deposited about two weeks ago. I cannot learn when or how shad got into the Ouachita, but will endeavor yet to do so. Very respectfully,

B. H. POLK.

[For *Alosa sapidissima*, see "Hallow's Gazetteer," page 380. The run of shad in the Washita River is usually from April 5 to May 12. In China shad are known to ascend the Yang-tse-Kiang, more than 4,000 miles.—Ed.]

WISCONSIN.—Madison, May 14.—Editor *Forest and Stream*: W. W. Welcher, State Superintendent of Hatching, reports that the Fishery Commission have just placed 50,000 lake trout in Boss Lake, St. Croix County, and in Clam Lake, Burnett County. This week will close the season for distribution. Large numbers of trout are to be placed in lakes along the upper Wisconsin Central Railway within a few days. First and Third Lakes at Madison will be abundantly supplied with large yearling salmon trout.

ROVER.

Natural History.

BREEDING OF THE OPOSSUM.

From a very considerable mass of material which has accumulated on our table since our correspondent "Tonic" first brought up this question, we have selected several communications which present diverse views on this topic, two of them the result of observations, the other setting forth a doctrine which seems to us quite worthy of the dark ages.

Our friend Mr. J. G. Shute, of Jamaica Plains, Boston, with commendable brevity, sends us an extract from the proceedings of the Essex Institute, vol. III., p. 288, from which we quote:

Meeting held Monday, October 26, 1863. Mr. F. W. Putnam read the following communication from Mr. James G. Shute, of Woburn, on the manner of birth in the opossum, observed by him while in Beaufort, N. C. "The date of birth was March 16, 1863. During the delivery of the young the parent lay on the right side with the body curved in such a manner as to bring the sexual orifice opposite that of the pouch; the mouth of the pouch was open or drawn down by contraction of the muscles, so as to receive the young when delivered. The young were seven in number. The time occupied in delivery was about four hours. The parent remained in the same position about thirty-six hours and refused all sustenance."

"Immediately after the transfer of the young to the pouch I removed one by detaching it from the teat, in order to ascertain if the movement of the fetus was instinctive. I found that it was at least partly voluntary, as it made an effort to regain its place in the pouch, and the same movement was made by the parent as at first to receive it. I did not notice any use of the limbs or lips of the parent during the transfer of the young."

We would also refer our readers to Waterhouse's work on the Marsupialia, pp. 4 to 7, where the birth of other marsupial mammals is discussed, to Audubon and Bachman's Quadrupeds of America, article Virginian Opossum, Vol. II., p. 107, and to the *Popular Science Monthly*, No. XLIV., p. 149, and XLV., p. 893. This topic, which is an interesting one, and which we should be glad to discuss at length did space permit, is quite fully treated in the works above cited, and, supplemented by Mr. Shute's observations, will give our readers a pretty complete history of what is known on the subject.

The second communication of those selected is a remarkable one and contains some (to us) novel ideas. Without wishing to ridicule the honest beliefs of any one, we would suggest to our correspondent that the days when swallows and rails were supposed to hibernate in the mud at the bottom of ponds, and when wild geese were believed to be formed from harnacles, is long past, and we advise him to give up his present ideas on the generation of the opossum and to believe what the late Prof. Agassiz told him. Further comment is needless. Let our correspondent speak for himself. He believes:

"First, that the female has neither vagina nor womb; that her nose is the medium of coition with the male; that by an act of her own the semen is transferred to her teats, situated in the pouch or cavity in the abdomen, and impregnated [What is impregnated? the semen, or the teats, or both?—Ed.]; that the fetus is formed on these, is attached to them, and continues to grow on them until maturity, when they drop off like ripened fruit from the branch, the teat, during the process, serving as the umbilical cord, growing to the mouth of the young."

Let our correspondent just quoted read the following note, and, reading, believe:

WESTONESTER, Pa., April 15, 1878.

EDITOR FOREST AND STREAM:

Having seen in your paper an article in regard to the opossum, I will give you my experience and opinion as to the mystery of their having young. I have examined three female opossums lately. Some had young hanging to the teat no larger than a small bean, others were as big as a young mouse. On dissecting the animal I found a double uterus, with all the appendages connected, as in any other womb. The male opossum has a bifurcated genital organ, which is adapted to the

organs of the female. The opossum has no afterbirth, and it is therefore necessary, as soon as life is developed in the womb, that the young should have sustenance. They are therefore expelled from the womb, and attached to the teats by the mouth of the mother, where they remain until able to move about in the false belly, which is the bread-basket of the young opossum.

Yours very truly, J. R. E.

PRAIRIE CHICKENS IN CALIFORNIA AND COLORADO.

The following slip is taken from the columns of the *Sacramento Union*. We are decidedly of the opinion that the views expressed by our correspondents, Mr. Henshaw and Amigo, are substantially correct. The point at issue is a very simple one and may easily be decided. Every one who has traveled much in the West knows that the term "prairie chicken" is applied indiscriminately to both the pinnated and sharp-tailed grouse, and that from this loose use of language much confusion necessarily ensues. If any of our friends about Humboldt will send us by mail a single skin of one of the "prairie chickens" we will be very glad to settle the matter finally. It should be remarked that the light color and short ruff spoken of below, point strongly toward the sharp-tail (*Pediacetes columbianus phasianellus*) as the bird in question. The *Union* says:

"A statement made some time ago regarding the migration of the prairie chicken westward along the line of the overland railroad into this State has created considerable speculation and comment both on this coast and in the Eastern States. A correspondent of *FOREST AND STREAM*, writing from this city recently, attempted to throw some doubt on the statement. But the fact remains as stated before in this column, and the evidence in favor of it is accumulating. The foreman of the grading work now being conducted on the line of the railroad in Humboldt County, Nevada, was instructed by some of the railroad officials in this city to take note of the presence or absence of the birds on the line of the work. Within the past week he has made a report from Golconda station, a few miles east of Winnemucca. He says that the birds are there in great numbers, and residents report that they have been there for two or three years past. From this point the birds have been traced, following the latitude due westward through northwestern Nevada, southeastern Oregon and into California. They are reported numerous in Butte Valley and all the other small valleys of northeastern California extending north and east from Mount Shasta. About the identity of the birds, it is claimed by sportsmen who have shot them that there can be no question. But there are slight differences noted between this bird and that of the prairies of the Great West, supposed to be due to climatic influences. The feathers of the ruff of our bird are somewhat shorter, and the color is lighter than those of the prairie chicken in the States east of us."

Much more definite and reliable is the following note, which can speak for itself. We should like to ask if any specimens were preserved:

GRAND RAPIDS, Mich., April 14, 1878.

EDITOR FOREST AND STREAM AND RON AND GUN:

In your issue of April 11 there appears an article entitled, "Prairie Chickens in Nevada," by H. W. Henshaw, in which the author states: "Cones, writing as late as 1874, says: 'I have found no record of the prairie chicken (*Cupidonia cupido*) reaching, as yet, either Colorado or Wyoming.' Without doubt he was correct in thus limiting the westward range of the bird, and a similar statement of its non-occurrence so far west as Colorado will, I think, hold good to-day." I beg leave to correct the above statement. In August, 1874, while on an eagle hunt, we camped on the Kiowa, a "dry creek" about forty miles east of Denver, Colorado. Our tent was pitched in a small woods situated along the creek bottom; in this timber we found large numbers of prairie chicken (*Cupidonia cupido*, Baird). While encamped here I shot some thirty specimens, and they were identical with those shot in Iowa and Southern Michigan. I observed none on the open prairie during the day, but noticed them just after sunrise flying down to the timber. The majority of the birds obtained were young birds of that season, and were evidently bred there. Three gentlemen, two of this city and one of Denver, who accompanied me on this trip, will bear me out in the above statement.

CHAS. W. GUNN, Ed. *Naturalist and Fancier*.

THE GRAY PARTRIDGE.

ST. PAUL, MINN., May 7, 1878.

EDITOR FOREST AND STREAM:

In your introductory remarks to my article in your issue of the 2d inst., entitled "The Gray Partridge," you make it appear as if I had been saying somewhere that the European quail was introduced into England some eighty years ago. This is a mistake. In a letter to you, accompanying the above contribution, I mentioned that the red partridge (*Perdix rubra*) was introduced into England about the time above stated, which is an historical fact. It was done by the enterprise of an English nobleman, whose name I have heard, but forgotten. The red partridges were imported from France, and are at present quite common in some counties of England, but not much in favor with the sportsmen on account of their propensity to run and skulk when the dogs come on their track, a propensity in which the European quail, to a great extent, is their equal.

As regards the European quail (*Coturnix communis*); being a migratory bird, and the British Islands within the boundaries of its geographical extension, it is more than probable that it introduced itself there regularly every spring since before the time of Julius Caesar. I remember distinctly to have read somewhere in some old English rhymed legend, how the ladies at the court of William the Conqueror or William Rufus, among other pastimes,

"Made their merlins strike the game
On the green field of the new forest."

This, Mr. Editor, is a very small matter, and hardly worth calling your attention to, were it not that it looks to me a little "greenish" to stand before the tens of thousands of keen and enlightened sportsmen who every week with avidity scan the columns of the *FOREST AND STREAM*, as responsible for the assertion that the European quail was introduced into England eighty years ago. As well might I have said that the woodcock or skylark were so introduced. If anybody should say anything about it, you will please remember these lines put in as a disclaimer.

Very truly yours,

JOHN SWAINSON.

MORE ALBINOES.—Salem, April 4, 1878.—I recently sent to the secretary of the Nuttall Club a wing of a bittern with one clear white primary; rest of bird as usual. Mr. Deane informs me of the capture of a large hawk in Tyngsburg, partial albino. I have a purple grackle in perfect normal plumage, except two white feathers back of neck just below base of skull. The freaks of nature are quite droll.

R. L. N.

A MERITED COMPLIMENT—THE LUTJANUS BLACKFORDII.—The following letter from Prof. G. Brown Goode, of the Smithsonian Institution, will be read with pleasure by the many friends of the Treasurer of the American Piscicultural Association. The compliment paid Mr. E. G. Blackford is fully deserved:

WASHINGTON, May 19, 1878.

My Dear Mr. Blackford.—You will be surprised to hear that the red snapper has never been scientifically described. I have suspected it for some time, and a thorough examination by Dr. Bean and myself confirms it. We have been looking for a namesake for you and if you consent to be golf-ther the beautiful fish shall be *Lutjanus Blackfordii*, Goode and Bean. I am glad to have a share in such a memorial of your services to ichthyology.

Yours sincerely,

G. BROWN GOODE.

A NOTE FROM FLORIDA.—Our valued friend, Mrs. Mary Treat, whose interesting researches in botany and general natural history are familiar to all our readers, is about to turn her face northward once more. Writing from Green Cove Spring, Florida, under date of April 22, she says:

"For the last few months I have devoted almost my entire time to ants, both North and here. My observations on the slave-making ants of the north will appear in *Harper's Magazine*. A species that I have found here has created quite an interest among the naturalists of Europe.

AMONG THE PIGEONS—Woodstock, Ohio, April 17, 1878.—After a short stay among the pigeons near Marionville, Forest County, Pa., I am prepared to make a statement concerning those birds which I am quite sure will be contradicted by many disciples of the trigger. When I first went to their nesting place they had not done building. That was on the 20th day of March, and on Saturday, April 6, they had all hatched out, and squabs were plenty large enough to take from the nest, as the old birds had filled them up with beech nuts preparatory to leaving the little fellows to look after themselves. Now for my statement: On Tuesday, April 9, these same birds, which had just left their young, began building nests again, and within a short half mile of their former nesting place. Now, this seems to me to be a very remarkable feature in the wild or passenger pigeon. I have often known of their nesting a second time within a very few miles of their first nesting, but never before have I heard of their building their nests on what might be called the squabs' feeding ground. I do not, by any means, make the assertion that they have not done such a thing; but it is new to me, and I would like to ask of older birds, through "our paper," if they have any knowledge of such a feature? If so, in what year and what locality? The oldest catchers, from Sheffield to the nesting, all agree on one verdict—"Never heard of the like before."

Very truly yours,

T. M. OWEN.

MASSACHUSETTS NOTES—Adams, Mass., April 15, 1878.—*Editor Forest and Stream:* The past winter has been so moderate that the ground squirrels (chipmunks) were to be seen in warm woods nearly every day. On January 27, this year, saw several red linnets, and a very large flock of goldfinches on Jan. 13; the latter were feeding on the ground under hemlock trees. The above two species of birds visit us occasionally every winter, and owing to the mildness of the weather and small amount of snow which fell the past season, they have remained with us nearly all winter. Common robins arrived here on March 8; song sparrows, snow birds, and a single wood pee-wee on March 10. On this date I noticed *Vanessa antiopa* and *V. milberti* (butterflies). The spring migration of small birds is twenty days earlier this year than in 1876 and 1877. Colt's-foot (*Tussilago farfara*) flowers are a week in advance of last spring. This plant is the first to gladden the heart and please the eye of the hotanist in this locality.

Respectfully,

YOUNG NATURALIST.

WHAT A TROUT EATS.—The Massachusetts *Ploverman* gives the following inventory of what Dr. Davis, of Plymouth, N. H., found in a trout caught near that town. Of course if a six-inch trout presented such an interesting collection, a fish fifty feet long must be proportionately rich in hidden treasures. What a pity, then, that Jonah did not make a note of what he found in the whale:

"The trout measured but six inches in length, but was of such unusual thickness as to cause a post-mortem examination, when the following was found inside his stomach: Two small snakes, one lizard, fifteen crickets, six small beetles. The heads of the snakes were digested, but from what remained they were judged to have originally been six inches long—or the entire length of the fish. Two of the crickets were alive, and are now in possession of a correspondent."

THE HAYDEN SURVEY.—Professor James Eccles, of England, attached to the Hayden survey, has arrived in Denver, where he will start upon a geological reconnaissance through Colorado to occupy two months. About the first of July he will join the Hayden expedition for a tour of the Yellowstone country, and late in the fall go with Major Powell to the canyons of the Colorado.

DO FISH SLEEP?—The "wily" trout sleeps at night, when he gets a chance. I have often entered my fish house at night in summer time, whilst smoking the postprandial cigar or pipe, and seen all the fish lying on their stomachs on the slate bottoms of my tanks, and have watched them for some time. The respiration is slow and regular, and the movements of the fins are of the same character, evidently indicating a diminished action of the heart and a state of rest exactly analogous to the regular breathing, slow pulse, and complete unconsciousness of the human being in a like state of deep sleep. Strike a light and the fish are immediately scared, fly about like maniacs and evince every sign of terror, exactly as a man may do some extraordinary act when suddenly roused out of a profound slumber. This, of course, only applies to fishes in a purely artificial state, or when in still water and well fed. The trout I refer to would start up at the sight of me, and when the covers of the tanks were taken off would rise to the hand and take food from it, permitting me to stroke them, or even take them out of the water—but then they knew me, would congregate at the end of the tank next the door when they heard my footfall, and evince many other signs of recognition. Now, as to the wild fish in running rapid streams, we have no direct evidence like the above. We see fish wag-

gling their fins and tails, apparently as wide awake from week's end to week's end as any of us in our most wakeful moments; but it must be recollected that man himself in his deepest sleep has a heart continually beating, and his lungs must respire oxygen, although perfectly unknown to his inner consciousness. So, firmly I believe, it is with a fish heading against the stream. The motion of opercula, or gill covers and gills, fins, tails, are as perfectly "relaxed," as physiologists term it—that is to say independent of direct volition—as that of a sleeping man's heart or lungs, and do not therefore indicate the entire absence of repose; I therefore think that we may safely come to the conclusion that repose of the brain, more or less complete, does exist in the piscine world, and certainly the higher the organization of the animal the more necessary is there for some such provision. I feel sure that the higher we ascend in the physiological scale the more need we shall find for some system of rest or reparation of the nervous system. I therefore unhesitatingly assert that fishes do take repose to a greater or less extent, according to their development. Temperature, as is well known, has a very remarkable effect on the activity of some species of fishes. Eels, for instance, will be very active in hot weather; but when winter sets in they become torpid and find refuge in mud, whereas in hot weather they are sporting about in the most active manner, darting hither and thither as if electrified. I believe that fishes sleep or repose their brains just as men do who walk in their sleep. They are capable of moving their fins and other appendages according to the force of stream, etc. but all this wants careful observation in order to bring proofs to a crucial test. Some beings sleep very heavily and must be positively shaken to be awakened; others, though apparently fast bound in a profound slumber, are disturbed by the slightest footfall. May not the same difference in sensibility to outer circumstances exist among fishes? I think, but cannot as yet prove, that it does.—*Fishing Gazette*.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 18, 1878.—One monkey, *Cebus caperensis*, presented by Master J. Randolph Smythe, Astoria; one camel, *Camelus dromedarius*, born in the menagerie; four prairie wolves, *Canis latrans*, born in the menagerie; two red-headed pochards, *Fuligula ferina*, received in exchange; three American swans, *Cygnus buccinator*, received in exchange; two passerine parakeets, *Pollactia passerina*, presented by Mrs. H. L. Robertson, N. Y. City; one flying squirrel, *Pteromys volaceus*, presented by Mr. C. H. Eagle, N. Y. City; two Cardinal birds, *Cardinalis virginianus*, captured in park; two black swans, *Cygnus atratus*.

W. A. CONKLIN, Director.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, MAY 14, INCLUSIVE.—One raccoon, *P. lotor*, presented; one garter snake, *Eulania airtalis*, presented; one woodchuck, *A. monax*, presented; one corn snake, *Coluber guttatus*, presented; one mountain black snake, *Coluber obsoletus*, presented.

ARTHUR E. BROWN.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, gas of suffering, etc.

SECOND ANNUAL NEW YORK BENCH SHOW.

WE think there are too many Bench Shows. This opinion is not alone our own, but is pretty generally expressed by the public. We believe that during the year there should be held only two great shows in the country and no more. We are satisfied that if one were held in the East, say in Boston, New York or Philadelphia (New York having the advantage of a larger audience and more extensive place of exhibition) and the other in Chicago or St. Louis, two such Bench Shows would be amply sufficient. Of course the dog must be, and really is, the foundation of all field sports, but we have had too many exhibitions of him. The sportsman proper, and we use it in its highest sense, does not appreciate fully public sentiment in regard to such matters. An over-sufficiency of shows has pulled upon the general sight-scr. The press may work all it can to call attention to such exhibitions, but we foretell that in future years, if the example of the last few months be repeated, that public interest will be diminished instead of increased. It comes down now to a simple question of expenses. Receipts will not balance expenditures. It may all be very fine for gentlemen constituting kennel clubs to show an immense amount of energy in arranging exhibitions, but with the heavy outlays consequent on such shows, if receipts from audiences are not forthcoming, in a time, longer or shorter, there must be an end to such things.

Though it may have been stated that the attendance at Gilmore's was large, which it was—the great excellence of the show attracting twenty times larger audiences than in Boston, Philadelphia and Baltimore together—in point of numbers it was not equal to the exhibition of 1877. Prior shows had taken off the cream of the New York one. We by no means wish it to be inferred that the show was not a most successful one. Quite to the contrary; it was a very fine exhibition and many thousands of persons attended it, but there was not the rush, the excitement as shown last season. All that excellent management could do was lavished by the gentlemen attached to the Westminster Kennel Club to render the show one of the leading events in the canine annals of the country; and their success so far as the *clat* of the matter goes, was immense; but

we doubt whether, financially, their expectations were realized. Of course we must insist that it is not money which the Westminster Club are looking for, but the expenses of the maintenance of a kennel such as New York requires, and disbursements necessary to carry on such an exhibition are so great that if a good balance is not placed to the treasurer's account, when the great risk is taken into consideration, it may make the most sanguine of entrepreneurs of such exhibitions rightly timorous. It is impossible to give an exhibition in the metropolis on a minor scale. Anything small or puny would not do. The *mesquin* in New York kills anything at once. In this dilemma what is to be done? Can gentlemen hire a dingy hall at small expense and show their animals in restricted quarters? This is impossible. We believe the remedy would be to have less shows and then the public would be forthcoming. Why could not the various kennel clubs meet then in convention and arrange a double programme as to places for the next year or so? We honestly believe that such a show would not only be immensely more successful, but that by this method of fixing the places by means of a convention a great deal of the very stupid bickerings which exist between kennel clubs in various portions of the country, would be done away with.

As to disposition, arrangement of the dogs, and general business of the show, managers and directors are to be complimented. The disagreeable dust which suffocated people last year was no longer annoying, and during the whole time of the show the absence of bad odors, due to the free use of the Girden disinfectant, rendered Gilmore's Garden as sweet smelling as a lady's parlor. We have yet to hear of any complaints on account of the men to whom the dogs were intrusted, Mr. Charles Lincoln's method of administering to the numerous wants of that most complicated and diletant of all things, a dog show, was absolutely perfect.

As to the dogs themselves, we do not think that in the sporting classes generally, the show was as perfect as last year. The absence of many notable animals was evident. In the non-sporting classes, the exhibition was a superb one. In pet dogs there never has been yet such a fine display. Very wrongfully the management have been blamed for rather fostering the exhibition of non-sporting classes, at the expense of the sporting classes. This imputation is very unjust. A large city like New York has fancies which are mixed as to dogs, and it is but proper that all tastes should be catered to. There are thousands of people in New York who would not pay a cent to see the finest pointer or setter that ever luxuriated in glossy coat, or wavy feather, but who would walk miles and pay their money to see a fine bull terrier, an Ulm dog, or a pug.

We now come to the more delicate portion of our task. There never was a dog show, there never will be one on this earth probably, where thorough satisfaction will be given. On the present occasion, and we are bound to express public opinion, complaints are numerous. We are the recipients of such a number of letters regarding judging, that did we give place to them, we should present to our readers the *Forest and Stream* and *Red and Gun* with nothing more in it than a series of complaints. The judgment of Mr. Lort has not been generally approved of. Certain standards which our breeders have considered as typical of excellence in form have been overthrown. The great point of discussion arises as to Mr. Lort's judgment in regard to the Llewellyn and Laverack setters. There having been some years ago a quite acrimonious correspondence between Mr. Lort and Mr. Llewellyn, Mr. Lort inclining toward the Laveracks in opposition to the Llewellyn dogs, it is asserted that Mr. Lort has been prejudiced in his decisions.

There are two camps in the United States, just as there are in England, one flying the Llewellyn banner, the other the Laverack colors; but we must state that judgments in the United States have been so far given quite equally in favor of both breeds of dogs. It does not behoove us to take part with the friends of either side, and we are by no means to be understood as passing any opinion on Mr. Lort's judgment, but that many are opposed to his ideas seems quite manifest to us, and it is our duty as publicists to state the fact. It is not alone in the setter classes that Mr. Lort has been found fault with. In his judgment on pointers many disagree with him. Any imputation thrown out to the Westminster Kennel Club in regard to the appointment of Mr. Lort, as favoring their kennel, is absurd, as numerous animals belonging to both Laveracks and Llewellyn strains are owned by members. If as patrons of the show their dogs were not entered for competition, animals bred from stock belonging to them owned by outside parties were represented in quantity in the numerous stalls. In selecting, then, Mr. Lort, no personal motives could have possibly actuated the members of the Westminster Club. We are quite sure that if in the judgment of the club any English gentleman would have been supposed by them to have had a knowledge of animals superior to that possessed by Mr. Lort he would have been sent for.

As for ourselves, we find no fault with the judgments. It is better not to run too much in a rut, either as to horses or dogs. If some pretty well asserted points as to the specific physical traits of dogs, which we very candidly confess we had thought were the best, have been somewhat reversed, we are by no means inclined to cavil with Mr. Lort's judgment. Whether Mr. Davidson's opinions coincide with Mr. Lort's we are not prepared to state. All we can say of Mr. Davidson, who has so often filled the important position of Judge, is that even granting that he had a predilection for a certain breed of dogs, his prejudices have never had the better of his decisions. As to his honesty, the fair record he has will only be sustaine

in the judgments he has just made. Dr. Twaddell's onerous task was carried out with his usual skill and impartiality.

GENERAL REMARKS.

The general expectancy that numerous English dogs would be present at the show was disappointed, the Paris exhibition probably claiming a great many of them. In the mastiffs Mr. Owen's Major was the best choice. If persons may have disagreed with Mr. Lort in his judgment of the sporting classes, in the non-sporting classes we may be taught many lessons. Major has no flabbiness, nor false folds of flesh about him, and he was many points above Hereward, Boss and Turk. Again we agree, in opposition to many, in regard to the Barry, which Mr. Lort, we think, rightly placed first. In black and tans (Gordons) we must confess ourselves only fairly satisfied. As a class they were not as good as last year. In class 34 we did not think Sam the best. Among the pointers Bow excited the most attention. We openly confess a preference for the Sensation stock. There is a heaviness of head in the representative of the St. Louis Kennel Club, which is by no means attractive. In class 15 Mr. Hammond's Psyche was a good winner, though run close by many in her class. All Mr. Orgill's pointers were good, and came in for numerous prizes, as did Mr. Charles H. Raymond's fine Laverack stock. As our space is but limited, and the list of winning dogs large, with our introductory remarks we must conclude for the present, trusting in future issues to be able to go more fully into some of the particular details of individual dogs.

SUPPLEMENTARY LIST OF AWARDS.

Class 12—Sleford, St. Louis Kennel Club.
Class 13—Romp, Edmund Orgill, Brooklyn.
Class 14—Bow, St. Louis Kennel Club; 2, Bake II, Joseph W Coffin, Providence; 3, Rapp, W R Hobart, Newark. V b c, Mac, George W Bell, Vineland, N J; Botton, Joseph J Snellenburg, New Brighton, Pa; Don, same owner. H c, Viscount, R M Lindsay, Scranton, Pa; Patch, Arthur L Sewell, N Y; Jocko, C Z Miley, Lancaster, Pa; and Don, Isaac Weigelt, Rochester. C, Reuben, F H Stowe; Iko, Charles Elms, Newark.
Class 15—Payche, S T Hammond, Springfield, Mass; 2, Grace, Luke W White, Bridgeport, Conn; 3, Juno, Charles M Schiefel, Mount Vernon, N Y. C, Juno, Charles Pinckney, Madison, N J.
Class 17—Rose, Edmund Orgill, Brooklyn.
Class 18—Dick, Albert M Wright, Scarborough-on-Hudson, N Y; 2, Bob, W E Doane, Stockbridge, Mass; 3, Rapp, Robert Emmet, No 52 Wall street. V b c, Racket, George S Floyd-Jones, South Oyster Bay, Long Island. H c, Ranger, Henry E Jones, No 118 East Eighteenth street, and Major, Dr William Baxter, Wappinger's Falls, N Y. C, Bill, Dennis Breen, Glen Cove, L I.
Class 19—Queen, A E Godeffroy, Guymard, N Y; 2, Belle, George C Colburn; 3, Topsy, Joseph J Snellenburg, New Brighton, Pa. H c, Nellie, W H Ely, Beverly, N J, and Belle, Edmund Orgill, Brooklyn. C, Belle, A Russell Strauch, N Y.
Class 20—Jerry, George C Colburn, N Y; 2, Sam, Milo Seagear, Bloomingburg, N Y. V b c, Bake, W J Emmett, Pelham, Westchester County, N Y. O, Toby, Joseph J Snellenburg, New Brighton, Pa; Johnnie, Albert Phillips, West Springfield, Mass; and Snooks, A E Godeffroy, Guymard, N Y.
Class 21—Nell, W J Emmett, Pelham, N Y; 2, Eff, R Lamb, N Y. V b c, Flirt, Rev R G Hamilton, Hart's Falls, N Y. H c, Nell, A E Godeffroy, Guymard, N Y. C, Gwendolen, F Campbell Moller, N Y; Kuty, A E Godeffroy, Guymard, N Y.
Class 22—Edmund Orgill.
Class 23—Bella, 2, Juny, Milo Seagear, Bloomingburg, N Y.
Class 24—Lark, P H Morris.
Class 25—Fairy, Charles H Raymond, Morris Plains, N J. V b c, Magnet, George W Landenberger, Fort Washington, Pa.
Class 26—Roderick Dhu, Charles H Raymond; 2, Ranger II, O W Donner, Brooklyn; 3, Jersey Duke, Von Lengerke Brothers, New York; 3 (special medal), St Elmo, S Fleet Spier, Brooklyn. V b c, Procyon, Charles H Raymond; Brongb, same owner; Bruce, same owner; Sir Lancelot, W E Leavitt, Flushing, L I; and Blue Blood, L J Gaines, West Meriden, Conn. H c, Sam, W H Howell, N Y; Joseph, Mary D Wagstaff, Babylon, L I; Kingfisher, Arthur J Moulton, Sparkill, N Y; Zip, George F Hecker, Dush, Dr F O Beach; Thinder, Joseph J Snellenburg, New Brighton, Pa; St Patrick, Washington A Coster, Flatbush, L I; and Czar, P H Morris, N Y. C, Young Laverack, Charles H Raymond, Morris Plains, N J; Promise, O de Ronge and H Inman, Milburn, N J; Du-h, G F Gilderlose, Brooklyn; Gron-e, Major James M Brown, Philadelphia; One-eyed Sancho, T Forman Taylor, Colt's Neck, N Y; William, Isaac Ferguson, West Meriden, Conn; and Duke, Charles S Keller, Washington, D C.
Class 27—Rhoda, Ashcroft Kennel Club, Bridgeport, Conn; 2, Abbie, E C and P La Montagne, N Y; 3, Pet, E F Mercillott, N Y. V b c, Kate, A R Warner; Tip, James R Tilley, Locust Valley, L I; and Slari, Samuel Scanton, Providence. H c, Nellie, George R Abbott; Puff, W R Simonds; Glen, C De Ronge and H Inman, Milburn, N J; Soliana, P H Morris, N Y; Nell, T Forman Taylor, Colt's Neck, N J.
Class 28—Will, E F Mercillott, N Y; 2, Cruickston, E L Wilke, Racquet Club.
Class 29—Anibel, Charles K Harrison, Pikeville, Md; 2, Bonnie Bess, Gouverneur M Smith, M D, N Y. V b c, Peg, W Lawrence. H c, Ida F, P H Morris, N Y.
Class 30—Faust, C Novel; 2, Breeze, same owner. V b c, Cheadla, Ashcroft Kennel Club, Bridgeport, Conn. O, Jerry, George F Hecker, N Y; Stannoh, Howard & Benham, Glen Cove, L I; Breeze, E Francis, Newark, and Gale, same owner.
Class 31—Nelly II, John E J Grainger, N Y; 2, Clamorous, E C and P La Montagne, N Y. V b c, Rhoda III, Ashcroft Kennel Club, Bridgeport, Conn. H c, Dream, C De Ronge and H Inman, Milburn, N J; and L J Gaines (West Meriden, Conn) pup, by Blue Blood, out of Bess.
Class 32—Mao, Thomas Flinn, Bridgeport, Conn; 3, Wallace, Thomas Cosgrove, Newark.
Class 33—2, Jessie, Thomas Cosgrove, Newark; 3, Fauny, E Eisman, Newark.
Class 34—Mallard, T M Aldrich, Providence; 2, Valjean, C T Pierce, Brooklyn. V b c, Carlo, P C Hewitt, N Y.
Class 35—Judy, Thomas Flinn, Bridgeport, Conn; 2, Topey, A E Godeffroy, Guymard, N Y.
Class 36—Trimbush, S B Thorne, N Y; 2, Duchess, V O Thorne. Class 37—Shot, George Watson, Jr, N Y; 2, Witch, Frederick H Hoe, Tarrytown, N Y; 3, Brutus, D S Leon. V b c, Fred, R B Hall, Brooklyn. H c, Alexis, Miss Lynch, Flushing, L I.
Class 38—Feather, Frank O Hollins, N Y; 2, Madge, Frederick H Hoe, Tarrytown, N Y; 3, Clem, D P Bosworth.
Class 39—Prince, C M Britton, N Y; 2, Blanche, Charles W Barker, N Y. V b c, Blanche, Theodore T Nixon, N Y; and Duck, W Landenberger, Fort Washington, Pa. H c, Drake, same owner.
Class 40—Frank, Archibald Watt, N Y.
Class 41—Duncan, John Hobart Warren, Troy, N Y; 2, Tam O'Shanter, T W Lawson, Boston; 3, Colin, John Hobart Warren, Troy, N Y. V b c, Tam Ridley, Frederick Bronson, N Y. H c, Rab, H M Jones, N Y.
Class 42—Jessie, Gardiner G Hammond, New London, Conn; 2, Friday, Frederick Bronson, N Y; 3, Flora II, same owner.
Class 43—Shep, W Lindsey, Jersey City; 2, Kooran, Dr J W Downey, Newmarket, Frederick County, Md.
Class 44—Rowdy, F H Stow, N Y; 2, Pickles, Miss Salisbury, N Y; 3, Toedles, Mrs. John P Haines, N Y. V b c, Punch, F Senn,

N Y. H c, Sambo, Mary D Wagstaff, Babylon, L I. O, Freak, Theodore Haight, West Chester, N Y; Puck, H Thomas Adey, N Y, and Punch, Miss Helen M. Iselin, N Y.
Class 45—Lena, Ferres S Thompson, N Y; 2, Judy, W S Hoyt, N Y; 3, Pet, W H Beadle, N Y. O, Katy, Henry Kisteman, N Y; Nellie, Theodore F W Talar, N Y; Nell, F Senn, N Y, and Puggie Dear, Mrs H Alexander, N Y.
Class 46—Little Nell, W H Beadle, N Y; 2, Smutt, Jr, F Senn, N Y.
Class 47—Beanty, A W Lucy, N Y; 2, Jerry, George P Benjamin, Newark.
Class 48—Jessie, F Senn, N Y; 2, Adole, Charles W Barker, N Y. V b c, Sport, L N Meyer, N Y. H c, Tommy, Mrs H B Millard, N Y; Scrub, Mrs Louis S I Brewster, N Y; Dick, R A Greason, N Y; Jack, S Van Dyke, Brooklyn; Nelly, same owner; Tom, H Kisterman, N Y. C, Charley, Henry Haggerty, N Y, and Flash, H A Kisteman, N Y.
Class 49—Whiskey, Douglas Robinson, N Y.
Class 50—Yorkshire Charley, Thomas Kaalagher, N Y; 2, Jack, John Marriott, N Y; 3, Bijou, J W Brown, N Y. V b c, Bright, Mrs W A Haines, Jr, N Y. H c, Dandie, Theodore F Baldwin, Newark, and Beanty, Mrs W A Haines, Jr.
Class 51—Snap, W A Haines, Jr; 2, Lucy, Henry Kisteman, N Y; 3, Scraps, W A Haines, Jr. V b c, Trip, same owner. H c, Jessie, Thomas Kaalagher, N Y; Prince, Henry Kisteman, and Terry, same owner. C, Young Bright, Thomas Kaalagher; Lucy, same owner, and Lucy, Greenville Kane.
Class 52—Minnie, Chauncy Edwards, N Y; 2, Dickie, John McGibney, N Y. V b c, Dandy, Henry Kisteman, N Y. H c, Joe, L N Meyer, N Y. C, Dandy Jim, Phenix Remsen, Babylon, L I; Victoria, Henry Kisteman; Rabbe, W Collins, N Y, and Gypsy, same owner.
Class 53—Lady Rosamond, Mrs A V Ely-Goddard, N Y.
Class 54—Saucy, L N Meyer, N Y; 2, Trickey, Miss Clara Long, N Y. H c, Moody, L N Meyer, and Spider, same owner.
Class 55—Prinnie, Mrs Charles E Pratt, N Y; 2, Kobe, Mrs I W Steward, N Y; Extra 2, Punch, Theodore F W Taylor, N Y. V b c, Judy, same owner. C, Minnie, L N Meyer, N Y, and Boko, Mrs I W Steward.
Class 56—Bijou, W F Morgan, N Y; 2, Tootsey, Henry Knobel, N Y. V b c, Fairy, Arthur C James, N Y. H c, Flora, L N Meyer and Fanny, George W Hunt, Brooklyn. C, Fay, O W Carpenter, Newark.
Miscellaneous—Fred Wood, N Y, Chinese edible dog Fanny, and Greenville Kane, N Y, Russian dog Count Kioeki, each a silver medal.
Class A—Bow, St. Louis Kennel Club.
Class B—Bow and Sleford, St. Louis Kennel Club.
Class C—Belle and Rose, Edmund Orgill.
Class D—Button, Joseph J Snellenburg, New Brighton, Pa.
Class E—Psyche, S T Hammond, Springfield, Mass.
Class F—Sam, Milo Seagear, Bloomingburg, N Y.
Class G—Jersey Duke, Von Lengerke Brothers, N Y.
Class H—Start, Samuel Scanton, Providence, R I.
Class I—Rhodette Dhu, Charles H Raymond, Morris Plains.
Class J—Young Laverack, Charles H Raymond.
Class K—Fairy, Charles H Raymond, Morris Plains, N J.
Class L—Duke, C Steward, N Y.
Class M—Loo II, St. Louis Kennel Club.
Class N—Dash, George C Colburn, N Y.
Class O—Nellie, A F Copeland, Boston.
Class P—George W Landenberger, Fort Washington, Penn, with Rattler, Chimney, Hunter, Cyclone, Fury and Vixen.
Class Q—Boss, Charles W Norton, Boston.
Class R—Barry, Le Roy Z Collins, Lancaster, Mass.
Class S—Feather, Frank C Hollins, N Y.
Class T—Gamester, A Newbold Morris, Bartow, N Y.
Class U—Victor, W Fanshame, N Y.
Class V—Soap, W A Haines, Jr, N Y.
Class W—Lena, Ferres S Thompson, N Y.
Class Y—Tam O'Shanter, T W Lawson, Boston.
Class Z—Prinnie, Mrs C E Pratt, N Y.

MR. LORT AS A JUDGE of English Setters and Pointers at the Westminster Kennel Bench Show.

EDITOR FOREST AND STREAM:

A couple of weeks since there appeared in the Chicago Field, underneath the signature of "Free Lance," a letter denouncing the action of the Westminster Kennel Club in having secured Mr. Lort, of England, as judge of setters and pointers at their bench show. A couple of gentlemen, members of the club, spoke to me concerning the attack, and I agreed with them that it was premature and unfair, and promised, if a copy of the paper was sent to me, to write a reply, complimenting the club on their energy and enterprise in securing a man so well known in England as a judge of dogs, etc., etc. The paper did not come in time for my reply, and the show is now a thing of the past. I do not know who "Free Lance" is, but perhaps he may allow me to pay him the compliment of now saying that he knew well whereof he wrote, and that his prophetic soul should take comfort in the more than ample justification of the charges brought against Mr. Lort, disqualifying him for the onerous and important office of judge of English setters. "Free Lance" said in his letter: "Mr. Lort is a member of the English Kennel Club and is paid to do their judging. The jealousy of the clique in that club to Mr. Llewellyn and their violent opposition to anything connected with Mr. Llewellyn, have made them notorious in England. There is money for them in abusing and injuring Mr. Llewellyn. Mr. Lort is one of the crowd; Mr. Macdonald is another. After the disgusting experience of last year at New York, when the club sent to England for Macdonald, and had him act as judge and award prizes to his own and his friends' dogs, the Westminster Kennel Club should have learned wisdom, etc." "The natural result must follow. Any owner of a Llewellyn setter who values his dog's reputation holds aloof from the show. L. H. Smith, of Stratford, and Arnold Burges, of Hillsdale, owners of the most celebrated Llewellyn setters in the country, could not be induced to exhibit at the 'Lort Show,' etc." "Free Lance," I must say that I admire you. I have been a student of human nature for many years, but you have beaten me this time, and Mr. Smith and Mr. Burges are to be congratulated that they were far-seeing enough to save their dogs from the indignity of an unjust judgment!

Mr. Lort forgot the Latin motto, "*Index non solum quid possit, sed etiam quid debeat ponderare debet*," his prejudices were too strong for him and led him to do what he could, irrespective of what he ought. As a gentleman in the ring remarked to me, "If he would only have the tact to cover them up decently it would not be so bad, but 'his offence is rank and smells to heaven!'" I am sorry to say that he expresses only what I felt. It became a foregone conclusion that if a Llewellyn setter entered the ring in competition it was but to be defeated. I am conscientiously impelled to say this, although I am pained at doing it. I do so in the interest of the truth, and of those who have at heart the interest of the finest strains of setters. Let not those be discouraged or misled by the perverse or had judgment of Mr. Lort. Truth is mighty, and will prevail in spite of such adversaries. It is a misfortune that no man commits error for himself alone, his folly is

scattered amongst all around him, but he must ultimately become the greatest sufferer, for his is the responsibility. It may take time to remedy the evils which Mr. Lort has worked, but time will do it, and as the best and most practical judge of setters in the show—so generally acknowledged—remarked to me when the judgments were announced: "I'm sorry for that—I'm verra sorry! But he has hurt himself more than any one else." So I think it will be. The Llewellyn setter is good enough to take care of itself. Mr. Lort may not fare as well in the long run. As I stood at the ring and saw with what complacent coolness he turned over every dog having the well marked Llewellyn stamp upon him to the "diminutive bow-wows," I gradually came to take the facetious side of the question, and was even led to perpetrate jokes, when, as if to add insult to injury, he halted a moment with finger on chin to simulate a grave consideration over some unfortunate canine with a Llewellyn cerebral development, only to make certain more sure of a final condemnation. In Lady Leicester's case I taxed Mr. Lort with his marked and great injustice, which was so apparent that one well known gentleman remarked that he "did not see how a man dared to so glaringly commit himself," and I challenged him to give his reasons for rejecting her without even a commendation. He replied that he had intended to give her an H. C., but Dr. Webb, who stood beside us, told him very plainly that he had not done so. He then fell back on a criticism of her stern, which he said was too long and sickle shaped, but unfortunately for his case some practical sportsmen present measured the sterns of both the first and second prize winners, and found them longer than Lady Leicester's. Mr. Lort was evidently very much irritated, and with the exclamation of "Rubbish, rubbish," left the scene. Dr. Speir, of Brooklyn, who was present, and who is a well known expert, told me that without knowing the dog he had picked her out as the finest in the whole show. I had taken several gentlemen to see her, as certain of the first prize, and not less than a dozen practical sportsmen, and some of them well known experts, came and spoke to me in terms nearly as laudatory. One gentleman, who was beaten last year by Mr. Smith's dogs, said to me, with his well known frankness, "Although beaten by Smith last year, I must say that Lady Leicester is a beauty, and it is disgraceful that Mr. Lort should have placed her, through prejudice, where he has." It is not necessary at present to give names, although I have no doubt many of these gentlemen would be quite willing.

There were only first and second prizes given in this class, the others, including Lady Leicester, were not thought worthy of a third, or even commendation. I refrain from criticisms upon some of the prize winners, as it is not my object to criticize the dogs, but to show up to deserved reprobation the animus which influenced the man. It cannot be justly claimed against me that I am writing as a disappointed exhibitor. I did not exhibit any of my own stock; I did not expect to be in the country at the time of the show, and had arranged for the exhibition of Lady Leicester out of compliment to Mr. Smith of Stratford, who hired her, and from whom I obtained her, proud as I would have been to have bred such a beautiful animal, had she been of my own stock. I would now have been silent, but as it is I feel what to me is the very secondary interest, that of ownership, and I feel quite at liberty to denounce Mr. Lort for his abuse of Mr. Llewellyn's kennel, from which so many fine dogs have been imported to this country, and assert that, from his awards, sentiments and expressions, he has simply acted the part of an advertisement to other English kennels that are his favorites and that it is to his pecuniary interest to advocate. And in this connection let me say that for just such reason we do not want such men as Macdonald and Lort to judge our dogs; we have enough of skillful and practical men in this country far better judges of sporting dogs than either of them, and who, if they give way unduly to prejudice and commit grave errors, can be held to account and summarily dealt with by their fellow sportsmen. It is much to be hoped that bench shows in this country may not be seriously impaired by the action of Mr. Lort and that we have had the last of this class of imported judges. I am personally convinced also that we have plenty in our midst who are really better qualified by their critical knowledge of pointers and setters to act as judges than is Mr. Lort, for from close observation of his methods of examination and from the nature of his remarks upon various points I am strongly of the opinion that, irrespective of his prejudices, he is far from being a thoroughly well qualified man, and his judgment of pointers was in many instances extremely faulty, and was so pronounced by many of our best men who were in a position to view the matter with a dispassionate eye. In one instance he awarded an H. C. to a most inferior looking animal, entirely overlooking several very fair dogs. My astonishment was so great that I expressed it somewhat strongly, when to my surprise a short time after a gentleman came to me and gave me the most indubitable evidence that the dog was a "dropper," his father being a mongrel setter. The joke is too good a one to keep. I would not have my fellow sportsmen imagine that I think that the Llewellyn setter is the only good strain; I believe it to be one of the best, and that we owe a debt of gratitude to Mr. Llewellyn for having done very much to raise the standard of the setter in very many ways, and that his strain is not what Mr. Lort characterized it in a letter which he recently wrote, mere "trash!" Before I close I must take the opportunity of saying that, so far as the details and general conduct of the show are concerned, I think the W. K. Club are deserving of all praise, and sincerely trust that they may meet with every encouragement to continue their efforts to give us an annual show. I also cannot help saying that I think Mr. Lincoln, the Supt., deserves the thanks and kind wishes of every exhibitor; his urbane and considerate conduct and earnest efforts to satisfy all were very manifest. In conclusion, Mr. Editor, permit me to say that I desire to hold myself entirely accountable for all that I have written, and beg to subscribe myself in full,

Very truly yours,
May 17, 1878. A. RUSSELL STRAUBAN,
51 E. Twenty-third st., New York.

HORSEHEATH FIELD TRIALS.

WE publish a most interesting letter from our well known correspondent, Captain John M. Taylor, who was present at the recent field trials in England. Captain Taylor, who certainly has a very thorough knowledge of field trials, gives clearly his ideas as to the necessary precautions to be used in future trials in the United States. One very particular fact which our correspondent brings into evidence is the superiority of English pointers over our own. Of this we have long been aware. We feel very sure that Captain Taylor's letters from abroad will be well received, and we are

equally certain that the visits he intends paying to the numerous English kennels will convey to us on this side many facts of vital interest to American dog breeders.

On our part, our thanks are due to our numerous friends abroad for the courtesy shown by them to our representative. Captain Taylor will return in time to be present at the coming field trials to be held under the auspices of the Baltimore Kennel Club:

LION HOTEL, CAMBRIDGE, ENGLAND.

The Kennel Club Field Trial Spring Meeting took place at Horseheath, near Linton, Cambridgeshire, on Tuesday, April 30, and on Wednesday, May 1, on the estate of G. Brewin, Esq., and on Thursday at Debenham Manor, near Newport, Essex, the estate of Percy Brewin, Esq. These lands comprise in all about 4,000 acres, the fields averaging from 70 to 100 acres. It is not my intention to give, nor would your readers care to know all the points of nose, backing, pace and style, etc., of each individual dog, as that would take up too much of your valuable space; but, as I have traveled close on 4,000 miles to see these dog field trials, I propose to compare them without any distinction with the rules, merits and working of dogs in America. The ground over which the dogs ran is an open country. The animals are worked in clover, wheat and growing fodder grasses, each of which was high enough to hide a hare. Of course, at this time of the year there is no shooting of birds, the gun being merely used to test dropping to shot, and to see whether the young dogs are gun shy. The latter will only apply to the puppies, as the rest of the dogs have already made their debut.

The Field Trial Derby, or Puppy Stakes, was for pointers and setters bred in 1877. There were 108 subscribers and twenty-one entries or starters, a number being the direct descendants of Ranger. The puppies are, on an average, from four to five months younger than the age of the puppies in field trials in America; but it must be remembered that the ground or fields are entirely divested of any bush, shrub or tree—in fact, it is one lovely, highly cultivated garden for miles and miles. Therefore, in my opinion, the scent is much better in England than in the United States. It is true the English dogs are younger, but then, to equalize them, the scent is superior. I will now show how the dogs are handled. The system of working all the dogs at these field trials is the best test—that is to say, the names of all the entries or starters are put into a hat and drawn two by two, and the two drawn together are worked together, provided that if there are two dogs entered by one gentleman, they must not be drawn against each other, or, in other words, they ought to be guarded as much as possible. Setters are worked against setters and pointers against pointers until there are no more setters and pointers to work against each other, then pointers and setters run with each other. This seems to me to be quite fair and advisable to be copied with advantage by the managers of American Field Trials. After all the dogs have been tried once and the winners selected the winners are tried against one another and so on until the final and true winner is arrived at; but not so with the second dog, as he is not of necessity the second best dog in the stake. This plan has been advocated by me in FOREST AND STREAM from the first, but now I think it does not work well, as it comes very hard on very young puppies who have to be down so frequently, so in all probability it will be given up. In my opinion the only way to judge dogs at field trials is to have two judges and a referee—gentlemen beyond dispute; judge them by points if you like, but do not have or allow any algebraical calculations to be mixed up with sport, but the judges to say which is the best, second and third dog in the stake, leaving this entirely to the judges, they not to be hampered in any way.

I am aware again, there are many minor objections to this and shall have a good deal to say of this system in another letter, as, after seeing the working of field trials both here and in the United States, I have again come to the conclusion that the great majority of "points" cannot be decided by mathematical calculations, but must of necessity be greatly left to the discretion and discernment of the judges.

In order to let the owners of entries and spectators know which animal has won his heat the dogs when worked together have each a red or white collar made of broad worsted web, which corresponds with the red and white flag carried by an assistant, and the instant a dog wins his course, or heat, the man holds a white or red flag, as the case may be. This is another little hint which may be used in the U. S.

The trial commenced with two puppies, and these dogs are invariably given the benefit of the wind. That is to say, they run with the wind on their noses all the time. (This is not the case in America, as we generally work the dogs across wind, so this is again another advantage for the English dog over the American dog at field trials.) These puppies are brought opposite the judges generally at "drop," the word "go" is given, and off they start, in most instances at a good rattling pace. After ranging about a good deal one comes to a point, the other probably backing, when the handler or worker of the dog quietly walks up to the puppy that is pointing, puts him on the head and otherwise encourages him. The puppy then begins to read, or work up to the game, and again makes a final point; the keeper finishes the birds, the gun is fired and the puppies both drop to wing and shot, or they don't. This is all very well, but as it appeared to me in this stake the men worked the birds instead of the dogs, as in several instances the keepers absolutely took the puppy by the collar and led him on to the birds. At the same time, as I was informed, it must be borne in mind that not one of the puppies had ever had a bird shot over them, the fields being full of hares, and a puppy to chase a hare would in all probability put him out of the stake. Again, a good many of the birds were Frenchmen, or red-legged partridge, which run like a greyhound and will not be to a dog except in rare instances where the animal is a fast runner and comes boldly on the bird and stands like a rock, which cannot be expected of puppies at twelve to fourteen months old.

On Tuesday we began at a quarter to ten with the field trial Derby for pointer and setter puppies bred in 1877; 108 subs:

Major Fernley's bk w d Ranger, by Ranger II.—Beas, 14 mos. (setter).	beat	J. Platt's lem w d Struggle, by Rhyl—Much, 14 mos. (setter).
R Lloyd Price's liv w d Monk, by G Moore's Bag—his Moll, 12 mos. (pointer).	"	G Brewin's liv w d Dart, by Roy—Mab, 12 mos. (pointer).
Major Platt's bk w d Darkie, by Rhyl—Dolly, 10 mos. (setter).	"	R Porcell Llewellyn's lem w d Lolly, by Prince—Leda, 14 mos. (setter).
R Lloyd Price's lem w d Dandy, by Drake—Nimble Ninespence, 13 mos. (pointer).	"	Barclay Field's liv w d Pride, by Rhot—Romp, 10 mos. (pointer).
Major C Ross's lem w d Ranger, by Ranger II.—Beas, 11 mos. (setter).	"	G Brewin's lem w d Strathie, by Ranger—Troll (setter).
Sir T B Lennard's liv w d Scamp, by Y Bang—Teal, 12 mos. (pointer).	"	R Lloyd Price's liv w d Placida, by Drake—Nimble Ninespence, 12 mos. (pointer).
Major Platt's bk w d Dip, by Rhyl—Dolly, 10 mos. (setter).	"	W D Duncan's w bk t d Royal IV., by Rollick—Flame, 14 mos. (setter).
Sir T B Lennard's liv w d Priam, by Y Bang—Teal, 12 mos. (pointer).	"	R Lloyd Price's lem w d The Irrepressible Drake, by Drake—Nimble Ninespence, 13 mos. (p.) (pointer).
A P Heywood Lonsdale, w bk d Barnet, by Brackley—Rhoda, 12 mos. (pointer).	"	E Bishop's Barclay Field's Oshin, by Frolic—Dumpey, 12 mos. (setter).
G T Burtram's bk w d Duncan, by Rollick—Brido, 12 mos. (setter).	"	Lord Downe's liv w d Sam, by Dash II.—Silk (setter).
G de Landre Macdonald's lem w d Ranger III., by Ranger II.—Cora, 13 mos. (setter) (a bye).		

Ranger III. (a bye) beat Ranger Reel. Rock. Scamp beat Monk. Scamp beat Darkie, by Ranger II.—Beas, 11 mos. (setter).

Scamp beat Darkie, by Ranger II.—Beas, 11 mos. (setter).

Scamp beat Duncan and divided first and second with Priam. Priam, however, was declared by the judges the best of the two. Duncan took third, and Darkie and Ranger III. divided the fourth prize.

The working of the puppies, with the exception of what I have previously mentioned, being the same in England as in America, I will escape becoming monotonous by giving further details. Suffice it to say, that the best puppies, as far as ranging, pace and style—and, I may say, nose—were the pointers Scamp and Priam, owned by Sir Thomas Lennard. Of the setter puppies, Lolly, owned by Porcell Llewellyn; Ranger III., owned by Major Fernley, and Darkie, by Maj. Platt, bids fair to make grand dogs, and will be heard from in their day.

On Wednesday the event was the Horseheath Stakes, a sweepstake of £26 ea. each, and a cup, value £20, added, for all-aged dogs or bitches setters or pointers:

G Pilkington's liv w d Garnet, by Toly—Jessie (pointer).	beat	R Lloyd Price's lem w d Dandy Drake, by Drake—Nimble Ninespence, 12 mos. (pointer).
Major Platt's bk w d Die, by Da-h—Dolly, 2 yrs. (setter).	"	J. Platt's (R Porcell Llewellyn's) Sam, by Sargeant—Kate, aged (setter).
Duke of Westminster's (A P Heywood Lonsdale's) liv w d Dight, by Mike—Watt's Moll, 8 yrs. (pointer).	"	R Lloyd Price's liv w d Dismal II.—Cora, 14 months (setter).
Lord Downe's bk w d Dan, by Sam—Flash, 3 yrs. 2 mos. (setter).	"	Edward Armstrong's (Lord Downe's) liv w d Jane, 3 yrs. (pointer).
J. H. Whitehouse's liv w d Rapid, by Chang—Romp, 6 yrs. (pointer).	"	Mr Bowers's (Lord Downe's) bk w d Duke, by Sam—Flash, 3 yrs. 2 months (setter).
J. Cunningham's (R Porcell Llewellyn's) bk w d Novel, by Van-Nellie, 3 yrs. 6 mos. (setter).	"	G Thorpe Bartram's Stella, by Sancho—Bess (pointer).
E Bishop's (R Lloyd Price's) liv w d Bow Bella, by Bang—Belle, 2 yrs. (pointer).	"	J. Armstrong's (Mr S Medley's) r d Kory, by Rover (setter).
G Brewin's lem w d Ranger, by Dan—Lady, 2 yrs. and 8 mos. (setter).	"	Arkwright's lem w d Tramp, by General Prim—Mink, 4 yrs. (pointer).
S E Shirley's (Mr Barclay Field's) bk t d Nora, by Mungo—Romp 1 yr and 2 mos. (pointer).	"	T E Medley's r d Bella, by Rover (setter).
R Russell Llewellyn's bk w t Nora, by Dan—Nellie, 8 yrs. (setter).	"	A P Heywood Lonsdale's liv w d Min, by Mike—Watt's Moll 3 yrs. (pointer).
Barclay Field's liv w d Drake, by Rhot—Queen, 1 yr and 8 mos. (pointer).	"	G de Landre Macdonald's bk w t d Ranger, by Quince II.—July, 6 yrs. (setter).
G Brewin's bk w t d Dash II., by Blue Prince—Kate, 4 yrs. (setter).	"	

Garnet beat Mght. Dan beat Di. Bow Bella beat Rapid.

Garnet beat Bow Bella. Novel beat Dan.

The prizes were awarded as follows: Garnet first in pointers and cup as best dog, Dash II. first in setters, Novel third prize, Dan fourth prize, Bow Bella and Drake divided the fifth and sixth prizes, and Nicholson (Garnet's breaker) took the breaker's prize.

The working of the pointer Garnet in this trial was truly magnificent. No such work have I ever seen on the other side of the Atlantic. The pace and style of this dog is wonderful, and his power of stooping and wheeling round and pointing instantly is truly startling, his action on his point is the beau ideal of the handsomest sporting dog in the world. The Pointer—For mathematical ranging and pace, Porcell Llewellyn's Nora undoubtedly took the palm in this stake, who, by the way, is a maiden bitch, three and a half years old, a fact I never heard of before, that so good a bitch should arrive at maturity without ever being allowed to receive a dog. I suppose the answer is, "We have plenty at present, she must wait until her turn comes." I think that Dash II., now owned by Mr. Brewin, was the best all-round dog in this stake. Lloyd Price's Bow Bella is a dashing little pointer bitch, and Dan, owned by Lord Downe, and worked by Edward Armstrong, the prince of breakers, who trained Garth's Drake (dead), and bred the wonderful setter bitch "Kate," certainly deserves a record.

The award for extra cup for best pointer or setter was then decided between Dash and Garnet. Dash dashed and dropped to a quick brace which he was making out. Garnet pointed and dropped; Dash had to be ordered down. Then he pointed a brace, then a bird, and Garnet refused to back. Then Dash pointed a brace, and was well backed. Finally, both false pointed, then both dogs pointed twice, and Garnet won.

The club challenge cup, value £30, for all age pointers or setters; the cup to be won three times by one member (not necessarily in successive years, or by the same dog), before becoming his absolute property; open to members of the Kennel Club only. All dogs or bitches competing must be the bona fide property of the member who enters them. Limited to one dog each:

G de Landre Macdonald's Ranger	beat	Arkwright's Tramp.
G Pilkington's Garnet	"	J H Whitehouse's Rapid.
G Brewin's Dash II.	"	P Brewin's Danger (dr.)
D. Lloyd Price's Dismal Jimmy	"	Barclay Field's Pride.

Ranger beat Garnet. Dash II. beat Dismal Jimmy.

Ranger beat Dash II. and won the Challenge Cup; Dash took a cup for the best of the opposite breed to the winner.

The dogs were handled in the same way as in America, the worker did not go up to the dogs as a rule to pat and encourage them. In this trial, as in all others, my remarks are confined to the cracks. Mr. Pilkington's Garnet was decidedly the best of the pointers in this stake, but his style of going, although very stylish, was not equal to his previous form, so Macdonald's Ranger beat him easily. The great trial of the day was between Macdonald's Ranger and Brewin's Dash II. The ranging, pointing, backlag of these two setters was, with very few exceptions, a very fine sport, as each dog seemed to vie with one another and really to know that it was a question which one was the best, as perhaps there are only two or three dogs in all England that can come anywhere near them, and after a long trial the dog went up for Ranger. Dash II. is the handsomer of the two dogs, but the picture we have all seen of Ranger in America would lead one to suppose he was like a spaniel, but I was much surprised to see a bold-looking setter head, with good limbs, and immense propelling powers behind. He is remarkably fast; for that matter so is Dash II., and there is very little choice between the two. A writer in *Bell's Life* says:

"There is an old saying, that there is no such test as when others see us, and this year Capt. Taylor, who has resided in America for twenty-two years, and has inaugurated field trials in that country, came over specially to be present at the Horseheath trials. Capt. Taylor can recollect the old pointers and setters of some years back, and he has seen all the imported and recently bred ones in America, and there, as far as I am informed, he was exceedingly well qualified to form an opinion. This, no English pointer of the present day, as he considered them vastly superior to anything he had ever seen before, both in range and style, and as yet nothing in America can touch them. The setters he thought were much more closely matched with those he has recently seen on the other side of the Atlantic in appearance and also in work, and this is probably a very correct estimate, as our American friends have

dipped pretty deeply into our best setter blood of late, and, like the breeders of shorthorns, we shall probably be obliged to send to America for a cross back of some of the Laverack strains."

Most of the largest and best of the pointer and setter breeders of England and their representatives were present at these trials. The pointer men were Sir Thomas Lennard, Mr. Barclay Field, Mr. Lloyd Price, Mr. Whitehouse and Mr. George Pilkington. The setter breeders were Mr. Teasdale Buckle, Lord Downe, Mr. Macdonald, Mr. Porcell Llewellyn, Mr. W. Lort, who is now in New York judging at the Westminster Kennel Club show.

As to purchasing setters and pointers here, winners of a great stake at field trials, it is next to an impossibility. Every one is willing to part with the uncles and aunts, nephews and nieces, nieces and brothers of the winners, but to sell the dog, they will not do it. I offered £300 or \$1,500 for Dash II., but could not get him, Mr. Buckle going £50 or \$160 better, so I threw up the sponge in disgust. Why should these gentlemen sell the very best animals? They do not want money, and it might take a lifetime to breed, rear, train and handle another great winner. It is true, some of the blood of these dogs is in the United States, but to say that at present there is any dog in America to compare with Dash II., Ranger, Nora, Novel Dan, Garnet, would be simply leading your readers astray.

The judging was well and satisfactorily accomplished by Mr. Shirley, M. P., and Mr. Satter. The latter I am in correspondence with as to a new and lasting code of laws to govern field trials. My thanks are due to Mr. George Brewin, Mr. Friend and Mr. Lowe, Secretary of the Kennel Club of England, for courtesies extended to me personally.

Having received invitations from Mr. George Moore, of Appleby Hall, Lancashire, whose father bred the stout pointers of the Crag of Shelsby strain; Mr. Teasdale Buckle, of Great Ormsby Hall, who is well known in the United States; Mr. Lloyd Price, of Bala, Wales, and Mr. Macdonald, of Cheshire Rectory. I shall from time to time, as circumstances permit, give your readers an account of the kennels of these celebrated sportsmen.

It was suggested by some gentlemen present at the field trials, that a grand picture of the portraits and a few dogs of the field trials at the world should be painted by subscription, the artist to be selected by a committee of gentlemen, the price to be paid for the picture 500 guineas. The amount subscribed for on the ground was about 200 guineas in less than an hour. Should any American field trier feel inclined to subscribe to this beautiful and lasting work of art, as lithographs will be sent to the subscribers, they will please send the money with their best photograph to Edward Armstrong, Danby Lodge, Yarou, Yorkshire, England, who is the manager pro tem.

JNO. M. TAYLOR,
Hon. Member K. C. of England.

CEREBRO SPINAL MENINGITIS IN THE DOG.

WE give full space to a most thorough and careful diagnosis of this disease in a dog. Our correspondent is to be complimented for the care which he has taken with this case, which we consider as a model of canine pathology:

WASHINGTON, D. C., May 14, 1878.

The following case presents so many points of interest to those who love the dog and have sympathy with him in his sufferings, as well as in his pleasures, that I send it to you as worthy of a place in the Kennel Department of your much valued journal: Black Prince was a beautifully formed, very intelligent black and tan setter, one year old, out of Florence, by Col. Rives Duke, who is out of Ruby by Dandy; Florence is out of Fly, of the Fairfax stock, native setters, by Trap, an imported dog owned by Gen. Beale, late minister to Austria.

March 6, 1878.—First noticed positive symptoms of illness to-day, although Prince has not seemed well and bright for ten days. Has had a nervous cough, which is brought on and increased by any excitement, and is attended with choking, as though of something in the throat, and with occasional vomiting. Has seemed less ambitious than usual. Eyes red and lids inflamed, discharging mucus. Three days ago noticed that in "sitting up" to order, he lost his balance and fell over backwards, which happened the second time when the order was repeated; also, that he failed to spring into the window when called, as was his custom, but had to be lifted in. To-day (March 6) took him with me in the buggy, and as he did not seem well as usual. He lay down, stretched out on his side, breathing apnoeically, not noticing things around nor wanting to get out. Put him out in Le Drole Park for a run, but he had no spirit, and seemed to move unaturally in his hind legs, moving stiffly and drawing his legs up under him more than proper. When ordered into the buggy put up his fore-feet and tried to climb in, instead of springing in as usual, and fell out on his back. When again called in, hung back in a dispirited way, but order being insisted on sprang in awkwardly. Is not sullen, has good appetite, no thirst, and apparently no fever. In the afternoon weakness of hind extremities markedly increased, accompanied by spasmodic twitching of the (platysma) skin of the back, especially on the left side. Examined carefully for injury, but could find none. Up to this time has not been restless. In the evening called him into the house to examine him. Told him to get on a chair, which he did with difficulty, climbing up instead of springing. When directed to shut the door, instead of jumping against it as usual he cloed it with one paw. Cannot sit up on his haunches without giving way. I mention these symptoms at length as giving evidence of incipient paralysis. He is not sullen nor ugly, but droopy; very restless, frequently turning around as though wishing to lie down; but does not. When ordered to lie down obeys with reluctance and with evident distress. Noticed long string of glairy mucus hanging down from mouth, but no froth. Weakness of hind parts and spasm of skin more marked; latter almost constant. Shut him up, fearing rabies.

March 20, 1878.—Is now just two weeks since Prince was shut up in his yard. Since that time his symptoms have been progressively worse, except appetite, which has never been wanting; on the contrary, he has eaten as much oatmeal porridge and bread and milk as would be sufficient in health. Neither has he at any time been delirious nor out of temper. The loss of power in the hind extremities became more and more marked until March 14, when he was no longer able to drag himself out of his house, and was in consequence put in the stable on a pile of hay. Has become generally weaker. Spasm of muscles of back, sides of abdomen and neck more severe and almost constant, evidently causing distress. Carries his head on one side, the left eye being lower than the right. Motion in hind legs not entirely lost, but only very faint. Sensibility to prick of a pin very slight in the thigh, and absent in the lower part of the leg. Conjunctiva strongly congested, both in veins of conjunctiva as well as those of the sclerotic, the former appearing as tortuous veins of a brick-red color, while the latter appear on close inspection beneath the former as fine radiating straight lines of a uniform pink color.

On the 16th of March, in the evening, noticed a wild ap-

pearance of the eyes, with widely dilated pupils, which was followed by clamping of the jaws and convulsions, bending backward of the spine, neck and head (*Opisthotonos*), and convulsive movements of all four extremities. Expected to find him dead the next morning (March 16), but was aroused at 6 A. M. by his pitiful cries, and on going out to see if I could render any assistance, found that he had in some manner got himself out of the stable on to the brick pavement in the yard, apparently to defecate (for he had relieved his bowels) and had not been able to get back again.

It had rained shortly before day, and he was soaking wet. The wetting seemed to have put a stop to the convulsions, for they had ceased. I lifted him back on to the hay, and his cries ceased. From this time he passed his urine and feces as he lay, but the hay being on concrete pavement, he was easily kept clean, the urine draining off, and the hay being frequently replaced by a fresh supply. The dog was, of course, more or less besmeared, but not so much as one would expect, and not at any time very offensive to the olfactory. Urine very free, and bowels moved naturally each day. Left side more affected than right; tongue moist and but slightly coated. In protruding, showed no sign of paralysis; coming out on either side in licking his chops, equally well. (When the tongue is paralyzed on one side it is protruded toward the side of the paralyzed muscles.) Has apparently no fever—in fact, instead of being thirsty, has not taken a drop of water since being placed under observation (March 6).

Up to March 17, is still able to raise himself on his elbow to eat or take notice. Intelligence unimpaired; will raise his paw to "shake hands" when told, and is grateful for attentions shown him. Has grown perceptibly weaker; lies habitually on the side, with almost constant twitching of the muscles and jerking of limbs (*chorea*). No diarrhoea. On the contrary, there was constipation at the commencement of the attack.

On the 18th of March, can no longer raise himself on his elbows without assistance; has to be held up while eating. Up to this time has suffered but little actual pain, but on the 17th had several paroxysms of pain, as also on the 18th, and on the night of the 18th, had violent attack of tetanic spasms, with opisthotonos and stiffening of the limbs at a right angle with the body, accompanied with great suffering and sudden snapping of the jaws. On the following day was stronger; could raise his head to feed. Tetanic rigidity of muscles disappeared, but twitching remained. A new symptom appeared in diffuse parenchymatous inflammation of the cornea or left eye, the clear portion of the eye becoming, at first cloudy, and then rapidly entirely opaque, milky white; conjunctiva inflamed, giving out purulent discharge. Discharge of thick pus has been noticed from the urethra (*penis*) for several days, and a protrusion of the head of the penis so swollen that it cannot be retracted is a source of much pain and distress. A small pustular eruption shows on the abdomen, evidently due to the constant soaking of the part in urine.

March 20, general condition better. Twitching continues; appetite good; eye worse; white spot appears at centre of cornea, as though ulceration were commencing; conjunctiva very angry, but not oedematous (*chemosis*). No vascularity of the cornea. Lower ribs appear more prominent than natural, but careful examination discovers no lung disease. No shortness in breathing. Is suffering great pain at times, which he gives expression to by short, plaintive barks, generally three together, as "ow-ow-ow," "ow-ow-ow."

March 21, passed a bad night. Cry very distressing. Has changed to an "owp-owp-owp," still three together, and in kept up almost without intermission. Went to him at 6 A. M. and found him suffering agony, evidently from the inflamed eye, the globe of which is swollen and somewhat protruded. Punctured the cornea (*paracutis*) with a fine needle, and fastened into it a solution of atropia, four grains to the ounce of water. Also gave one-half of the following recipe:

Rx.—Morphine sul., gr. $\frac{1}{4}$; chloral hydrate, gr. xx; syr. aurantij, oz. ij; aquae, oz. vi. Take $\frac{1}{2}$ at one dose.

Great relief followed, and he slept the rest of the day. Toward night, very weak and prostrate. Eye appears better, but feet and legs cold. Noticed for first time, very strong, unpleasant odor as of stale, ammoniacal urine, but not of that alone—a smell also as of commencing decomposition.

March 22.—Not dead as I expected to find, but rather better. Good appetite; uses forelegs better. Eyeball not so much swelled; appearance of cornea about the same. Strong smell still present, but not so offensive.

March 23.—Bad odor disappeared; spasmodic twitchings still continue; end of penis exposed and swollen (*Paraphimosis*). Feces blackened by iron in pills.

From this time forward to the end of the chapter the condition remained just about the same, except that all symptoms of acute disease gradually subsided, leaving a condition of chronic paralysis and chorea behind it. The white of the eyes resumed their normal condition, the opacity of cornea in left eye partially cleared away, but emaciation increased instead of disappearing, which was worthy of remark when we remember that the most nourishing food was taken abundantly.

Paralysis of the left hind leg was complete with extreme wasting of the muscles, and nearly complete in the right hind leg. Muscular twitching constant in hind legs and in neck, more on left side. I watched carefully for three weeks after acute symptoms had subsided for signs of improvement, but the debility, emaciation and paralysis progressively increasing instead, I was forced, greatly against my will, to the conclusion that recovery was impossible, and that mercy directed that his sufferings should be ended.

Treatment.—Nothing was given up to the time that Prince was shut up (March 6) for he was not looked upon as a sick dog until that time. March 7, being constipated, the following aperient was ordered:

Rx.—Leptandrin, gr. ij; Podophyllin, gr. ss; Aloes, gr. ij; Saponis, gr. ij; make into one powder.

This was administered in a piece of meat, and operated twice during the night, producing free, consistent discharges.

March 9.—Having watched him carefully for two days, and found the paralysis increasing, ordered the following as a tonic to stomach and nervous system:

Rx.—Ext. Nucis Vomice, gr. vj; Quinia Sul., gr. xvij; Ext. Gentiane, gr. xxiv; make in xij. pills, s. one three times a day.

These pills were taken until the 17th, when they were discontinued, and citrate of quinine and iron, gr. v., was ordered three times a day instead.

On the night of the 17th, March the convulsions were so violent that I administered chloroform, being fully aware of the danger to life in the dog from the use of this agent, but the case was desperate. The suffering was so great that it was evident, unless relieved, that the poor dog must quickly die.

Chloroform was administered by drawing a cotton bag over

the head, and pouring about a teaspoonful over his muzzle. The struggle was violent for a few seconds, but soon ceased, and he became quiet with stertorous breathing.

In half an hour the spasms returned with loud barking. Repeated the chloroform, giving a larger dose, bringing him more completely under its influence; respiration easy and regular; eyes staring wide open. Left him for the night, expecting he would be dead in the morning. He was, however, next morning, not only alive but better and stronger. Convulsions had ceased.

Diet consisted from the first of oatmeal porridge and milk, and bread and milk, which he took freely during his whole illness, not missing a meal.

A very remarkable circumstance is the fact that for five weeks from the time Prince was taken sick (March 6) he drank not one drop of water. When acute symptoms had subsided he took water sparingly. Then also beef soup was added to his diet.

The affection of the eye was treated by dropping into it a solution of sulphate of atropia (gr. iv, to oz. i.) three times a day, and when the eyeball became distended and threatened rupture, by paracentesis of the cornea (puncturing the eye with a needle and letting out the aqueous humor). The eye appeared to the unpracticed eye hopelessly lost, but was improving, and I have no doubt would have been fully restored had the dog lived.

On April 28, after consultation with a number of friends who unanimously pronounced the case hopeless, Prince took his last pill, one grain of strychnia, and his sufferings were quickly ended.

I have called the disease here depicted with perhaps tedious minuteness, *cerebro spinal meningitis*, because an analysis of the more prominent symptoms points most clearly to that disease. The paralysis of the hind extremities (*paraplegia*) the spasmodic twitchings of the muscles, convulsions, the left side being more affected than the right, the holding of the head one sided, the congestion of the conjunctivae, all indicate unmistakably disease of the *cerebro spinal axis*. So also does the fact that recovery from the paralysis, etc., did not take place on the subsidence of the acute symptoms, proving that the inflammation of the membranes of the spinal cord had left behind it serious lesions within the spinal canal. Negatively the absence of fever, as shown by the moist tongue, good appetite and freedom from thirst, point in the same direction by excluding from the diagnosis any zymotic blood disease like *typhus fever*.

Mr. Mayhew in his article on distemper ("Dogs and Their Management," Edward Mayhew, 2d Am. Ed., p. 120 *et seq.*) gives a vivid description of all the symptoms which occurred in this case, and in addition enumerates many which did not develop, such symptoms as indicate pneumonia, diarrhoea and dysentery. He considers the disease (distemper) to be parallel with *continued fever* in the human subject, and *continued fever* in man means either *typhus* or *typhoid fever*. Stonehenge, 2d Ed., London, p. 363 *et seq.*, calls distemper *typhus fever*, and is more explicit in his description of the disease, confining himself evidently to *typhus* and *typhoid fever* proper, referring to intercurrent diseases as complications. An American authority (Hallowell's Sportsman's Gazetteer, p. 499) says that "true canine distemper is of extremely rare occurrence, if, indeed, it ever makes its appearance in the U.S. or Canada. As laid down by that eminent pathologist, Kolliker, it is a disease attended by a catarrh, consisting essentially of an irritation of the brain and spinal marrow, and characterized by frequent convulsions tetanic in character." Lower down on the same page is the heading, "*Distemper, Pleuro Pneumonia, Lung Fever*."

Thus we have, according to the best authority in such matters, at least four different diseases classed under the common name *distemper*, viz.: *Pleuro pneumonia*, *typhus fever*, *typhoid fever* and *cerebro spinal meningitis*. The same confusion in nomenclature exists with regard to horses and cattle. With the laity—those who possess no special knowledge of disease in the dog, as well as many who pretend to great knowledge and know less—every sick dog has distemper, and is to be dosed accordingly with whatever quack nostrum happens to find favor with the individual.

Truly in the present instance is a "little knowledge a dangerous thing," as many a valued "friend of man" could testify were the ghosts of departed canines permitted to reappear upon this mundane sphere. Such confusion of terms is not creditable to intelligent observers, and is to be greatly deplored as entirely subversive to intelligent treatment.

On closing this report I have a word of caution as to the treatment of our sick four-footed friends: Sick dogs like sick men are frequently injured by over-medication, and are the more likely to be so injured because they cannot command language to express their ailments, nor protest against meddlesome interference. Be not in too great haste to give Dr. Slight-Polk's "Dead Shot for Distemper," pills, or what not, but place the patient under most favorable hygienic conditions. Diet him and watch him. Then doctor his symptoms intelligently, giving no medicine without knowing why you are giving it, and being sure of the right dose. The proper dose for a dog has the same ratio to that for a human being, that the weight of the former bears to the latter. R. F. B.

DEATH OF FLAKE.

EDITOR FOREST AND STREAM:

It has just been brought to my notice that "*Memento Mori*" has to be written of the pointer Flake, and I cannot resist the impulse to put on record my opinion of him. Flake was bred by me and was a grandson of my pointer George, facts I think not generally known, and for some reason less often acknowledged in the past than I could have wished, seeing that I have always formed so high an estimate of him as a representative small pointer. He is dead and gone now, poor fellow, and I only wish that I might write of him, "*Pars tui melior immortalis est*." Perhaps I might not err in doing so—at any rate I trust it may be so practically through a long line of descendants. I write this little notice of the dog, because I think Flake was the best bench show small pointer I ever saw. I think I speak free from prejudice, for, although he was bred by me, he passed entirely out of my ownership when he was three or four months old, and on the few occasions that I afterward saw him I think I examined him as critically as I would any other dog. It was a matter of sincere regret to me that he was not awarded the champion prize over Snapshot at the Westminster Club's show last year, for so far as I am able to judge he was a much superior dog. I do not claim to be a special expert, but I do claim some considerable knowledge of the points which go to make up a good pointer or setter, and the failure on the part of the gentleman who acted as judge on that occasion to point out to me any really weak

points in Flake when challenged by me to do so, only served to confirm me in the opinion that he was well deserving of the prize. Speaking as an anatomist, Flake was about the best put together dog of any kind I ever saw, there was no waste material from the tip of his nose to the end of his tail; in this respect he was very like his progenitor, George, only cast in a smaller mould. He had the same delicate and beautiful lines of form and the same grand development of muscle. There are those who thought his head too small, but the outlines were, to my eyes, very fine, and the balance of brain good. Who has not known a hooch with a big head? It is not size so much as good proportions which tell. It affords me great satisfaction that I had the good fortune to find his mate in Mr. Orgill's Lill. It was at the Minncola show some years ago that I first saw him and at once remarked him as the type of dog likely to match well with Flake. I urged her owner to communicate with Mr. Steele, the owner of Flake, and I think the results have proved the correctness of my judgment. The owners of Daisy, Rose and others will at least admit it. It is not often nowadays, Mr. Editor, that I find time to write on dog matters, but I could not allow the death of one I admired so much to pass without notice; it will be long, I fear, before we see his superior on the show bench, and I am looking forward with the greatest pleasure to an examination of his progeny, which I trust will be well represented at the coming show in this city. Believe me, sincerely yours, A. RUSSELL STRACLEAN.

DOG POISONING—A SHAMEFUL ACT.—Editor *Forest and Stream*: My Newfoundland dog Hayes, winner of first prizes at Boston and Baltimore this year, was poisoned last week at my farm at Campville, Tioga County, N. Y., and died on the night of Friday, May 10. The act was committed by some person or persons unknown, and without discoverable cause. The poison used was that commonly known in that locality as a "dog-button," a lozenge made and sold for the especial purpose of killing dogs, and as I am informed, easily procurable at any of the village drug stores. I have offered in the local papers a reward of fifty dollars for such information as will lead to the arrest and conviction of the person or persons who committed this villainous act, and shall use every effort to bring the party to justice, not only to insure my own safety in the future, but to aid in putting an end to such shameful practices in other parts of the country. Yours, respectfully, HENRY W. LIVINGSTON.

154 W. Fourteenth street, New York, May 14, 1878.

It seems quite positive to us that when an apothecary or chemist sells any substance which is noxious or hurtful either to human beings or to animals, he should be held strictly accountable for such sale. We would be very glad to learn of the conviction of any apothecary selling the so-called "dog-button," unless fully satisfied as to the respectability of the person purchasing such poison. We believe that an action at law would hold in such a case. We regret exceedingly to hear of Mr. Livingston's loss, and only hope that the poisoners and all those implicated in it will come to grief.

CHESAPEAKE BAY DOG.—In view of the increasing interest in this peculiar and useful breed of dogs, all the information we can gather concerning them is valuable, hence we invite extended correspondence on the subject. One writer says:

"I have read the letter of 'Observer,' in which he states that he would 'doubt the pedigree of any Chesapeake Bay' dog which weighed over seventy pounds." As I have shot ducks for many years, and am thoroughly acquainted with this breed, or rather these breeds, of dogs, I must respectfully differ from him. The only advantage of a small dog is that he is easy of transportation. In calm water he is probably equal to the beaver dog, but in the heavy seas which prevail in the fall of the year in the Chesapeake Bay, I much prefer the heavier dog at this time. I own a dog which has a pedigree of at least forty years. He weighs nearly one hundred pounds, and in heavy seas is the fastest dog I ever saw. He will wind a duck over one hundred yards off, and I have seen him catch a crippled canvas-back after a chase of nearly an hour. He is liver colored, with close curly hair, and has all the sagacity and winning ways of a regularly trained poodle. There are three strains of these dogs, the one the short curly hair, and a dog which is highly spoken of—the red Winchester. The last dog I am not familiar with. St. John."

WHELPS—Detroit, May 19.—L. F. Whitman's Blue Belton Mell, whelped six dogs and seven hitches, eight black and white and five black, tan and white. They are by Burges' Druid, winner of first premium with Queen Mab in the brace stakes at the late St. Louis Dog Show. DAVID.

NAMES CLAIMED.—Jas. P. Crossley, of Titusville, Pa., claims the name of Rap for his liver and white cocker spaniel pup, by M. P. McKoon's Captain out of McKoon's Bess.

CARLOW.—W. E. Shedd, of Waltham, Mass., claims the name of Carlow for his liver and white cocker spaniel dog pup, purchased of Mr. M. P. McKoon and bred by him with full pedigree.

LOHMAN—FLORENCE M.—E. R. Turnbull, Esq., of Lawrenceville, Pa., claims the names of Lohman and Florence M. for dog and bitch puppies of Redgauntlet out of Quail II.

LOUISIANA.—New Orleans, May 16.—The bench show fever has struck us, and the only remedy appears to be to let it work out its natural course. We are talking of a bench show here in June or July. There is abundant material hereabouts, our sporting dogs aggregating something like 400, and the other breeds in equally good supply. AUTOMENTINUS.

NEW YORK DOGS.—The dog catchers begin their operations June 1. Owners of valuable dogs should remember that eternal vigilance is the price of dog-flesh.

FERGUSON'S SPORTSMAN'S LANTERN.—Mr. A. Ferguson, a well-known sportsman of Brooklyn, has invented a new sportsman's lantern, for which he claims material advantages over the old style. Its superiority is in its lightness, the ease with which it can be used, and the variety of uses to which it can be put. By an ingenious arrangement of leather straps the lamp may be securely attached to the hat, and by the use of the loop attachment the lamp may be used to light the tent or for a variety of other purposes. The staff attachment further adds to the usefulness of this very convenient and important part of a sportsman's outfit.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, *Salmo fontinalis*. Salmon Trout, *Salmo confinis*.
Salmon, *Salmo salar*. Shad, *Alosa*.
Grayling, *Thymallus tricolor*. Land-locked Salmon, *Salmo gairdneri*.

FLIES IN SEASON IN MAY.

BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline.

GOW DUNG, No. 10 AND 11.—Body and feet, brownish yellow; wings, yellow-gray.

GREAT DUN, No. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setae, dark brown annulated with gray.

RED SPINNER, No. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setae, pale brick color.

YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setae, yellow.

COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.

KING OF THE WATER.—Same as queen of the water, with earlet body instead of orange.

GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.

CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setae, scarlet green and wood duck feathers mixed.

SOLDIER.—Body, crimson; feet, red hackle; wings, gray.

KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.

Black Palmer, Brown Palmer, Red Palmer and Gray Palmer are made respectively of the different colored hackles that distinguish them.

FISH IN MARKET.—Retail Prices.—Bass, 20 cents; line fish, 15; salmon, 50 to 75; mackerel, 18; eel, 45; weakfish, 12½; white perch, 15; Spanish mackerel, 75; green turtle, 15; halibut, 15; king fish, 15; codfish, 8; black fish, 10; flounders, 8; porgies, 8; sea bass, 18; eels, 18; lobsters, 8; sheephead, 12½; turbot, 20; Long Island brook trout, \$1; red snapper, 18; pompano, 65; white bait, per pound, \$1; hard crabs, per 100, \$3; soft crabs, per dozen, \$1.50.

The salmon from the Connecticut during the last week received in New York have been 53; average, 14 pounds. Total so far received, 137; whole catch possibly twice this number. Pompano coming from the Chesapeake with Spanish mackerel. The first lot of red snapper (*Lutjanus Blackfordii*) ever brought to this market arrived on Monday in the fishing smack Isabel from Pensacola. King fish very plenty. Two salmon from the Restigouche River arrived last Saturday, and in the course of a week or ten days we may expect an abundant supply of this, the choicest of all salmon.

MAINE.—Monson, May 13.—Messrs. H. N. Brooks and W. G. Jones have just returned from one day's brook fishing with 250 trout. Streams unusually full of trout this season. Several have been taken from our ponds weighing three and three and a half pounds. E. R. H.

Princeton, May 16.—Not many sportsmen have got along yet. The trout, however, are plenty and waiting. Over one hundred salmon trout were taken on the 14th at Grand Lake Stream. The fishing never has opened better. The trout are plenty, large, and as gamy as ever. W. P. P.

VERMONT.—Trout captures of note are reported from North Dorset, Factory Point, and Greensboro Pond, near Montpelier. Lunge, shad, pickerel, perch and pouts are taken at Newport, Lake Memphremagog.

Richmond, Vt., May 17.—A party of sixteen persons, composed of clergymen, physicians, lawyers, merchants and the upper tens in Montreal, returned to-day from their annual fishing excursion to Potomac, Quebec, being out several days and enjoying regular camp life. This party has been accustomed to visit this place annually for fourteen years, and during this time only one person has died from their numbers.

MASSACHUSETTS.—New Bedford, May 14.—The trout brooks have yielded plentifully the past week. Mr. A. E. Lucas was high hook, catching twenty-three fish weighing thirteen and one-half pounds. The largest single fish so far weighed one and a half pounds. The traps in this vicinity have been well filled, and our market abounds with sea bass, bluefish, scup, tautog and some fine striped bass. Of this latter fish you will soon hear reports as the fishing clubs are gathering their forces at the islands. The bass are now entering the river. CONCHA.

This information of our correspondent conveys a great deal of meaning to the angler who is *au fait* in fishing for striped bass. When this delicious fish first enters the fresh waters of the Eastern rivers he is like a June-run salmon, lithe, clean, shapely, and as steel bright as a cuirass. In the salt water he acquires a coppery complexion and becomes comparatively logy. The flavor is somewhat impaired also. Between an early salmon and an early striped bass there is little to choose for game qualities. There are many expert shore-fishermen, like our friend Concha, of New Bedford, who perhaps have never been hung to a salmon, who would doubtless prove as skillful as the most experienced in handling a salmon. There is a great difference however in the kind of tackle and lines used, and in the methods of offering it to these two kinds of fish, a difference which enhances the pleasure of angling in the one case or the other alike. Concha has sent us one of these twelve-pound striped bass packed on ice, and a more delicious fish was never served on the table. May joy go with him and "success to his fishing!"

May 20.—I hear of some fine catches in the rivers at the head of the bay around Pocasset, etc., running from 12 to 10 pound each. The school of sea bass will reach the Islands about June 1 to 10. They are of different appearance, the back of the head iridescent with blue and green like the neck of the wood duck. CONCHA.

—The Magdalen Islands fishery is reported to be a failure.

CONNECTICUT.—We notice in the *Windsor Forum* that a black bass, three and one quarter pounds, was caught last week in Pestepaugh Pond, Wallingford, Conn. This pond was stocked with black bass in 1871 by Mr. T. C. Banks, the business manager of this journal. Those skeptical spirits who have so long scouted the idea that the bass plant would ever amount to anything may now swallow that bass.

NEW YORK.—Canton, May 13.—Trout fishing not first-class yet. Water too high. J. H. R.

Wyoming, May 17.—Elegant pickerel and bass fishing at Silver Lake. Quite a number of very heavy strings have been taken. Clem A. and Mark S. are champions thus far. Splendid trout fishing at the Weathersfield pond and brooks. One string of 50 and one of 120 fine speckled beauties were taken last week. ATTICUS.

GREENWOOD LAKE.—May 20.—A large number of anglers present to-day to open the bass season. The hotels are all in excellent condition and afford comfortable accommodations. This season, with the accommodations and facilities afforded by the St. George—the new hotel—at Cooper, the present termination of the railroad, parties can leave New York at 4:30 P. M., arrive at the St. George at 6:45, have from that time till 7:33 A. M. the following morning, and be back in New York by 9:30 A. M. By telegraphing to the St. George a few hours in advance of arrival, boats, bait and guide can be secured and in waiting, thus avoiding delay and loss of time.

LATER.—The day's catch has scored fifty for private parties, one reported to weigh 8½ lbs. Messrs. A. Chamberlain and H. C. Cook, of the Greenwood Lake Sportsman's Association, took seventy-three black bass. Of the Wa-wa-yanda Club, W. S. Knapp and H. D. Felton took twenty black bass and five pickerel; Mr. J. Smith, four Otsego bass, one perch, seven sunfish; W. C. Conner and J. A. Slack, twelve black bass and six pickerel; M. B. Brown and J. J. Kello, forty-one black bass, two pickerel and eight sunfish; N. Tappan and D. Jackson, nine bass and five pickerel; H. Felton and J. Smith, fourteen bass; S. Knapp, three bass.

GREENWOOD.

WILLEWMOO TROUT CLUB.—At the annual meeting on Tuesday, 14th inst., at the office of Mr. George W. Van Siclen, 99 Nassau street, New York, C. Van Brunt was re-elected President; Mr. Ohas. A. Macy, Jr., Vice-President; I. S. Coffin, Secretary and Treasurer; and Frank Macy, Esq., on the Executive Committee. G. W. V. S.

NEW JERSEY.—Kinsey's, May 18.—Easterly storms of the 14th and 15th have affected our bluefishing for the past few days. Blackfish and sea bass are biting freely, and good catches reported. Two small boys caught several, running from 3 to 4 lbs. B.

PENNSYLVANIA.—Erie, May 18.—Muscalonge, pike and bass fishing very fine here. The law allows fishing with hook and line in the bay at any season. SNIPE.

Erie, May 20.—The sport here is first rate with bass and muscalonge, and has been much improved by the removal of the nets, which were recently set so near the mouth of the bay.

—Pine Creek, Potter County, is said to afford good trout fishing.

MARYLAND.—Baltimore, May 10.—Messrs. Leonard Levell, Leonard Levering and Frank W. Thomas have just returned from Cobb's Island, which is one of the best sportsman's resorts on the Maryland coast. They left Baltimore about ten days ago, going to Norfolk, thence to Cherrystone, Va., where vehicles were procured, and the party drove to Cobb's Landing, where they embarked and crossed the sound to the island. The accommodations were found first class. Good weather prevailed, but the sport was rather tame. A few days' shooting laid three hundred snipe, which was the principal game bounding. The fishing was very good, some fine sea trout and mullet being caught, while from forty to fifty drum-fish were hooked, ranging all the way from thirty to one hundred pounds. The angling for them was conducted by casting long lines out beyond the surf, and rather troublesome and tiresome it was too. Robin breasts had not put in an appearance. Some few sharks were being caught, but no real fun in the sport, it being too tame yet. The shooting is very fine on the island from the 20th July until the 1st August. TRAYMORE.

ON THE ROCK CASTLE.—Those of our angling friends who followed the fortunes of the writer of the following on his "Trip to the Middle Fork of the Rock Castle," as set forth in our issue of October 25, 1877, will be glad to hear of his further exploits on the same stream:

"Col. Tom Wallerson and Maj. Duncan were my companions on my spring trip to Rock Castle this year. Two more whole-souled, industrious and accomplished anglers one could not find in a month's march. We made directly for Judge Faubus', on the Middle Fork, fished there three days, and devoted Thursday and Friday to running the twenty miles from the Judge's to Livingston, the railroad terminus. Lav. Hale, a Cimmerian representation of the 'colored brother,' who knows better how to propel a canoe with pole and paddle, and where to round to for a black bass or goggle-eye bite than any individual on the Castle, was our factotum; and Lav. made things lovely, supplying fine minnows and serving feasts upon the river bank. We found the bass and goggle-eye in greater abundance, and running heavier than any previous year. Captured all that we could consume with aid of the residents with whom we stopped, and killed many very large ones. Maj. Duncan landed the only pike. We took a score of salmon, ten inches long, which the natives unanimously pronounced California, but, as we had never seen a specimen of that variety except in fry state, and have never taken one of same year's plant from any of our neighboring streams, we were incredulous, and neglected sending one to Mr. Wm. Griffith, the President of Kentucky State Fish Commission. They are gamy fellows, and were as much alike as so many black-eyed peas. Lav. found a trap in full operation as he went up with canoe load of traps and provisions, and effected its immediate destruction. Having heard of three others upon another branch of the river, he gave out that he would soon take a party up that stream, and their temporary removal at least is assured. We need not a rigid enforcement of our fish law to bring our waters rapidly up to the old standard which will render it superfluous for Kentucky sportsmen to seek felicity out of their own State. Stanford, Ky., May 8, 1878. KENTUCKIAN.

ARKANSAS.—Hot Springs, May 14.—I see some magnificent bass, four and five pounders, coming in here from the Ouachita and intend to try my hand on them before leaving. B. H. P.

MISSISSIPPI.—Corinth, May 11.—Some good strings of bass and perch are taken by our fishermen in the adjacent streams. The water has been too high until within the past week to fish much. GUYON.

MICHIGAN.—Grand Rapids, May 12.—Hess Lake, twenty-eight miles N. of Grand Rapids, is celebrated for its perch fishing. There is a prejudice among some anglers against this fish, but to me they afforded some fine sport, being in my estimation nearly equal to trout. Good livers, and with light tackle, a perch of one-half to one pound, quite common here, will show himself gamy enough to suit almost any person. In a visit to the lake the other day, in three hours my friend and myself caught over two hundred, and they would average thirteen inches in length. Michigan is famous for the number of small lakes within her borders, and they all contain the perch. I have fished many of them, but for the size and beauty of the fish I never saw any to compare with those of Hess Lake. Black bass also abound in goodly weight and are taken freely with minnow or spoon and give fine sport. VALLEY CITY.

MISSOURI.—St. Louis.—The report of the King's Lake Fishing Club for April, shows this total of recorded game and fish: snipe, 425; ducks, 157; croppies, 360; bass, 118. Fishing is good and game prospects excellent.

SOME RARE FISHING IN IOWA.—Col. J. L. D. Morrison, of St. Louis, well-known to many of our Western readers, has been on a tour of exploration to Northwestern Iowa. Although we have before referred to much of the ground here described, we second the laudible ambition of our correspondent to make known to brother craftsmen the good things to be had here. We give a brief abstract of an article contributed to the *St. Louis Republican*:

Riding North from Algona, which is on the Chicago, Milwaukee and St. Paul Railroad, you enter upon an elevated prairie plateau, which runs westwardly to the Sioux River, embracing numerous beautiful lakes, well stocked with every variety of fish known to this latitude. The pickerel, wall-eyed pike, muskalooge and black and green bass, and crummy dominating. Ten miles from the Iowa line in Minnesota is Fairmont, on the Southern Minnesota Railroad. Fairmont, 47½ miles from St. Louis, presents a most inviting field for hunting and fishing. It is upon the centre chain lakes; East Chain, Centre Chain and West Chain form the main group of lakes here, with fourteen additional ones within a radius of twelve miles from Fairmont. Commencing five miles east of Fairmont the East Chain, running from north to south is composed of thirteen lakes, the most southerly one of the group approaching near the Iowa line being a deep, clear lake about four and a half miles long by one and a half in width, and the other lakes extending northward varying in size from one to three miles in length. The East Chain has seventeen lakes extending twenty-four miles upon a direct line from north to south, their borders covered with fine oak, walnut, sugar maple and other timber trees, in the season covered with water fowl and filled with the finest fish, within thirty hours of St. Louis by rail.

Prairie chickens in season are here by the million, while it is the great hatchery field of the geese, swan, brant, duck and crane, which visit us in the fall upon their flight to the South. Many of these lakes the look of the angler has never disturbed while myriads of the finest fresh water fish sport in their limpid waters. A colony of English farmers, some of them, I learned, graduates of Oxford, hospitable and refined, have located around Fairmont and appear to enjoy all the luxuries of rural life. They have brought with them the English taste for field sports, have a kennel of 24 hounds, some fine imported English hunters, and are always ready for a fox or wolf hunt, frequently chasing the wolves 20 miles before they are captured. They are a jolly set and are very kindly spoken of by all the farmers in the vicinity.

Nine miles west of Fairmont is the West Chain, which contains ten lakes, the largest, "Okamnapadee," seven miles long and very deep; the southerly half of the lakes flowing into the Des Moines and northerly ones into St. Peter's River. Outside of these chains are fourteen other lakes equally as attractive.

From Tenhasson, on this chain, we drove westward on the same grand and fertile prairie plateau, passing endless beautiful lakes, and now and then a homestead settler, for 40 miles, when we reached Spirit Lake, in Dickinson County, Iowa. This and the East and West "Okaligi" lakes, all connected by outlets, are growing to be quite a resort for sportsmen and anglers from the East, Boston and New York furnishing their annual quota. They are large, clear, beautiful lakes, and filled with fish of every variety. I tried my hand at fishing, although the wind was blowing a northwest gale. I caught 32 fine fish from the bridge between Okaligi and Spirit lake, aggregating over 100 pounds in weight, embracing pickerel, wall-eyed pike, muskalooge and green bass, the three last offering fine sport, as they came to the shore with great reluctance. It is no unusual thing in the season to see a ton of fish taken with the hook upon this bridge. The Scandinavian farmers, who compose a majority of the settlers, salt and dry them for summer use. Indeed, if one did not tire of such food, fish and wild game, with little labor in taking them, could be made to supply the table all the year round.

To the sportsman and angler I say by all means visit the Chain lakes this fall, and to every one in search of invigorating, pure, bracing air and consequent health, no better resort can be found in the United States, the only drawback being suitable accommodation for families. For fishing and hunting parties everything is ready, and the game laws allow chicken shooting after August 15. Every farmer in the three counties I have visited will welcome you as a brother, and no danger of the Chain lake faeco being repeated among these hospitable frontiersmen, most of whom were eight years ago homesteaders. J. L. D. M.

UTAH.—Salt Lake City, May 8.—Better sport for the angler can be found nowhere. Trout are both plenty and large. Have one fish breeding establishment here and several gun clubs. O. S. H.

MOVEMENTS OF SPORTSMEN.—Hon. Allan Gilmore, of Ottawa, Canada, leaves in a few days in his steam yacht for the

River Godbout, of which he is the lessee or owner. The Godbout is a famous salmon river, emptying into the Lower St. Lawrence far below Quebec.

Geo. Dawson, Esq., of the Albany Journal, who has become a devotee to the two-handed rod within the past year, departs on Thursday next for the River St. Marguerite, on the Saguenay, to fish for salmon.

Col. F. G. Sklauer left yesterday for the Paris Exposition and the rest of Europe.

L. Dock, Esq., of Philadelphia, is sitting out for the Rocky Mountains.

—The season for salmon angling is unusually early this year, and the old veterans are already departing for the rivers. The fish are said to be abundant, but will not average over fifteen pounds.

FLY TIME.—Messrs. Abbey & Imbrie, 48 Maiden lane, have reminded us that fly-fishing is now in order, by the presentation of a handsome fly book, bound in morocco. It has the "Hyde Clip" for attaching the flies and holding them in place, and is sewed throughout. It has two very serviceable felt leaves, also, for needles, etc. These leaves are very convenient for securing spare flies, which have been removed from the casting line in making changes while engaged in fishing, and which the impatience of the angler may prevent him from placing in the clips. We shall hope to be always the happy possessor of one of these books. Price, \$6.

ANGLING AN EXPONENT OF CHARACTER.—Mr. George Dawson, editor of the Albany Evening Journal, and, aside from his journalistic reputation, well known to scores of angling friends in this country and the Canadas, contributes to his paper a "Familiar Talk" on fish and fishing. This is what he has to say of the people he has met in the woods:

"I have often on angling waters been brought into close association with men of whom I had previously known but little, and I had frequently found myself amusing myself in conjecturing the business and home character and life of those around me. For instance, A would cheerfully at any time forego the capture of a fish to ensure, by his personal supervision, a tidy camp or an appetizing dinner. Such an one I would look up to as a uniformly good provider and the possessor of an orderly home. B, like some of our patriotic electors, would fish 'early and often,' and was never hilarious unless he had brought into camp the greatest number and the heaviest weight. I had no doubt that at home B was esteemed for his energy, but closely watched because of his excessive love of accumulation. C would be in the seventh heaven during his two or three hours of successful angling, but he reached a story higher through the other hours of the day while lounging beneath the shadows of the woods or hunting up some cosy dell or pretty mountain rivulet. I had no hesitation in voting him a born poet with the tastes of an artist, though he might have earned his extra dollars to cover his summer vacation behind a bank counter or amid the dust and debris of sugar casks or molasses bogsheads. D would linger over his trout and venison as if he deemed eating, and not his spiritual obligations, 'the chief end of man.' He took pleasure in catching trout and salmon, but he seemed to find far greater delight in magnifying their gastronomic virtues. I hazarded nothing in deciding that D was a good liver, whose dinners were memorable events in the lives of those who were privileged to partake of them. E loved the sport intensely, but he was happiest when he discovered a good pool and could induce a friend to share it with him. This, you know, is a virtue which few have the requisite grace to practice, for it is the highest manifestation of that rarest of all virtues, self-sacrifice. What else could such a man be at home than a model of amiability, kindness and charity? F admired the woods, the rivers, the mountains and all that therein is. But he loved them in detail, and like the busy bee he would 'improve each shining hour' by rapidly passing from one bit of beauty to another, and so, by his unceasing desire to 'move on,' keep himself and every one about him in a state of perpetual unrest. Oh what a nuisance such a one is in a camp of good fellows who desire to fish and be happy in a quiet and leisurely way! What could be at home but a perpetual torment to family and friends? I have had more than one summer vacation spoiled by these jumping-jacks, who have no more appreciation of what constitutes real comfort in camp than they have of the quiet and gentle elements which enter into the character of a true angler."

THE GERMAN WAY TO COOK A SHAD.—The following recipe is contributed to the Hartford Weekly Times:

"Buy a shad as fresh as possible; never have it dressed right off, but take it home, there scale it, then wash it clean several times, put it on a clean board, cut open the fish and take carefully out the inside of it, separate the gall from the liver (be careful not to open the gall or even a vein of it, as the least particle of it will spoil the fish), and save it with the spawn, which are delicacies. Cut the fish now in pieces, but do not wash it again and so spill the blood of the fish. Take a hawl, put at the bottom two sliced onions, one lemon in slices, two gingersnaps, two bay-leaves, six to eight cloves, rub the fish with salt, but not so much as to make the gravy too salt, and lay it on top of the spices, also the liver and spawn between, pour half a bottle of light red wine (or beer, if it is not bitter) over it, and let it stand in a cool place two hours before cooking. Then take a good glazed cooking-pot, one that will not cook blue, put in the fish with the spices, wine, a little sugar according to your taste, and a spoonful of good butter, and stew it slowly. Thicken the gravy with a little flour, if you like it, and serve it hot or cold in its own sauce. Add a cup of water when you have not gravy enough to stew your fish in, but don't make too long or thin, tasteless sauce."

—Mr. T. F. Craige, of 95 Maiden lane, claims to make fly hooks a specialty, we believe, and has them at prices varying from \$3.75 to \$7.—[See advertisement.]

THE LITTLE GIANT.—This is the not most unfitting name given by the French Manufacturing Co., of Brockton, Mass., to their camp-stool and walking-stick combined. A chair for the lawn or croquet ground, and which you can fold up into the compass of an ordinary "banger," and gracefully swing on the promenade, is just what will fill the wants of Young, Old and Middle-aged America.

BOAT AND YACHT BUILDING.—NO. 14.

Diagrams Nos. 47, 48 and 49 give a model with a midship section similar to the celebrated yacht Sappho's. Special attention is called to the inclined water line of this model, also to the inclined water line of the model given in the thirteenth paper. Both models are new, and I will be glad to hear from any gentleman who may build from either drawing. The model given with this paper is designed to be twenty-six feet long on the water line, three feet and nine inches extreme draught of water, eight and one half feet beam, and will carry about 850 square feet of canvas. The dimensions may be larger or smaller, or may be adapted for a schooner by placing the sections further apart. Diagram No. 50 shows a detail in the construction of boats or yachts that has been omitted in

its proper place. The diagram shows the junction of the keel, stern post and stern deadwood; at the points where the grooves cross the joints between the keel and stern deadwood and stern post and stern deadwood, holes are bored through, wooden plugs driven in tightly and trimmed down to conform to the shape of the groove. These plugs are called "water stoppers," and their object is to prevent water leaking through between the joints and entering the boat. On yachts of this size a "tiller" is preferable for steering; if any steering gear is used, that known as the "Boston Steering Gear" can be recommended. In rigging yachts wooden blocks with brass sheaves should be chosen. The mainsail and jib halliards should be led through solid brass blocks fastened to the deck at the foot of the mast, and then led back and fastened to cleats, so as to be in easy reach in case of emergencies. Mast booms are best of wood, copper fastened; jib hanks of brass, or galvanized iron large enough to give plenty of room for the "down haul," the end of this rope should be led back into the cockpit so as to be convenient in case of necessity. The shrouds, jib stay and side stays of bowsprit are best of galvanized wire rope; the bob stay of iron, with a turn buckle to set it up. Sails for small boats can be made out of drilling, or twill muslin, and are easily sewn with a common needle of good size, or can be sewed on a sewing machine.

Large sails for yachts, made from duck, require sail needles for sewing and "palms" for forcing the needles through the cloth. The sewing of duck sails will be found hard work and, unless the amateur has plenty of patience, had better be made by a professional sailmaker. To cut the cloths for a sail, mark out on a floor the shape desired and allow sufficient for the hem that is required on the edges of the sail, commencing with the leech cloth. Lay down the cloth in place, stretching it in position by the centre of the cloth (never stretch the selvage), tack it in place, after which the next cloth is laid down,

lapped one inch on the first cloth, stretched and fastened in position as before and in like manner with the remaining cloths. Duck is of different widths, commonly about twenty-seven inches, and should be "bighted" once, that is doubled on itself down the middle and seamed, to increase its strength and elasticity; if narrow duck is used bighting is omitted. The next important point in sailmaking is the "roping," for this purpose a special rope is made called bolt-rope which has extra flexibility.

The head, foot and hoist of the sail are roped flat; the leech is roped more or less elastic, according to the material used in the sail; if too much elasticity is given to the leech rope the canvas will be strained and in danger of tearing. On the other hand, if the leech rope has not sufficient elasticity a "bag sail" is the result. Experience alone can teach the amateur on this point. Turning in the rope increases its elasticity. Duck is more elastic than drilling, and requires more elasticity in the leech rope. Iron ballast should be well painted with hot tar before being placed in position. Yachts of twenty-five or more feet length should be provided with a windlass, well fastened on the "Sampson post." If a large amount of chain cable is carried, the chain box should be located as far aft as possible—that is, near the forward end of the cockpit, otherwise the bows will be heavy in a sea. Air cushions are very comfortable, and can be used as life preservers, if necessary.

If a yacht is to be used at sea a "drogue" should be provided. A drogue is made by fastening a conical canvas bag on an iron hoop, two or more feet in diameter; to the hoop a strong rope is attached by a span, in such a manner that the bag will fill with water and act as a drag. A tripping line is attached to the tail of the bag, and serves to pull the end of the bag forward, so that the drogue can be easily spilled or taken on board. In running before the wind in a heavy sea there is great danger of a small boat being caught in a "comber," if the yachtsman is not skillful, and sometimes if he is. The boat rushes down the declivity, the bow is submerged, the stern lifted, and the boat performs a somersault, end over end, like sticks in a mill-race. If the wave catches the boat on the quarter the yacht capsizes, or "broaches-to;" the remedy is to tow the drogue astern thirty to fifty or more feet. In sailing against "combers," if sufficient speed can be kept to force the boat through the wave, the yachtsman is safe; otherwise, put out the drogue at the bow, and "lay to." If, when coming before the wind in rough water, there is any danger of the boom-end dipping by the rolling of the boat, thereby tripping or jibing the sail, lower the peak of the mainsail. If in danger of a capsize with the wind abeam, slack the jib first, after which let go the peak halliards, and, if necessary, lower the sail. Never let go the throat-halliards. Always keep the running ends of the halliards coiled up in such a manner that they will not pay out without fouling.

CATAMARANS are attracting much attention at the present time, and require some notice. Mr. Butler's paper on "The Flying Proa," in Harper's Magazine of last August, is interesting, but not altogether correct. The poor cat-boat is unmercifully run down, and the Flying Proa unduly extolled. Directions are given for building a double boat 16ft. long,

which is stated is capable of sustaining 3,000lbs. more than the weight of the hulls and rigging. This amount is at least 100 per cent. more than the truth, in the writer's opinion.

It is stated the Proa gives three times the available space for passengers furnished by a 16ft. cat-boat. Now, of what use is this space when it is known that two persons will load down the Proa more than eight will the cat-boat? The cost of the Proa is stated as but one-half that of the cat-boat of the same length. The truth is, the cost will be about the same. Mr. Butler "can trust her to a consumptive theological student with the utmost confidence that she will resist all his attempts at drowning himself." The only comment necessary on the last statement is the fact that a catamaran will upset endways, or "pitch pole," as easily as an acrobat turns somersaults. To sum up the objections to double-hulled boats of the Catamaran or Flying Proa type: First—the tendency to "pitch pole," or upset endways; second—the resistance of the two hulls to head seas, making them very slow in stays and working to windward; third—if the connections of one hull to the other are not heavy and strong, there is danger of the hulls being wrenched apart (Mr. Herreshoff gains lightness and strength by elastic connections which are patented, and can only be used by him); fourth—catamarans are very wet boats in rough water, and only sail well when wind and tide are not opposed to one another; fifth—want of carrying capacity, a 30ft. catamaran not sailing well with more than two, or at most three, persons aboard; sixth—unsuitability for cruising; seventh—they are unseaworthy. At the Caroline and Pelew Islands, the home of the Flying Proa, great loss of life is common. Any one who has sailed "the raging sea" knows the dexterity required to keep a lively, quick-working boat from broaching or pitching pole in a comber. What would become of a catamaran in such a situation is hardly a matter of doubt.

Mr. Herreshoff's catamarans are the fastest and most successful of any yet built, and I cannot do better than give the dimensions of his boats. The midship sections of the hulls are shown in Diagram No. 51, both hulls being alike. The bows and sterns of hulls are shaped alike: Length on deck, 32ft.; beam at midships, 28in.; depth of hulls at ends, 2½ft.; draught of water at ends, 1ft.; draught of water at midships, 21in. The hulls are placed 16ft. apart, from centre to centre: forward end of centre-boards (one in each hull), 16ft. 8in. from bow of boat; centre-boards, 2ft. long; rudders, 2ft. long, one on each hull; mast stepped 12ft. 10in. aft of the bows; bowsprit, 22ft. 8in. long; main boom, 31ft. 4in. long; sails, of the usual shape. The hulls may be connected by five or six cross beams, strongly fastened to the decks. Cross beams 6in. wide, and two or more inches thick. The plat-

form or cockpit is fastened on the cross beams, and may be of any degree of simplicity or complexity. The cross beams and bulls are kept in shape and strengthened by diagonal rods of iron. The mast is held upright by stays, three on each side.

NAUTICS.

YACHTING NEWS.

KNICKERBOCKER YACHT CLUB.—This club will hold its spring regatta at their club house, Port Morris, May 30. Bots will be started at 2 P. M. The club reports to us a flattering condition of its affairs, and many accessions of yachts and members to its list. Their burgee is a red triangular flag, white cross and blue star in centre of cross.

PAVONIA YACHT CLUB.—The following officers have been elected for the season. Commodore, Edward A. Davis; Vice-Commodore, Theo. Crummenauer; Rear-Commodore, William Taylor; Secretary, Alexander W. Murray; Treasurer, Harry H. Holmes; President, John G. Northrup; Steward, James Dainty; Measurer, Walter G. Moulds; Sailing Master, Charles W. Wild. The Board of Trustees consists of J. L. Kreymer, H. H. Holmes and Otto Crummenauer.

NEWBURYPORT YACHT CLUB.—The old club at Newburyport, Mass., has been brought into life again under the following board of officers: Commodore, F. H. Boardman; Vice-commodore, Wm. O. Thompson; Captain, Benj. P. Davis; Secretary and Treasurer, Edward A. Williams; Regatta Committee, Captains W. A. Davis, Thomas McKinney, and Daniel Pierce.

DELAWARE RIVER YACHT CLUB.—The date fixed for their match is May 20. Start from Market street wharf, Camden, around red buoy at Chester and return. There will also be an open regatta June 10, Vice-Com. Paul Klotz in charge, on the Delaware, from Chester round the Cherry Island buoy and return, distance 22 miles.

SEAWANAKA YACHT CLUB.—Under the auspices of this club, the Eighth Corinthian Match will take place June 15, for second class schooners and first, second and third class sloops. Race open to yachts belonging to any recognized club and governed by sailing regulations of the Seawanaka Yacht Club. Second class schooners comprise all whose areas are 1,950ft. or less; first class sloops, all whose areas exceed 900ft.; second class sloops, all whose areas are between 900ft. and 550ft. Four prizes, one in each class; two to start or no race. Yachts must be manned by amateurs exclusively to the satisfaction of the regatta committee. They will be allowed one man for every 5ft. of length on deck, and one for every additional fractional part of 5ft. Sailing master, pilot and cook not allowed to interfere with management of boats, and each yacht to be steered and sailed by her owner. Only plain, working sails permitted. The start will be a flying one from club steamer, and the course to and around buoy No. 10, on Southwest Spit, keeping it on port hand, thence to and around Sandy Hook Light-ship, keeping it on starboard, and return over same course. Yachts must keep to the eastward of buoys 9, 11 and 13, on the west bank, and outside buoy 54, on Sandy Hook Point. The Regatta Committee consists of Messrs. Rosevelt, Schuyler, J. H. Elliott, C. Wylly, S. Betts, Henry De F. Weekes and L. P. Bayard.

YACHTING AT HALIFAX, NOVA SCOTIA.—The Nova Scotia Yacht Squadron had fixed the 15th of June for their opening cruise. Several yachts are already in commission. The schooner *Sea Foam*, Captain Larcom, R. A., has, indeed, been in commission all winter, and her owner and some friends enjoyed a midwinter cruise in search of sport. They got plenty of wind and sea, and little else. The *Phantom*, sloop, formerly owned by Mr. H. E. Billing, has passed into the hands of Lt. Hammersley, 20th Regt., who commissioned her about a month ago. She has proved herself a very stiff, powerful, handy and speedy craft, but has not yet been tried in a regular race. The *Hebe*, sloop, Mr. J. E. Butler, was the next out. She was the champion yacht last season, and will no doubt give a good account of herself this year. She has a new boom and is fitted with lazy crails instead of the single topping lifts she carried last year. Lt. G. E. Capel Core, 20th Regt., who sailed the little *Muta* last season, has become the owner of the *Psyche*, sloop, built by Mr. Butler in 1876. She will cut out work for all her rivals, as her owner sails her hard. She is in commission, as is also Lt. Groves' (97th Regt.) *Little Annie*. Mr. E. Moseley, Dartmouth, has put his sloop *Squirrel* into the water after extensive repairs, including new keel and floors, new cabin, skylight, etc. She has shortened her top-mast four feet. She will not fit out for some time yet, her owners being busy building a steamer for the War Department. The *Mystery*, sloop, Messrs. F. C. Sumichrast and W. H. Troup, is being fitted out rapidly. She has had a new mast put in and a new running top-mast, being the only craft on the station re-rigged. She has had a thorough overhaul, new wire standing-rigging, and is to have more ballast. Her owners use her principally for cruising. The *Oprey* schooner, a comfortable and staunch cruiser, has been purchased by Captain Cantley, 97th Regt., who put her in commission about a month ago, and has already tested her sea-going qualities. Her cabins have been altered and improved, and with the addition of a jib-boom and flying-jib she will travel well. The *Albatross*, schooner, Mr. D. Cronan, is fitting out; she is a fast and handsome vessel of her class, and often bothers sloops even turning to windward, her owner sailing her with remarkable skill. The *Spray*, sloop, Mr. H. St. G. Twining, will shortly fit out. She had a complete overhaul last year, and is now in good order. The *Kestrel*, yawl, Vice-Commodore White, will probably not fit out until the return of her owner, who is now in Europe. The *Nymphia*, yawl, Mr. C. E. Brown, will fit out in June, after the first glory of the salmon fishing is over, her owner being as enthusiastic a fisherman as he is a skilled yachtsman. The *Kate*, sloop, Mr. W. H. Brookfield, has been in commission since the end of April. Her owner went to Prince Edward Island in her last summer.

American yachts are always welcome in Halifax harbor, and the Hon. Secretary of the Nova Scotia Yacht Squadron, Mr. G. C. Sumichrast, will, if required, take charge of letters and papers and have them delivered on board yachts on their arrival, and give any information and assistance in his power to yachtsmen.

QUAKER CITY YACHT CLUB.—This is now the most prominent club on the Delaware. It was organized in Philadelphia in February, 1876. At first it was intended to include only the larger class of cabin yachts, but this season a class has been made for open yachts between twenty and thirty feet in length. The membership of the club numbers eighty-three, with a fleet of thirteen cabin and three open yachts. The officers of the club for 1878 are: Commodore, A. F. Bancroft; Vice-Commodore, L. Coleman; Rear Commodore, Paul Klotz, of Chester; President, N. B. Boyd; Treasurer, Robert Baird; Secretary, Charles S. Salin; Assistant Secretary, J. J. Baughman; Measurer, Captain John Vanderslice; Regatta

Committee: Commodore A. F. Bancroft, John E. Pomeroy, Robert Baird, L. Coleman, Charles S. Austin, Paul Klotz and John M. Seigel. The third annual spring regatta takes place May 23. Course from Laurel street wharf, Philadelphia, to Chester red buoy and return. The George W. Barrow Challenge Cup will be awarded to the yacht making fastest time. The other prizes consist of marine glasses, cabin lamp, yacht ensign, and kedge anchor. The following programme has been arranged for the coming season: Opening Review and Harbor Cruise, May 12; Annual Spring Regatta, May 23; Chester Regatta, June 10; Review and Harbor Cruise, June 23; Corinthian Regatta (yachts to be sailed by their owners, and crews to be composed of amateurs, for prizes offered by the flag officers) July 4; Review and Harbor Cruise, July 14, and August 4; Annual Cruise to the Delaware Bay, August 17 to 31; Fall Regatta, September 19; Closing Review September 29. The Corinthian races and the club cruises are most commendable features of this organization, and we hope they will be strictly carried out as per programme.

—Owing to want of space a number of communications and other matter has been unavoidably deferred.

YACHTING DRIFT.

There will not be many big schooners in commission this year. Most owners have gone to Paris, but things will be very lively among the smaller craft. *Seavitch*, ex-Com. F. H. Stott, has been on a cruise. Her owner is a thorough yachtsman and a professional sailor. Corinthian races are becoming more popular, also yachts of a size suitable to such sport. Time allowance of the Seawanaka Club is based on area obtained by multiplying extreme beam and mean of lengths on water-line and over all. New Orleans parties are forming a new yacht club. Seven cabin and twenty open boats have entered for the South Boston Yacht Club race. Keels and centre boards will be raced in one class. This is as it should be. No reason at all for giving each a separate class. *Undine*, of New York, is in the hands of a builder at Cohasset, Mass. Keels and cutters are coming more into fashion; so much the better for seamanship and cruising. Mr. A. Cary Smith is designing a thoroughbred keel cutter. Ballast on keel and garboards is also coming into vogue. About time, too. Commodore Peabody's new cutter is attracting much attention in Boston waters; this was to be expected, but why on earth has he got tarred rope?—hemp, perhaps—for running gear? We give him just four weeks to reeve off an entire new batch of manilla instead. Hinchina and Pryor, well known in Boston as builders of fast and-mainsails, have launched eight boats last week. Two suicidal individuals are going to cross the wide, wide seas from Boston to Europe in a 19-ft. dory called the *Nautilus*. Their venture is as stale and second-handed as the name of their coffin. Commodore West, of the Madison Yacht Club, is working hard to get up a fine June regatta on Fourth Lake, Wis. He has matched his *Whisper* against *Lulu* of Geneva Lake. Mr. Colgate, of the *Idler*, has returned to the N. Y. Y. C. the Breaton's Reef Challenge cup as required by the conditions governing it, as he will not commission his schooner this year. The race for this cup will take place June 27, from New York to Newport and return, outside course. Will any one come to the line for this event? It seems doubtful. *Wanderer*, Mr. Stillman's owner, is another of the big ones that will not show up this year.

THE OAR AND PADDLE.

COLLEGE PROSPECTS.—At Williams the racing will not be extensive this year. The course will be improved to a mile and a half in length on the Hoosac with the appropriation of \$5,000 presented to the college by Cyrus W. Field. Cornell's spring regatta will be rowed on Cayuga Lake, June 17. All classes but the freshmen will furnish a six-oared crew, and there will be a race of sixes between the crews of the Tom Hughes and Sprague clubs, composed of members of all the classes. At Brown College the three lower classes will come together, the seniors having withdrawn, June 14. The freshmen will pull against the Narragansett crew on the Seekonk River in six-oared shells, three miles with a turn, on May 30. At Bowdoin the juniors, sophomores and freshmen will row for the champion cup in four-oared gigs with coxswains, probably on June 8. At Philadelphia the University of Pennsylvania will have a four-oared crew at the Schuylkill Regatta. The juniors have also accepted a challenge from the freshmen for a six-oared race, to take place May 24, and the freshmen have a similar contest in prospect with the sophomores. At Princeton, boating matters seem at a low ebb, the expected contest of their freshmen with those of Columbia having fallen through. At Michigan University there is next to nothing doing. Marietta College, Ohio, is the only one in that State that will muster a racing crew, though no fixtures have as yet been settled upon. California University being high and dry in a desert, its students can only indulge in hoeing potatoes for a winger, and shell boats and sculls to them must ever remain a mystery. Rutgers has men in training, but no definite races in view. Wesleyan oarsmen are quiet. Columbia has given an account of herself on the Harlem, and the public will watch with eagerness the doings of the brave four that go to Henley.

HANLON-PLAISTED RACE.—As expected by all who had witnessed the two men at practice, Hanlon easily beat Plaisted, the race being pretty much of a walk-over for the Canadian. It was pulled at Toronto, May 14, the course being from Gooderham's to Queen's Wharf, and the weather and water fair. No coaching was allowed, and suspicious persons were not allowed to accompany the oarsmen. Stephen Roberts, the Harlem boat builder, was referee. Hanlon turned the scales at 163½ pounds, his adversary weighing 3½ pounds less. The former pulled in a shell by Elliott of Greenpoint, L. I., the latter in a paper boat by Waters & Sons, of Troy. At 6h. 8m. the word "go" was given. Plaisted took the water first and started off with a stroke of 34, taking the lead for a short distance. Hanlon's long, steady swing of 28 soon told, however, for in less than three-quarters of a mile he had distanced the New Yorker by a length. He then rowed leisurely with two lengths between the boats. Finally the Canadian won in 13m. 40s., three lengths and a half ahead. In connection with the race it is to the credit of American shell builders and of Judge Elliott, of Greenpoint, in particular, that Hanlon gave a decided preference to his Long Island boat over several imported from England. Col. Shaw, the popular American Consul, was the backer of Hanlon. Let us have no more such one-sided races for the championship, but let those interested trot out make Courtney, the best man in America, who will it warmer for the Kanuck than any other man we know of.

THE EUREKAS.—For the Newark Regatta the Eureka Club has the following powerful four: Augleman, stroke; George Clark, bow; P. Young and Wm. Flavell in the waist. They are said to have made better time recently than ever before. The entries for the Passaic River Amateur Rowing Associa-

tion Regatta will close June 14. Mr. Young's absence will prevent the Eureka's from attending Watkins, but he will return in time for the Passaic regatta.

YALE SPRING REGATTA.—The Yale navy met on Lake Salton-stall during a drizzling rain May 15. The first event was a race between the Juniors and Sophomores. The former had made the best time on record for two miles, and when the Sophomores showed up first at the finish the surprise was great, for they had actually eclipsed the Juniors' wonderful time. Distance, two miles; time, 12m. 57½s. In the second barge race between the academic and scientific freshmen, the latter made a fine spurt toward the finish and won in 13m. 43½s. In the Junior scull race B. S. Keaton easily beat G. M. Edwards and A. F. Jones in 15m. 15½s. In the senior scull race E. P. Livingston won in 15m. 13s., defeating H. H. Donaldson.

ROWING RIFLES.

Great preparations are being made by the Schuylkill clubs for the regatta, June 10. Pennsylvania Barge Club has received a new four for a crew averaging 170 lbs. The Unclines, of Philadelphia, are after the Crescents. The latter have the heaviest four, the Ridgeway crew, on the Schuylkill. Elia Ward, now permanently located in the Quaker City, wants to take the shine out of Flick or Kishy to the tune of \$200, or will pull a pair with his brother Gilbert against the two. Hlawutha is the name of a new club just organized in Philadelphia. Hanlon is going to Pittsburgh. At last! Frenchy Johnson has found a backer and he is prepared to tackle Reagan, of Boston. The Plaisted-Reagan race is off, the latter not having come to time; probably the best thing he could do, for his friends would have lost their money. The Quincy Rowing Club has organized in Quincy, Mass. Pool law in force in Canada. Only private bets hereafter among our friends across the border. Hanlon says he likes his Greenpoint boat better than any other. The Union Boat Club of Boston has a duo four composed of Peabody, stroke, Williams, Haughton and Jones. Peabody rowed in one of the Oxford crews, also at Henley. Williams is a coxswain. They pull 38 strokes, English style. Plaisted works with his arms to much, in the old New York Battery style, now happily dying out. The jerky stroke never could do anything alongside of the "steady" English swing.

New Publications.

MODERN OBSERVATIONS ON RIFLE SHOOTING, with Improved System of Score Book and Silicate Slate for Use on the Range. Second edition. Edward A. Perry, Editor and Publisher.

It is difficult to imagine how in a more compact and convenient form the author of this score book could have embodied so many useful facts in regard to rifle practice. It is by no means a simple score book, but contains all the information the beginner in rifle practice can require. It is quite a desideratum with one who commences to understand clearly what tools he may want and Mr. Perry gives in detail all the requisites. How to care for a rifle, how to clean it, how shells should be preserved, how powder should be handled and all that is known of bullets are to be found in the book. When it comes to the more delicate manipulation of the rifle, the precautions to be taken, as to light and wind, the book is particularly excellent. Allowances for elevation are minutely given and nothing is neglected. The chapter entitled "Reasons for Failures" is very much to the point and really explains many of those puzzling points which set the tyro at sea when unacquainted with the mysteries of rifle shooting. The whole system of team shooting is explained. When we state that to all this is added the rules and regulations of rifle associations our readers can understand that nothing has been left out. When we come to the method of targets, with the silicate slate—a blotter in fact, for use in the field—into which the scores can be copied for future and permanent reference, Mr. Perry's system is absolutely perfect. We have, since the book has been on our shelf, frequently used it for reference, have recommended it and have no hesitation in advising all those using rifles on ranges to purchase Perry's book as it is the best for the purposes intended that has yet come under our notice.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, 820, N. Y. HORTICULTURAL SOCIETY.

BEAUTIFUL NATIVE PLANTS.

THE following list of native plants was exhibited by Messrs. Woolson & Co., Passaic, N. J., at the last meeting of the New York Horticultural Society. It was a very interesting and instructive exhibit, and, in connection with the group of hardy flowering plants, but seldom cultivated and exhibited that they should be better known, were of as much interest to many, as the rare and choice orchids shown by Messrs. Sueh, Bennett and Buchanan: *Berberis vulgaris*, var. *purpurea*; *Cercis japonica*; *Euonymus latifolia*, very fine in fruit; *Exochorda grandiflora*; *Halesia tetrapetala*; *Kerria japonica* var., usually kept as a greenhouse plant, but perfectly hardy with us; *Lonicera Ruprechtii*; *do. Tartaria*, var. *grandiflora*; *Nevlisa Alabamensis*, one of the rarest American shrubs, with fruit like *Clematis*; *Rhodotypos kerrioides*, a recent introduction from Japan and very showy.

The following is the list of native (North American) plants, forty species and varieties: *Amsonia ciliata*; *do. Tabernemontana*; *Andromeda polifolia*; *Aquilegia canadensis*; *Aquilegia canadensis*, var. *flava*; *Brodiaea grandiflora*; *Camassia esculenta*; *Clematis Douglasii*; *Cypripedium arietinum*; *Cypripedium pubescens*; *Dicentra eximia*; *Gaura triflorum*; *Iris cristata*; *Iris tenax*; *Daylia platyglossa*; *Lindheimeria texana*; *Mertensia lanceolata*; *Mertensia virginica*; *Phlox amara*; *Phlox divaricata*; *Phlox stolonifera*; *Podophyllum peltatum*; *Polemonium reptans*; *Sedum obtusatum*; *Sedum ternatum*; *Seubertia laxa*; *Silene pennsylvanica*; *Smilacina stellata*; *Spigelia Marylandica*; *Tellima pallidiflora*; *Thalictrum anemonoides*; *Trillium erectum*, var. *album*; *Trillium grandiflorum*; *Uvularia perfoliata*; *Uvularia sessilifolia*; *Viola canadensis*; *Viola pedata*; *Viola pubescens*; *Waldsteinia fragarioides*.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

40, 111 (old No. 108) FULTON STREET, NEW YORK.
(Post Office Box 2332.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 23, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may give rise to propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 24.—Creedmoor—Short Range: "Nallo at Guardaman" and other matches; subscriptions and stated prizes. Long Range: Sharps' Military Team; subscriptions and stated prizes. Rowing: Univ. of Pa., Juniors vs. Freshmen. Yacht Regatta at Gunhook. Dog Show at Worcester. Base Ball: Allegheny vs. Rochester, at Rochester; Buffalo vs. Tremont, at Buffalo. Trotting: Hillsdale, Mich. Running Meetings: Baltimore, Md.; Louisville, Ky.

Saturday, May 25.—Creedmoor—Short Range: Directors' Match; Military Team Match; Catblat Team Match; Subscriptions and stated prizes. Mid-Range: "National Guardaman" Match; Subscriptions and stated prizes. Cricket: Philadelphia vs. Young Americans, at Nicetown; Melton vs. Germantown, at Ardmore; Dorlan vs. Philadelphia, at Haverford. Mystic Boat Club Games, at Waverly Park, Newark. Base Ball: Utica vs. Live Oak, at Lynn; Allegheny vs. Buffalo, at Buffalo; Indianapolis vs. Milwaukee, at Milwaukee; Cincinnati vs. Chicago, at Chicago. Running Meeting: Louisville, Ky.

Monday, May 27.—Smithwick, Phila., Yacht Club Regatta. Base Ball: Utica vs. Lynn, at Lynn. Running Meeting at Louisville, Ky.

Tuesday, May 28.—Watkins Open Amateur Regatta. Base Ball: Indianapolis vs. Cincinnati, at Cincinnati; Milwaukee vs. Providence, at Providence. Trotting: Le Roy, N. Y.; Parker City, Pa.; Providence, R. I.; Point Breeze Park, Phila.; Pittsburgh, Pa.; Freeport, Ill.

Wednesday, May 29.—Watkins Open Regatta. Cricket: Merion vs. Baltimore, at Ardmore. Trotting as above; also at Princeton, N. J., and Red on, Mich.

Thursday, May 30.—Watkins Open Amateur Regatta; Eastern Rowing Association Open Regatta; Brown University Class Races; South Carolina Amateur Regatta, at Charleston; Atlantic Yacht Club, Brooklyn, Opening Day; Providence, R. I., Yacht Club Regatta, at Bullock's Point; South Boston Yacht Club Union Regatta, Club Course; Knickerbocker Yacht Club Opening Regatta. New York Athletic Club Games, at Mott Haven; Yonkers Lyceum Games. Cricket: St. George vs. Philadelphia, at Hoboken; Germantown vs. Belmont, at Nicetown; Merion (vet.) vs. Commercial Exchange. Base Ball: Chicago vs. Boston, at Boston; Milwaukee vs. Providence, at Providence; Indianapolis vs. Cincinnati, at Cincinnati. Trotting as above, and at Delphos, O. Running Meeting at Jerome Park.

—No sportsman should think of going into the country for the summer, without a copy of the Sportsman's Gazetteer. Consult it for choice of routes, localities, outfits, kinds of fish to be caught and the methods of taking them.

PROFESSOR SPENCER F. BAIRD.

At an election held by the trustees of the Smithsonian Institution, on the occasion of the vacation of the position of Secretary caused by the death of the much lamented Professor Heary, Professor Spencer F. Baird was unanimously chosen as Secretary. It may be said that no higher scientific position nor place of greater trust is accessible to any one in the United States. The choice of the trustees means the merited approval of the country, and is a just reward to the admirable administrative powers and high scientific acquirements of the present incumbent. Endeavoring in every way to follow out the wishes of the founder of the Smithsonian Institution to make it the great fountain head in America for the distribution of general knowledge, the efforts of Professor Baird in the past are as a guarantee of the future.

One of the greatest gifts Professor Baird possesses, apart from his cosmical knowledge, is this peculiar inherent power: by simple contact alone he imbues those who work with him or under him with a truer love of science for science's sake alone. In administrative ability, in the practical handling of vast subjects, in steadfast philosophical research, in putting aside without an effort the chaff, and in seizing in the grain, always holding steadfastly before him the great public good, Professor Baird has few equals among that learned group of men who stand in the first rank in the history of our country.

MANHATTAN BEACH AND WHITE-BAIT.

CERTAINLY, when matters ichthyological and gastronomic can be combined, the pleasures are twofold; but when, in addition to these two elements, the one purely scientific and the other physical, a third enjoyment—that of a pleasant jaunt to the sea side—is added, then a man's happiness may be said to be filled.

Of course, it has been said quite frequently of late in the public prints, that Coney Island is quite accessible to New York. Some 2,000,000 of people, who were formerly cooped up during the summer heats in those great cities which centre at the confluence of the North and East Rivers, have had opened to them a delightful resort, right on the Atlantic Ocean. Whereas your Londoner has to travel no end of miles to reach Brighton, your New Yorker, your Brooklynite, or Jersey City man, can now in an hour revel in the delights of a cool breeze and refresh himself in the tumbling billows of the ocean. The Manhattan Beach Railway is the latest system of locomotion which brings the world of New York to the sea side. In point of enterprise, the project of the Manhattan Beach R. R. by no means dwindles with the idea of being a narrow-gauge road, for, if the tracks are narrow, it has no less than three distinct connections with New York and the neighboring cities. Most, if not all, of this work, conceived on the largest plan, is due to D. C. Corbin, Esq., the active Manager and Director of the Manhattan Beach Railroad. Administrative powers, so far as railroad men are concerned, are sorely taxed when the problem to be solved is to take up an enormous number of passengers in the shortest conceivable time, and to land them, and then to swoop them all up again and to put them back again where they came from. The Manhattan Beach R. R. is prepared to accomplish the feat of collecting some 20,000 odd people, of landing them at their hotel on the beach, and of taking them back again to New York without accident or delay, all within the limit of some six to eight hours.

On Wednesday last, at the invitation of the Manhattan Beach Railroad, a large company of gentlemen, representing the New York and Brooklyn Press, passed, by steamboat and railroad, to the superb hotel on the beach, owned by the company. A very superb dinner was provided by the proprietors, Messrs. Keefer & Co. Now, there are dinners and dinners, and we may as well state that your representative of the press is mostly a dainty individual, and appreciative withal. We have no hesitation in saying that the dinner was superb—fully equal to any feast served at Delmonico's in every way, and the ability of the chef, Monsieur Auguste Conrad, was conspicuous. To dine seventy-five people quite as well and quickly as if there were but ten, is the acme of culinary skill. The very notable event in the dinner was the presence of white-bait, furnished, for the first time in the United States, by Mr. E. G. Blackford. In the FOREST AND STREAM AND ROD AND GUN, in a former issue, we gave full particulars in regard to this notable fish.

Ichthyologically, we are quite well satisfied that it is the young of some species of the herring; gastronomically, we must affirm that whitebait is a most dainty fish. Of course, we feel in no way bound to quarrel with any one who would assert that a square meal of codfish balls was better than a dainty fry of whitebait. The only thing we would insist upon is this, that in some of the accounts given in the public prints of this dinner the authenticity of the fish themselves was disputed. Who could expect a poor ordinary reporter to feel the solemnity of the occasion, when first the realm of whitebait was opened before him? Such a man would joke about the equator. *Dona fide* whitebait were they, however, upon as good authority as that which can be furnished by the Smithsonian Institution. Delicately fried (Miss Corson having solved the method of serving them), we may now bid defiance to Greenwich, and the many famous whitebait houses there. The dinner was a delightful one, the excellent fare being supplemented by the numerous clever speeches made by the gentlemen present. When pleasant talk was subdued for a

moment, the fine music of Graffulla's band filled up the hiatus. That whitebait were eaten with gusto is quite evident from the fact that in a twinkling all the plates were emptied. No longer, then, will free Americans be subservient to aristocratic Englishmen. Should, then, Lord Beaconsfield resign, and the Tories lose power in England, we should not hesitate a moment to invite Disraeli to the Manhattan Beach House, feeling sure that we could give him quite as good a dinner—whitebait included—as the Premier ever enjoyed at any Ministerial repast at Greenwich. We shall be sending whitebait to London before very long.

WHITE-BAIT.—It is hardly necessary to add anything more to the facts in regard to white-bait. However, to set all matters at rest, we publish the following letter from the Secretary of the Smithsonian Institution:

"Dear Mr. Blackford—Mr. Bean and Prof. Goode have been examining the question of white-bait, and find the specimens to contain the young of two distinct species—one the *Pomolobus pseudo harengus*, the common alewife or gaspereau, the other, the *P. mediodors*, or sea or Taylor shad. It is probable that some other species may also be mixed in, such as the young of the sea-herring, *Clupea elongata*, the thread berring, etc. The English white-bait is now generally considered to be composed of young fish, possibly of one or both species of English shad, the sprat, etc. A great deal of discussion has been wasted upon the subject, especially as to whether the sizes usually caught represent a distinct, fully grown species. So far, there is no evidence of that fact. Yours truly, SPENCER F. BAIRD, Commissioner."

FRANK FORESTER.

IN MEMORIAM.

TWENTY-FIVE or thirty years ago, when the flats around Cbatham and Pine Brook swarmed with snipe, and the Warwick woodlands of Orange County were invaded by a saboth of Bob White and timber doodles, "Frank Forester" might have been encountered in the gray dawn pacing rapidly over the dusty Newark road, en route for the Jersey meadows, or the rattling of the long, boxed shooting wagon have awakened the drowsy tavern-keeper for the sparkling *cau de vie*, as old "Herbert," in company with some devoted friend, drove toward the gem in the mountains (Long Pond) or sought the hospitable log ranche of Tom Ward (old fat Tom Draw) within the quiet solitudes of Warwick, New York.

But for twenty years his mortal remains have slumbered quietly within the environs of Mount Pleasant Cemetery, near Belleville, and the balmy breezes of the tranquil spring have sung their appropriate lullabies and bedecked the little grassy hillock with the daisy, and the sweet violet and the departing woodland year has also contributed her sympathies with murmuring sighs and weird lamentations. There remains not a vestige of the little Mary Tudor cottage, "The Cedars," at one time half-erased among the towering foliage on the banks of the Passaic, where the gifted author and great sportsman, in a sort of English hospitality, would entertain his friends of the rod and rifle, or peep from the historic annals of tradition such masterpieces as King Henry the VIII., "Captains of the Old World," etc.

In glancing over his sporting works, I imagine the peculiar odor from the stagnant sedges at Montauk, the familiar drafts from The Cedars; nay, I thought I heard but a moment ago Bob White's cheery whistle as he broke his fast in yonder stubble, and the spirited whirr of the fat autumnal woodcock as he sprang from the brake just beyond the brook on the verge of the meadow. To the devoted student of nature, such as was the lamented "Frank Forester," the huddling spring time has many strange fascinations. That glorious season of the fleeting year, when the warbler carols forth his tuneful praise to his Creator for the pleasant sunshine, filling the woodland far and wide with his thrilling music, and gladdening the heart of all mankind. There is something, too, in the "melancholy" days of the golden autumn, when the songster from the forest seeks again his home in sunnier climes, when the floweret which lately bloomed by the wayside blooms no more, and perhaps with the falling leaf there flashes through the mind the remembrance of some bright, familiar face who but a year ago departed with the choicest flower from the hillside. But, gentle reader, it required the inspired Herbert to picture forth nature's attractions, and it would appear that from him she bid nothing. How feelingly does he describe the tranquil decline of the woodland year to the extreme beauty of the ill-fated consumptive. It will bear many readings before the sportsman tires of its repetition: "It leads to death, indeed, but it seems to me rather to resemble the tranquil close of a well spent life, beautiful by the consciousness of good deeds done during the heat of youth and in the heyday of manhood, and enriched by the hope of glories to shine forth after the winter of the grave, than the termination of an existence to be dreaded or deplored." When the Indian summer, with its mellow hues and balmy, almost breathless atmosphere, had inspired the overtaxed intellect of our departed friend, he was eager to penetrate the wilds of nature along some craggy cavern in the wood or the upland, or in the stubble, and, in a word, wherever nature's smiling beauties enticed his willing step, there would he wander with his faithful spaniel "to heel," surprising some foolish "quack" sailing lazily up and down the creek, or cutting down a "brace" in the open by his very frequent accomplishment—a "truly cool, quick, double shot."

But "Old Herbert" has departed from the brakes and marshes these twenty long years, leaving Miss Quailina to canvass the buckwheat stubble *ad libitum*. Mr. Editor, it be-

comes a very painful duty at times for your humble servant to pass the old "Stevens House" on Broadway opposite the Bowling-Green when I recollect its history, for it was in this old dwelling that Henry William Herbert passed his last hours of pain and anguish on that fatal May morning, the 19th, 1858; and I venture to say that the numberless readers of this journal would be compelled to shed the sympathetic tear had they the privilege of reading his last farewell to the Press of America. "A pilgrim in a foreign land, with no home or country for six and twenty years, subjected to treatment and circumstances far below his merit by education." "You will miss me when I am gone" is a phrase in his doleful epistle which has indeed proved only too true.

There seemed to be an air about "Old Herbert" which gave him rather an eccentric appearance, and he was classed among the "curious;" but so did they abuse the great Audubon, and that most illustrious gentleman, Alexander Wilson, whose zeal for the advancement of that most interesting of all branches of science, Ornithology, that he had written seven (small) volumes of his "American Ornithology" before he received a single cent from the publishers as a recompense for his labors. Summing up: Henry William Herbert was one of the most interesting writers in this country, and the wild-fowler at Currituck or on the Chesapeake, the moose hunter in snow-clad wilds of Canada, or the salmon angler on the Restigouche may follow the fascinating pleasures of the Forest and Stream and Rod and Gun, but never more can he find through his careless rambles such a brilliant mind as the "Lord of the Cedars" possessed, hereditary by the best blood of Old England. GELLERT.

OUR WASHINGTON LETTER.

FOREST AND STREAM AS AN ADVERTISING MEDIUM—TAXING AND PROTECTING DOGS—A BAD SEASON FOR JACK SNIPES—GLASS BALL SHOOTING—PISCATORIAL, ETC.

(FROM OUR REGULAR CORRESPONDENT.)

WASHINGTON, D. C., May 13, 1878.

Looking over the columns of FOREST AND STREAM, and especially those containing the advertisements, by no means the least interesting part of this valuable journal, an incident was brought to mind which shows its popularity and the extensive circulation it enjoys. Several months ago a few friends and myself had some delightful shooting in one of the lower counties of Maryland, where the true sportsman can find every comfort and a hearty welcome. In one or two of my letters I gave a description of this country, the pleasure to be found there, abundance of game, etc., and the result was to unexpectedly flood me with letters from various parts of the country inquiring as to routes by which the section mentioned could be reached, terms, accommodations, and other details. The proprietor of the hotel there, himself a sportsman and capital fellow, has since informed me that he has had many guests drawn thither by the brief mention of its advantages which appeared in FOREST AND STREAM, besides having received scores of inquiring letters. I mention this fact for the benefit of hotel proprietors and others having summer resorts, especially those in the neighborhood of good shooting and fishing localities, that they may send forward their advertisements, for every dollar invested in advertising in FOREST AND STREAM will be repaid tenfold. Many are just now selecting places to pass their summer vacation, and a judicious advertisement is sure to attract attention, especially in a paper where those columns are read as carefully and with as much interest as any other part of the journal.

OUR NEW DOG LAW.

After many trials and disappointments we at last have a prospect for a dog law which will protect valuable dogs and rid the city of many worthless curs now infesting our streets, the House of Representatives having recently passed a bill levying a tax on dogs, and there seems to be no doubt that it will be passed by the Senate. Under our old municipal regime dogs were taxed, but they were not recognized as property, and therefore the owner was not protected. When this question came to be tested in the courts it was decided that the city had no power to levy and collect a tax on any thing not recognized as property by its laws. The owner of every dog of any value is willing to pay a reasonable tax thereon, but at the same time he is entitled to protection against any miscreant who may injure the dog, or thief who may steal it. Since that decision miserable curs have increased and multiplied throughout the city until there are more worthless dogs in Washington now than in any other city of the Union. The District Board of Health issues its proclamation annually, about the middle of May, declaring that all dogs found on the street unmuzzled between that time and the first of October shall be impounded, but may be redeemed within twenty-four hours by the payment of one dollar. The dog catchers, as a matter of course, always keep a sharp lookout for dogs which they know will be redeemed while the uncared for curs are unmolested. The owner of a valuable dog dare not take him out for a walk even with a muzzle on, as the street curs, always unmuzzled, are sure to attack a dog encumbered with one. They seem to know he is powerless to defend himself against their cowardly attacks. There are many valuable dogs owned in this District. Among them Mr. F. B. Farnsworth's Livy, a field trial setter imported from a celebrated English kennel; Mr. E. L. Mills' black and tan Gordon setter Ben, Willie Clark's Rose, Col. Kinney's Tramp, Col. Burnside's celebrated setter whose name I cannot now recall, Col. Rives' Duke, Maj. Harry Clarke's Rover and Pink, besides many other dogs of wide reputation and pure blood. The new law provides for a tax of \$2 per annum upon all dogs owned or kept in the District. The authorities are to furnish a suitable metallic tag, stamped with the year, to be attached to the collar of the dog, showing that the tax has been paid. Dogs found at large without such tag are to be impounded and sold or destroyed after forty-eight hours, unless redeemed by the owners upon payment of two dollars. Dogs wearing such tax tags are to be regarded as personal property, and any per-

son injuring or destroying such animal shall be liable to a civil action for damages, and also be deemed to have committed a misdemeanor, and upon conviction thereof be liable to a fine of not less than \$20 nor more than \$30, or in default of payment, be imprisoned not less than ten nor more than thirty days. The owner of any dog shall also be liable in a civil action for any damage done by his dog. All dogs are to wear a collar, bearing inscribed thereon the name of the owner, to which collar the tax tag shall be attached. The bill further provides for the muzzling of dogs during a period to be defined by the District Commissioners, and prescribes a penalty of not less than five nor more than twenty dollars for removing or causing to be removed the collar or tax tag from any dog. Fierce and dangerous dogs are not permitted to go at large.

SNIPES SHOOTING.

Snipe shooting this spring has been a failure, for the reason that the weather of the past winter—and especially since January—has been so exceedingly mild that the birds have been gradually migrating north since the latter part of that month, instead of reaching our latitude in large numbers late in March and early in April, as they usually do. During the past winter it was not often that the thermometer here fell to the freezing point. About the 15th of January a snipe was killed upon a meadow near the city, but I then thought it was a belated bird of last year on his way south. Now I am convinced that it was just the reverse (i. e., an early bird of this year on his way north), the mild weather having started them north from their winter quarters in the south thus early in the season. The marshes and lowlands bordering on the Patuxent River in Maryland are generally filled with snipe about the 1st of April, and a number of sportsmen from this city and Baltimore usually have some delightful shooting there about that time, a good shot often bagging as many as fifty or seventy-five birds in a day's tramp over the meadows and marshes, from which the reeds and grass are always burned in February, preparatory to snipe shooting. This year the birds made their appearance even before the grass was burned, and their migration northward was kept up until the close of the season. So, instead of having a point on a bird behind nearly every tussock, as had been the case in former years, we were glad to put up a dozen birds in meadows where we had put up fifty or more in a few hours heretofore.

GLASS BALL SHOOTING.

In several letters I have referred to the fact that the respectable class of gentlemen to be found among our Washington sportsmen is gratifying to every true lover of the pleasures derived from rod and gun. As a general thing they are men who use every honorable means to encourage legitimate field sports, and the skill displayed by some of them in the field is much to their credit. Upon a recent Saturday afternoon I witnessed the glass ball shooting at Kalorama, a short distance north of the city, where many of our sportsmen assemble once a week at this season for practice at glass balls, using the Bogardus trap and the Paine feather-filled ball. I could not help noticing the gentlemanly bearing and appearance of all engaged in the sport. There was an entire absence of any loud or boisterous language, no arguments or disputes over shots, but the whole thing was conducted by gentlemen and in a manner to please gentlemen. Mr. E. L. Mills, of the Treasury Department, was the champion. He is an excellent marksman, shoots very quick, and rarely misses a ball. Messrs. McLeod, Lauritsen, Henderson, Alexander, Derrick, Williams, Daw, Clark and others shot well and won applause from many visitors.

BLACK BASS AND PERCH FISHING.

The white perch fishing of the Upper Potomac in the vicinity of the chain bridge and Little Falls has been a failure this season. Many small ones, but very few large ones have been taken. They usually ascend the river with the shad, and from the first to the fifteenth or twentieth of April they bite ravenously at common angling worms. I have frequently caught them from ten to twelve inches in length and weighing a pound, which we believe is about the greatest weight this fish ever attain in our waters. Genio C. Scott, in his admirable work on "Fishing in American Waters," says: "It is a little fish at best, ranging all the way from three ounces to three pounds," but I have never heard of one so large being caught in this river. They remain in the deep holes of the Upper Potomac, where the bottom is rocky, until about the first of May and then return to salt water, but are caught at all times lower down the river, their favorite haunts being in the neighborhood of Aquia Creek, where the water begins to get brackish, and between this point and Blackiston's Island they are always plentiful.

We have no law here to protect black bass, and the result is they are caught in their spawning season just as at any other time. I have heard of many being captured at the foot of the Great Falls this spring and others below the Little Falls and at other points along the river. Bass are game fish in every sense of the word, and it is an outrage to take them during the spawning period, which commences about the middle of April and continues until June. The proper season to catch them is from the middle of July to the first of December, when they are in prime condition and bite ravenously, but now they are poor, and, in my judgment, not fit to eat.

The carp ponds, of which I gave a description a few weeks ago, are nearly finished, and already some of the carp have been brought over from Baltimore and placed in one of them. Prof. Baird has taken every precaution to have the ponds guarded, and a watchman is always on duty to prevent persons from throwing anything in the water and to keep out dogs, as all such disturbances are injurious to the fish.

OBITUARY.

Black Prince, a valuable black and tan setter owned by Dr. D. W. Prentiss, of this city, died a few days ago after suffering two months from cerebral spinal meningitis, the worst form of English distemper, producing paralysis of the hind extremities and St. Vitus' dance. He was a remarkably intelligent animal, and this disease, always so fatal in blooded dogs, was more than he could bear, although he received the best medical attention. He was a combination of the Gordon blood with the Laverack, his grandmother being Ruby by Mystery out of Cora, bred by Mr. Laverack, and imported by Dr. J. H. Gautier, and his grandfather, Dan, by Dandy out of Di, also imported by that gentleman. Well trained and obedient, Prince gave promise of a useful career. "After life's fitful fever he sleeps well" in his new-made grave in the stable yard, where he so often impatiently scampered in early morn while waiting for the horses to be harnessed to take us to some neighboring county of Maryland or Virginia for a day's shooting. The well worn gun-cases and the satchels containing shells and other paraphernalia were familiar sights to Prince, and with that intelligence which amounted to reason, he well knew that these implements meant sport for him as well as his master that day. R. F. B.

AN INTERESTING CABINET AND CURIOSITIES OF A NATURALIST.

DR. W. WOOD, of East Windsor Hill, Conn., has one of, if not, the best and most extensive private collections of ornithological, archaeological, historical and oological specimens in New England. The Doctor is a practicing physician, with a wide country practice, still he finds time to bring down with his muzzling shot-gun many rare specimens of our feathered and other visitants and residents, and to set them up with his own hands in his own admirable manner. Visitors, who have examined larger collections in our own and other lands, uniformly award the Doctor the praise of seeing no specimens set up with greater taste and scientific nicety. In the indulgence of his taste he makes a specialty of ornithology, oology and archaeology; historical, etc., specimens come in as incidental, being collected as occasion offers, presented by friends, and sent in by his collectors of other specimens. His collection, in the ornithological line, includes over 230 species, and of each he has specimens of both sexes, as well as in the different stages of maturity. Where they vary, as is the case with many of the rapacious birds, such as are several years in acquiring adult plumage, he has them in all the intermediate stages, swelling the number of specimens to about 600. Among the thirteen or more varieties and species of hawks, I noticed the duck hawk (*Paleo anatum*, Bon.) which it has been claimed does not nest in Conn.; but the Doctor disproves this by showing six eggs taken from two nests not far away from his residence. His collection includes all of the different species known in his vicinity, from the largest to the smallest. Ten species of owls here stand peering at you through their glassy eyes, and all, except the hawk owl (which was taken in Vermont), were taken in Connecticut. That noble bird, the bald eagle (*Haliaeetus leucocephalus*, S.), stands looking as if he were watching some lesser bird catching a fish, which he is prepared to relieve it of as soon as the bird rises in the air with it. Twenty-five varieties of humming birds, mounted and in skins, are included, most of which were taken in South America. The belted kingfisher's nests are quite common on the banks of the Scantic River, near the Doctor's residence, and he has made a study of its nesting and other habits. The wild turkey (*Meleagris gallopavo*, Linn.), the loon (*Columbus torquatus*), the latter shot by N. Jones in the Connecticut River in South Windsor, are observed in all their majestic beauty. Splendid specimens of the wood duck (*Aix sponsa*, Bon.), the most beautiful bird that flies, together with all other kinds which visit our New England waters. It would be impossible to even name all the different species and varieties in an ordinary letter which adorn his collection, so I will pass them to see his Albinos. Here are Albinos of the robin (red breast), A. bobolink or redbird, A. bluebird, A. muskrat, A. musk, A. swallow, A. red squirrel, and A. rats, mice, rabbits, etc. Common muskrats, rabbits, foxes, skunks (young and old), star and other moles; rats and mice of all kinds found in this section; black rats, wharf rats, spotted mouse, red weasel, mink, snakes from the box constrictor down to hair snake, lizards and insects in variety. An India bat spreading his wings three feet; snapping-turtle (taken in Scantic River after being watched for four years) weighing twenty-four pounds. In dark cases are exhibited a deformed calf, from a common cow, with a head and nose resembling a bull-dog, feet set on rudimentary legs only two or three inches long; a pig (from the town farm) with one head and body, with eight legs, four ears—two natural, and the rudiments of two others; a chicken with four legs; a porcupine, etc., with duplicates of before-mentioned specimens. In one corner is a sort of non-descript or What-is-it, named, by the Doctor, "Short-tailed Hoax," to be appreciated it must be seen and examined. Turning to another apartment we were shown a compressed herring or celpout, taken in Scantic River four or five miles from its junction with the Connecticut, May 22, 1863, and by the Doctor, described in the *American Naturalist*, Vol. III., No. 1. Of eggs there are shown some 5,000 to 6,000 specimens of 300 to 400 varieties, ranging from that of the ostrich to that of the humming-bird; also eggs of the different varieties of turtles, etc., found in Connecticut. In blowing the eggs the Doctor uses an instrument invented and patented by his brother-in-law, Mr. E. W. Ellsworth, whereby the work is expeditiously performed with the thumb and two fingers, the egg being held in the other hand; no blowing with the mouth through a blower, straining the eyes out of the head, but all done with a little instrument with a barrel no larger than a spool of No. 40 or 50 sewing cotton, and much better than in any other way. Among the Doctor's specimens is a splendid otter, captured in the woods of Wapping Parish, South Windsor, by P. Tryon, son and dog, after a long chase and worry by the dog, with which the dog could not have done anything had not his master come to his assistance. It measures three feet ten inches from tip of nose to end of tail. This, so far as I am informed, is the only specimen of the kind ever captured in that vicinity, certainly the first and only one within the memory of the present inhabitants, and how this one should have strayed to the vicinity is a wonder not easily accounted for. A wild cat (red lynx) captured in East Hartland, which had first killed twenty sheep the winter taken—a most ferocious-looking animal, with limbs and muscle of immense strength for an animal of its size. A raccoon, captured in the woods of South Windsor lately, being the first seen in that locality for some thirty-five or more years. What gives peculiar interest to such specimens is that they were captured in his own town and near locality. A jet black wood-huck also stands guard on his native understanding; this also was killed in the near vicinity. A splendid specimen leopard from Africa, measuring about eight feet from tip of nose to end of tail is also here shown—truly a splendid looking animal, for all his savage appearance or general reputation. Having gone through with the main specimens on this floor (the Doctor does not keep all his collection on one floor of his office, or even in the same building), let us ascend to the floor above and see what of interest he may show us. We pass, first, several large boxes nailed fast, but filled with stuffed birds, kept here for convenience and safety. Next we come to three others filled with birds' nests of various kinds and description. The first to attract our attention is a humming bird's nest, a natural curiosity, if you please, or whatever you may please to term it—it is still a curiosity, showing what can be accomplished by the smallest specimen of the feathered tribe. Build them where they may, they are very inconspicuous, scarcely discernible from the object on which they are built; a soft nest made from spider's webs, scarcely large enough to admit the end of your finger. On the top of a limb it looks like a small knot covered with lichen, as the outside is of that material. Some years since a friend of the writer told him of finding one of these nests fastened to an apple on an apple tree. A nest of the blue yellow-back in

peculiar, as they make them by simply working a hole into a bunch of hanging moss, where one would not suspect such a thing existed unless they happened to see a bird go to or come from it, and then examined particularly. Suspended from some branch, few would think of looking at such a bunch of moss for a bird's nest. A nice piece of workmanship for so small a bird is the nest of the marsh wren. It consists of a neat, symmetrical ball, worked by fastening the tops of tall grass together, leaving an opening in the side just large enough to admit the worker. Here the tiny occupant can sit, swaying to and fro, undisturbed by the strongest wind, secure while tempests rage to the destruction of strong trees. See here how the yellow warbler provides for the comfort and warmth of its young, and also for retaining heat while incubating, by lining its nest with soft cotton. The cow-bird—lazy, shiftless creature, indifferent to its progeny, so it can but obtain its own ends by stealth—is a great annoyance to the warbler. Never building a nest for itself, it frequently deposits its own egg in their nest, for them to incubate, sometimes it goes so far as to tumble out an egg in a full nest in order to make room for its own, or to allay suspicion. Sometimes the warbler or other bird will tamely submit to this imposition, at others they will, in turn, attempt to throw out the interloping egg. Often, if unsuccessful, they will build a new nest directly over the egg, covering it entirely. Look! here are three robins' nests, made of bits of tobacco twine, all inseparably woven together—not the three nests, but each. They were found in a shed for hanging tobacco for curing in, and were all built during one season. Now, the query arises, "Did one robin build the three nests before commencing to lay, or did she build and occupy them in succession?" Probably the former is the correct conclusion. That the three nests belong to the same robin must be certain, as two or more robins could not agree to incubate so near each other. The Doctor says he once knew a robin build two nests before commencing to lay. Here we have the nest of the great crested fly-catcher, made from snake skins, constructed in a hollow limb, and cannot be removed without destroying it. This is the little fly-catcher's nest, all lined with feathers, nice and warm. The chimney swallow builds a strong nest, as evidenced by this specimen, made of bits of sticks, all firmly glued together with secretions from its own mouth, and strongly attached to the inside of the chimney by means of the same gummy substance from the same source.

Perhaps enough nests have been mentioned to satisfy the reader, so now we will turn our attention to reviewing the Doctor's Indian and other relics. Of stone implements he has some 400 lbs., having presented the Smithsonian Institute as much more in the past. These implements were found in South Windsor or vicinity. Of stone pots, here are three perfect specimens made from soapstone, besides several broken ones. One is two feet long by ten inches wide and six inches deep, with ears projecting from the ends about two inches for it to rest on stones, so that fire may be built underneath for heating, cooking, etc. A Yankee could not form one more perfect in form and shape, as it is very symmetrical. This is the "succotash pot," not just the vessel, but dish and name we Yankees have borrowed from the aboriginal inhabitants of this land of "steady habits." The other two are smaller, one holding only about a quart, the other two quarts. Here we have the greater portion of one two and a half feet long, one foot wide and eight inches deep. Here are also portions of pots made of clay and pulverized stone, like the Bolton quarry stone used for stone walks formerly, baked, apparently similar to the pottery of the present day. These were found some thirty years ago, and are now only found in small pieces. They are handsomely shaped, resembling in form and shape our old-fashioned "bellied" pots, the outside being quite elaborately figured, showing that ceramics is no new thing in New England. Here we have an Indian chief's war club, a savage looking instrument, yet a perfect piece of workmanship, made of stone, two and a half feet long, six inches in circumference at one end, diminishing in size to one inch at the other end. There, too, are primitive tools for grinding corn that "Big Indian" may eat his corn bread, after "squaw" has ground the corn and baked the cake, she having also first dug the ground, planted and tended the crop to maturity, harvesting, etc., with her papoose strapped, perhaps, to her back, while performing the various duties of culture, etc. Here we have no fewer than six pebbles, from eight to eighteen inches in length, and from four to six inches in circumference; these they used in their stone mortars to pound or grind their corn to fine meal, a practice adopted by the "Pilgrim Fathers." For digging up the ground for planting, here are eight stone picks, a somewhat flat instrument, four to eight inches long, three-quarters to one-and-a-half inches thick, shaped like the letter V, with a groove worked around near the upper end for the purpose of fastening a handle to—a split stick at one end, the halves passing on either side, a withe binding to the stone instrument, making quite an effective tool for the purpose. For hoeing the corn, here we have ten hoes somewhat after the fashion of the picks, except that they are sharp at one end, and both ends of near the same width. For skinning animals, here are venison knives, sharp and strong, made of flint stones. For some of their work, here are gouges of stone, in shape very similar to those of steel of the present day used by carpenters, one side being rounded and the other hollowed to correspond, the end being brought to an edge. The larger ones are grooved around the centre for the purpose of being handled similar to the pick described. Hatchets, with a groove around for affixing a handle, in other respects similarly shaped to those of the present day of iron and steel. Chisels for framing and other purposes, of various sizes and lengths, flat and sharp at one end and round at the other; a squaw's chisel, sharp and flat at both ends. I suppose "Big Indian" thought "squaw do more work; want double tools;" can't account for double-edged tools other ways. Here are scaling knives of stone, shaped like the chisel, only smaller, thinner and very sharp; among them are two, which, from appearance, have seen service, being thoroughly stained with blood, so much so that soap, sand, water and hard scouring fail to remove it. Here is one called the "cutting knife," being formed exactly like an old-fashioned chopping-knife, and a very perfect instrument; sling stones about the size of a butternut, with a small groove cut around near the smaller end for the purpose of receiving the strip of raw-hide, with which it is slung with great force. And here we have a hand-spear, a marvel of workmanship, being made of flint stone, very perfectly formed, twelve inches long by one-and-a-half inches wide, two-edged, terminating in a sharp point, the two edges being very sharp their whole length; in no part is it over one-fourth of an inch thick. How so hard a stone could be worked to that length, thickness, and double-edged, too, so sharp, excels our comprehension. Here are also flint stones formed into picks, five to eight inches long, two to three inches wide, and double-edged, running to a point, for digging out canoes; scrapers for cleaning skins,

rub-stones for rubbing and making them pliable. These implements have been seen and are named by a native red man, so we have his authority for names.

We will now, if you please, pass to another and more fancy class of articles, such as various ornaments worn by the beauty and elite of the females of the Indian race for the decoration of the person, for charms, etc., such as flat stones three to five inches long, three-quarters to one inch wide at one end, running to nearly a point at the other, with a hole in the larger end to receive a strip of raw-hide or cord to tie around the neck. Here are some with two holes near the centre, designed to be worn crossways, same as our ladies at the present wear a breastpin; these stones are flat and thin, with both ends of the same width, one to one-and-a-half inches, and the middle expanding from one-and-a-half to two inches. Here is one oval oblong, two inches in length, one-and-a-half inches wide, flat on one side, and three-quarters of an inch thick, with a hole through its long diameter, evidently designed to be worn the flat side next the body; it is very handsome as well as rare. For smoking their tobacco, here are stone pipes of various patterns, one quite elaborately worked out.

From Major Hamilton, of Oregon, the doctor obtained some very handsome arrows, heads fastened to reeds, some two feet long, with feathers on the opposite end, all ready for use. Here are bone arrows for shooting fish, very much larger and longer than those used in war or for killing game; the bone head is some four or five inches long, and about one-half inch wide at the widest, tapering to a very sharp point; there are notches near three-quarters its length similar to the barb of a fish-hook; this head is loosely inserted in a hole in the shaft; also a strip of raw hide, three to four feet long, is attached, one end to the bone head, the other tied to the centre of the shaft, the last being about three feet long and two feet in circumference, with feathers in one end. When shot into the fish the shaft becomes detached, but is still held by the strip of hide to the head, and acts as a float to drown the fish. Also, here are hundreds of arrow and spear-heads of various forms and sizes. All these names and uses are given by the above-mentioned Indian, who paid this archaeological cabinet a visit.

Kind reader, if not already too tired, we will pass along and look at some relics and curiosities of a somewhat different kind, some from foreign countries, for this collection embraces foreign as well as those collected near at home. Here is a pillow, such as those who are accustomed to downy ones would hardly care to use commonly. It is called "tube pillow," designed for the chief or some distinguished character; it is made of wood, worked out from a single stick about eighteen inches long, with two legs at each end, six or eight inches high; the common people cannot afford such extravagance, consequently use pieces of wood with branches for legs. These pillows, instead of being used to rest the head on, as is common with us, are for using under the neck, keeping the head from resting on anything, so that the elaborately barbed hair may not be disarranged. What time and labor is here saved! (Ladies, take the hint and save expense and time; for once arranging the hair will last several days.) This neatly-worked utensil is a Zulu milk pail, made from a stick of wood about one foot high and six or eight inches in diameter, dug out, with ears worked out of the sides. For straining the milk they use stainers made from flags or coarse braided glass nearly two feet long, hollow and about one foot in circumference at the larger end, and closed at the other, shaped similar to the bill of a sword-fish. In this we have the rule of authority to subdue the fractious, undutiful wives of the chief, called the "Zulu knob stick;" it is simply a small handle of wood with a knob or knot on one end about one foot in circumference, the wood being almost as heavy as iron; the whole length being fifteen to eighteen inches; a single blow from which would be supposed sufficient to subdue the thickest skull, break a limb, or bring to terms the most obstinate. Horns for blowing music are made from the head appendages of the large and small African bush-buck and the little reed-buck. The latter are little, straight, pointed bits of things, only about four feet long. In this we see a relic from a Zulu ox once owned by the Rev. Josiah Tyler, who says it is of moderate size compared with some—it is only three feet four inches long, and twelve inches in circumference at the large end. The oxen are much smaller than our New England cattle. This is an African shield made from the skin of an ox, hair on, three feet long and two feet wide at the centre, oval oblong; a stick is fastened on the inside by strips of skin passing around the stick and through the shield; the left arm passes through between the stick and shield, and thus held to protect the head and body, while both hands are at liberty to use the bow and arrow.

Here we have a large collection of curiosities from the Sandwich Islands, brought away while yet in the uncivilized state—game boards and various implements and trinkets used by the heathen. Here is one, a stick three feet long, semi-circular at one end with an ivory tip, said to be used by the chief for the unique purpose of scratching his back. This gourd, four feet long with a hole in each end, is used by the Sandwich Island girls to blow upon when they wish to get married—they blow till a lover comes. From appearances, this has been used by others since it came into the Doctor's possession, as it is now sadly cracked. The Doctor won't say certainly, but rather mistrusts that some lady visitor tried it so hard as to crack it, and still failed to call the lover anticipated. Here we have a costly fly-brush, used only by the chief to keep the flies off, so expensive that only the chiefs may use it. It is made of birds' feathers, only two of which are found on one bird, and the birds are rare. Hundreds of feathers are required to make one, and are attached to a very elaborately worked handle. This wristlet don't look very like those worn by the ladies of to-day; it is only worn by the princess, and is made of wild boar's tusks. Through each tusk are two holes, drilled about an inch apart, near the centre, through which strings are passed to form the wristlet; it takes about twenty tusks to make one wristlet. And here we have a very curious musical instrument and personal ornament worn by the princess when she dances. It is worn on the leg, extending from above the knee to the calf of the leg, and is made of dogs' tusks, each tusk having a hole drilled through it at the largest end, and all strung together with strong cords. There are twenty-four rows and one hundred and twenty teeth in each row, and all interlaced together, making an amount of 2,800 tusks of dogs dangling about the leg, and while dancing they must make quite a sensation striking together. Just think how many poor dogs it takes to supply all of those teeth—pity some which we know could not be served in the same way, there would be more sheep on our hill farms. Here are traveling bags, drums, gourds, idols, beads, necklaces, etc., etc., too numerous to notice separately. This is a whalebone eight feet long, one edge of which is covered with hairs two to six inches long; it comes from a species of whale which has its mouth filled with these hairs. What purpose

do they serve? Is it for straining and separating their drink and food? Such would seem to be the case; for in passing, the water is covered with insects, the mouth is opened, taking in both insects and water, the water being ejected while the insects are retained for food. Here we have also numbers of teeth of the sperm whale, and immense sized teeth of the sea-cow. These skulls are those of the leopard, hyena, wolf, alligator and various other smaller animals. A very handsome collection of coral and shells, with a little in almost every department of natural history, makes up the collection. In addition, the Doctor shows us an acrolite found in Wapping. A remarkable specimen of petrification of a section of a chestnut tree, marks of the axe and the rings denoting age, as perfect as when first cut. And here we will close our review of this interesting cabinet, acknowledging the kind courtesy of the Doctor in showing and explaining all to us. W. H. W.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Connecticut State Sportsmen's Association, Hartford, May 15.
Iowa State Sportsmen's Association, Des Moines, May 28.
Nebraska State Sportsmen's Association, Fremont, May 21st and 22d.
National Sportsmen's Association, Wilkesbarre, Pa., June 11.
Illinois State Sportsmen's Association, Quincy, June 11; Sec'y., Geo. E. Wheeler.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sec'y., Benj. F. Dowance.
Ohio State Sportsmen's Association, Cincinnati, June 16; Sec'y., Wiltbank, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2; Sec'y., Clark Fritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President.
Missouri State Sportsmen's Association.

NATIONAL SPORTSMEN'S CONVENTION.—The next annual meeting of the National Sportsmen's Association will be held on the 15th of June, 1878, at 8 p. m., in the Club Rooms of the Wyoming Hotel, at Wilkes Barre, Pa. We urge upon State Associations the importance of sending representatives to this Convention, and bespeak a full representation of the different sections of the country.

NEW YORK STATE ASSOCIATION.—Buffalo, May 20.—Association assembled at McArthur's Hall, this evening, Senator R. V. Pierce, Pres., in the chair; Vice-Pres., J. J. Flannigan, of Utica; Second Vice-Pres., John Vanderburg, of Clyde; John B. Sage, of Buffalo, Sec., and S. M. Spencer, the Treas., of Rochester, all being present. The following clubs were represented by their delegates: Albion Rifle Sportsmen's Club; Albion Audubon Club; Rochester Audubon Club; Buffalo Adirondack Club; Adams Central New York Sportsmen's Club; Utica Central City Sportsmen's Association, Syracuse; Deen Richmond Club, Batavia; Danville Sportsmen's Association, Danville; Forester Club, Buffalo; Forester Club, Rochester; Forester Club, of Yates County, Pa.; Genesee Sportsmen's Club, Ironduquoit; Iliion Sportsmen's Club, Iliion; Jordan Sportsmen's Club, Jordan; Leather-Stocking Club, Oswego; Leroy Sportsmen's Club, Leroy; Livingston Association, Genesee; Madison County Sportsmen's Club, Morrisville; Monroe County Club, Rochester; Mount Morris Sportsmen's Association, Mount Morris; Niagara Falls Shooting Club, Niagara Falls; Onondaga County Sportsmen's Club, Syracuse; Phoenix Sportsmen's Club, Seneca Falls; Queen City Sportsmen's Club, Buffalo; Rochester Sportsmen's Club, Rochester; Riverside Shooting Club, Buffalo; Rome Sportsmen's Club, Rome; Skaneateles Sportsmen's Club, Skaneateles; Wayne County Sportsmen's Club, Clyde. The following new clubs were admitted: Brooklyn Gun Club, East Buffalo Shooting Club, Buffalo Gun Club. A petition was received from the Windsor Hotel, of New York City, by P. P. Flowers without giving the name of the club, but admitted under the name of the Windsor Hotel Association; Corning Sportsmen's Club, Scottsburg Sportsmen's Association of Livingston County; Bay View Rifle Association, of Buffalo; Seneca Gun Club, of Seneca Falls; Ellicott Sporting Club, of the town of Amherst, N. Y.; Onondaga County Fishing Club, of Spracuse; Farmer Village Sportsmen's Club; Forest and Stream Sportsmen's Club, of Akron. The following officers were elected: President, A. B. Lamberton, of Rochester; Vice-President, Childs Horace Silsby, Seneca Falls; Secretary, John B. Sage, of Buffalo; Treasurer, William Babcock; Corresponding Secretary, L. A. Pratt, of Rochester. The treasurer reported a balance on hand of \$696.70. The president reported that in accordance with the resolution passed at the last meeting, the association had been incorporated under the laws of the State. Rochester was selected as the place for the next annual meeting.

May 21.—There were 114 entries in to-day's matches. The first contest, a single trap shoot at ten single birds, resulted as follows: First prize, a breech-loading shot-gun, J. F. Lawrence, of the Seneca Falls Club; second prize, a meerschaum pipe, R. V. Pierce, of the Buffalo Foresters; third prize, twenty-four pounds of Dupont powder, diamond grain, J. M. Whitmer, of the Niagara Falls Club; fourth prize, a Bogardus glass ball trap and balls, P. J. Fisher, of the Le Roy Club; fifth prize, a game and cartridge belt, J. Sees, of the Wayne County Club, New York.

—The Kenneboc (Me.) Association send as delegates to the National Convention at Wilkesbarre, Pa., Col. Waterman Smith, of Manchester; Charles F. Stark, of Dunbarton, and Dr. William Jarvis, of Claremont.

GAME PROTECTION—AN ARREST AND FINE.—Thos. Camp, of Steadmansville, Atlantic Co., N. J., was arrested May 14, for killing a deer out of season. The case having been brought before Squire Moor, of May's Landing, Camp was fined \$55.64. This prosecution was due to the West Jersey Game Protective Society. We have before this commented on the efficiency of the officers of this association.

—The guides at Greenwood Lake are complained of for using land-locked salmon fry for bait. If the lake did not lie under the jurisdiction of two States it would be easier to prevent such senseless folly and wrong.

MICHAOTRY QUAIL.—Nashua, N. H., May 12.—I am confident that I have seen at least one of that species, and, from

a description furnished by a friend, am positive that others have been seen in this vicinity. I am satisfied that their introduction is going to be a successful undertaking. There was a bevy of them let loose in Groton, Mass., some fifteen miles from here, last season, and perhaps those seen here belonged to them.

The Rifle.

MAINE—Portland, May 16.—First match; Maine Rifle Club:

	500 yards.	1,000 yards.

CONNECTICUT RIFLE ASSOCIATION.—This association will have regular shooting days at Willowbrook on the 2d and 4th Saturday of each month. First competition for purse is to be held on Saturday, May 28. The following prizes have been provided:

Long Range—Regular prize of 1878, ten shots each, at 800, 900, and 1,000 yards. To be won three times before becoming the property of the winner.

Mid-Range—"Remington prize," a revolver. Ten shots at 500 yards. To be won three times.

Military Prize—A prize for military men only. Seven shots, 200 and 500 yards. Any military rifle. Aggregate score to win. To be won three times.

All Comers' Prize—Seven shots at 200 yards. Any rifle and any trigger pull. To be won three times.

CREEDMOOR—May 15.—Day cloudy, rain in morning; not much wind. First match for the Appleton prize—complete set of American Encyclopedia. Open to all comers, 200 and 300 yards; seven shots; scores:

	200 yds.	300 yds.

Eighth Regiment Rifle Club's contest for Douglas cup; 200 and 500 yards; 10 shots at each distance. Capt. Chas. Reizman, with 73, won the trophy, though Dr. G. D. Hobart had the trophy upon the higher aggregate.

Canadian Wimbledon Team.—The following is the composition of the team: From Ontario, Capt. Gibson and Corp. F. Newby; from Quebec, Sergt. Riddle, Capt. Thomas, Sergt. Hatley and Private J. J. Wardell; from New Brunswick, Sergt. J. F. Parker, Brigadier J. T. Hart, Trooper J. Langstroth, Private J. M. Kinneir, Capt. G. R. Arnold, Capt. E. Arnold, Sergt. C. W. Weyman, Ensign T. G. Loggie, Private J. D. Perkins and Trooper J. J. Ryan; from Nova Scotia, Sergt. E. Power, Sergt. S. S. Hard and Lieut. B. Weston. The party will leave Quebec for England on June 15, under command of Lieut.-Col. Beers, Seventy-fourth Battalion, New Brunswick, and Ensign Fitch, Seventy-eighth Highlanders, Nova Scotia.

May 18.—By the withdrawal of the Remington \$300 prize, some of the riflemen were disappointed. The only match hot was the first competition for the champion marksmen's

hedge. Conditions—Open to members of the N. G., also members of the N. R. A.; distance, 200 and 500 yards; trophy to belong to competitor winning the greatest number of times during the season. The following are the scores:

	200 yds.	500 yds.

The Stock Exchange Rifle Club shot for the "Woeris-shoeffer" hedge at 200 yards, 10 shots off hand. Mr. R. W. Day won with 40 out of a possible 50 points.

It is but paying a passing tribute to Gen. Dakin, whose sudden death was mentioned by us in last week's issue, to state that his memory, at least at Creedmoor, was not forgotten. Many were the kind comments passed on him by the riflemen on Saturday, and his appearance, as he was last seen at the range, was vividly recalled. Perhaps if any permanency were possible on the buildings now erected at Creedmoor, so our tablet might be raised commemorative of Gen. Dakin. How would it do to call the main avenue leading up to the range Dakin Avenue?

SEPPENFELDT RIFLE CLUB, May 10.—Match shot at 104 Bowery; 175 feet distance, 24-in. hull's-eye, Creedmoor rules, possible 50:

	104 yds.

CREEDMOOR SPRING MEETING.—This event takes place today. The "Leach Cup" match will open the ball—fifteen shots at 800, 900, and 1,000 yards, at 10 A. M. At 1 P. M. the Frazer match—200 yards, and at the same time the Soldiers' match. The day's programme will conclude with the Spirmorsbers' match. On Friday there will be no less than 21 matches, 15 of them subscription matches. The National Guardsman's match, first stage, will be for a Remington rifle. Conditions, 300 yards, 7 shots, at 9 o'clock. The long range match (No. 10) "Sharp's" military team at 1 o'clock. Second stage of the same at 3 o'clock. The final stage, 1,000 yards. On Saturday the Directors' match will begin at 9 A. M. There are twelve matches on Saturday, of which eight are subscription matches.

The Corps of Cadets of the Twenty-third Regiment will give a reception and complimentary drill for the Vigilantia Medals, with a dress parade and promenade concert, next Friday evening, May 24, at the Armory. Col. Ward will review the corps.

SYRACUSE.—The Inspector of Rifle Practice of the Fifty-fifth Regiment has received from the Messrs. Tiffany the handsome silver cup presented by this leading firm of silversmiths, and the trophy is now on exhibition in Syracuse.

NEWARK RIFLE ASSOCIATION VS. NEW JERSEY SCHUTZEN CORPS.—Newark, May 15.—Twenty men a side, ring targets. The match was won by the New Jersey Schutzen Corps with three rings. The number of points was as follows:

TENNESSEE—Nashville, May 16.—At the barbeque at Melrose Park, the magnificent country seat of Mrs. Gov. A. V. Brown, about three miles from town, the company, in all about fifty, was composed principally of the merchants of Broad and Market streets. While waiting for dinner the

gentlemen amused themselves in various ways—jumping, running, wrestling and rifle shooting. A very interesting match was shot by the teams made up on the grounds. Each team was composed of eight members, each to have ten shots at 50 yards with the ordinary squirrel rifle; target, three inches diameter:

	50 yds.
Thos H Bradford.....	1 1 1 1 1 1 1 0 0 1-3
Julian Cooley.....	1 1 1 1 0 1 1 0 0 0-5

		J D H.	

COLORADO—Denver.—The following handsome scores were made last month by three members of the club; distance, 200 yards:

	200 yds.
G Gove.....	4 4 4 5 4 4 5 4 5 3-40
Spangler.....	4 4 4 5 5 4 4 4 4 5 4-40
C Gove.....	5 5 5 5 4 4 5 5 4 4 5-46

On May 10, for the Fay medal; the following are the scores:

	800 yds.	900 yds.	1,000 yds.	Total.
J M Swem.....	27	20	23	70
M Spangler.....	33	23	26	82
J P Lower.....	26	22	14	62
H Miler.....	33	20	23	76
F Church.....	24	30	26	80
W J Fay.....	30	22	23	75
C Gove.....	31	32	30	93

A telegraph match has been made between the Denver Rifle Club and the Saratoga riflemen. On a late occasion, Mr. C. Gove, at 500 yards, made a perfect score. Considering that Mr. Gove is 61, he must still have a clear eye and a steady hand.

WINCHESTER REPEATING RIFLES.—The history of this important enterprise is one in which the energy and determination of a single man whose name is given to these well-known fire-arms is most conspicuous. Originating some twenty-eight years ago, the manufacture of the repeating rifle has had no end of vicissitudes. First called the Jennings repeating gun, it was not until 1868 that the present association, the Winchester Repeating Arms Company, was organized and commenced the manufacture of the new and improved arms. To-day there is no private establishment in the world which has such enormous facilities for manufacture nor one whose arms are held higher in general estimation. It has taken, of course, over twenty-five years to establish the fact that the magazine gun, the arm having within itself some fifteen or more consecutive fires, was the arm of the present. Governments understand these things apparently later than do individuals. Strange it is to state that the United States has been among the last to look carefully into the practicability of such a repeating arm, when with the old model of 1866 in the hands of the Turk they made last year such havoc in the Russian forces at Plevna. An arm with which even a man who is not an adept can discharge fifteen shots in ten seconds must be terribly effective. With increasing business the Winchester Repeating Arms Company have opened a handsome establishment at No. 245 Broadway, New York, in the old locality, formerly occupied by Grange Judd & Co. Mr. A. W. Hopper will act as agent for the company. Mr. P. G. Sanford, so long and favorably known in New York in the gun trade as an expert in fire-arms, will attend to the disposal of the Winchester rifles. The capacities of the company are immense. With a producing power of 300 perfect arms every twenty-four hours in a day's time, from stock on hand 12,000 guns can be furnished. As to the excellence of the arm for sporting purposes our columns have frequently borne witness. Without being too heavy, resisting all the accidents which rough usage subjects fire-arms to, its wonderful accuracy and simplicity of mechanism most especially commends it to the public. It is not only rifles which the Winchester Repeating Arms Company manufactures. Any one who has visited New Haven has not seen the most notable thing in the Elm City unless he has passed some hours at the arms factory. In addition to a large number of mechanics fully employed in making rifles, hundreds of workmen and boys are occupied in preparing cartridges. The capability of turning out perfect cartridges is 1,000,000 per diem; and this company have furnished even more rapidly than at the above rate per diem, some 255,000,000 of cartridges for the Turkish Government. Every kind of cartridge is made, not only for their own special arms, but for all known systems. One specialty of the company is the making of bullets for long-range shooting. Perfection of shape, size, weight, and density of metal being the great desiderata, the most careful mechanical appliances have been invented and brought into use in order to turn the balls, which are absolutely identical one with another.

Returning once more to the arms, the model of 1866 manufactured by the company, using a rim fire cartridge, 44-100, is still popular. Of the model of 1873 some 175,000 are now in use. This uses a longer cartridge, with more powder, giving the ball an initial velocity of some 1,300 feet per second. The model of 1875 is of 45-100 calibre, and uses 75 grains of powder, with 350 grains of lead, being nearly double the charge in the model of 1873.

It is the intention of the company to introduce shortly on the market the Hotchkiss repeater, which holds the magazine in the butt. It will carry from five to seven cartridges. It is a perfect military arm, and at the same time a long-range sporting rifle.

ANOTHER "ACCIDENT."—The shooting of an apple from a person's head is still practiced in the variety theatres and circuses, and the recent fatal accident in Rhode Island, instead of serving as a warning, seems to have stimulated the interest in the dangerous and thoroughly reprehensible feat. In an Indiana circus the other day a man was shooting at the apple on his wife's head, the bullets going through the canvas tent into the crowd outside. At the third shot a boy was killed, then the circus man folded his tent and slid away before the people lynched him. A liberal term of State prison would be the proper thing for him.

THE BEST SUBSTITUTE FOR EXPLOSIVE AND EXPRESS BULLETS.

March 10, 1878.

EDITOR FOREST AND STREAM:

The very practical communications of Mr. Van Dyke and Mr. Rigby, in late numbers of your journal, have a direct bearing upon a subject that has doubtless engaged the attention of every one who, to any extent, has hunted large game. I allude to the large number of animals hit by the rifle bullet that escape, either to die a lingering death or fall a prey to the first wolf or mountain lion that crosses their track. Mr. Van Dyke estimates this proportion at one-third of the total number hit. I believe his estimate is too small, and think it should be nearer one-half, basing the opinion upon my own experience, and upon information from old hunters.

This is not astonishing, when the following circumstances are considered: First. With antelope and white and black tall deer (the most numerous class of large game found in this country), good standing shots at short range (say within one hundred yards) are not numerous, and which, at best, require a quiet aim and steady nerve. The most numerous shots are "on the jump," and at distances varying from 150 to 300 yards. These remarks apply to hunting on the prairies and mountains of the West, where the bulk of the large game is found, and not to timbered districts.

Second. The vital parts of the deer, etc., are a space about twelve by fourteen inches over the region of the heart, and including a part of the shoulder, the brain and the spinal column. What is meant by vital parts is, that a bullet penetrating or striking such parts will cause them to fall and die within ten or fifteen minutes. With the buffalo, elk and bear, the vital space is, of course, larger. An animal struck in the limbs, paunch, or any other point than as above described, will either escape, or, if secured at all, it will be at the expense of much labor in following up.

Thirdly. All these animals have an extraordinary vitality. I have frequently shot deer and antelope through the paunch or entrails that gave not the least indication of it, but trotted off as proudly as if untouched, and the fact would never have been ascertained had they not been brought down by a second or third shot. I am satisfied that an antelope or deer, especially a yearling fawn, have as much or more vitality than the buffalo, elk or bear, and, in hunting parlance, will "pack off more lead" than either of the last-named. These animals, often shot through the heart, will run one hundred to two hundred yards before falling. I recall an instance where I shot, with a .45-450 grain cartridge, at 125 yards, a doe standing facing me, the ball entering near the striking point, ranging back through the vitals, breaking every rib on one side, and lodging against the skin of the ham, the ball being flattened out into a shape that would have satisfied the most enthusiastic "Express ball" man, yet she ran 250 yards before dropping, and was, of course, perfectly dead when found. Another similar instance: a large white tail buck, shot with same ball at seventy yards, the ball ranging through vitals in same manner, and coming out of rear. He ran about same distance before falling, and was perfectly dead when found. I recall another instance of a buck antelope fired at, at 250 yards distance, gave no sign of being hit, and I continued on my route. After traveling a half mile, in sweeping the prairie with my field glass, he was discovered a half mile off floundering up and down, and fighting off the inevitable with all his strength. As it was in an Indian country, had plenty of fat buffalo meat, and the study of the effect of projectiles not being at the time uppermost in my mind, the character of the wound was never ascertained. Such examples are within the experience of every hunter, and are merely mentioned to illustrate the subject under discussion. Many game are hit and mortally wounded without the hunter's knowledge, and escape to die within a few hours. It then becomes a matter of common humanity—if there is such a thing as humanity in connection with the killing of game—to devise means to lessen the useless suffering that appears inseparable from hunting such game, as well as save a large amount of valuable food.

Mr. Rigby and our British friends think the Express bullet properly sent is the best device for instantly killing. Mr. Van Dyke has detailed in a very entertaining and practical manner his experiments with explosive bullets upon deer, and appears to have arrived at the same conclusion to which my own experiment had brought me, that the explosive principle possessed no other merit except expanding the end of the bullet at moment of contact—the same result as is accomplished by the "Express" bullet without the explosive. I have given the question of "explosive" and "Express" projectiles a great deal of thought, and am convinced that these devices are very partial remedies for the evil under discussion, and that the only effectual remedy is by the use of a good hunting dog, a dog trained to follow "to heel," to "go for" any wounded animal you may order; will follow him until brought to bay, and remain with him until you come up. With such a dog you are always sure of your game, even when slightly disabled. Such is the vitality of the antelope, deer, elk, buffalo and bear, that unless shot through the vitals, as before described, no projectile much short of a six-pounder will kill them at once. I feel sure that such calibres as .50 or .57 possess no appreciable advantage in killing effects over the .44 or .45 calibre. Neither will kill at once, unless the projectile is through the vitals. In reasons given hereafter I feel sure the "Express" rifle will do no more.

Making due allowance for some of the exaggerated statements of the destructive effects of the projectile, the rifle must have much merit for killing game, if for no other reason for the double shots and low trajectory claimed for it. Its low trajectory is, however, combined with the disadvantage of a very light projectile. To compensate for the lightness of the bullet, its point is made hollow, so that at the moment of contact it flattens out, and its high velocity suddenly arrested by its increased surface communicates a much greater shock to the animal struck. It is questionable with me, however, whether what is gained in velocity is not lost to a great extent in momentum from lightness of projectile, and consequently in shock. Cannot equally as great velocity be given the Express bullet from the American breech-loader, with the same charge of powder and ball? I get a very flat trajectory up to 200 yards with a charge of

100 grains powder and 297 grains lead from a Sharps .44, with twist of one turn in 20 in. The balls were naked, and the target not as good as had they been patched balls. The Sharps system of rifling appears very similar to the Henry used in the Express rifle, having six narrow, shallow lands instead of seven as in the Henry system. The lands in the latter are also slightly pointed.

My principal objection to the Express principle is that the light ball which gives the flat trajectory up to a certain distance, say 250 yards, must drop rapidly afterward, and deprive it of a respectably long range. This would be no serious objection in a thickly timbered country like India, where respectably long shots must be the exception, but it would be in a prairie and mountain district where close shots are the exception, and where, with careful and skillful shooting, a good deal of game can be killed up to 400 or 600 yards.

I feel sure that Mr. Rigby's 200 and 300-grain projectile would be unsuitable for hunting in the Rocky Mountain region, because, if for no other reason when hunting for deer and antelope you are liable at any time to come across bear and straggling buffalo. You need an arm that will master any animal liable to be met. On account of the above considerations, my preference is for an arm, .44 or .45 calibre, throwing a projectile of at least 450 grains weight (1½ inch long), with plenty of strong powder behind it (say 90 to 100 grains), fitted up with convenient and accurate peep and globe sights that can be used, at a moment's notice, in place of the open sights necessary only for short range. Such a rifle was used by me during two seasons' hunting in Montana. In examining the character of the wound, I found that the length of the ball (one and a quarter inches), as a rule, caused it to tip over in passing through the animal, and to come out sideways, tearing a larger hole, and causing a greater shock. When a boue was struck, it was considerably smashed up, and must have had the "shock" effect as claimed for the Express ball. I have no hesitation in claiming that such a projectile is as effective in killing the large game of this country as the Express bullet; certainly more so than the 300 grain bullet Mr. Rigby speaks of, on account of its increased range. Black tail deer, and antelope, when over 300 yards, will frequently allow you to get in four or five shots without moving much. By watching where the balls strike you can frequently get in a bull's-eye. When put through the vitals it never failed to bring down the largest animals. Frequently when struck through the paunch the shock was such as to drop them. Sometimes they will fail to get up, but as a rule they would make off. The Express rifle would accomplish nothing more. Mr. Rigby admits that, when in his letter he provides "if shot anywhere forward, and not too high."

But to return to the dog and how I became convinced that he was the "only effectual remedy." I spent last winter, to the 7th February, hunting in the foot-hills of the Highwood Mountains, Montana, on the waters of Belt Creek. Up to Christmas had met with fair success hunting white and black tail deer, and, though without a dog, had secured often, after much fatigue and labor, all the wounded ones known to be hit, for I was then pretty "sharp set" after this kind of sport.

About that time, in two days' hunting, I lost three does and a large black tail buck, all seriously wounded. An old doe, wounded through the groin, and hind leg broken high up, was followed at least four hours over hill and through brush, with snow ten inches deep, and though fired at repeatedly, generally 150 to 200 yards, and on the move, she failed to respond. As twilight set in my last cartridge was fired, and had the satisfaction of seeing her disappear over the next hill, hobbling along just fast enough to keep out of reach. My disappointment was none the less when it was realized that I was at foot, four miles from camp, and bitter cold, the thermometer, on reaching camp, after a weary tramp, registering eleven degrees below zero. As some compensation for the day's fatigue, however, a young buck had been killed early in the day. A snow-storm prevailing that night obliterated all traces of the old doe, and it was never ascertained how many balls, if any, had touched her. Oscar Olinger, at whose rancho I was stopping, had a large, black, lurcher-looking bob-tailed shepherd dog, resembling a Newfoundland, accustomed to lie around the fire, and a playmate for the children. On hearing of my bad luck, he advised me to take along "Old Maj" on the next hunt. A few days afterward the black-tail buck before alluded to was wounded, and old "Maj" was persuaded to go in the search of him. He was soon jumped in the canyon of a coulee, and after a lively chase up and down the canyon was brought to bay and dispatched. The dog's action pleased me so much that he became my constant companion for the balance of the winter's hunt. Possessed of a thorough knowledge of the habits of game, and eye keen enough to see a deer's head almost a mile over the prairie, a good, quick shot, Oscar Olinger had no superior in Montana as a successful hunter, and in several years' hunting had thoroughly trained the dog for wounded game. He would follow at my mare's heels until game was discovered, and when I dismounted to approach he would remain with the mare. At the crack of the rifle he would come up, and if his services were not needed he would remain quietly by. If told to go for any wounded animal, he would follow unerringly, and his welcome bark would soon be heard when it was brought to bay. He would then remain with it until you came up, worrying it and nipping it, if it attempted to get off. If game got down before you came up, he did not mutilate it. He was not active, yet by "main strength and awkwardness" did not once fail to overtake and bring to bay every wounded animal he was sent after. A slightly disabling wound, such as the breaking of the ankle bone (in one case the shattering of buck's hoof), was all that was necessary for "Old Maj." Nothing escaped his eye on the prairie, and no animal, man, or beast could approach me without his premonitory growl. With such a hunting companion, of course all trouble about wounded animals ceased. During the six weeks "Maj" was with me a good many deer were killed (more than half of my fall and winter hunt), and, as before remarked, not once did he fail to secure anything known to be hit. I recall only two instances of his "breaking shot." Not including three buffalo, the result of the winter's hunt was forty-three white and black tail and antelope known to be hit, all of which were secured except the three does before alluded to.

If Mr. Van Dyke will only secure the services of such a dog as "Maj" he will be troubled no more about wounded game, the subject of destructive projectiles will not occupy his thoughts, and "melodious Thomas cats" will roam ever afterward undisturbed around his premises. The use of such a dog is the only sure way to secure the large percentage of wounded game and the saving of much valuable food, and no hunter of large game can afford to do without one.

"Maj" has been described so much in detail as an indication of what a hunting dog should be. There are a hundred of such dogs in use by hunters, though Maj has few equals. I have frequently known the common cur dogs of the South to be excellent on the slow trail in wooded districts. Any intelligent setter, with sufficient courage and inclination to run after stock, could be trained for this purpose. In a deer hunt in Minnesota in 1875 my black setter was very useful, the only difficulty being the deer were so smart and wary in the poplar thickets that there were few opportunities afforded for practicing him on bringing them to "bay." Following to heel, he always indicated by his actions when near them. In this way a setter can be made very useful, for deer are too wary to allow him to approach near enough for a "stand." When you know they are near additional caution will generally secure you a shot. The instincts of the shepherd dog being for running after and controlling stock would seem to indicate that breed the most suitable for this work. Such a dog must be under perfect control, for if allowed to run around good shots would be rare.

BEAR PAW.

Rational Pastimes.

INTERCOLLEGIATE ATHLETICS.—At the annual meeting of college representatives at Mott Haven, last Saturday, the following colleges were represented: Columbia, Princeton, University of Pennsylvania, Union, Lehigh, Dartmouth, Harvard, Rutgers and the College of the City of New York. The weather was all that could have been asked, the merry crowds of students and their lady friends in the best of humor, and the contests of the day passed off most pleasantly. Columbia was naturally strongest in members, and bore off the greatest number of prizes—eleven. Next came Princeton with nine, and then the University of Pennsylvania, whose home field days are always excellent, took home five medals as her share. The contests were as follows:

Standing broad leap—F Larkin, Princeton, '79, 9ft 11½ in; N N Lee, Univ. Pa., 9ft 1½ in.

One-mile walk—Chas Eldridge, Columbia, '79, won in 7m 38½s; W M Watson, College City N Y, '80.

Putting the 16-pound shot—G E Potter, Lehigh, '80; W J McNulty, Union, '80; J D Wilson, Dartmouth; F Larkin, Princeton. Larkin, 32ft 11in; Wilson, 32ft 7½ in.

Running high leap—J P Conover, Columbia, '80, 5ft 6½ in; G W Heinz, Univ Pa, 5ft 2in.

Half-mile run—A J Burton, Columbia, '79; W Oramer, Rutgers; J N Simmons, Harvard, '80; O G Brown, Union, '80; C N Cogswell, Dartmouth, '80. Burton, 2m 8½s; Simmons, 2m 9½s.

Pole vaulting—G Fabragou, College City N Y, 9ft; B F Harrah, Univ Pa, 8ft 10in; F Larkin, Princeton, and G E Potter, Lehigh, 8ft 1in; J W Pryor, Lehigh, and J Withington, Princeton, 7ft 7in.

Hundred-yards dash—First heat, W J McNulty, Union, 11½s; T Flint Jr, Dartmouth, and L A Stewart, College City N Y, a dead heat for second place. Second heat, Lee, Univ Pa, 10 4-5s; Waller, Columbia, second; W R Randolph, Lehigh, third. Final heat, Lee, 10½s; Waller, a good second.

Running broad leap—Conover, Columbia, 19ft 2½ in; Withington, Princeton, 19ft 10in; McChesney, Rutgers, 17ft 7in.

Quarter-mile run—Burton, Columbia, 54 1-5s; Simmons, Harvard, 54 2-5s; Stewart, Princeton, third.

Standing high leap—Larkin, Princeton, 4ft 9½ in; Pryor, Columbia, 4ft 1½ in.

Two hundred and twenty yards dash—Lee and Waller, Univ Pa; McNulty, Union. Lee came in ahead, time not placed on record. McNulty claimed foul on Waller; Waller claimed foul on Lee. Race ordered to be run over again; Lee and Waller refuse; walk over for McNulty in 25s. Only unpleasantness of the day.

Two-mile walk—Eldridge, Columbia, 16m 33s; Watson, College City N Y, 16m 43s.

Hurdle race, 120 yards, 10 hurdles—Pryor, Columbia, 21 3-5s; B Hughes, Univ Pa, '80, second.

Throwing hammer—Larkin, Princeton, 76ft 9in; Blackwell, same college, 75ft 10in; Ridabock and J H Montgomery, Columbia; J D Wilson, Dartmouth.

Hundred yards Dash—F J Duffield, Princeton '76, 11 1-5s; L H Geyelin, Univ Pa, '77.

One-mile walk—G D Farmlay, Princeton, '76, 9m 31½s; E T Weed, College City N Y, '77.

DARTMOUTH SPORTS.—The successful competitors in the athletic games at Dartmouth College, May 15 and 16, were as follows:

Half mile run, C. H. Cogswell, of North Easton, Mass., 2m. 16s.; hundred yards dash backwards, W. Warner, Jr., of Tecumseh, Ala., 16s.; one mile walk, J. E. Horn, of Dover, N. H., 8m. 15½s.; one mile run, A. G. Lombard, of Franklin, N. H., 5m. 34s.; pole vaulting, G. S. Sloane, of Washington, D. C., 7ft. 5in.; running long jump, J. B. Gerould, Keene, N. H., 16ft.; standing long jump, F. W. Shattuck, Fitchville, Vt., 11ft. 2½ in.; quarter mile race, C. H. Cogswell, North Easton, Mass., 58½s.; running high jump, Thomas Flint, Jr., San Juan, Cal., 5ft.; sack race, 100 yards, F. W. Shattuck, Fitchville, Vt., 32½s.; three-legged race, 100 yards, Danforth and Sloan, 14s.; throwing base-ball, J. B. Gerould, Keene, N. H., 33ft. 9in.; potato race, five-sixths of a mile, W. E. Badger, Concord, N. H., 31½s.; two hundred and twenty yards dash, Thomas Flint, Jr., San Juan, Cal., 24½s.; hop, skip and jump, W. M. Mason, Concord, 35ft. 4in.; three mile walk between C. S. Dutton, of Norwich, Vt., and J. H. King, of Malone, N. Y., was a tie; time, 29m. 6s.; horizontal bar, Oscar Mickel, Albany, N. Y.; three mile run, A. G. Lombard, Franklin, N. H., time, 19m. 8s.; hurdle race, 120 yards, eleven hurdles, W. E. Badger, Concord, 21½s.; one hundred yard dash, final heat, G. H. Danforth, Dover, N. H., 10½s.; consolation race, one quarter of a mile, open to all contestants who had won no prize, G. W. Spring, Lebanon, 1m. 1½s. The sports concluded with a Rugby match game of football between two picked elevens, H. S. Dewey, of New York city, captain of reds, and G. E. Thompson, of Dover, N. H., captain of blues. Neither side made a point in the given time; declared a draw.

ST. LAWRENCE UNIVERSITY.—The annual field day sports resulted as follows:

Running jump won by J. V. Witherbee, 17ft. 3in.; standing high jump, A. A. Rice, 4ft. 1in.; one hundred yards dash, J. V. Witherbee, 12s.; throwing base-ball, 27ft.; standing three jumps, G. R. Malby, 33ft. 5½ in.; throwing hammer, D. Lamphear, 60ft.; one mile walk, G. Barnes, 10m.; one hundred yards backwards, J. V. Witherbee, 17s.; standing jump, J. L. Heaton, 12ft. 3in.; half mile run, H. L. Robinson, 2m. 31s.; potato race, H. L. Robinson, 3m. 6s. (25 potatoes one yard apart); three-legged race, 100 yards dash, 15s.; rope pull between departments of the university was won by the Theological Department.

POLO.—The sports attending the opening games at the grounds, Fordham, last Saturday, were introduced by a football match between elevens of Columbia and Fordham freshmen, the teams being made up as follows: Columbia—J. D. Crane, capt.; R. Combs, T. Patten, T. J. Brereton, F. W. Reid, P. Treman, W. Forster, R. G. Angell, M. Undermeyer, G. Rawson, H. Muller. Fordham—J. Davidson, captain; Percy Morgan, J. B. Devoe, J. Ammelmg, L. Camman, H. Herrich, Ch. Gibbons, L. Gibbons, P. J. Hoyt, J. Camp, W. Coffin. In the half hour allowed, Fordham secured two South-downs. A

game of lacrosse followed, the players being: New York—E. C. La Montaigne, captain; H. F. Ficken, F. E. Randall, R. La Montaigne, E. Merritt, H. P. Montant, H. Inman, T. M. Mitchell, W. C. Hall, W. B. Dowd, M. T. Pyne, G. H. Hammond, Ravenswood—Ed. Cluff, captain; W. P. Ritchie, A. P. Ritchie, J. L. Smith, C. Smith, A. G. Goldsmith, G. B. Wilson, R. Wilson, F. Guttersen, J. A. Nicholls, R. Slater, R. Graham. Some exciting playing was witnessed, but neither side made a goal in the time allotted to this game, and the polo players were next being matched as follows: Reds—Harry Oelrichs, A. Belmont, Jr., H. Austin. Blues—Hermann Oelrichs, F. Griswold, B. Purdy. In the two matches the reds and the blues secured three goals each. There was more foot-ball, with a goal and a South-down for Columbia, and a dispute having subsequently arisen, the match is to be played over again. The Ravenswood Lacrosse Club having secured two goals to the New Yorkers one, carried off the silver cup.

—Gen. Grant and the Prince of Wales were among the spectators at a game of polo in the Bois de Boulogne last week.

PEDESTRIANISM.—George Ouyon, who was defeated by Harriman in the late walking championship matches, is to meet his rival again at Chicago, August 9 and 10 next.

LONG DISTANCE WALKING.—Another series of long distance walking has been arranged, the amateur walk being twenty-five miles, and the professional of forty-eight hours duration. The winner of the former will receive a gold stop watch, while the prizes in the latter are \$350 and a champion belt to the first, \$200 to the second, \$100 to the third, and the fourth to save his entrance. The tournament will take place on June 6, 7, 8, at the American Institute.

O'LEARY.—The world's champion long distance walker has returned to Chicago, where at the solicitation of friends he will probably give a walking exhibition. New York will be visited in turn, and we may see for ourselves how the thing is done. O'Leary goes to the Paris Exposition.

BOSTON'S LACROSSE CLUB.—The game of lacrosse is growing in popular favor. Boston's new club, the Union Lacrosse Club, went into practice the present week. The club numbers among its members players from the Shamrocks, of Montreal, Toronto and Ontario. It is proposed to engage the New York players in a match June 29.

—The Harvard freshmen have organized a lacrosse club.

STATEN ISLAND CRICKET CLUB.—A club game was played May 18, with the following score:

W. M. DONALD'S SIDE.	HARVEY'S SIDE.
Marsh, retired.....32	Harvey, D. Marsh.....21
Brittain, C. Benson, b. Stevens.....4	Stevens, b. J. Eyre.....6
Roberts, b. Harvey.....0	Sprague, b. Donald.....6
Donald, C. Stevens, b. Harvey.....2	Konradson, retired.....35
McKeon, retired.....3	Taylor, C. Sprague, b. Kessler.....1
M. Eyre, C. Sprague, b. Harvey.....4	Duer, C. Sprague, b. J. Eyre.....2
J. Eyre, not out.....3	Menshaw, run out.....3
Kessler, b. Harvey.....0	Jarvis, not out.....8
Eyes.....0	Wiles.....4
Total.....33	Total.....73

—The St. George's and the Philadelphia Club play a match game on Decoration Day.

—The cricket players of St. Louis, Mo., are organizing new clubs and renewing the interest of the old ones. A number of games are arranged for the season.

BASE BALL GAMES FOR MAY.—The following are the model games for the past half month:

May 1—Boston vs Providence, at Providence.....1-0	May 13—Meriden vs New Haven, at Meriden.....4-3
May 3—Star vs Buffalo, at Syracuse.....1-0	May 13—Cricker vs Utica, at Utica.....4-4
May 7—Live Oak vs Cricketer, at Lynn.....1-0	May 11—Rose Hill vs Athlete, at St. John's College, Fordham.....6-5
May 11—Indianapolis vs Milwaukee, at Indianapolis.....1-0	May 14—Worcester vs Westboro, at Worcester.....2-2
May 8—Amherst vs Clippert, at Amherst.....2-0	May 11—Lowell vs Tecumseh, at Lowell.....11-9
May 8—Tecumseh vs Auburn, at Auburn.....2-1	
May 4—Springfield vs Amherst, at Amherst.....2-1	
May 7—Erie vs Forest City, at Cleveland.....2-1	
May 8—Hornell vs Utica, at Utica.....2-1	
May 9—Milwaukee vs Indianapolis, at Indianapolis.....2-1	
May 10—Lowell vs Buffalo, at Lowell.....2-1	
May 13—Manchester vs Buffalo, at Manchester.....2-1	
May 7—Milwaukee vs Indianapolis, at Indianapolis.....2-2	
May 1—Star vs Utica, at Syracuse.....3-0	
May 9—Buffalo vs Lowell, at Lowell.....3-0	
May 14—Tecumseh vs Manchester, at Manchester.....3-0	
May 1—Hornell vs Live Oak, at Lynn.....3-1	
May 1—Rochester vs Springfield, at Springfield.....3-1	
May 2—New Bedford vs Hornell, at New Bedford.....3-1	
May 2—Madison Freshmen vs Seniors, at Hamilton, N. Y.....3-1	
May 6—Chicago vs Indianapolis, at Indianapolis.....3-1	
May 6—Buffalo vs Pittsfield, at Pittsfield.....3-1	
May 11—Harvard vs Princeton, at Princeton.....3-1	
May 8—Westboro vs Worcester, at Worcester.....3-2	
May 8—Live Oak vs New Bedford, at New Bedford.....3-2	
May 8—Providence vs Boston, at Providence.....3-2	
May 4—Utica vs Buffalo, at Utica.....3-3	
May 8—Pittsfield vs Springfield, at Pittsfield.....3-3	
May 8—Brooklyn vs Alaska, at Brooklyn.....3-3	
May 14—Worcester vs Westboro, at Worcester.....3-3	

May 7—Milwaukee vs Indianapolis, Ind.....2-2	May 7—Meriden vs New Haven, at Meriden.....4-3
May 4—Utica vs Buffalo, at Utica, N. Y.....3-3	May 13—Cricker vs Utica, at Utica.....4-4
May 7—Racine College vs Northwest University, at Evanston, Wis.....5-1	
May 9—Madison University vs Hamilton College, at Clinton, N. Y.....6-5	
May 9—Rochester vs Utica, at Rochester.....8-7	
May 2—Lowell vs Cricketer, at Lowell.....10-6	

May 7—Meriden vs New Haven, at Meriden.....4-3	May 13—Cricker vs Utica, at Utica.....4-4
May 11—Rose Hill vs Athlete, at St. John's College, Fordham.....6-5	

May 14—Worcester vs Westboro, at Worcester.....2-2	May 11—Lowell vs Tecumseh, at Lowell.....11-9
--	---

May 7—Live Oak vs Cricketer, at Lynn.....1-0	
--	--

The Stars vs. Utica, at Utica last Saturday, tied on 4 at close of the ninth inning. Six more innings were necessary to decide the game, when the score stood, Stars, 7; Utica, 6.

—A Boston bicycle rider died of heart disease while driving his vehicle at a rapid pace.

—The Yonkers Lyceum games take place on the 30th inst.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

SOLVERS' TABLE.

The following contains the number of solutions—but not duals and variations—received from different solvers up to May 17, 1878. Several of our solvers have, of late, much to our surprise, sent in incorrect solutions:

G. R. Philadelphia, Pa. 14; Waldman, Rocky Hill, N. J. 14; E. H. W. New Haven, Conn. 16; Rev. L. W. M. Princeton, N. J. 16; W. K. Waterbury, Conn. 17; Wm. Ayler, Irvington, Conn. 18; K. H. S. Holyoke, Mass. 16; Prof. D. S. Jordan, Irvington, Ind. 9; Prof. C. Jacobus, New Brighton, Pa. 7; E. L. Bradford, Webster, Mass. 6; N. D. Mills, Savannah, Tenn. 9; Rook. N. Y. City, 6; Franklin Benner, Astoria, L. I. 12; W. A. Briggs, Montpelier, Vt. 13; Wm. Parker, New Britain, Conn.; Richard Fairly, Chatham, N. H. 2; Geo. Noble, Fisherville, Canada. 1; Chas. C. Hubbard, Cambridge, Mass. 11; G. K. Andrews, Mahonington, Pa. 6; Geo. A. Lee, 1; Harry M. Wheelock, Red Wing, Minn. 8; Statna, Boston, Mass. 13; A. Taylor, Philadelphia, Pa. 1; Incog, Boston, Mass. 13; F. A. N. New Orleans, La. 15; A. M. J. Galveston, Texas, 13; Elcho, Brookline, Mass. 8; Commodore C. W. Pickering, Portsmouth, N. H. 1; H. E. Dill, Enck, Fort Plains, N. Y. 11; —, New Haven, Conn. 8; C. E. Minard, Syracuse, N. Y. 4.

We shall esteem it a favor if correspondents notify us of any errors in the above table, which we will gladly correct if our correspondence file contains the uncredited solutions.

"Time and tide wait for no man" is well known as a saying, and in our case, so far as this chess department is concerned, of late courts of law and fishing would not wait, and in consequence, our readers have been more than indignant. On this account, we shall try to propitiate with an extract from the *Westminster Papers* for May. This should get us into their good graces again:

"The FOREST AND STREAM is giving a series of the chess openings translated from the *Handbuch*, a very useful work, indeed, and one for which Mr. Kunkle deserves the thanks of all English speaking amateurs."

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—GAMING.—Wilson Snipe, \$2.50 per dozen; bay birds, large, \$3 per dozen; small do, 20 to 75 cents; wild pigeons, flight, \$1; stall fed do, \$1.50; Philadelphia squabs, 25 cents; wild do, 50 to \$1.

Poultry.—Philadelphia and Bucks County dry picked chickens, 25 cents per pound; do fowls, 18 cents; do turkeys, 18 cents; do ducks, 18 cents; Stale and Western chickens, 15 cents; do turkeys, 15 cents; do fowls, 14 cents; do ducks, 15 cents; spring chickens 30 to 35 cents.

THE SHOOTING SEASON.—We are in receipt of letters almost every day containing most favorable reports of the prospects for the coming season's sport. The increased vigilance of game protective associations has had its good results, and to this must be added the very favorable weather of an unusually mild winter. We shall expect to chronicle in our game columns next fall reports of uniformly good sport.

CONNECTICUT.—Waterbury, May 14.—We will have good woodcock shooting here this season. A gun club has just been started here.

KENTUCKY.—Stanford, May 17.—Flattering indications of a quail crop which will delight even a greedy pot-hunter should nesting season prove favorable. Cold weather and high water has put a stop to the fishing.

NORTH CAROLINA.—Lilesville, May 11.—No shooting here now save for squirrels, which as mulberries and wheat ripen grow fat. From April 1 to October no game bird or wild turkey can be shot "according to law" in this (Anson) county, and with no act of his life is your correspondent more satisfied than that of originating the movement which led to the passage of the law. It has since been adopted by several counties. Yes, the hunting season is over, and Alto seems, by her wistful, longing look, as she lies there in her favorite corner, to know that possibly she and her master may not live to see another. Both are growing old—their best days are gone, and when she dies none will be left like unto her. She never went to a "bench show," never took a "prize," but, even though she will not retrieve, and will sometimes mash and chew a bird, she can, even yet, hunt over more ground, flush fewer birds, and stand more steadily and magnificently on a "point" than any dog she ever hunted with. When she dies "Percy's spur will grow cold," and that good old 13-gauge muzzle-loader—which wouldn't be exchanged now for a cartload of breechers—will be honorably and decorously laid away and willed to the owner's oldest boy!

ONE WAY TO HUNT TURKEYS.—A correspondent in Huntington, Tenn., contributes this remarkable method of hunting wild turkeys, as given in Higland's "History of Birds, Fishes, Reptiles and Insects."

"The natives of America hunt wild turkeys with a dog, driving them to take shelter in a tree, where they sit quite spent and fatigued until the hunter comes up with a long pole and knocks them down one after another."

OHIO.—Hudson.—Woodcock are very plenty this season, more so than usual.

ILLINOIS.—Charleston, May 10.—Ducks are scarcer on the prairies this spring than I have ever seen them before. Snipe and brant in moderate numbers. The geese, plover and woodcock and jacksnipe very scarce. Rabbits by the thousand. The game in the timber is plentier than I have seen it for several years—such as quail, ruffed grouse, turkey and squirrel. There is a stray deer to be seen occasionally. Joseph Waldrop killed the last one; it weighed 150 lbs., and was about two years old.

—Mr. Goodenough, of Manistee, Mich., has during the spring trapped and killed five full-grown bears. And it has been a poor season for bears too.

UTAH.—Salt Lake City, May 8.—Our game law has been amended to allow the killing of quail or grouse from Aug. 15 to March 15; wild ducks, otter or beaver from November to April, and elk, deer, mountain sheep or antelope from Aug. 1 to January. The old law prohibited killing grouse before Sept. 15. Pinnated grouse are very abundant, and so are geese and ducks, staying here the year round. They are killed in great numbers at the mouth of Bear River and Utah Lake.

CALIFORNIA.—Polsom, May 6.—We have had no snipe shooting this spring, although I have heard of some good bags being made on the borders of the overgrown lands near Sacramento. Glass balls are now the rage. Doves will be large enough to shoot about the middle of June; they usually give us good sport with little exertion. Much running would be almost impossible with the mercury high in the thermometers. Our style of shooting doves is for three or four to take a team, about 5 m., and drive out three or four miles to some point where the birds are passing from their feeding grounds to their roosting places, with ten or twenty pounds of ice and a bucket of water, three or four bottles of claret or "Badweiser," take a stand and go to shooting, the birds passing in such numbers that you can use fifty to seventy-five shells in a couple of hours. They fly quite as rapidly as a teal duck, so that it takes a good shot to make a respectable bag.

A CALIFORNIA MARKET SHOOTER.—Mr. L. W. Smith, a resident of Merced, Merced County, Cal., shows the following as the result of the past season's shooting: Mr. Smith killed with a No. 4 gauge gun, weighing 22 pounds, between Sept. 15, 1877, and April 31, 1878, 6,350 geese, 5,956 ducks, 367 sand hill crane, and 69 swan. He is a regular gunner, whose business it is to shoot for the Sacramento market.

CAPTAIN BOGARDUS.—We had the pleasure of a visit from Captain Bogardus. On Saturday the captain will shoot at Binghamton, N. Y. On the 30th Captain Bogardus and Eugene will leave in the City of Montreal for England. The great event which calls the American champion to England is to meet Mr. Pennell in the match for £400, to be shot sometime toward the close of June. The 1,000 glass ball matches against time will be repeated by the champion in London, Liverpool and Paris.

E. M. E., Hancock, N. Y.—What breed of dogs do you consider the best for ruffed grouse? Also, would the same be best for pinnate grouse? Does the cocker spaniel follow the partridges to the tree? I raise the bird without giving warning; if so, how? Ans. Point or setter equally good. The spaniel gives tongue on raising the bird.

H. A. T., Boston.—I would like to have some Messina gull, say about \$5 worth, but suppose it is too late in the season to send out for any. Do you know of any lots coming in of which the importers would like to let me have a part, I paying, of course, my proportionate part of the cost to about the above amount? Ans. It would be too late this season to import. We believe that next season quite a quantity will be wanted, now that arrangements have been made by us. We should be glad, say about November of this year, to take charge of such an importation. If you will write us then, we should be glad to assist you in such an excellent undertaking. An aggregate of nearly 1,900 have already been ordered by various clubs, among them the West Jersey Game Protective Society and the Lakeville, Conn., Club.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

SPORTSMAN'S SCORE-BOOK

FOR
 GLASS-BALL TRAP SHOOTING

In the evening traps now used to throw glass balls for practice shooting, sportsmen have a mechanical contrivance which should entirely do away with the "chance" which arises in trap-pigeon shooting, as the glass ball goes invariably in the direction desired by the trap puller, or in which the trap is set. In bird shooting from a trap—where many dilute on account of the well known objection to it—there is a large element of chance, as one man may have good, slow quartering birds, while the opponent may get steady "in-coming" or "fall-birds," making the match uneven, simply because the one has much easier shots than the other, and is not liable to miss or have his birds shot outside the boundaries. In order to derive the greatest possible benefit from trap shooting, and at the same time test the marksmanship of any number who may be engaged, it is necessary: First, that not only should the trap throw balls in different directions, but that each person shooting should have in every ten shots the same angles at which the other shoot, so that no one may be favored by chance or by the trapper. Second, that a record be kept of each person's hits and misses and the angles on which they occur, so that one may practice intelligently, knowing on what angles he needs more proficiency. It is believed that the plan adopted for scoring, which has been copyrighted, together with all arrangements, whether of letters, or figures, or characters or plans for recording shooting by angles will be found all that is desired. (For good practice the trap should at all times be bid from right of the person shooting—by means of a bell.)

This system not only records the angles so that each person competing scores the same shot as all the others, but also records the angles on which he is to shoot his balls, so that he may practice alone and perfect himself, where he tells most. We have carefully examined "The Sportsman's Score-Book for Glass Ball Trap Shooting," by D. E. HOLMES, and can confidently recommend it as being the most perfect system we have seen for keeping a complete record of a shooting match, and equalizing the chances of those engaged, in regard to the direction in which the balls are thrown, by giving each person the same angles at which all the others shoot. The book is well printed on good quality paper, and contains full instructions together with.

Plumber, Steam Fitter and Copper-Smith, April 8 3m 120 BEEKMAN ST., NEW YORK.

FLYING TARGET.

(Patented August 7, 1877, No. 193,579.)

The way it came to pass was this: I to a sporting club belong; I love to shoot; I love to see the long-bill tottering to the coops from whence 'twas flushed, or in its whirling flight the goodly grouse come duttering to the ground, and hence to make myself proficient in the manly sport, I joined the club, and practiced at the gyro, glass ball, and the living bird, and as a substitute therefor the CHEAPEST and the BEST the Flying Target, I've contrived. For information, if you wish, or for a trap, address

E. M. LEAVITT, Auburn, Me.

apr25 3m

\$66 a week in your own town. Terms and 42 outfit box. Address E. M. LEAVITT & Co., Portland, Maine.

A New American Paper Shell.

Superiority of the Howard Shell over all others First—Having a metallic reinforce it is gas tight. Second—The flat anvil used in the primer will not cause the expeller pins to break. Third—The paper is of the best quality, and can be reloaded many times. Prices as low as any American shell. The heads of the shell are uniform to a gauge. Try them. For sale by the gun trade generally.

SCHOVERLING & DALY, SOLE AGENTS, 84 and 86 Chambers St., New York.

FERGUSON'S

Sportsman's Lantern.

THE HAZARD POWDER CO,

MANUFACTURERS OF

GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and makes. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN GR, PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

If funds sufficient to defray express charge accompany order. All goods, from the cheapest to the finest quality, furnished as low as they can be sold. We shall be pleased to quote prices on any different styles of outfits or single articles that parties may desire.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside.

Head solid and much thicker than any Shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches.

Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.

Messrs. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.

Yours truly, A. H. BOGARDUS.

SHARPS' RIFLES---MODEL 1878.

ORDERS FOR THE NEW MILITARY AND LONG-RANGE RIFLE ARE NOW BEING FILLED.

SEND FOR ILLUSTRATED PRICE LIST.

The Stanton Siphon Fountain Pen Holder.

The Only Practical and Really Useful Fountain Pen-Holder Ever Manufactured.

The only Fountain Pen-holder with a FLEXIBLE SIPHON, so that any size or make of Pen can be used. The only Fountain Pen-holder in which the INK does not come in contact with oxidizable metal, and therefore cannot decompose or coagulate. No spilling of ink can occur in filling, as the tube is filled by suction from any vessel containing writing fluid.

No Inkstand or Special Ink Required.

ALWAYS READY FOR USE.

Is a very handsome and convenient pocket article; is made of strong metal, heavily nickel-plated and polished. Contains sufficient ink to closely write twenty pages of foolscap; will feed to the point of the pen until the last drop of ink is exhausted, and being air-tight the ink can neither evaporate nor mold. Is easily replenished, always perfectly clean and any steel or gold pen can be substituted for the handsome Esterbrook Indestructible Golden Pen furnished with each holder.

Sportsmen will find it a most Convenient Companion when away from home.

Will carry sufficient ink for TEN DAYS' ordinary use. Especially adapted to the use of Doctors, Lawyers, Commercial Travelers, Collectors, Government Officers, Railway Officials, Tourists, and all who can appreciate the immense comfort in always having their own pen and ink with them.

Sent by mail on receipt of 25 cents, with full directions.

STENT & CO., Manufacturers' Agents, 132 Nassau St., New York.

P. O. Box 2,997. The Trade Supplied. Send for Catalogue of Useful Novelties.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland and return for \$20 are sold at 63 Clark street, or the C. M. and St. Paul, Madison Street Depot, Chicago; also at low rates from Milwaukee. Dogs, guns and camp equipment taken free.

The points of attraction to sportsmen on this "Forest and Stream" route are Menasha and Green Bay for bass fishing; Butterworth Creek and Lake for muscalonge; the many branches and lakes of the Flambeau and Chippewa which team with bass, pike and pickerel, never till last season fished by sportsmen. Between Silver Creek and Ashland all are trout streams, and many others can be easily reached along the shore from Ashland or Bayfield, while rock fishing for speckled trout and trolling in the Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last year, has been enlarged, and is supplied with a steam-yacht, sail and rowboats and excellent guides. The atmosphere at Ashland is a sure preventive of hay fever.

Steamers from Ashland to all Lake Ports.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan.

VIA THE
Grand Rapids & Indiana RR

(Mackinaw, Grand Rapids & Cincinnati Short Line.)
 Sportsmen who have cast a fly, or trolled a spoon
 to the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.

In no other streams east of the Rocky Mountains
 is the famous AMERICAN GAYLINO found in
 such numbers.

BROOK TROUT Season opens May 1.
 GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpass-
 ing the average of countries new enough to afford
 the first of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attrac-
 tive train facilities offered to tourists and sportsmen;

 and Sportsmen's Association," for an unusu-
 ally fine display of Duck, Mole skin and
 Leather

HUNTING SUITS,
 which attracted great attention and were
 much admired by all Sportsmen.

THE BOSTON
SHOOTING SUIT.

Manufactured only by
G. W. SIMMONS & SON.

BOSTON, MASS.
 NEW YORK AGENTS:

Fowler & Fulton,

300 BROADWAY,
 The Best in Use.

ONLY ONE QUALITY MADE, AND THAT IS
 THE VERY BEST.

Flexible Waterproof, Tan-Colored Duck.

Each article—coat, trousers, vest and hat
 cap—has the name and manufacturer's ad-
 dress stamped upon it, and no suit is genuine
 without it bears this imprint.

We make no discount except to the trade.
 The price of the suit complete is \$13.

The material is of the best quality of duck,
 waterproofed by a patent process. The color
 is that known as "dead grass shade."

The seams and pocket corners are copper-
 riveted, and nothing is neglected to make the
 whole suit complete in every way.

This is what one of our best sportsmen says
 of it, writing from camp: "Altkough I had
 been nearly eight hours under incessant rain,
 laboring and striving along under adverse
 circumstances, yet I found myself compara-
 tively dry, and my clothes without a tear. For
 the benefit of our brother sportsmen, let me
 advise one of Messrs Simmons' (of Boston,
 Mass.) Waterproof Suits. Oh! what a relief
 it was to find one's tobacco was dry, and that
 one could light a pipe; that you could laugh
 at your miserable friend, who stood shivering
 and shaking as if he had the palsy; and then,
 next morning, oh! what fun it was to see him
 mending his clothes, while I had not a tear to
 complain of! Ventilation, that great bugbear
 of waterproof suits, is legislated for in the
 most ingenious manner. No sportsman should
 fail to supply himself with a suit which is at
 once cheap, practical, and will last an almost
 indefinite time."

Our Flexible Tan-Colored Water-Proof
 Leather Coats, Breeches, Vest, Lag-
 gings and Caps are considered the finest
 things ever made.

SCHUETZENFEST

The FOREST AND STREAM and ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be one to the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. HARENBURG, Treasurer of the Sharpshooters' Union, No. 100 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President, J. H. BEHRENS, Cor. Sec., 31 Bowery, New York.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Heel Vernier Scale, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for P. WEBBLY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

HOMER FISHER, 260 Broadway, Cor. Warren St., New York.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that most closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street, FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Lucas Co., Ill. Dec6 t

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £100, and a money prize of £100, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 25 yards and 1 foot and 20 1/2 yards. He also won the second event, killing 8 birds in succession at 85 yards, a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 56 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,323. BEWARE OF INFRINGEMENTS OR IMITATIONS.

FOREST HAUNTS.

YE olden oaks, deep clad in greenness vernal,
With summer's sunlight on your rugged brows,
Methinks I hear the voice of the Eternal
Go out amid the swaying of your boughs.

Oh, not the mythic fear-inspiring Monarch
That but with dread our doubting thoughts invest,
But He who bears above Wrong's throned Anarch
Earth's sorrowing children on His loving breast.

And oft into your solemn shades retiring,
Of temple, altar, shrine, my heart to him
Has poured the burden of its high aspiring
In measured cadence through your cloisters dim.

As wayward child, touched by some anguished arrow
From the full quiver of the coming years,
On mother's breast unobscured wild its sorrow,
While loving kisses dry the brimming tears;

So turn I, yearning for your dear caressing;
World-worn and weary do I come again
To win some measure of maternal blessing,
If but a brief forgetfulness of pain.

From Life's fierce conflict, from its toll unending,
Awhile to rest me where no care intrudes,
And feel my soul in quickened pulses blending
With kindred souls that dwell in solitudes;

To lowly listen to the mystic voices
That through your boundless sanctuaries ring,
And feel, while Nature in her heart rejoices,
Some thrill of rapture in my own spring.

The mossy bank wears meek a smile of blessing;
There lives a gladness in each floral bell,
A spirit-healing in the mild caressing
Of balmy zephyrs in the woodland dell.

And hark! a thousand tiny throats are winging
Joy's silvery songs amid the murmuring trees;
O happy choir! a choral anthem singing—
The blended music of the birds and bees.

These shall restore me to the pure and tender
Of feelings smitten in embittered strife;
Some faint ray kindle of Hope's morning splendor,
That shed a halo on each dream of life.

O gentle spirit that afar is hiding
In unfrequented wilds of wood and glen,
Couldst thou as in these tranquil haunts abiding
Dwell in the homes and in the hearts of men,

I had not need to medicine this longing
With calm and quiet in your green retreat;
Life's stony paths, with weary pilgrims thronging,
Were fair and flowery to these bleeding feet.

—Country Gentleman.

For Forest and Stream and Rod and Gun.

A Day With the "Hard-Goers."

Suppose you challenge in a glass,
And name the pretty doe;
I'll prove your lass can't mine surpass—
I'll swallow hogheads to my lass—
Or my name's not Tally-ho!

Let me, as o'er life's chase I pass,
Crop pleasure as I go;
I'll take my glass and toast my lass,
I'll ride and dance and sport my brass,
For my name is Tally-ho!

THUS sang, or should, or would have sung the amateur minstrel at a Yule feast in old Virginia. And by St. Hubert! you may breed statesmen, merchants, lawyers and doctors, soldiers and priests in the North, but for a real "hard-goer," and a reckless, devil-may-care rider, you must have the strain of Celtic blood that flows in the veins of the Virginians; and it comes from the far-off time of the Puritan and the cavalier, when the families in old England, who boasted that blood by their birthright of traditional aristocracy, irrespective of fortune, followed the rightful monarch. And while the business-like Puritan, wrecked by war, came to Plymouth, the careless, dashing cavalier settled in the Colony, which was, from the first settlement, characteristic of his element. The remarkable individuality of the Southern in society, politics and war still marks the strong antithesis to the North, which moves with the impetus of steady will and organization. The Highland Scotch, the Welsh and Irish have imparted to the South the fiery spirit that echoed over

the historic fields of the late civil war with a fierce slogan that defied the deep toned shout of the blue battalions. And, if the impassioned disarray of the gray battalions reminded an acute observer of the Celtic clans, it is not less true that the Southern fox-hunter is highly suggestive of the character of the "hard-goers" who flourish in the glowing pages of Bar-
rington and Lever.

But to our tale.

You are not likely to see at a meet in the Old Dominion the picturesque scarlet coats and corduroy breeches that follow the Fitzwilliam pack, but the horsemanship may challenge comparison with the world, and the dogs, light and wiry, are equal to the "best of black St. Hubert's breed"—not so long as the English dog, but with a cross on the harric which has imparted a marvelous pertinacity and endurance, while the sliken coat and the black, tan and bluish black in colors, make a fine pack, a rare delight to the eye of a true sportsman. And then they run as if tipping the ground now and then, in order to remember not to fly. Uncle Billy S., whom I shall presently describe, says, that for a good run after an old red, you should be able to cover the pack in full cry with a blanket—which aphorism means that twelve good dogs, trained together to know the leader and the huntsman, are worth all the noisy, riotous packs made up from all the neighborhoods in the county.

Were you to see Uncle Billy leading the field, with his immense horn flapping at his side, and the red bandana round his neck waving in the wind like a banner, you would pronounce it a sight at once beautiful and heroic. And then such a blast!

"Like that which erst the Viking blew."

The lash of his whip can reach more than twice the stride of his big gray gelding, Dick Wildfire; and once, when he had tried to make a "cutting dog" ware, he fetched the unfortunate offender such a wipe that one-half of the dog remained tangled in the lash while the other half lay quivering on the ground. He has been known to drink the best riders of three counties drunk the over-night, then blow up his pack the next morning and take a brush before anybody else could get out of bed for the headaches. He made a forty-seven-mile run after a red, straight from the "Slashes" of Hanover to the Piedmont, and dug out Reynard stark and stiff at sunset, while all along he had left the best men of his county; and he swore that when he blew a "mort" and tied the brush to his saddle-bow, all the people thought that the new railroad was finished, for nothing but a steam whistle could blow such a blast. He also declared that Dick Wildfire was so fresh that he ran away twice on the way to the nearest farmhouse, and he had to couple up his favorites, Rattler and Whalebone, to keep them from going off on another trail. His rambling old cottage mansion, with twenty rooms, stands midway between Helltown and Niggerfoot, two villages noted for their fighting and drinking in the country, that gave the name of "The Mill Boy of the Slashes" to Henry Clay.

Here is Uncle Billy's letter from his house, "Kingwood," to his "dear little Baron," meaning Minchhausen:

"Come down Christmas and I'll fill you to the muzzle with stone-fence the over-night so you won't be fit to live the next morning, and won't be afraid to ride Madge Wildfire, the prettiest filly ever foaled at Bullfield. Her mouth is velvet, the rest of her lightning and red pepper."

"Yours, to count on,

Wm. S.

The Squire of Ringwood has three sons in the West, two in Texas and another sleeping under the tall cedars that shade the graves of his sires, with a stone over him marked with the historic name, Chancellorsville, and four married daughters. He has declared to me that he couldn't remember the names of his grand-children. Sitting before his great log fire, with a face that rivals its glow, he is a picture as he smokes his pipe of brier-root through a stem of "seven bark," so long that a little darkey is always at hand to light it. A giant punch-bowl, surrounded with mugs and tumblers, gave token that a drinking bout was in progress. The sporting gentry of the vicinage were sitting around, with a fine background of foxes' tails and other trophies of the chase, hunting horns, etc., hung on the walls to make a background to the picture. The four pictures, "The Meet," "The Breaking Cover," "The Full Cry" and "The Death," ornamented the walls, and, though dingy, retained the fine characterization of the originals. How the evening progressed, and how we got to bed, were long to tell. As the young, unwary chancier saluted the rising moon I fell asleep with the impression of twenty bed-posts waltzing around me; the next thing was the sound of a steam whistle right in my ears, and, waking with a start, I beheld Uncle Billy's great red face right over me, his great hunting-horn in his mouth, and his cheeks puffed out with the blast he was sounding.

"Jump into your breeches, youngster; a fox-hunter should ha' been up long ago."

"Stone-fence!" I muttered.

"Pshaw! you children can't drink. I can empty that bowl by myself, and then want a night-cap."

There was a bullaboo already in the yard, and crawling to the window and throwing up the sash I saw eight groggy heads poked out of four windows, and every one calling stupidly the name of his nag; little and big "niggers" running to and fro from house to stable and repeating the orders given from the windows. Barking of dogs and quacking of

geese and ducks added to the effect of the chorus. The varied breakfast couldn't tempt me out of the "remorse of a guilty stomach," but I got on my spurs and swaggered out on the long portico utterly reckless of any and all risks to life and limb. Sure enough there was Madge Wildfire, a beautiful chestnut filly, plunging like wild, while the little nigger groom's eyes danced like saucers in a pool of ink.

"Look sharp now, youngster," sang out Uncle Billy, who was already on his big gelding beyond the gate, and surrounded by twenty riders and thirty-five hounds, with their keen tails in the air, just waiting the steam-whistle blast.

"Never mind, old man; I can ride a streak of lightning if it's got a bridle on." And before the filly knew it I had the reins, then canted my head down and heels up and was in the saddle. But before I could get a stirrup Uncle Billy had slammed the gate, and his fluttering red bandana vanished down the hill, while the early Agricola, four miles away, heard that trumpet-like voice.

"To cover; hark! Rattler, Whalebone." Then I felt like flying through the air as the filly went over the gate with her feet gathered under her like a deer's; and then pulling on the curb I came up abreast of the big raw boned gray gelding. The pack were scouring through a brushy lowland, when old Rattler gave a short yelp, *sotto voce*, then another louder and prolonged, and in a second more the startled echoes rang with the magnificent chorus of thirty-five hounds, and the younger riders screeching themselves hoarse.

Reynard was picking the feathers of his Christmas goose out of his teeth and was loth for a long run, so he took the chase, tearing down the slash, ran up the branch, then cunningly doubled back and snaked up into a plowed field. But Uncle Billy's two favorites had too often "made it good at a cold fault" to be easily fluffed, and it was a sight to see old Rattler and Whalebone flying around that field with noses to the ground, "but not saying a word." The wary old huntsman then took the two hounds carefully over the plowed field and in ten minutes jumped the object of search; and then, men, horses and hounds took him a "sight chase" for a quarter of a mile with such a chorus as is rarely heard. Helter-skelter, pell-mell, through swamp and brushwood leaving three gallant spurs floundering on the ground, while two of the riderless horses pushed wildly up to the pack with the stirrups flying at every leap; over an old rotten worm fence that broke under some of the horses as we scrambled over; then in full cry along a level ridge for a mile, driving like a whirlwind over the sedge and little stunted pines. Everybody is drunk with the excitement and the music of that intoxicating chorus as it wakes field and woodland and sends the chase as if on the wings of the wind. Uncle Billy never draws his rein, but keeps right up to the hounds, though his red bandana is in tatters and the blood streaming from more than one wound inflicted on his rubicund face by the brush and briars. But he sits his gallant nag as if he were in a rocking chair, and ever and anon as the filly comes tearing up to his side, Dick Wildfire shakes his crest, gives a plunge forward, and settling again to his work still leads the field with his untiring stride.

Over the height of a ridge we came, and down a slope to a broad ditch, beyond which was a half-mile of smooth, beautiful wheatfield rising to the next low ridge—a scrap of exquisite rich green, making an Arcadian picture set in the gray cope and woodland which enclosed it. We had already lost six stout and bold riders, and now as through that wheatfield the pack in full view sent forth the hill cry of thirty-four full-tongued hounds, and the distant echoes just caught and gave back the magnificent refrain, no wonder that a ringing whoop burst from each huntsman as he pushed his nag down the hill and just took one look at the broad, dangerous ditch in the little valley. The filly was pressing up once more to the big gelding, when Uncle Billy said quietly:

"Steady now, youngster; pull hard on the snaffle till you're right up to it, then give her her head and over she goes."

As well have spoken to the wild wind that whistled past our ears. I was fairly drunk with the lightning speed and the maddening music of the pack. The hoofs rang sharp and clear on the frosty ground, the horace, flecked with foam and mad as the riders, sent forth smoke on the keen winter air; and as for me, my blood tingled and my hair seemed to rise and lift my hat. As Uncle Billy steadied his splendid nag for the fearful leap the filly shot three lengths ahead of him, down the hill like mad, and with a desperate rush drove at the ditch, her rider, crazy, but sitting well down in the narrow cantled English saddle, and letting curb and bridle both free. There was a long gleaming streak of ice enclosed in two stiff ridges of briars—twenty-three feet, if an inch. I almost felt myself on the other side, when the sun's face flashed from the frozen mirror full in the filly's face, and she flutered at the very second that she left the ground with her four feet gathered under her. A crash, and the rider was down in the ice, mud and water, and the filly falling backwards with her feet in the air; the gray gelding and the red bandana flashed overhead, then there was a momentary scramble, and the first thing I knew the filly was lying across the wheat-field, stirrups in the air and I running after, batless and covered with mud and water.

Uncle Billy caught her rein, and, as I scrambled into the saddle, said impatiently: "You durned fool, can't you stop bollerin' and get on your horse?" Then away we swept again, the keen tails of the last of the pack just vanishing over

the hill. The chorus comes faintly for a moment, then as the pack plunges into a wooded glen it wakes again with ten thousand wild, mad echoes, and on and on we drive, reckless and headlong over bush and bramble, through swamp and woodland. What man with a heart and soul could think of risk to life and limb.

And still on and on the mad chase drives, till the blue hills that mark the outposts of the Blue Ridge Mountains rise against the horizon, and it is only then that we estimate the distance we have traversed, for horse and rider maintain their mettle in four instances at least.

"I were long to tell what averts gave o'er,
As swept the chase by Campus moor;
But when the bug of Turk was won
The forest at horseman rode alone."

Alone, but, with the tattered red bandana waving in defiance and the gray gelding still plying his long, untiring stride, Uncle Billy was going for the trush, which he swore to himself he had pre-empted some four hours ago against the claim of any rider in that hunt.

But where were Madge Wildfire and her rider?

Upon our right hand there rose in view a pretty gray old mansion surrounded with giant oaks on the rise of hill, and as we scoured along the valley below, the pack lost the trail in a chapparral of alder bushes through which trickled a "spring branch," as it is called in old Virginia. It was not a cold fault, however, and Uncle Billy took a rapid glance at the situation and waited quietly for his two veterans to find the trail, for they were already circling around the little cover. As luck would have it then, my eye caught the sight of something reddish or yellow that flashed through the bloom ridge along the hill-side and made right for the house, and I knew that Reynard, hard pressed, was after running through the farm yard and losing the dogs among the sheep and stock; so, quickly getting two of the dogs on the trail, I went up the hill as fast as the filly could put her feet to the ground, and it seemed in a second more I saw the tails of the two hounds vanish over the garden fence. It was an old rotten paling, and down it went as soon as the filly's fore-feet struck it, and then there rose such a hullabaloo as might appal any but a huntsman in the heat of the chase. Ducks quacked and geese squeaked, roosters and hens cackled as they fled, and a half dozen dogs of various sizes barked; several little incipient F. V.'s yelled, and a big, fat, greasy-looking black cook bawled at everything and everybody; one of them leaped frantically up a great old knotted tree and felt sprawling down on his back; but what was the hubbub and clamor to me? I leaped from the saddle and rushed for the brush. By this time there was a group of people on the portico and several couples of bright eyes ready to witness my triumph, when, all at once, the big black cook exclaimed:

"Run here; Mars' John, 'lore de Lord, dogs and man done tred our yaller cat!"

And so it was; there was the quarry in the fork of the tree, gazing down on the baffled pursuers with his green eyes.

Reader, my tale is done. I wish that I had the one which, of course, Uncle Billy took, and which in the goodness of his heart he gave me to sport as my own fairly won trophy.

CLINCY.

ANGLING IN TENNESSEE.

In Hsillock's "Sportsman's Gazetteer" we find in the article devoted to "Southern Inland Fishes" the statement that angling had until recently received but little attention from Southern gentlemen, but had been pursued mainly by the negroes and "poor whites." While this statement is in the main true, it is necessary to except many localities, and especially that drained by the clear-flowing Tennessee and its numerous tributaries. It has been my fortune to pass many happy years in this section, and to kill many noble bass and other game fish in the clear streams which form one of its many beauties. With the desire of making some return for the many joys that I have received, I pen these lines in order, if my feeble efforts may be of any avail, to bring to the attention of the lovers of sport some of the characteristic features of this region, and will begin with Cypress Creek.

This beautiful tributary of the Tennessee River empties its waters into that stream a mile or more below the pleasant little town of Florence not very far below the far-famed Mussel Shoals. It is true that the stream is no longer, as in former years, the haunt of the multitudes of fish that once inhabited its waters. The shoals of bass, pike-perch, channel-cat and other varieties of game and food fishes that once frequented its waters and gladdened the heart of the angler and put fisherman have become for the most part but a cherished memory. The trot line, fish trap, wing and bait net, seine, grab hook, and other devices of the enemy, have done their work only too well, and but a tithe of the former multitude now remains. Still, the skilled and patient angler may yet enjoy many a thrill of exultation when at last, after many efforts, he has succeeded in luring from his haunt some finny patriarch, and after a bold fight shall lift him sparkling in the sunlight over the gunwale of his skiff. Much, too, can be found along its winding course to delight the eye of the artist and the lover of nature. On one bank rise bold cliffs of gray limestone, over whose rugged brow the laurel loves to display its pink tinted blossoms, and the fringe tree to droop its pendent sprays. On the other, fields of grain or Indian corn slope to the very margin, while over all is spread a sky whose azure hue may rival that of storied Italy, and the whole landscape is vocal with the songs of birds. The fish that are to be found here are two varieties of bass, called here black and white trout, the pike-perch or Ohio salmon, many varieties of perch, and the blue or channel-cat. The last mentioned fish, although the tribe to which he belongs is universally exterminated (and, it may be said, universally eaten), deserves none of the opprobrium that, justly or unjustly, has been showered upon all of his fellow race. Whatever may be said of the rest, the channel-cat is as bold in the water and as toothsome on the board as any fish of them all.

To the bass, however, is the attention of the local angler chiefly devoted, and on any day in the season may you find him at flood's mill, the Selma dam, the old factory, Gunnel-ford, or at the "mouth," as the stage of water may warrant, busily plying his favorite art. You will find him equipped with a rod of long and taper Japanese cane mounted by Portlock, who knows what is right in such matters; a Flankfort reel, No. 4, containing one hundred yards of oiled silk, or cable-laid sea-grass line, and a 50 or 60 Carline hook, upon which is unjailed a live chub from Sweet Water, or a silver-side from the river. Great interest is taken by the Florentines in fish and fishing, and on days when it is known that the fish are "biting well" excitement rises high

Many amusing anecdotes might be told in this connection, but I will limit myself to one in which figures a waggish shoemaker, who, as will appear, was thoroughly imbued with the idea first promulgated by the accident artist, to wit: that no cobbler should go beyond his last.

This disciple of St. Crispin had a son whom he was endeavoring to train in the way he should go, and whom he was bringing rapidly to a waxed end. This youth had a love for nature, and on a lazy day when the westerly breeze was blowing, and all nature seemed to invite one out of doors, he had heard that the fish were abroad and were willing to take bait. After many stage asides, and broad hints intended for the obtuse parent, who sat priggling away unheeding, the soxious youth, driven to desperation, ventured the remark: "Pappy, they say the fish are biting." "Well, my son," remarked the hard-hearted sire, "stick to your bench and they won't bite you." On one occasion there came to F. a gentleman who, as Mark Twain says, was a very good and clever man although a clergyman. At that time, in the golden age, "before the war," Florence boasted an organized fishing club. Now it happened that the aforementioned clergyman was a votary of St. Peter in a double sense, and consequently was invited to go fishing with the club. As an especial honor he was assigned to a seat in the president's boat. The president of the club was a man of much humor but of few words. In a few moments after the fishing had commenced the parson got a bite, and without wasting time hoisted a three-pound bass out of the water and into the boat very much after the manner in which a red checked urchin extracts his first shiner from his father's spring branch.

The parson had just straightened himself and was looking around to receive the congratulations of his companions, when the old president, removing his pipe from his lips, said: "Throw that fish back." The member of the club nearest the scene of action immediately obeyed the mandate.

"In the name of redemption! what does this mean?" shouted the preacher.

"Fish had no chance," calmly replied the old gentleman, at the same time returning the pipe to his lips.

The fair sex, too, are not always proof against the infection; and, though there may be those who, aware that the time for fishing is the season when, among other natural phenomena, spoken of by Mr. Tenyson,

A young man's fancies lightly turn to thoughts of love,

frequent the stream to fish—but not for the scaly inhabitants; yet there are some who go from pure love of sport and not as fishers of men. Prominent in my memory stands a lady who some years ago, while fishing in old Cypress, had the good fortune to hook a six-pound salmon, and after a long struggle, to land him on a low pebbly bar. The salmon getting free from the hook began to flounder back to the water. Aid was loudly summoned, but before it could come the fish would get back into the water. Now, fair readers, what would you have done under the circumstances? Leaving you to guess it or to give it up at your pleasure, I will tell you what my heroine did. She simply sat down on him, and as she was a half dozen specimens and weighed over 12 stone, the salmon wisely concluded to reconsider the matter and remained where he was.

Now, while I am on this subject, I might go on and tell of the old lady who caught two bass on the same hook and at the same time knocked two men overboard; but I am afraid my readers may think I have ceased to deal in facts and have gone to telling fish stories, so I will desist. In glancing over what I have written I see that I have been led astray from the course first laid out, and instead of writing about the fishing in Cypress Creek, and the methods used there, have been betrayed into telling a number of fishy anecdotes. However, I must take my leave of you for the present, hoping to appear again at some future time to tell what I know of the fishing in other streams of this region.

WILL.

Fish Culture.

FISH CULTURE IN MAINE.—Mr. Geo. Shepard Page, of the Oquossoc Angling Association, states that Capt. Fred Barker, of the steamer Oquossoc, which runs from Indian Rock to the Upper Dam, at the outlet of Lake Mooseneognotic, writes, under date of May 10, that he had just taken Fish Commissioner Sisley to Burns Stream, where he deposited 110,000 young brook trout, and the same number of blue-back trout (*Salmo cyprinus*). They were a part of the 400,000 hatchling in the house erected last October, at the outlet of Rangeley Lake, by private subscription of five members of the Oquossoc Angling Association.

MAINE.—Coburnscontee Lake, near Augusta, has been stocked with 5,000 landlocked salmon, and an equal number are to be added annually until the lake is fully stocked. Five thousand Sebago salmon have been placed in the Sidney ponds.

TENNESSEE.—Nashville, May 23.—Nothing has been heard from the shad in the Cumberland, though an old lady residing here says that when she first settled here, some sixty years ago, she remembers distinctly to have seen shad that were caught in this river.

J. D. H.

TENNESSEE.—Huntington, May 24.—Mr. S. M. Rixey, of the United States Fish Commission, on last Monday, placed in Beaver Creek at Huntington 50,000 young shad. They appeared to be in good condition.

FORESTER.

FISH CULTURE IN MISSISSIPPI.—Aberdeen, Miss., May 20.—Our river (Tombigbee) was stocked with young shad last Saturday, May 18, by the United States Fish Commission, on request of Hon. H. L. Muldrow, our able member of Congress of this district. It was managed under the supervision of United States Fish Commissioner Mr. Wm. Russ, of Havre de Grace, Md., in presence of our excellent Major, T. B. Lykes, and many citizens. The Commissioner deposited at this place, Aberdeen, county seat of Monroe, 60,000 young shad, and at Fulton, county seat of Itawamba, 30 miles up the river, 90,000; also at Deerpole, 100 miles down the river, 60,000. This is a sufficient number for this part of the Tombigbee River, and I hope in course of three or four years we will have this fine fish on our family table. I will have you well posted from time to time how the young shad improve, and will inform you when the first grown shad is caught in this section.

W. K.

—A new fish has been introduced into French waters. It comes from China and is called the *Sets*.

DESERTING OF MOON CREDIT.—Mr. G. S. Lamphear, of the well-known firm of Morn & Lamphear, wholesale fish dealers of Fulton Market, New York, has received the thanks of the Secretary of the Smithsonian Institute for his exertion in collecting the statistics of the fishery receipts of New York. At the last meeting of the American Fish Culturalists it may be remembered that the society urged on members the necessity of collecting such statistics. It was shown by Professor Baird that we were very much at fault in our controversy with the English Commissioners in regard to the Dominion fisheries, because no such data of our own were at hand. As the collection of these necessary statistics is a voluntary one on the part of Mr. Lamphear, and by no means is easy, we are pleased to note that an acknowledgment has been made from such a high source.

Natural History.

RECENT ADDITIONS TO THE U. S. NATIONAL MUSEUM.

While wood and field are rejoicing in their renewed accession of chickweed, bluets, huttercups, anemones, spring beauties, blood-root, saxifrage, and trailing arbutus, and the parks resound with the melody of the song sparrow, the robin and their associates, the museum is harvesting the results of that increased activity in collecting which is usually ushered in by the advancing spring.

The anadromous shad and salmon, returning from their ancestral haunts in the mysterious somewhere of the Atlantic, or from their "new reservation" in the Gulf, seeking, in their maturity, the shallows and eddies which sheltered the fryhood of their existence, become trophies of the skill and guardianship of their foster parents—the Fish Commissioners. Venetian sirens, tritons, lizards and snakes, burrowing in the black ooze of the rice swamps in search of unwary worms, or dreaming, in the unsafe retreat of a fallen log, of the twilight which lulls the drowsy fly, or tarrying too long at the fascinating brookside, or basking dreamily in the warm sunshine, fall a prey to the quick hand of the collector, and devote the remainder of their lives to the service of the artists, who copy their colors and perpetuate their forms in plaster. The number of tortoises and turtles has become so great as to call for a series of inclosures in which they have access to water and grass, and such nests as they require. Here a great many species may be collected and observed. Each individual is indelibly marked with a catalogue number and its locality, for convenience in taking notes. When required by the artist, it is easy to select any species and have its colors faithfully copied. Then a cast is made in plaster or paper mache, which is subsequently painted in imitation of the artist's sketch. The series of casts embraces nearly all the testudinate from the Mississippi Valley eastward, and additions are being made rapidly. The species now living in the inclosures are the snapping turtle, *Chelydra serpentina*; the diamond back terrapin, *Malacoclemmys palustris*; the geographic terrapin, *Malacoclemmys geographicus*; the Florida terrapin, *Pseudemys floridana*; a Louisiana species, *Pseudemys elegans*; the slider, *Chrysemys picta*; Texas terrapin, *Pseudemys troostii*; the box turtle, *Castalia clausa*; the speckled tortoise, *Chelopus guttata*, and the stink pot, *Aromochelys odorata*. Some of these burrow and hide away out of sight; others show only their heads and a part of the carapax above water; but there are unguarded moments when one may add something to his knowledge of their habits.

Another object of interest is the snake cage, now containing a collection sent by Mr. G. Brown Goode from Florida, for which the museum is indebted to Mr. F. C. Goode and Col. J. S. Smissis. The species are the green snake, *Cyclophis astivus*; the adder, *Herterodon atmod* (?); the king snake, *Ophibolus getulus*; the calico snake, *Coluber guttatus*, and the horn snake, *Abutor erythrogrammus*. These pets fare sumptuously on mice and frogs, feeding probably at night, since they are not observed in the act during the day. The frogs nestle fearlessly on the coils of the serpents, little knowing how soon they will be honored with inside accommodation. With the consignment of snakes from Florida came a beautiful six-lined lizard, *Cnemidophorus sexlineatus*, which is now luxuriating, not in clover, but in a bed of "black moss," *Tillandsia usneoides*, which may recall its southern home.

A pretty lot of tritons, *Plethodon glutinosus*, sent from North Carolina by Mr. Milner, Deputy Commissioner of Fisheries, adds another species to the vivarium. The great difficulty is to catch flies enough for their maintenance. The object in sending living reptiles to the museum is to secure faithful sketches of their life colors, to serve as models for painting the casts which are made after their death. So closely do the casts imitate the original that it is hard to distinguish them from the animals themselves.

The rattlesnake, prone, passive or defiant, looks out upon you in a most realistic fashion; the iguana leads a procession of scaly satellites away from the open jaws of the alligator; the tortoises seem about projecting a new trial of speed with a colony of over-confident hares. Day by day the combinations multiply, and material accumulates for the student and sight-seer.

Many interesting additions have been made to the collection of fishes. Mr. T. S. Doran, of Montgomery, Ala., has sent a

fine adult shad from the Coosa River. Mr. E. J. Anderson, of Trenton, N. J., forwarded the second salmon, *salmo salar*, received, within a short time, from the Delaware River. This fine specimen, weighing 23½ pounds, is now seen daily by many persons. It is believed to be one of the returns from eggs presented by the German Government in 1873, about 5,000 of which were successfully planted in one of the tributaries of the Delaware.

Mr. Blackford contributed brook trout from at least twenty localities in the United States and Canada, besides species of *salmo* from England, Ireland and Scotland. From these a series of beautiful casts have been prepared. FOREST AND STREAM AND RON AND GUN has already noticed the 47½ pound salmon trout and the 60 pound cod which came from Mr. Blackford two weeks ago. The stomachs of both were empty. That of the cod was perforated by the pubic bone of a pleuroctoid, the pre-anal spine of one just appearing externally. Two other bones having escaped into the abdominal cavity.

A beautiful albino cod was shipped by Messrs. Smith and Oakes, of Gloucester. This was said to be entirely lemon-yellow and white when caught. On its arrival the lemon-yellow was interspersed with spots and blotches of orange, and small areas of gray and black. A second individual like the above was reported a few days later. There was no sign of disease about either of these cod, indeed they were in prime condition.

Among a lot of fresh fishes sent by Mr. G. Brown Goode from Charleston, is one not often received here; it is the "gilt head," called "bastard snapper" in Charleston market, the *Sparus aculeatus* of Prof. Gill's catalogue of East Coast Fishes. Another interesting species is a *Sargus*, which closely resembles Poey's *Sargus caudimaculata*. No species of *Sargus* is recorded from the East Coast of the United States, except *Sargus ambassie* of Gunther, which is nothing more than our common scup.

To Mr. Silas Stearna, of Pensacola, Fla., the collection is indebted for an addition to the fauna of the United States in the fine species of *Caulolatilus* secured by him. This has been described in full under the name of *Caulolatilus microps*, Goode and Bean. It is readily distinguished from *C. chrysops*, Cuv. and Val., and *C. cyanops*, Poey, by its deeper and thicker body, its smaller eye, which is contained 6 times in head, instead of 3½ times as in *chrysops*, or 4 times as in *chrysops*, by the position of its nostrils midway from snout to eye, by its shorter pectoral, and by its greater number of scales (120) in the lateral line. A detailed description will appear in the proceedings of the U. S. National Museum.

Just as this hasty sketch was supposed to be finished, a new arrival made its appearance, and as it is of special interest it deserves mention. I refer to a hishop-ray or whip-ray, called also skate and corn cracker, the *Elobatis narinari* of Muller and Henle. One of its young is just escaping through the vent; the whole of the tail, which is remarkably long compared with that of the parent, being extruded.

TABLETON H. BEAN.

U. S. National Museum, April 20, 1878.

MORE ABOUT THE EUROPEAN STARLING.

ST. JOHN, N. B., Mar. 17, 1878.

EDITOR FOREST AND STREAM:

The south of England is the home of this beautiful bird, and in that part of it called the Weald of Sussex they are found in great numbers. They choose the old hollow trees abounding in the lovely parks in that part of the island as their nesting places, although I have known, in my native town, an occasional nest under the eaves of the old parish church, and each returning spring saw a battle between the starlings and the house-sparrows for the possession of a nesting place under the eaves of the old house at home, the former always coming off victorious. I have never seen a nest in a stone quarry; they love, rather, to make their homes adjacent to rich meadows, pastures and lawns, where their food abounds. They never frequent the woods. Their comical chattering and shrill whistling is most amusing, and in captivity they can be taught many imitative sounds. Their eggs, legs and size are about the same as the American blackbird. I have never known them nest twice a year. The plumage of the young (generally four or five in number) is of a dirty ash color, and they are the most shy of any young bird I know of. The plumage of the male is nearly black, inclining to dark green, spotted with white, and inclining to dirty yellow. The plumage has a rich, metallic lustre.

The starlings are gregarious only in winter, when they are to be seen by thousands in a flock, curving and sweeping the air. When the frost is very severe the flocks break up, and reassemble when a thaw takes place, and on the approach of spring they pair off. They are very fond of the company of sheep, and are frequently seen on the backs of the latter, probably in search of parasites. The only little sin they commit is in robbing the cherry orchards—this to a limited extent. But many of the choicest song birds of Europe are given to fruit stealing, "Philomela" not excepted. I know well the north of Europe; have never seen the starling in the winter in the Baltic provinces, and I believe that the birds bred in the north of England come south in severe weather. I have frequently picked them up dead from the effects of a severe winter in the south.

This is all I know of the habits of the starling, remembered from some thirty years since, when with me "No pleasures could equal the joys of a school-boy, When Christmas vacation at large lets him run, To seek thro' the fields and to chase up the hedge-rows, And popper a blackbird with cross-bow and gun; Or with stones went a-shying at robins, or trying, Now slitting, now flying, to knock o'er a lark, What a lark to shoot o'er the meadows from daylight till dark!"

LOCAL NOMENCLATURE.—A correspondent, Mr. Charles Baylies, of Taunton, Mass., writes to us remarking upon the great abundance of birds recently noticed by him while on a

trout excursion. He sends us a list of fifty-seven species observed by him during his trip, all of them being mentioned by their local names. In these local designations consists the chief interest of the list, and as a few of them are new to us we should like to have the assistance of some of our correspondents in identifying the birds to which they belong. What species is it that is called chulet? and what is the snake hawk? Dibdaber is, we presume, *Podilymbus podiceps*, and partridge woodpecker, *Hylotomus pilatus*, while the snake hawk may, perhaps, be *Buteo lineatus*, as it kills a good many snakes. Others of the names are more easily recognized, as mourning dove, chnweet, oven bird, skunk blackbird, striped woodpecker, marsh quail and canker bird (cedar bird). The last named, so called from its supposed habit of destroying great numbers of canker worms.

INABILITY OF OUR QUAIL TO MAKE LONG FLIGHTS.—Mr. Editor—It was the opinion of my grandfather, the late George Mason, of Gunston Hall, Fairfax County, Va., a sportsman of great skill and experience, that the Virginia quail (*Ortyx virginianus*) was incapable of flying a greater distance than about half a mile. This belief was founded on the fact that full grown coveys attempting to fly across Potomac Creek, between his estate and Cedar Grove, the residence of the McCarty's, at a point where it was half a mile wide, were often picked up on the beach in an exhausted condition, or even fell into the water, unable to reach the shore; and on the further fact, that he had never seen one of these birds fly further than half a mile over land. My own experience (and few men have had more with this bird in the past thirty years), is to the same effect. They will seldom attempt to cross water much over 200 yards wide. I have shot many hundreds of them along both banks of the Potomac, near Leesburg, where it averages 600 yards in width, and never saw one of them attempt to fly across. A friend, however, informed me that he had flushed a covey on the Virginia shore and they flew straight across, and he thought all reached the Maryland shore safely. In this case the lands were low on both sides, and the covey had no advantage of elevation in starting. This flight was probably 650 yards. Last November I saw a covey fly 800 yards over land to cover, and though accurately marked down by a person standing near the spot where they reached cover, I could not flush one, though using two very good setters. I thought they were exhausted by their long flight and were withholding their scent, which power, I believe, they unquestionably possess.

BLACKSBURG, VIRGINIA.

WINTER RANGE OF THE AMERICAN GOLDFINCH.—Warner, N. H. March 26, 1878.—I noticed in a recent number of the FOREST AND STREAM a note from H. D., of Boston, on the American goldfinch, and your reply as to their wintering in Connecticut. I have noticed for many years that they wintered here, and are often seen in large flocks. During the winter of '76-'77 there was an unusually large flock of these birds in this vicinity, and I often saw them and have specimens taken at the time. But I never knew them to assume the yellow and black plumage of the male until much later in the season than H. D. mentions.

[This is an extremely interesting note, as *Chrysomitris tristis* has never before, we think, been reported to winter so far north.—ED.]

BOOMING OF THE BITTERN.—Peotone, Ill., April 20, 1878.—H. W. T. E. asks if any one can disprove Thoreau's theory about the booming of bittern. I have been quite close to the bird at times and have never noticed the "spouting" when making the noise called "booming." Robins have young ones several days old.

A WORD OF CAUTION.—H. D. Minot, of Boston, Mass., says:

"Every spring items appear in the papers announcing the unusually early arrival of certain birds. Let me state in your columns that robins, song sparrows, goldfinches and pigeon woodpeckers, all pass the winter about Boston. I have invariably seen them for several years. Bluebirds and purple finches are said to have been found in southern New England throughout the year. A consideration of these facts will save much unnecessary astonishment."

BLUEBIRDS AND WOODPECKERS.—Nashville, May 23.—I have been much interested for the last few days in watching a prolonged combat between some bluebirds and two woodpeckers. In a tree close by my bedroom window some woodpeckers built a nest last year by hollowing out a place in the tree. This year the bluebirds arrived first and occupied the nest, and raised some young ones in it. By the time the latter were beginning to take their first flights, the woodpeckers returned and tried to take possession of their old home. Then commenced the fight, which lasted for more than a week. The bluebirds, old and young, defended their home, and to my surprise were able to keep the woodpeckers off, and the latter contented themselves by building a new nest in another branch of the same tree.

AN EPICUREAN EAGLE.—Our correspondent, John, of Hornellsville, N. Y., writes us under date of May 12, saying: A large white-headed eagle swooped down on a flock of sheep here and made a breakfast on lamb chops before he could be driven off. Five pure white robins have been observed here this spring; all males. They have mated and built nests. Two have been shot and stuffed.

We hope that no more of those white robins will be shot, but that their offspring will be watched so as to see whether there is anything abnormal in their coloration.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TO-BE-DAY, MAY 21.—One blue jay, *Cyanura cristata*, presented; one ring-necked snake, *Diadophis punctatus*, presented; one alligator, *A. mississippiensis*, presented; nine prairie dogs, *Cynomys ludovicianus*, born in garden.

ARTHUR E. BROWN, Gen. Supt.

—Dr. Dio Lewis has organized a party of forty or fifty ladies and gentlemen who are to camp out on one of the Catskill mountains for about five months.

Woodland, Farm and Garden.

SOWING WILD RICE.

SALEM, MASS., May 23, 1878.

EDITOR FOREST AND STREAM:

Your issue of April 18 contains a letter from Jackson Gillbanks on the cultivation of wild rice. What I want to know is, whether wild rice, or any other seed, will reproduce unless thoroughly mature? Can wild rice be mature when in the milk, or partially so? Does any plant drop its seed before said seed is ripe? In the case in point, I take it that when the seed is ripe it drops into the water, sinks, and finds its own resting place, and, in due season, is reproduced—there is no cultivation or covering with soil; nature furnishes all that is necessary in the natural sediment in the water. It would, no doubt, be well for any one who is going to plant new localities, to first break up the bottom of the pond and offer a better resting place for the seed. I shall try this experiment this fall if I live, but shall order thoroughly ripe seed, but no mud. Yours respectfully, C. T. J.

Nearly five years ago we began giving instructions in planting wild rice, and those persons who were fortunate enough to obtain the seed and follow our instructions have generally succeeded. Wild rice seed does not wait to harrow before it rattles out of the heads, as other grain does. When the heads become heavy their weight bends the stalks down to the surface, where the kernels become soaked in the water. The stalks begin to bend at full maturity, but the grain is succulent and soft, though not strictly milky. In grain which has been gathered a long time and become hardened, the grain is very tardy in developing itself, and old seed is not likely to propagate. We must imitate nature closely in what we do, and therefore it is important to gather the rice at the period of its full ripeness, and to sow it in such a manner that it will not be swept out of the mud by currents or eaten by insects or creatures, or left to decay on unsuitable bottoms where it cannot take root. Therefore, as our correspondent says, it is well to chop a strip of three feet wide in the mud around the margin of the lake or pond, and to sow broadcast before an anticipated rise of water by rains or artificial means. Where the water can be regulated, it is well to draw off and flood, and cover the seed twice.

FLORIDA ORANGES.—A gentleman at Palerkin, Florida, writes May 21:

There will not be a full crop this year. At the time the oranges were the size of small peas we had a very violent rain storm that stripped the trees, more or less, all over the State, when the storm passed.

QUEENS COUNTY AGRICULTURAL SOCIETY.—There will be a grand fair held on Thursday and Friday the 13th and 14th of June, at Mineola, L. I. The horticultural exhibition will be very complete and the money awards handsome. In addition to the horses' performances there will be a base ball tournament. For full information apply to J. Howard Rushmore, Old Westbury, Queens County, L. I.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloat, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the name of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

WORCESTER DOG SHOW.

FOLLOWING the example of other cities, Worcester, Mass., has had its dog show; and though the exhibition of the canine elite was not on so grand a scale as those of the larger cities, the display was most creditable to the enterprise of its managers. There was a good display of local dogs in the various classes. Mechanic's Hall proved an excellent place for the exhibition, and Worcester people were present in goodly numbers. Below we give the list of awards:

PREMIUMS.

Newfoundlands—Lonsdale, G. Helgate, Lonsdale, R. I. H. e. Major, George F. Dunsmore; Frank, C. H. Kimball. Siberian Bloodhounds—Nero, Al Watts, Boston. St. Bernards—Pontio, C. B. Hathaway, Westborough. Mastiffs—Romeo, A. D. Warren. V. h. e. Josie, W. E. Sessions. He, Bruno, F. G. Davis, Millbury. Shepherd Dogs—Beauty, C. E. Bond. V. h. e. Tam O'Shanter, T. W. Lawton, Boston. He, Waich, Wm. T. Slater. Champion English Setters—Jennie, W. Tallman, Watchemoket, R. I. Champion Irish Setters—Pat, W. Tallman, Watchemoket, R. I. Champion Pointers—Dog pup, I. M. Rand; bitch, Buff, J. H. O. Hadley. Imported English Setters—Dog, Dan, A. D. Warren; bitch, Bonibel, W. Tallman, Watchemoket, R. I. V. h. e. Fritz, Al Watts, Boston; Lib, A. D. Warren. Native English Setters—Dog, Pete, W. S. Perry; bitch, Gypsy, L. F. Alden. V. h. e. Sam, M. Brigham, Natick; Don, R. L. Gilbert; Ralph, J. Winn; Jennie, W. Tallman, Watchemoket, R. I.; Jack, S. L. Bigelow, Westborough; pup, Duke and Trinn, J. J. Cohran. Imported Red, or Red and White Irish Setters—Pat, W. Tallman, Watchemoket, R. I. V. h. e. Dan, I. Jones; bitch, Peg, A. D. Warren. Native Red, or Red and White Irish Setters—Tim, Geo. E. Kendall, V. h. e. Dash, J. W. Clark, New York; Dick, Dana K. Fitch;

Don, W C Clark. Dog pup, Dash, Charles W Smith, Jr; hitch pop, Bess, W Tallman, Watchmaker, R I.
Black and Tan, or Black, White and Tan Gordon Setters, Native or Imported—Dog, Don, Lyman Miller, Westborough; bitch, Gypsy, L M Holman. V h c, Don, Wm Forrest, Oxford. H c, Dick, A P Pond. Bitch, V h c, Tip, A E Knight, West Boylston. Dog Pup—Mack, J S Forrest, Oxford. V h c, Pete, L M Raod. H c, bitch, Whiskey, J F Knight, West Boylston. Bitch Pup—Kilder, E C Greenleaf, Westborough. V h c, Tib II, G Walton, Boston.

Pointers, 50lbs and over—Sam, L P Day, Westborough. V h c, Rake II, J W Coffin, Providence, R I; King, M G Fuller. H c, Mack, F Hoyle. Bitch, Kit, H S Hall. V h c, Fly, E R Howe. H c, Belle, B W Prentice.

Pointers Under 50lbs—Fritz, J Hayden Greene. V h c, Mac, Dr J H Wright, Natick. H c, Don, B W Prentice. Bitch, Dolly, T Horrigan, Brighton. V h c, Nellie, Melvin Hoyt.

Pointer Puppies—Shot, Chas Allen. V h c, Snyder, E R Howe. Bulldog—Billy, Al Watts, Boston.

Bull Terriers—Bitch, Sting, Matthew Gay, Boston. V h c, Daisy, Jerome F Hale, Boston; No 145, entered by Thacher Goddard, Boston. H c, Kate, L M Rand.

Cocker Spaniels—Grip. V h c, No 139, entered by Chas Allen. H c, No 141, entered by Frank Brophy.

Foxhounds—Sport and Diamond, H Ramadoll, Natick. V h c, Zack and mate, same owner.

Beagle Hounds—Jack, Willie T Brigham, West Boylston. V h c, Sanchez, Al Watts.

Fox Terriers—Turk, Al Watts.

Pugs—Charley, George Walton, Boston. V h c, Punch, Al Watts. H c, Toby, Thacher Goddard, Boston.

Poodles—Pedro, L M Rand.

Black and Tan Terriers—Rocket, Charles Allen. V h c, Fido, Charles E Haven. H c, Daisy, John Fitzgibbon, South Boston.

Rink Charles Spaniels—Charley, Mrs S K Hindley. V h c, Lady, same owner.

Best Native Red or Red and White Setter Stud Dog—Dick, Dana K Rich.

Equilmanx Dogs—Ned, George H Wood, West Boylston. V h c, Bolton, A C Lombard. H c, Emperor, J B Small.

Italian Greyhounds—Snyder, Charles B Dennis, Fitchburg. V h c, Carlo, V P Curtis.

Dalmatian or Coach Dogs—Rex, W M Plaisted. V h c, Ned, Charles Allen. H c, Sport, Oscar Foote, Reading.

Skye Terriers—Snyder, George H Whitney. H c, Silver, George Walton, Boston; Jeff, M Garrity; Glinker, Charles T Pratt, Milbury. V h c, Topay, M P Goff, South Boston.

Yorkshire Terriers—Rags, J A Coudy. V h c, Dot, F S Waitt, Boston. H c, Pan, M P Goff, South Boston.

Field Spaniels—Courad, C F Mann. V h c, Rover, H Weesby.

Miscellaneous Class—Felix, St Bernard and Newfoundland, entered by H M Goddard, Milbury.

Retrieving Spaniels—Sport, R M Waterman, Athol. V h c, bitch, Norah, T M Larnard, Worcester. H c, Nameless, H G Reed, Worcester.

BEAR DOGS.

In reply to some inquiries made by us in regard to a bear dog, a correspondent kindly furnishes us with some facts as to the character of the dog. If to the sagacity of the collie the weight and courage of a bulldog could be added, as our correspondent suggests, very possibly a good dog could be had. In such hunting camps as we have seen, bear dogs, as shown to us, seemed to be a mixture of all kinds—in fact, of no particular breed at all. We would refer our readers to a capital article, "Two Bear Stories," commenced in our last issue, which describes the method of attacking a bear by a dog.

EDITOR FOREST AND STREAM:

There is no breed of bear dogs in this immediate vicinity. A friend of mine—Palmer—who lives in the Saginaw region, and hunts there, owns a splendid dog. I talked with him on the subject, and he told me the dog was half shepherd and bull. The dog is a still hunter—that is, he gives tongue only when he closes with or treads the bear. Palmer says this is better than if the dog gave tongue when first striking the trail, as it does not alarm the bear and scare other game that might happen to be in the vicinity. The same authority informs me that to make a dog a good one for bears there is as much in training as in breed, provided the dog has courage to take hold of a bear, but if not, he is not worth breaking for bear. A small bear is the best to commence with, as he generally runs, and the dog will be more sure to bite him behind and trace him. A large bear is more apt to stand ground and fight, and should the dog attack him in front, the chances are that the dog will soon be a "still hunter." There is another dog here of the same breed, and only a pup (and very lame all the time), yet, with his first bear he took him behind, and made it lively for bruin for a few minutes. The bear, however, escaped. I mention this to show that shepherd and bull is a good cross. There is a bear dog in Crawford County, six shepherd, dam pointer and Scotch terrier, weighing about twenty five or thirty pounds, which hunted two years ago successfully, his master, with the dog, scoring fourteen bears to his opponent's one in a few weeks' hunting match. I don't know if the other party hunted with a dog. No hunter uses more than one dog here, and I know of none for sale.

Respectfully yours,

C. MURPHY.

Otsego Lake, May 15, 1878.

How Dogs Fight.—Two dogs that had always run together peacefully—one a hound belonging to A. A. Bills, and the bulldog owned by L. F. Bills—ran a rabbit into the wall on David's Hill, and by some means got to quarreling, and a terrible fight ensued. They were heard in the afternoon, and as they did not reach home at six o'clock, the owner of the hound went to find it. The dogs lay about six feet apart, facing each other, exhausted by loss of blood, and neither could stand. They were buried in one grave.—*Amherst (N. H.) Cabinet.*

DISCRIMINATING IN SCENT.—A correspondent in South Carolina sends us the following interesting points on this much discussed subject:

"In one of your back copies an article headed 'Discriminating Scent' attracted my attention, and while I can endorse the statement of your correspondent, it has been, and is still, a mystery to me. In my experience, which is a long one, I have known and seen one dog, and only one, while bringing in a dead bird, to come to a full and steady point on a single live bird, and not on a covey, as your correspondent reports. And more than once have I seen the said dog (old Banko) the property of my lamented old hunting companion Joah Mosley, of Aiken, South Carolina, perform to us the same wonderful feat. Banko was a pointer of medium nose and steady goer, but had some very mean tricks, and was hard

to control, but when he did come down you might bet your bottom dollar that the game was *thar*. But how old Banko could tell the difference between a dead bird that he was chewing up—for it was one of his bad tricks—and a live one on the ground, has always been one of the unaccountables to

"ONE OF THE GAND."

AN ENRAGED HEN OOPS FOR A PUPPY.—From time to time questions have been put to us how to cure puppies of chasing chickens. A correspondent in Princeton sends us the following amusing incident—a lesson, in fact, with a moral:

"I have two setter puppies, neither of which, I venture to say, will ever chase a chicken. I was strolling about the place playing with the puppies, when, in our perambulations, we encountered a hen with her chicks. (I may here mention that I keep only pure game fowls, as I find them by far the most thrifty and healthy.) Well, with the natural inquisitiveness of puppies, one of my gentlemen proceeded to investigate the chicks, who incontinently scuttled off into the grass. In far less time, however, than it took them to disappear, the enraged mamma was straddling that unfortunate puppy, belaboring him with her wings, clawing him all over the back, and pecking away at the top of his head like a wood-pecker on a hollow limb. The whole thing did not last a minute, but a more chopfallen puppy never came out of a scrimmage. The other reflected a masterly retreat between my legs as soon as hostilities commenced, from which 'coign of vantage' he surveyed the total rout of his brother with intense interest, and his head very much on one side. Now, if either of those puppies is guilty in maturer years of chasing chickens, I am very much mistaken. Moral—To prevent dogs from chasing fowl keep a game hen or two.

W. J. SLIDELL."

THE NATIONAL AMERICAN KENNEL CLUB MEETING.—The hook of Mr. Burges, so long in hand, it was reported was now nearly ready for press. Without having transacted any business worthy of special mention, the club appointed a committee, consisting of Messrs. L. H. Smith, John Davidson and C. B. Whitford to draw up a series of rules to regulate Field Trials, which should be presented on the 8th of November next at Baltimore.

A NEW KENNEL.—M. P. Noel has established a kennel at Milburn, N. J. The kennel will be known by the name of the "Kenilworth Kennel," which may be heard on the romance, but admirable for a dog nursery. Mr. Noel will have leading stock, and doubtless we may look for a fine race of dogs, as emanating from Kenilworth.

VISITS.—Rusa by imported Statue, May 12, St. Louis.

New York, May 23.—Joseph H. Dew's Fanny Kean; Leicester—Dart to Gladstone. L. H. Smith, Mersey, Leicester—Dart to Gladstone.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—Game.—Wilson Snipe, \$2.50 per dozen; plover, \$3 per dozen; bay birds, large, \$2.50 per dozen; small do, 20 cents; wild pigeons, flights, \$1; stall fed do, \$1.50; Philadelphia squabs, \$2.25; wild do, 75 cents.

Poultry.—Philadelphia and Bucks County dry picked chickens, 25 cents per pound; do fowls, 18 cents; do turkeys, 18 cents; do ducks, 18 cents; do geese, 18; State and Western chickens, 15 cents; do turkeys, 15 cents; do fowls, 18 cents; espans, 40 cents; spring chickens 20 to 35 cents.

MASSACHUSETTS.—Salem, May 21.—On a recent trip from Salem to Amesbury, stopping at Ipswich, Rowley and West Newbury, the birds seen and shot were some robin, snipe, winter, butter-heads, jacks, curlew, peeps and ring-necks. The peeps were very plenty some days at Ipswich. Also shot old squaws and loons; saw one good flock of sheldrakes. Most of the birds were seen last of last week and first of the present week. "Quawks" or night-birons are increasing in numbers rapidly. Eagle Hill slough and the road to same is much dryer than commonly.

R. L. N.

FOUNTAIN GUN CLUB.—The following officers have been elected: Pres., Charles F. Fiske; Vice-Pres., Abel Crook; Sec., Arthur P. Curlin; Treas., Henry G. Miller; Trustees, Hugh Goodwin, William Cleaver, John Hanley, F. W. Hausen, and John Randolph. The club is in a very flourishing condition at present. One prominent feature, and worthy of imitation, is the prohibition of betting or wagering in any way whatever.

NEW JERSEY.—Stanley, May 23.—A letter just received from Byron, Franklin Co., Maine, from one of the best guides it was ever my good fortune to know (Stephen Taylor) gives information which it may be deemed of sufficient interest to fill a place in the columns of your valuable journal. He says: "My brother Austin writes me from Hartford, Me., that he saw a woodcock on her nest. When she flew she made a sharp whistling sound with her wings. When on the nest she did not stir, not even so much as wink. There were four eggs about the size of a partridge's; color, a pale yellow, covered with brown blotches." It must be unusually early for nesting woodcock in Northern Maine. He continues: "I was fortunate enough to trap a bear this week. I think he was two years old. He had a splendid skin." Mr. Taylor and his brother-in-law, Addison Young, are famous bear hunters. They have killed 39 in the past nine years. One enormous fellow they followed eleven days in the dead of winter, with the thermometer below zero all the time. But they took that bear's carcass on a hand sled, over mountain, through forest and valley to Byron. It netted \$40.

GEO. SHEPARD PAGE.

KINSEY'S Ashley House, Barnegat Inlet, May 25.—Bay birds quite plentiful. William Middleton (schooner yacht *Sans Souci*) bagged 50 on the 23d and 30 on the 24th. Samuel Lard, F. Schober and brother, Philadelphia, bagged 300 in three days.

VIRGINIA.—Chincoteague Island.—Mr. Isaac Hineley, President of the Wilmington and Baltimore Railroad, and a party of friends have just returned from Chincoteague Island, where they report having had magnificent sport. Mr. Diston and friends, of Philadelphia, bagged some 1,300 in less than a

week's shooting. The Old Dominion Line of steamers should have their hands full when this kind of racket is going on, for it carries passengers almost to the very grounds by means of its railway connections in Accomac.

A WEST VIRGINIA PARK.—A gentleman from West Virginia has for sale a tract of 31,000 acres of unimproved land, well stocked with bears, panthers, deer, turkeys, pheasants, etc., and containing some fine trout streams. He wishes to dispose of it to a sportsmen's club, in which he will himself take a large share. Further particulars may be had by addressing this office.

TENNESSEE.—Nashville, May 23.—The prospects for a great many partridges (quail) were never better than now, there being great numbers of old birds, and they have long since mated. The woods are full of squirrels, so I learn from several sources.

MINNESOTA.—Owatonna, May 20.—Prairie chicken prospects unusually fine. Hope some of our friends will give us a call. Can assure them fine sport.

J. P. E.

Sleepy Eye, May 23.—The prairies are teeming with curlew, both straight and side bill; golden, sandy and upland plover, the latter so tame that we drive within ten feet of pairs frequently. A few geese are breeding in the sloughs, and I have found several ducks' nests with seven or eight eggs each. I have seen but one snipe this year, and the sand hills are not so plenty as they are south of here.

VERD MONT.

Nobles County, May 20.—A young man killed five wolves near Worthington last week. We have right here at our doors the Okabena Lakes, in which fishing is pretty good.

R. E. DUBOIS.

IDAHO.—Camp Coeur D'Alene, May 8.—Our bag for the past week, without counting fish, consists of one very large gray (timber) wolf, one otter, with pelt in good trim, and one panther, 7ft. 2in.

MONMOUTH.

A CARD.

NEW YORK, May 28, 1878.

To my Friends and the Sporting Public in General: Before leaving for England, where I trust to compete with the leading English shots, where I also hope to be able to uphold the American name, I would like to call the attention of the general public to my traps and glass halls. I have made the fullest arrangements with my agents for the continuation of my business, and there will be constantly held in hand, ready for orders, a large assortment of traps and balls. I hereby forbid all makers or dealers of glass balls and traps from infringing on my patents, and agents for selling the same, as I shall prosecute any one trespassing on my vested rights.

A. H. BOOARDUS.

THE PARKER GUN AT THE STATE CONVENTION.—Among the prizes most highly valued by members of the Sportsmen's Association for many years past have been the guns presented by Messrs. Parker Brothers, of Meriden, Conn. The gun donated by them to the tournament just closed, as a first prize in the double bird contest, was one of the finest, and is valued at \$300. It was won by Mr. George J. Marsh, of the Forester Club of Buffalo. A large proportion of the guns used at this tournament were of this well known make. Ten prizes were won by sportsmen using the Parker gun, among them were first prizes in three contests and the special prize offered by the FOREST AND STREAM for the best average.—*Ado.*

LAMINATED STEEL AND DAMASCUS GUN BARRELS.—In your impression of April 11th, you answer a correspondent on the above under an error which I feel assured you will correct by the publication of this short letter. You confound "Damascus," which is half steel and half iron, with the inferior quality of metal composed solely of iron, but which is technically always called "stub-Damascus." The term "Damascus" applies solely to barrels composed of one-half of steel scraps, old springs, etc., and the other half of the finest iron, such as old horseshoe nails. "Laminated steel" is composed of 52 percent of such steel and 48 percent of such iron. The manipulation of the metal is somewhat different, the laminated steel being left more in plates, hence its name. The Damascus is much better worked out into an endless congeries of circular fibres, eliminating all foreign matter which is apt to lodge between the *laminae*. The cast of the barrels is identically the same, but the use of the Damascus by all the best gunmakers, men to whom the prime cost of the raw material is as but dust in the balance compared with final results, has long ago settled the question of its superiority over laminated steel. The latter was for instance found wanting when some years ago many breech loaders were converted from "pin" to "central" fire, and had to undergo a new proof. The percentage of bursts at proof were greatly in excess in the laminated steel, which is also apt to fly to pieces in very cold weather. Yours, etc., J. D. DOUGALL.

Express Rifle Office, 59 St. James st., London.

[We take great pleasure in publishing Mr. Dougall's letter, though we are not conscious of having made any error, that is as to the materials from which barrels are made, as understood in the United States and supported by some strong English authorities. We are not so fully satisfied as to the greater excellence of Damascus over laminated steel for gun barrels. Mr. Greener, and quite a number of leading English gun builders, affirm that laminated steel is the stronger and tougher material of the two. They insist that although frequent working of the metal removes impurities, that the fibres of the metal are weakened by twisting. Mr. Greener says: "Laminated steel barrels are the most suitable for choke-bore guns, and more tenacious than Damascus, and therefore resist the repeated strain of heavy charges better. They will be found more durable and to lead less than barrels of softer material." What we believe is, that though theoretically there may be some difference, practically, for all ordinary purposes, Damascus and laminated steel are on a par.—Ed.]

THE NATIONAL CONVENTION.—The Luzerne County Sportsmen's Club, of Wilkesbarre, Pa., cordially invite all delegates to the National Convention, June 11, to provide themselves with gun, etc., for pigeon-shooting. The Luzerne Club propose to entertain the visiting sportsmen with a free shooting tournament on the 12th.

YACHTING NEWS.

ST. LAWRENCE YACHTING.—The Montreal Yacht Club, organized during the month of May, 1877, held its first annual meeting at Longueuil, the headquarters of the club, on Saturday, 11th inst. The club, although so lately formed, now numbers nearly one hundred members and a fleet of some twenty yachts. As the cruising and regattas have to be sailed on the river St. Lawrence, the yachts are, as a rule, only from twenty to twenty-five feet in length. The club intends holding several open races during the season, and invites competition from all its friends, and there is a prospect of several yachts entering from Lake Champlain for the annual regatta. The club has as its guest Commodore R. W. Holmes, of the Long Island Yacht Club, with his yacht *Playful*, and now numbers him as one of its honorary members. The officers of the club for this year are: Dr. Chas. Brewster, Com.; Angus J. McIntosh, Vice-Com.; Gregory Glassford, Secy.; David Lewis, Jr., Treas.; R. T. McGregor, Measurer; Messrs. A. W. Glassford, A. A. Tracy and A. Holmes, Committee. The affairs of the club are in a very healthy condition, and very handsome prizes are offered for competition during the season.

QUEENS COUNTY YACHT CLUB.—The Sixth Annual Regatta of the Queens County Yacht Club at Flushing will take place June 4, at 11 A. M. Boats will be divided into four classes, and the course from the club-house, Little Bay Side, around the gateway buoy and one to the westward of City Island, thence around Throgg's Neck buoy and return, to be sailed over twice.

THE SOUTHERN YACHT CLUB.—At one time the Crescent City Yacht Club was among the active ones of our junior clubs, but, owing to some reason or other, interest in it has flagged of late. The Southern is the title of a new organization about to supersede the old and revive the racing spirit on Mississippi waters. It numbers already over ninety members, and is in a fair way to become a permanent institution. Its officers are: Com., Emile O'Brien; First Vice Com., J. E. Austin; Second Vice-Com., A. Claiborne; Treas., H. Denege; Secy., O. Jamison. The more influential members are doing much to popularize cabin yachts and cruising, and in this they have our best wishes for success.

THE BRATTON MOTOR.—At East Providence, Mr. J. P. Smith has put a new motor in the screw launch *Carilla*. It is of eight horse-power, starts instantly by the application of a match, stops quickly, cannot explode, and it occupies but little space. There is no steam, coal or ashes. The *Carilla* is 30ft. 6in. long over all, 8ft. beam, 3ft. 3in. deep, and is fitted with a cabin 12ft. long. Her speed remains to be determined. The same builder has in hand the steamer *Medora*, which he is lengthening 25ft., and also the *Lucille*, formerly of this City.

A SEA-GOING STEAM YACHT.—Messrs. Ward, Stanton & Co., the well-known engineers and ship builders of Newburg, have in hand another large steam yacht. These gentlemen have built and engined a very large fleet of steamers, among them several for the Government, as well as others for Mr. Lorillard, and some for foreign parties. Their engines have justly won a wide reputation for simplicity, strength and smooth working. We believe they were the first to introduce phosphor bronze for bearings of high speed engines in this country, and, judging from the large yachts recently built by them, they may justly claim to have made a specialty of that line of work to a greater degree than any other firm in America. Though they have so far confined themselves to wooden hulls, they are prepared to build of iron or steel, when desired. Only a short while ago they launched the fine sea-going yacht *Vidette* for Mr. Ph. Phoenix, of New York, and a few days ago they closed a contract with Mr. Dion Boucault for the largest vessel of the kind in America. Lake Mr. Phoenix's craft, the new one is to be a thorough sea-going ship, and her owner having so long and successfully trodden the boards of the stage, is now to tread the deck of a noble yacht, always providing he can borrow a pair of sea-legs as readily as he can the native brogue of the bogs. The steamer is to be 160ft long on deck, 25ft. beam and 12ft. water. Her general model will be of the medium type, compound engines, three water-tight compartments and half-bird rig. Her hull will be of oak, and copper fastened, while the interior arrangements, as might be supposed, will be perfectly gorgeous. A main saloon of twenty-five feet square, chart room and storage aft, three state-rooms on port side, smoking room amidships, and the owner's suit of rooms, bath-rooms, etc., will, in accord with nautical etiquette, be located on the starboard side. No name having been decided upon as yet for this beauty, we respectfully suggest *Shaughraun*, *Con* or *The Emerald Isle*.

MOHAWK REDIVIVUS.—The Coast Survey has purchased the *Mohawk* for its service at the low figure of \$20,000. Captain Carlisle P. Patterson was instrumental in bringing about the sale. The *Mohawk* is undoubtedly a well and honestly built schooner, but whether the Coast Survey will not after all find itself saddled with a white elephant is a question. Though nominally of light draft, she is really the reverse on account of her board. Moreover, she seems to us entirely too large and unhandy for the service intended, and will entail a great expense upon the Bureau to keep her in commission. Her spars and canvas must be materially reduced for active work, for though very stable at the outset, her form is such that even at moderate angles under her present rig she reaches the vanishing point of her curve of stability, and her great beam and flat floor only increase the danger in a seaway. To be sure, all our shallow yachts suffer

from the same deficiency, but none of them to the extent of the *Mohawk*. Her rig, for safety's sake as well as for handiness, should be considerably cut down. A smaller foresail and a square topsail would be preferable to the full fore and aft rig, as it would also allow shortening the head booms, an absolute necessity in rough water.

THE CLYTIE SCHOONER.—Perhaps one of the most successful schooners launched of late is the *Clytie*, Mr. Brooks' owner. Her model is the production of both her owner and Ketchum, the City Island ship-builder. What "Boss" Ketchum does not know about a fast sailing schooner is generally not supposed to be worth knowing, and considering the more than satisfactory performance of *Clytie* during her first months out, whenever there was a chance of having a brush with any of her sisters, it will be acknowledged that in her Ketchum was not far astray. Though this schooner can hardly be said to have passed through any official ordeal in the way of regular match racing, the few spins she had while in company with the fleet of the N. Y. Y. C. were enough to show that the rest of the cracks may expect in her a Tartar this season. *Clytie's* model may be characterized as one combining extraordinary stiffness with a long, flat floor, rather full bow and fine run, and very high freeboard, especially forward. The first impression upon viewing her is that her sail carrying power is something wonderful; indeed we have it on good authority that it was found a difficult matter to fetch her "gunwale to," and that it seemed as though her sticks would go out of her before she could ever be knocked down. Her design has boldness and ease throughout, and in so far as a successful attempt has been made to unite a powerful shoulder amidships with a somewhat hollow and plumb sided bow, without any swell or flaring belly along the fore hatches, too much credit cannot be given her designers for the care displayed with this in view. We believe Ketchum paid rather more attention to his diagonals and inclined water-lines than customary, and in attempting to keep them fine forward avoided entirely the belly referred to, without at the same time sacrificing her shoulder or giving too long an entrance to the craft. Aft, the floor rises bodily until it tapers off into the counter, which is of the Steers type, barring an overhang of some 6 or 8 in. at the rudder hole. In short, the yacht is a very large boat for her length, and that this is not incompatible with speed her excellent sailing last season under the most unfavorable circumstances has simply proven. Still we cannot but think that off the wind or when keeling only moderately, a somewhat longer entrance would be beneficial, especially at high speeds. Froude has so clearly demonstrated the retradation, or more properly speaking, the resistance, due to wave making at high speeds, that under such circumstances a fine entrance becomes an absolute necessity. This is doubly the case in a seaway, and an additional four or six feet to *Clytie's* length forward would probably be found of decided benefit; but even as it is, she is a fast one and will give a good account of herself this season. She is flush decked, has roomy accommodations below, and makes as serviceable a cruiser as a smart sailer. We hope to give the calculated elements of this schooner at an early day and so afford a means of comparing her with others of her class in an intelligent way.

VESTED INTERESTS.—When the Yacht Racing Association in England thought it had put an extinguisher upon all further attempts at rectifying the abuses grown up under the fallacies of the Thames measurement rule, the eminent conservatives who composed the committee on measurement evidently counted with too much confidence upon the credulity of Englishmen in general. Hardly has their dictum been promulgated when we find those yachtsmen abroad, in whom the spirit of inquiry has not been entirely smothered by the august topi-ficness of red-tapeism, striking out afresh and with renewed vigor in the cause of common justice and common sense. Mr. Dixon Kemp makes a very fair proposition in accord with equity and the principles of naval science to tax depth in British yachts as a factor of size and power, whereupon an owner of a yacht (oh! libel on naval design!) with six beams to her length, jumps up and cries: "Vested interests! Let well enough alone." He must race his sixty tonner with the forties, says this gentleman of fair and candid mind; measure power and not size. "My model is such a miserable design that, though enormously large my hull, my canvas is extremely small. Tax that and I rest in peace, but you must let me put in an extra twenty tons of size if I choose; and to expect me to pay for that, you know, is the height of absurdity." When such logic is met with at the very outset, well may English yachtsmen despair of ever ousting vested interests and planting in their place a rule that will not squeeze their yachts any thinner than the latest types. Yachts they may call such things as *Christine*, *Julian*, and *Allarette* in England, in America we call them caricatures and lead mines.

UNION REGATTA.—The Brooklyn Yacht Club has concluded to have a "union" regatta in place of the usual club race, June 18. This on account of the probability of scant entries from the club alone; and the usual cruise will not be undertaken, an omission much to be regretted. Mr. George F. Randolph, of the sloop *Kate*, has been elected vice-commodore, Mr. R. H. Huntley having declined the offer to fill the vacancy caused by the death of J. B. Norris, Esq.

BALDERDASH CRITICISM.—As a specimen of what an unprofessional critic can accomplish in the way of compiling arrant nonsense, commend us to a review of the *Intrepid*, innocently published recently in a paper devoted to the turf. Here are some samples of that exasperative *alla-podrida*: "The depth of the buttock should have been considered at the outset.....The retroussement of the stern on the upper sheer.....Neither is the daylight under the counter in harmony with the apparent lowness of sheer at the foremast.....I be stand of the masts.....Longitudinal moment of inertia a minimum. But enough of this. With all due respect to the undeniable talents (shimmering) of this unlucky scribe, we beg to suggest to him the propriety of turning his attention to boiling potatoes as a business: as a nautical critic he makes himself the laughing stock of all."

YACHTING DRIFT.

Tidal Wave has her sails beat, and will make a trial trip before leaving for California.....*Ariel* has arrived at San Francisco May 21, safe and sound.....Long Island Yacht Club has postponed its regatta to the 20th of June.....*Addie Taylor* and *H. H. Holmes* have been matched for \$250 a side. Ira Smith will sail the former and Jake Schmidt the latter.....Herreshoff's latest catamaran has a trysail in place of main-sail. He has built six catamarans on his patent.....The Brooklyn Yacht Club will not have many vessels in commission this year.....The sloop *Latrobe* was launched at Baltimore for the South Baltimore Yacht Club. She is 36ft. 6in. more, 14ft. 2in. beam, and 3ft. hold.....*Estelle*, Mr. James D. Smith, has received a new boom 68ft. long, 28ft. of which are

onboard.....A new collapsible boat of thin sheet steel has been brought to light in England.....*Viking*, sloop, Mr. W. H. Gorman, of Boston, is said to be sailing well.....Haverhill Yacht Club regatta June 17.....Hollow spars are being generally adopted in Boston. Why is New York behind in this respect?.....Hollow masts are stronger and lighter, and very advantageous for cats and small sloops, also for booms.....James D. Leary, of Williamsburgh, has built a thirty-five ton sloop for Judge Pratt, of the Supreme Court, Brooklyn.....Sloop *Gusie* was sold at auction to Mr. G. W. Root for \$3,000. He has got a fine ship at a low figure.....Mr. Wallack prefers docile Swedes for his crew. They don't smoke, chew, or swear, but go to Sunday school; while for bright work they are not to be beaten.....It takes fourteen hands to run the *Columbia*. Too many by six.....*Columbia* will not race, but cruise. Her owner has taken a fancy to the sea, which we are glad to note.....Another 28ft. launched in Jersey City by Stephen Coolahan will race in the Bay Regatta.....*Adelphi* won the match on the Delaware from Kaigra's Point to Chester buoy and return, twenty-six miles; time, three hours, fifteen minutes.....Capt. Andrew Comstock, of Queen's Cup fame, will remain in command of the *Columbia* schooner.....Jersey City Yacht Club sails in squadron to Bath, L. I., on Decoration Day.....Mr. A. Carey Smith is designing a cutter yacht for Mr. Stillman, of the *Wanderer*. Good.....In the Portland challenge match, May 20, *Undine* retains cup in second class schooners, *Twilight* won the cup for second class sloops, and *Mat* keeps the cup in the third class.....Tarrytown wants to hold a grand union regatta on the Tappan Lea similar to its sister city, Newburgh.....In the Quincey Yacht Club match, sailed May 18, the winners in the first class were *Folly* and *Vision*; in the second class, *Nettle* and *Cora B.*; third class, *Imp* and *Annie*.....Schooner *Poam* is being lengthened to 80ft. 6in. on water line by Palmer, of Nantux.

ORAR AND PADDLE.

OFF FOR HENLEY.—The *Columbia* crew took their last spin on the Harlem, May 20, before leaving for Europe. The best material *Columbia* College contained has been selected for the crew, and the only thing to be regretted is that they leave only as the representatives of a single institution instead of the champions of the country. The final make-up of the four is as follows: E. E. Sage, 23 years, 165 lbs, bow; Jasper T. Goodwin, 28 years, 165 lbs, stroke; Cyrus Edson, 20 years, 163 lbs, No. 2, and H. O. Kidwiler, 21 years, 175 lbs, No. 3, with Charles Eldridge as supernummary. The men look in fine trim and are hopeful of the future. They will take with them two boats, a cedar built by Thomas Pearson and a paper from Waters & Son of Troy, with ours by Donoghue. The events to be rowed in by the four are the Steward's Cup and the Visitors' Cup or the college race. They sailed in the City of Chester May 23, with their boats aboard. From Liverpool they proceed directly to London, and to their quarters at the Red Lion Hotel, on the banks of the Thames. Their chances of disposing of the English amateurs do not seem very bright, but they will certainly give a good account of themselves at all events.

HARLEM REGATTA.—This event will be held Saturday, June 22. The programme will include singles, both junior and senior, pairs, fours, six-oared gigs, with coxswain, and four-oared gigs with coxswains for juniors. Winners of each heat in the singles will receive special prizes. Rules of the N. A. of A. O. will govern the regatta.

PARIS REGATTA.—It seems that the authorities of the Paris Exposition have finally determined to have a general regatta on the Seine on Aug. 11, 12, 13 and 14. Races open for singles, pairs and fours. All details concerning these events are still wanting on this side of the Atlantic. In France America still seems to be pretty much a *terra incognita*, and that rowing flourishes here they seem unaware of. Unless we send for information ourselves it is not likely to come from Frenchmen spontaneously by any means.

UNIVERSITY RACE.—Forecasts concerning the great annual "Varsity" race between the two leading institutions of the kind in America begin to attract more notice as the day for the event approaches. The race is to take place June 28 over the new course on the Thames at New London. From the gentlemen in charge at that place we have the assurance that every one who has inspected the course laid out has unqualifiedly approved of it, and its superiority over others heretofore tried is so manifest in more than one respect, that it would not be surprising to see it finally adopted as the permanent scene of the annual tussle of college skill and muscle at the oar. Though there is still some time for the Yale men to be brought into proper form and finish, the way matters stand at present their opponents rather have the advantage, many of the Harvard crew being old hands at the oar, having pulled in former college races. The Yale men on the contrary, while containing plenty of promising material, are comparatively green as yet. They do not work as well together as they should, nor do they show much finish, but they have done some honest work during the spring, and it is a sharp coach can be procured to take them in hand and put them through in thorough style, they may yet come to the start in fine form. In weight both crews are pretty evenly matched, Harvard's avoidupois being slightly in excess, but the balance may be changed after a few weeks' more training. With the exception of Le Moyné, the Harvards will muster the same crew that pulled last year. At latest advices the positions were as follows: Bow, Alvah Crocker; 2, N. M. Brigham; 3, V. D. L. Stow; 4, M. R. Jacobs; 5, B. J. Legate; 6, W. H. Schwartz; 7, F. W. Smith, and stroke, W. A. Bancroft, with L. N. Littner and J. Parker as substitutes, and F. H. Allen for coxswain. Average weight, 170½ lbs. Yale is doing work every pleasant day in the Keest barge under direction of Capt. Thompson, who has been doing his best to trim the raw men down to the regulation Yale stroke. Only three of them can be said to have had much experience at the oar or anything like a reputation; the rest at the commencement were almost green. They have been pulling the old-fashioned ball weights in the gymnasium during cold weather, and in March were first tried at the oar in the barge. As the senior class has no representative in the crew, there should be no lack of good material for next year's match, and then they will be most likely to have the advantage as regards finished oarsmen that Harvard now enjoys. The average weight of the crew is 163 lbs, and they are said to be still coming down. Julian W. Curtiss pulls bow, next Frank E. Hyde, C. A. Wright No. 3, Hermann Livingston No. 4, H. W. Taft No. 5, Geo. B. Rogers No. 6, David Trumbull No. 7, and Oliver D. Thompson stroke. The coxswain has not yet been selected.

HARVARD-CORNELL FRESHMEN.—The two freshmen crews of these colleges have agreed upon Lake Owasco, near Auburn, for the place of their meeting, July 17. The Harvards have chosen their quarters and will row in a paper boat. They are

in training under direction of Mr. Crocker, their coach. As the crew contains some good material a close race with the Cornell is not unlikely.

WORLD'S CHAMPION.—Trickett has lost two fingers of his left hand through handling a beer keg in his hotel. It is possible that this mishap may put an end to his career as an oarsman, in which case the question arises as to whom the title rightfully belongs. Until Courtney shows up a little more among the professionals of England and settles matters with Hanlon, he can hardly lay claim to it. The sooner he gets to actual work the better.

CANOE RACING.—Would it not be a good plan for the Newark oarsmen to incorporate in their annual regatta in August an open match for canoes under canvas or paddle? Such an event, we know from parties interested, would be certain to draw to the waters of the Passaic many fine canoes and afford an opportunity for comparing their merits. In view of the many new models and devices in the canoeing line, brought to light since the adoption of the sport in America, an open trial of the claimants to public favor would be welcomed by those interested and by the public in general. We hope canoe men will see to it that something may come of it, since it is only required to familiarize the public with the wonderful range of usefulness and capacity of these boats to have them rapidly take hold of the sport *en masse*. Newark claims among its citizens the originator of the canvas canoe, a type which, for lightness and cheapness, cannot be surpassed, and quite a fleet of these is to be found on the Passaic ready to take part in any event on its waters.

ROWING RIFLES.

The London *Field* is all mixed on American amateurs.....C. E. Steel won in the singles' race of the Crescents on the Schuylkill, May 18; time, 7m. 20s.; course one mile.....The Twilights-won in the double-sculls, and the Chamouni crew the race for fours. In the six-oared barge race the Falcons were victorious. Time, 5m. 8s.....Winona Boat Club, of Jersey City, has moved into its new boat-house foot of Henderson street, erected at a cost of \$5,000. Their opening takes place June 1.....New Orleans Club is in a flourishing condition, and owns one four-oared paper shell, one cedar ditto, one paper single, three four-oared gigs, two larges, two pairs, and three doubles.....Higgins, the English champion, rows Elliot June 3, from Putney to Northlake.....Hanlon will beat Morris over the Hulton course, Pittsburgh, June 20.....Paisades will enter an eight-oared barge for the Manhattan Regatta.....Great times ahead at Silver Lake, Boston, May 30.....The jaw-breaking Shoewacacmette four will row at Watkins.....Morris, of Pittsburgh, had better forfeit the money up; to pull Hanlon is simply ridiculous.....Boston thinks Hanlon can beat Courtney—hardly.....Colored men take to the oar in the Hub.....Potomac boys are alive and up to the times; they are doing much to popularize rowing at the capital.....The Annapolans are in training for the race with the Undines of Baltimore. White, Campbell, Page and Burdette, how, will form the crew. The Potomacs have no outside matches on hand.

THE "HERALD" CANOE.

EDITOR FOREST AND STREAM:

Perhaps it will not be out of place if I offer your readers the results of some fifteen years' experience with almost all kinds of canoes. The desirable points for either a hunting or cruising canoe, are speed, buoyancy, strength, lightness and convenience for stowing dunnage. The *Herald* probably meets the second, third and fifth points as well as any canoe that is built. In point of strength it is probably unequalled, but, unfortunately, for a hunting canoe it is too heavy, and, as Mr. Alden remarks, her full hull makes her throw a good deal of spray in a head sea. This seeming fault, when reduced a very little by making the bow lines a shade flatter, as in the canoes built by Mr. Wm. English, of Peterboro, Ont., proves to be one of the very best qualities a canoe can have in a heavy head sea. It gives her great buoyancy, and enables her to rise on and ride over the waves like a true Indian "bark" canoe; whereas, a canoe with very deep lines forward cuts into and goes through the waves, rendering a deck an absolute necessity, and in the case of heavy breakers or white caps, very likely to call into play the air-tight compartments, while the canoe with greater buoyancy would ride the waves like a duck. To illustrate this: A double canoe of the English pattern carried two friends of mine last November over a lake eight miles long and four miles wide, in a heavy gale—a very heavy sea, and while caps on every wave—and carried 350lbs. of venison, tent, blankets, etc., in addition to the two paddlers, whose united weight was 320lbs.—in all, 670lbs. carried through a heavy sea by a canoe which only weighs 60lbs., having no more deck than the *Herald*, and, as was often proved on the same trip, being very much superior to the *Herald* in point of speed. The dimensions of this canoe are: Length, 16ft. 6in.; width, 26in.; depth amidships, 11 1/2in., and at the bow and stern, 13in.; has a shear of 3 1/2in.; built of 3-16 boards; ribs, 3/4x3/4in., 7in. apart; Carvel built, or smooth on the outside; joints flattened on inside with 1x3/4in. elm; wide bottom boards, on inside bottomed down to ribs, so can be taken out handy; two thwarts, 3 1/2in. wide, and shaped. Said thwarts are always used to sit on, Mr. Alden to the contrary notwithstanding, and a very great rest they give the paddler, who sometimes sits on the thwart, his knees on a cushion, and his feet under the thwart; at others, sitting square on the thwart, his legs extended in front, or again, in the same position as when sitting on a chair. The expert paddler in this position, being so high up, and having the freest possible use of the upper portion of his body, and bracing himself well with knees and feet, can apply the whole power of the body, aided by the legs, to the paddle, and in this position can get twenty-five per cent. more power on the paddle with the same expenditure of force than can be got when sitting down flat or nearly so, say eight or nine inches lower in the canoe on a cushion. I quite agree with Mr. Garfield in the desirability of having your load stowed in an open space in preference to having it under a deck or in a locker. This is found to be especially the case in a canoe trip up the back lakes and rivers of Canada, where a portage or carry is met with every few miles, and on some good front streams, every half a mile.

I have made some fifteen or twenty canoe trips, of from fifty to one hundred miles and return, in a very rough and rocky country, and have used and owned canoes of six or seven different patterns and makes, from the birch bark up, and have yet to see the equal, for general purposes, of the canoe I have described above. I have one now, the *Emma*, a single, 13ft. 6in. long, 24in. beam, 11in. deep amidships, weighs 45lbs., will carry 250 to 275lbs., and I don't think can be beaten for speed, strength and buoyancy. English builds five or six sizes, at from \$25 to \$35, others for special purposes to order. Tom Gordon, of Lakefield, Ont., near Peterboro, builds a very similar canoe. Its one fault is that it is rather cranky. I prefer the English to the *Herald*, because the former has somewhat finer lines forward, giving greater speed with about the same buoyancy, weighs nearly one-third less, and, having bottom boards on top of ribs, you can take in a lot of splash or rain without the discomfort of having the blankets wet, or being compelled to kneel in a pool of water. Permit me to say in conclusion that I am in no way interested in the English or Gordon canoe. The three last I

have owned I built for myself, and am therefore quite independent of all professional builders.

EDITOR FOREST AND STREAM:

I noticed in your journal of the 2d. and 9th inst., also in *Harper's Monthly* for April, that the merits and demerits of the *Herald* canoe are pretty well ventilated. Not so thoroughly, however, but that I think there is room left for further profitable discussion. In the first place, Mr. W. L. Alden is decidedly unfair in comparing the *Herald* with the cruising canoes mentioned in *Harper's*, for this reason: The *Herald* is not, and never was, intended for a cruising canoe, but is built and used in this country almost exclusively for fishing and hunting. On our inland lakes and rivers, for deer or duck hunting and fishing the *Shadow* (which, according to Mr. Alden, is perfection) would only be a nuisance. In shallow water the *Herald* certainly has an advantage in paddling through the rice and mud beds in the marshes. When duck shooting, the rice lake boat will move with more ease and less noise; and in trolling you certainly have more space in which to "land" your fish. Again, I think the captain of a *Shadow* would find some difficulty in taking a deer aboard when killed any distance from camp. The *Herald* canoe, as built at Rice Lake, is not intended for open water cruising; it is rigged with one sail, the size of which is left to the discretion of its owner. It is very simple in construction, can be set in a moment and is quickly taken down. Mr. Garfield is perfectly correct in saying what he does about the sail (as far as concerns the *Herald*), for with it no dandy or jib is required. Notwithstanding Mr. Alden, the *Herald* with this sail will run close to the wind tack and go about without aid from the paddle, if properly handled. Mr. Alden is right when he says the thwarts are necessary to hold the sides of the craft in position, but they also take the place of a seat for the paddler, as his position is partly kneeling and partly sitting. The middle thwart, however, is sometimes made to fasten with a couple of hooks on the under side, and can be taken out at pleasure, if it is desired to make up a bed, but in this country no one thinks of sleeping in, or under his canoe, save the Indian, or trapper of the class that cannot afford a tent. The comforts of a good canvas tent that is both waterproof and dryproof are too well known to give the preference to a canoe, when we wish a good night's rest, and add little to the weight of your cargo and occupy a small space when packed; and the trouble of pitching the camp and striking it again is no great hardship. As a rule here with camping and hunting parties the double hunting canoe carries two men, with their tent, blankets, provisions, cooking utensils, shooting and fishing tackle, dogs, etc., yet according to Mr. Alden's idea of a canoeist these men, in order to maintain the dignity of the craft, must sleep in their boat. The "wobbling" tendency in the *Herald*, mentioned by Mr. A., is disposed of in Mr. Garfield's letter, and he might have added, the slight turn given the paddle to keep the craft in her proper course is no fatigue to an experienced paddler, in fact no one becomes perfect in the use of the paddle till that slight turn of the wrist is acquired, and it is no more a hindrance to the speed of a *Herald* than it is to a *Shadow*. There are other canoes in this vicinity quite as well known as the *Herald* and in some respects superior. The *English*, the *Gordon* and the *Stephenson* canoe are all good boats, resembling the *Herald* in appearance, but for strength, beauty of model and speed under sail or paddle, the *Stephenson* is in advance of any portable hunting canoe manufactured from wood. These boats are one and a half feet longer than the *Nautilus* or *Shadow* and carry their bearings much better than the shorter boats, and if we are to judge of the deck plan of the several boats, as represented in *Harper's*, the *Herald* does not exhibit that tub-like appearance noticeable in the *Rob Roy*, *Nautilus* and *Shadow*. The builder and designer of the *Stephenson* is now finishing a new style of hunting canoe, which of course has yet to be tried, but if it meets the anticipations of the builder it will really be the substance of all *Shadows* yet turned out. In and about the city of New York the *Shadow* may be the perfection of a canoe, but here in the woods it would be looked upon as a kind of a cross between a skiff and a small sail boat. She has this advantage, however, of being converted into a Saratoga truck, a sleeping berth, or a packing case. If the New York canoeists can boast of a *Shadow* we in the backwoods of Canada claim the substance and, of course, are happy.

Peterboro, Canada, May 15, 1878.

EDITOR FOREST AND STREAM:

I notice in the edition of May 9, F. AND S., a communication from W. L. Alden, in which he attacks my article on the *Herald* canoe published May 9 in F. AND S. He says that the *Herald* patent canoe cannot be built without thwarts, and remarks that Mr. Herald is the authority for this statement. I allow that Mr. Herald knows as much about his canoes as I do, and I have the written statement from Mr. Herald that his canoes are made without thwarts if so ordered, and I still maintain that the thwarts are for the convenience of the paddler, and not to hold the sides of the canoe in position. I am well aware that if the canoe be turned bottom side up in the water it will not sink, and I still hold that if it be filled with water the canoe will not sink, and there will be buoyancy enough in the craft in this condition to keep two persons from drowning.

Mr. Alden says my statement about having the sails in one shows that I know nothing whatever about sailing a canoe. I will answer that I know nothing whatever about sailing a canoe. I will answer that in making that statement I had in mind general cruising, and still adhere to that assertion, and have the testimony of one who has had practical experience for twenty-five years in cruising and hunting in a canoe. I am perfectly aware that in an open bay where a steady breeze can be had, more than one sail can be used to advantage; but on rivers and streams, as a general thing, more than one sail on a canoe is an abomination. It should be as simple as possible, so as to be easily shipped in a moment's notice, and take up but little room.

Mr. Alden says the *Herald*, after being fitted up with air-tight compartments, etc., is a strong, swift, safe and commodious canoe, and says that this fitting up must be done by the purchaser. This is not necessary, as Mr. Herald will do all the fitting up that the purchaser may want, in the way of air-tight compartments, etc., when so ordered. The *Herald* canoe is in no danger of having her bottom ripped out when running a rapid, as there is no keel to strike on the rocks, and it does not scrape along on the bottom of shallow streams as is the case with other canoes.

Mr. Herald having seen my article in F. AND S. of May 2 on the *Herald* canoe, informs me that he fully indorses my statements. I received from him a letter, in which he informs me that he has just completed a canoe without thwarts, and equipped with air-tight compartments; also, cover for open space in the centre of canoe bottomed on for sleeping under, and also one to use in case of heavy sea to keep out spray. This canoe is for Mr. Smith, of New York city, a canoeist by reputation. Mr. Alden will no doubt be pleased to meet him and have the pleasure of examining a *Herald* canoe without thwarts and with the air-tight compartments, all completed, at Mr. Herald's work shop.

WM. B. GARFIELD.

FOR LADIES ONLY.—English ladies in India engage in shooting matches. At Sangur, in the Central Provinces, last November, twelve ladies competed in a match with gentlemen. The majority of the ladies made very good scores. Miss Hanlon, a sister of the Canadian oarsman, offers to row any woman in the United States or Canada, for a purse of \$500 over a three mile course. It is said that she can defeat her brother in a mile race.

New Publications.

ON THE EBB: A Few Log Lines from an Old Salt—Chas. F. Hotchkiss. Tuttle, Morehouse & Taylor, Printers, New Haven, Conn.

This is a little volume of experiences, written in a style peculiarly quaint and original, and sold by subscription chiefly. There is a great deal of information in it which will prove serviceable to salt water anglers, and a perusal of the book will more than compensate for the price of subscription, which is \$1.00. The book is one of those curiosities of literature which gentlemen should desire to add to their libraries. Here is an extract from the author's preface, by which the author's estimate of his own work may be gauged:

"It is my business, and mine alone, to work up some of the incidents of seventy-three years, put it in pamphlet form, pay the printer, and sell it, provided it has merit. It stands on its own bottom. If the purchaser, after getting possession, has made a satisfactory bargain, we are even; and if he, she, or it, is not suited, we are even again. It was my barrel of flour, or my string of fish, and as I never recommend the quality, they should have looked the horse in the mouth. I do not send fish to market in a wheel-barrow, trumpet for the quality or kind—it is your business to open its gills; for who would cry 'Stale fish?' I am too old to meddle with fiction in any shape, for it is much easier to catch fish with good, clean, live bait than an old dead winkle. Fish are not tools always, neither are the majority of the human family full of wisdom. My experience, pleasantly (as my friends will indorse), has been large, long and deep, and at my standpoint of life, I have concluded that game fish are much more smart than the human family, for they never take stinking bait in their mouth, consequently they never vomit. No, never! Mankind swoons up everything of the book species that is announced, provided it comes under Turkey, Morocco and Gold Leaf. I send this book out in its plain Quaker garb, extracting from it the scales, flippers, backbone, head and inward, leaving the purchaser the clean marrow. In fact, it is like a Connecticut River sard, all washed clean of fiction, well bloated, and ready for broiling."

The style of the author is worthy of Mark Twain. The information which he gives about fishing in Long Island Sound is just what many anglers have long desired, and those who wish to take a summer cruise cannot do better than to follow the precepts contained in the first chapter of the book. All the best localities are designated, and the best methods and times of fishing also. For sale at this office.

POGANO PEOPLE, by Mrs. Harriet Beecher Stowe. New York: Fords, Howard & Hulbert; 1878. Price \$1.50.

Though Mrs. Stowe's "Uncle Tom's Cabin" was written for grown folks, it has been read and re-read by thousands and thousands of children. With the little ones this writer has ever been a favorite, and now she has given us a new story, "Pogano People," written, we presume, especially for their delectation. We can unhesitatingly commend the book to the youthful readers of this paper. They will find in it reading of a pleasant character that will do them no harm. It's just the kind of a goody book for a Sunday-school library.

BIRDS OF A FEATHER FLOCK TOGETHER; or, Talks With Sothorn, edited by F. G. DeFontaine. New York: G. W. Carleton & Co.; 1878.

This volume, as its name imports, is made up of choice stories from an almost inexhaustible fund, concerning the daily life, theatrical experience, practical jokes, and the many different phases of character exhibited by Sothorn, *Dundreary* and the *Crushed Tragedian*. Any one who knows anything about Sothorn knows that a dozen books might be written about him. Mr. DeFontaine has exercised commendable good judgment in his selection from the vast amount of material at his command, and the result is an entertaining book. Those who have seen *Dundreary*—and who has not?—will enjoy these papers.

CANADA UNDER THE ADMINISTRATION OF LORD DUFFERIN.—Mr. George Stewart, Jr., well known throughout Canada, and to a less degree to readers in the United States, is engaged upon a history of Canada under the Administration of Lord Dufferin. The rare good judgment with which that excellent statesman fulfilled the responsible trusts given him, his popularity with the people under his rule and with the United States, and the prosperity of the Canadian Dominion during his term, afford ample material for a most worthy contribution to American-British history. The publishers are the Rose-Belford Pub. Co., Toronto, Can.

UPLAND GAME BIRDS AND WATER-FOWL OF THE UNITED STATES, by A. Pope, Jr. Scribner, Armstrong & Co., New York. 1878. Part V.

How can the criticism of this excellent series of birds be otherwise than descriptive? Now, here is the pinnated grouse—the prairie chicken, the *Cupidonia cupido*, the beloved of all sportsmen, the bird par excellence which our English cousins cross the ocean to shoot, and which they would like to introduce into their own moors. Mr. Pope has made the bird erect, and almost the size of life. The bird turns his game head just a little on one side, as if ready to make that peculiar noise which is called "tooting." The two narrow feathers which overlie the neck are in repose now. There he stands, just prepared for swift flight. Come but a little nearer to him and he is off, skimming the prairie, to alight some three hundred yards off. Both cock and hen are perfectly true to nature in their coats of brown with the mahogany linings. To beg such a fellow you would walk miles over the prairies, and the semblance of him in the picture must recall good times with dog and gun. In contrast with him Mr. Pope has given us a brace of red heads, the true American pochard. As to his appearance, his red head allows the artist a nice bit of coloring, for he is really a handsomer bird than the canvas hawk. Feeding, as he does, on the same juicy water plants as the canvas duck, he is quite as good to eat. He is well known to be a thief, and steals what he can from his companion ducks. Of course, the suggestive element of a picture may strike people so differently. If, in seeing Mr. Kilbourne work for that future publication, which is to be called "The Game Fish of the United States," we should watch him in the act of adding that little bit of frosting to the sides of a Connecticut salmon so that it should be of silver, we hardly think green peas as an accompaniment to the salmon would be appermost in our mind. It must be a coarser taste, then, which brings to our memory the sweet savor of a well roasted red head. Still, the picture is good enough to make one think of clattering ducks and blinds and No. 10 guns and Chesapeake Bay dogs and all that kind of thing. As Messrs. Scribner's pictures reach us we have them framed, and they ornament our rooms. If we can't shoot ourselves, we can at least keep looking at the "Game Birds of America."

JORDAN'S VERTEBRATES.—We are happy to be able to announce the appearance of a second edition of Prof. D. S. Jordan's Manual of Vertebrates, and to recommend it once more to our readers. We know of no book which is more needed by the very large and constantly increasing class of students who at present know little or nothing of North American animals, but who are ready and anxious to observe and learn if they can only have some reliable work to which to refer. It is certain that there is no book from which an individual wholly ignorant of the subject can so easily acquire a knowledge of our animals as the one under discussion, and those who make use of Prof. Jordan's work will soon appreciate its value. The fishes are the favorite study of the author and the portion of the book devoted to this class has been entirely rewritten and all the genera exactly characterized. A feature which especially recommends the work to the angler is the detailed description of the North American *Salmonidae*, with an account of the habitat and range of each species. The copious bibliography and the glossary of scientific terms are other additions which much increase the value of the Manual.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

NO. 111 (old No. 103) FULTON STREET, NEW YORK.
(POST OFFICE BOX 2332.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MAY 30, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, May 31.—South Carolina Annual Regatta, at Charleston Trotting: Point Breeze Park, Philadelphia; Pittsburgh, Pa.; Freeport, Ill.; Hudson, Mich.; DePue, O. Running meeting at Cincinnati, O. Base Ball: Tecumseh vs Rochester, at Rochester.

Saturday, June 1.—Cricket: Germantown vs Young America, at Nicetown; Doran vs Philadelphia, at Haverford; Merion (vel.) vs Old Haverfordians, at Ardmore. Running meetings as above; at Jerome Park. Base ball: Chicago vs Boston, at Boston; Milwaukee vs Providence, at Providence; Indianapolis vs Cincinnati, at Cincinnati.

Tuesday, June 4.—Williamstown Yacht Club Annual Regatta; Queens County Yacht Club Regatta. Trotting: Lyons, N. Y.; Albany, N. Y.; Gouverneur, N. Y.; Loudonville, O.; St. Peterburgh, Pa.; Duquesne, Pa.; Plainville, Conn.; Milwaukee, Wis.; Adrian, Mich. Running meetings: Jerome Park; Cincinnati, O.; Gouverneur, N. Y.; St. Louis, Mo. Base ball: Chicago vs Providence, at Providence; Milwaukee vs Boston, at Boston; Cincinnati vs Indianapolis, at Indianapolis.

Wednesday, June 5.—Sixth Div. Ride Match at Syracuse. Trotting as above; at Dalton, O. Running meetings as above. Base ball.

Thursday, June 6.—Manhattan Yacht Club Regatta; Beverly, Mass., Yacht Club Regatta off Nahant. Championship walks, New York. Sixth Division, at Syracuse, as above. Trotting as above. Running meetings as above. Base ball: Milwaukee vs Boston, at Boston; Chicago vs Providence, at Providence; Cincinnati vs Indianapolis at Indianapolis.

OUR FRONTIER READERS.—The soldiers at Spekan Falls, Washington Territory, preserve their numbers of the FOREST AND STREAM in bindings formed of old pasteboard boxes and the worn out drum heads, and when covers are scarce they drum all the harder. With the varied reading of the papers and the martial memories evoked by the unique covers, those must be interesting volumes.

✂ We go to press one day earlier than usual this week. Several events, which would otherwise appear, have for that reason been deferred.

✂ FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

ARCHITECT AND GARDENER.

IN our issue of August 9, 1877, may be found some very interesting notes from the pen of Professor D. G. Elliot, of Paris, upon the bower birds of Australia and New Guinea. Much interest has been excited among naturalists by the discovery of a new bird of this species in New Guinea. This discovery by Prof. Beccari, a traveler and naturalist, was mentioned in Prof. Elliot's article, and has since attracted much attention, being discussed in magazines and newspapers, among them the *Gardener's Journal*.

Amblyornis inornata, as this new species is called, belongs to the group known as bower birds, a name given to them from their habit of building on the ground highly ornamented bowers; not, as might be imagined, for nesting purposes, for their nests are built in trees, but in which to carry on their courtships. Signor Beccari's narrative of the habits of the present species indicates that it is in many respects very peculiar, and indeed all the bower birds display an extraordinary high degree of aesthetic taste. Mr. Darwin says of the Australian species that the satin bower bird

"Collects gaily-colored articles, such as the blue tail feathers of the parakeets, bleached bones and shells, which it sticks between the twigs or arranges at the entrance. Mr. Gould found in one bower a neatly worked stone tomahawk and a slip of blue cotton, evidently procured from a native encampment. These objects are continually rearranged and carried about by the birds whilst at play. The bower of the spotted bower bird is 'beautifully lined with tall grasses, so disposed that the heads nearly meet, and the decorations are very profuse.' Round stones are used to keep the grass-stems in their proper places, and to make divergent paths leading to the bower. The stones and shells are often brought from a great distance. The regent bird, as described by Mr. Ramsay, ornaments its short bower with bleached land-shells belonging to five or six species, and with 'heavies of various colors, blue, red and black, which give it, when fresh, a very pretty appearance. Besides these, there were several newly picked leaves and young shoots of a pinkish color, the whole showing a decided taste for the beautiful.'"

The species to which we now refer far exceeds, however, those just mentioned in the adornment of its pleasure grounds, and it has besides some peculiarities which its Australian relatives are not known to possess. To all outward appearance *Amblyornis* is a very ordinary bird, in size about equal to a turtle dove, and sober brown in plumage, unrelieved by any dash of brighter color. The habits of the birds, however, show conclusively that they highly appreciate and enjoy brilliant colors, and that they use no little diligence in gratifying their tastes in this direction.

This species is also a most extraordinary mimic and can imitate most faithfully the cries and songs of other birds. In this way it is a continual thorn in the side of the ornithological collector, constantly deceiving him and causing him to lose time and patience. Signor Beccari says:

"It is a clever bird, called by the inhabitants *Buruk Gurca*, Master Bird, since it imitates the songs and screechings of numerous birds so well, that it brought my hunters to despair, who were but too often misled by the bird."

The most wonderful thing about *Amblyornis*, however, is its skill and taste in architecture and landscape gardening, and we are told that one of the native names of "the bird is *Tukan Robon*, which means a gardener." The bowers of these birds are like those of the Australian bower birds, built on the ground. A flat spot is selected at the foot of a small tree whose stem is no thicker than a walking stick, and on which the branches do not grow near the ground, and here, around the foot of the tree, a cone of moss is built up about four inches in height. The immediate object of this structure is not known, but it is suggested that it may serve as a cushion to protect the plumage of the bird from wear against the tree trunk. Their next proceeding is to collect the twigs of an epiphytic orchid and attach them to the stem of the tree about two feet from the ground, weaving them together and fastening them to the ground at a distance of about eighteen inches from the foot of the tree. The leaves and stalks of this plant remain fresh and green for a long time, rendering the arbor very attractive in appearance. Thus we see that the birds have a shelter, shaped something like a Sibley tent and furnished in a most charming manner. But this is not all. Signor Beccari tells us that—

"Before the cottage there is a meadow of moss. This is brought to the spot, and kept free from grass, stones, or anything which would offend the eye. On this green turf, flowers and fruits of pretty color are placed, so as to form an elegant little garden. The greater part of the decoration is collected round the entrance to the nest, and it would appear that the husband offers there his daily gifts to his wife. The objects are very various, but always of vivid color. There were some fruits of a *Garcinia* like a small-sized apple. Others were the fruits of *Gardenia* of a deep yellow color in the interior. I saw also small rosy fruits, probably of a *Scitaminaceous* plant, and beautiful rosy flowers of a splendid new *Vaccinium* (*Agapetes amblyornidis*). There were also fungi and mottled insects placed on the turf. As soon as the objects are faded they are moved to the back of the hut."

Our author grimly compares the human inhabitants of the island with *Amblyornis*, saying, "I discovered that the inhabitants of Arfax did not follow the example of *Amblyornis*. Their houses are quite inaccessible from dirt."

All this is certainly very wonderful, but what should most excite our surprise and admiration is the fact that these elaborate structures are built, as has been said, not for the more practical uses of domestic life, but as pleasure grounds in which the birds can carry on their wooings, and in the construction of which the amorous male can exercise all his taste and ingenuity to please the fair one of his choice. Does not the exhibition of such mental qualities as are indicated by these actions of *Amblyornis* warrant us in assuming for this

bird reasoning powers of an order far above those usually attributed to birds?

THE BAROMETER.

The cruising season being near at hand, the following observations on the barometer will not be out of place: It is almost needless to say that a yacht pretending to anything like a proper outfit should not break anchor without a reliable instrument of the kind in her cabin. The most appropriate place to hang the barometer is in the companion or somewhere readily accessible at all times to the hand in charge of the deck.

The barometers in general use consist of two kinds—the mercurial and the aneroid. The former depends for its action upon the difference in pressure of the atmosphere on a column of mercury; the second upon the vibrations of metal diaphragms or springs, giving motion to an indicator around a face-plate divided into inches and decimals. In the first instrument, the level of the top of the mercury column referred to a scale and vernier at its side, gives the reading; while in the second, the position of the pointer on the graduated arc shows a similar condition of the atmosphere. The method of reading a barometer can best be learned by actual practice; explanations in print would be of little avail. A few minutes spent with an old hand will suffice to master the "vernier," and it then only remains to comprehend the interpretations to be put upon the fluctuations observed and to use a little judgment in the connection of consecutive readings.

The usual range of the barometer in our latitudes is between 29 and 30.5 inches, though in exceptional weather it may fall as low as 28 inches or less, and as high as 30.8. These figures apply to observations at about the sea level. In general the rising of the mercury presages fair weather, and its falling, on the contrary, indicates coming rain, snow, high winds and storms. This rule, however, is subject to the following limitations:

When foul weather happens soon after the fall of the barometer, it may be expected to be of short duration, and similarly fair weather setting in rapidly after a rise of the mercury will last but a short time. If during foul weather the mercury rises much and maintains its height before the foul weather has disappeared, a long continuation of fine weather may be expected. Likewise if during fair weather it falls and remains low before the fair weather has ceased, look out for a long spell of nasty weather accompanied with wet. The unsettled motions of the instrument, frequent rising and falling, indicate variable weather with no special prominence to either good or bad. Do not be guided by the wording on the scale or plate, but rather by the manner of the fluctuations. By observing the surface of the mercury it can be determined whether the barometer is in a rising or falling condition, thus detecting the impending changes. If the mercury shows round on the surface, it is in a rising condition; if it shows concave or hollow in the middle, it is falling; if level across, it is stationary. When about to take a reading, gently tap the instrument with the hand so as to loosen it up, as sometimes the mercury will cling to the glass or the needle refuse to move on account of friction, if the changes are delicate.

MR. LORT.—Mr. Wm. Lort returned to England last Saturday in the Adriatic. The gentlemen of the kennel club have contributed to make his visit pleasant, notwithstanding the disagreeable and to a degree thankless duties of judging dogs at a bench show, which he came to America expressly to perform. We regret that we had not the pleasure of seeing Mr. Lort, or even receiving a call from him at our office. Twice we endeavored to present ourselves to him, but venturing without a previous notification, were disappointed.

While we unfortunately missed an interview with Mr. Lort, it is something of a coincidence that Capt. John M. Taylor, our kennel editor as long as five years ago, who first introduced field trials into America, should have been receiving substantial honors and courtesies from leading patrons in England for the services rendered here and in behalf of dog fanciers everywhere during and through his editorial connection with the FOREST AND STREAM.

TEMPLES NOT MADE WITH HANDS.—The Methodists of Michigan, having selected Bay View as their camping ground for summer praying, bathing, praisting, fishing, exhorting, boating and all the kindred camp-meeting occupations and pleasures, and being most satisfied with their annual conventions at that place, have been joined by the Presbyterians and Methodists, who have camped over against them on the other side of the bay, and this summer Michigan woods and waters will resound with the praises of the multitude. All these good people will be carried via the Grand Rapids and Indiana Railroad, and according to its new summer schedule. As this line is already famous for its fishing and shooting resorts, we see now no new attraction which it can offer to the pleasure-seeking tourists.

MISS CORSON COMES TO THE SPORTSMAN'S AID.—THE NEW CURSING OF THE WOODS.—Miss Corson has kindly volunteered to shed her brilliant culinary light on benighted sportsmen. Say what you may, though men have all kinds of woodcraft at their fingers' ends, when it comes to preparing the food for camp most of them turn out to be miserable failures. Just read what Mr. Charles Dudley Warner says in the last *Atlantic Monthly* about the slap-jacks which were a solid piece of work, and did not go to pieces in a person's stomach

like a trivial bun. Think of it! We have seen, ourselves, a man, a human being, skin a quail and boil a woodcock in the field, because he knew no better. The only thing we are afraid of is that Miss Corson will have her hands full. Questions may be asked her as to how a heaver tail is to be cooked, how a saddle of Rocky Mountain sheep is to be roasted, or how an owl can be turned into a spring chicken, and many other incomprehensible things. We are certain, however, that the Superintendent of the New York Cooking School will be quite equal to the task:

NEW YORK, May 23, 1878.

EDITOR FOREST AND STREAM:

Please accept thanks for your pleasant report of my recent sportsmen's dinner. I am deeply interested in the cuisine of the woods, for I am an old "camp cook." If your correspondents will do me the favor to send me a memorandum of the articles I find most frequently used by them, I shall take great pleasure in devising for them during the coming summer and fall some dishes which they may like to know of before another sporting season.

Very truly yours,

JULIET CORSON,
Supt. N. Y. Cooking School.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

National Sportsmen's Association, Wilkesbarre, Pa., June 11.
Illinois State Sportsmen's Association, Quincy, June 11; Sec'y., Geo. E. Wheeler.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sec'y., Benj. F. Dowance.
Ohio State Sportsmen's Association, Cincinnati, June 15; Sec'y., Wilbank, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2; Sec'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President.
Missouri State Sportsmen's Association.

PENNSYLVANIA STATE ASSOCIATION.—The officers of the Pennsylvania State Association for the Protection of Fish and Game are: Pres't, Robert Dalzell, Pittsburg, Allegheny County; First Vice-Pres't, D. W. Seiler, Harrisburg; Second Vice-Pres't, J. B. Reno, New Brighton; Third Vice-Pres't, B. W. Richards, Philadelphia; Fourth Vice-Pres't, F. S. Blunt, Sharon; Rec. Sec'y, B. F. Dorrance, Wilkesbarre; Cor. Sec'y, A. M. Whister, New Brighton; Treas., J. A. Harper, Pittsburg. Committee on Rules, Regulations and Game Laws: J. Ross Thompson, Erie; B. W. Richards, Philadelphia; Jno. C. Brown, Pittsburg; Adolph S. Ohl, Philadelphia. Committee on Fish Culture: D. W. Seiler, Harrisburg; W. F. Fundenburg, Pittsburg; W. H. Brooks, Greenville.

—Great efforts are going to be made, when the Legislature meets in January next, to get some stringent laws passed to protect fish in the waters of Tennessee. The wholesale manner in which the fish are caught and destroyed in every stream and lake in the State, in a short time will leave none worth speaking about.

J. D. H.

ILLINOIS STATE CONVENTION.—The Fifth Annual Convention of the Illinois State Sportsmen's Association, which is held at Quincy, June 11, promises to be very largely attended. The meeting continues four days.

NEBRASKA STATE CONVENTION.—The association met May 21 at Fremont, twenty-five members present. Addresses were read by Treasurer McBride and others. The following officers were elected: W. L. May, Fremont, Pres.; Daniel Long, Plattsmouth, Treas.; and D. F. Welty, Fremont, Sec.; Vice-Pres., J. M. Thurston, Omaha Club; S. C. Elliott, Lincoln Club; Wm. Clark, Omaha Field Club; E. G. St. John, Fremont Club; John O'Rourke, Plattsmouth Club; J. E. Winslade, Omaha Workmen's Club. The next annual convention will be held at Omaha. Pigeon matches and a bench show were features of the convention.

The Rifle.

BOSTON—Walnut Hill, May 22.—Sixth renewed competition, Shot-gun match, 800, 900 and 1,000 yards; wind, varying from nine to three o'clock, blew a perfect gale up the range directly in the faces of the shooters:

CREEDMOOR SPRING MEETING.

Thursday, May 23.—With good weather, a well arranged programme, with the finest range probably in the world, with everything which could be done to render this leading rifle event of the N. R. A. conspicuous, we are forced to state that, as far as spectators went, these were remarkably few in numbers on the first day. General Woodward was early on the ground, assisted by Colonel Scott, range officer, and by Capt. Story, the statistical officer. It was some quarter after ten when the booming of the second gun announced the opening of the spring meeting, with the contest for the Leech cup. This cup, presented by Major Leech, is among the finest of the rifle trophies, and presented in 1875, has been won so far by Colonel Bodine in 1875, with 205; by Colonel Gildersleeve in 1876, with 204; and in 1877 by Major Jewell, with the brilliant score of 213. It fell yesterday to the skill of Mr. Hyde, with the very good score of 205. The following are the best scores:

	800 yards.	900 yards.	1,000 yards.	Total.
Frank Hyde.	69	67	64	205
B G Doaghy.	56	67	64	187
L L Hepburn.	64	70	62	196
H S Jewell.	72	65	59	196
W H Jackson.	71	69	65	195
H J Rockwell.	69	64	60	193
R H Sanford.	65	67	58	190
W H Farron.	65	61	58	184

The following are the total scores of the other marksmen:

	800 yards.	900 yards.	1,000 yards.	Total.
N Washburn.	139	139	139	417
H F Clark.	138	138	138	414
John Bouine.	136	136	136	408
Thomas Lamb.	136	136	136	408
J A Halsey.	135	135	135	405
L L Allen.	134	134	134	402
F Weston.	133	133	133	399
L Weber.	133	133	133	399
R H Keene.	132	132	132	396
A D Hodgeman.	131	131	131	393

At one o'clock the competition for the Frazier prizes of \$100, \$75, \$50 and \$20, took place; open to teams, two men from each company National Guards State of New York, in uniform; twenty shots, to be fired from cartridges in the cartridge box, one minute's time for firing. The following are the scores:

Company	Score
Company D, Seventy-first Regiment—W Robertson, 86; W F Edmundstone, 24, total 60.	60
Company B, Twelfth Regiment—A B Van Hensen, 32; J Ross, 24; total, 56.	56
Company G, Seventy-first Regiment—E Demmler, 24; A Steele, 26; total, 50.	50
Company H, Seventh Regiment—J L Price, 34; E W Price, 14; total, 48.	48
Company H, Twelfth Regiment, made 46 points; Company I, Seventh Regiment, sent four teams, which made respectively 42, 31, 40, and 23, and the Separate Company, of Flushing, L. I., made 33 points.	

In the Soldiers' match, for a bronze trophy, presented by Colonel R. Olyphant, four teams competed, making ten entries. The conditions were described as follows in the official programme:

Open to teams of eight (privates or corporals) from each company, troop or battery in the National Guard; each organization having the right to send as many teams as it sees fit; distance, 200 yards; position, standing; weapon, Remington rifle or carbine, State model. Third class target. Competitors to be in uniform (jacket, cap, waistbelt and cartridge box). The match to consist of two stages.

First—Firing by File.—Five rounds per man; time not to exceed two minutes from the command "Commence firing." Second—Firing by Volleys.—Five volleys for each team. The firing in both stages to be conducted according to the tactics, each team being formed into a squad of four files and commanded by an officer of its own company, who will give the commands to load and fire in each stage. Cartridges to be taken from the cartridge box.

The prize to be shot for monthly, to be held during the month by the company whose team makes the highest score, and at the close of the season of 1878 to become the property of that company whose team may have won it the most times. The following are the highest scores of each team:

Company	File.	Volley.	Total.
Company G, 11th Regiment.	101	89	190
Company I, 1th Regiment.	90	77	167
Company H, 12th Regiment.	98	60	158
Company H, 12th Regiment.	67	61	128

The members of the winning team were Corporals Demmler, Frazer, Huse and Jacot, and Privates Addison, Engel, McCabill and Morton.

The Skirmishers' Badge match, at four o'clock, concluded the day's programme. The following are the scores:

	Advance.	Retreat.	Total.
W C Reddy.	17	13	30
M M Malby.	16	10	26
A B Van Hensen.	4	20	24
James Ross.	5	16	21
J R Grohman.	14	8	22
J Bukowski.	8	12	20
J J Simmon.	4	14	18
G T Addison.	3	14	17
J P Kenworthy.	4	10	14
J Holder.	5	7	12
M Eagle.	4	8	12
W F Edmundstone.	8	4	12
H T Rockwell.	4	7	11
E Demmler.	2	6	8
A Steele.	3	—	3

Friday, May 24.—The attendance on the second day was not better than on the opening day. The weather was unfavorable, lights flashing at times, and cloudy at others, but without much wind. Shooting commenced at nine and concluded at four.

No. 2, Stated prizes, open to all comers; distance, 300 yards; weapon, any. No duplicate entries allowed. There were forty-one entries. The following are the highest scores:

	Score
R H Keene.	31

No. 9 A, The "Oliver match," for a silver trophy, value \$100; open to teams of four from the National Guard; distance, 300 yards. It was won last week by a team from C company, Twenty-third regiment, on a score of 50 out of a

possible 140 points. This event will be decided at the field meeting, when the aggregate will be taken.

Sharps' "Military Team" match, No. 10; teams of four men from any military organization; distances, 800, 900, and 1,000 yards; position, any under the rules; weapon, military rifle. Prizes—To the team making the highest aggregate score, a Sharps' military rifle to each member. One-half the entrance money to be divided as follows: One-sixth to the team making highest score at 800 yards; two-sixths to the team making highest score at 900 yards; three-sixths to the team making highest score at 1,000 yards. The following were the scores:

	800 yards.	900 yards.	1,000 yards.	Total.
Forty-eighth regiment.	94	78	108	280
Eighth regiment.	85	70	60	215

SUBSCRIPTION MATCHES.—The winners of the subscription matches were as follows; possible score 35: No. 1, at 300 yards, D. F. Davids, 28; J. W. Todd, 28; E. E. Lewis, 27. No. 6, at 300 yards, J. S. Case, 30; R. Solis, 28; W. M. Livermore, 26. No. 8, the Empire Club team, 103; the New York Rifle Club team, 99; the Company C, United States Engineers Corps team, 97. No. 9, Seventh Regiment team, 95; Twenty-third Regiment team, 88. No. 11, at 800 yards, W. H. Jackson, 34; O. Judd, 33; R. Rathbone, 32. No. 15, at 800 yards, C. H. Eagle, 17. No. 17, at 900 yards, F. Hyde, 35; H. Fisher, 33; W. H. Jackson, 32. No. 21, at 1,000 yards, O. Judd, 31; W. H. Jackson, 31; F. Hyde, 30.

Saturday, May 25.—With a much better attendance of spectators, but with by no means as large as might have been expected, the spring meeting was brought to a close on Saturday. Weather was clear and dampish, and atmosphere slightly hazy; wind moderate.

No. 24, The Directors' Match, open only to directors and honorary directors of the N. R. A.; 200 yards; rounds, five; position, standing; weapon, any rifle; prize, the director's champion gold badge, shot for annually and held by the winner during the year. There were twelve entries. The following are the scores:

	Score

No. 26, Military team match; open to teams of five from any company, troop or battery of the National Guard or any State, or the regular army, navy or marine corps; distance, 200 yards; position, standing; teams to use the rifle their company is armed with. There were ten teams entered. The following are the scores of the three highest: Company E, United States Engineer Corps, 142; Company I, Seventh Regiment, 134; Company I, Seventh Regiment, 132.

No. 40, Stated prizes, open to all comers; distance, 600 yards; position, any; weapon, any rifle. There were twenty-five entries. The following gentlemen won the prizes:

	Score
A V Canfield, Jr.	35
H F Clark.	39
R Rathbone.	35
R H Keene.	35
J O P Burnside.	35
W M Farron.	34
L C Bruce.	33
F Hyde.	31
L L Allen.	33

The highest three pooled the prizes and tossed for places.

No. 50, Stated prizes, open to all comers; distance, 500 yards; position, any; weapon, any rifle. There were thirty entries. The prizes go to the following competitors:

	Score
F Hyde.	35
R Rathbone.	34
E H Sanford.	35
A V Canfield, Jr.	34
W M Farron.	35
H F Clark.	34
L L Allen.	35
J O P Burnside.	34
W H Jackson.	35
R H Keene.	33

The tie in this match was decided in the same manner as in No. 40.

In the subscription matches we give the following as the winners: No. 27, at 200 yards—Empire Rifle Club, team 1,

119; Empire Rifle Club, team 2, 116; New York Rifle Club, 111. No. 29 at 200 yards—E. E. Lewis, 31; J. W. Mangum, 31. D. P. Davids and A. H. Wickham, 30 (tie). No. 30, at 200 yards—W. M. Farrow, 33; H. Fisher, 29; W. R. Livermore, 20. No. 31, at 200 yards—A. Steele, 29; O. O. Hoffman, 29; C. H. Eagle, 28. No. 34, at 200 yards—J. M. Robertson, 23; C. H. Eagle, 28; H. F. Clark, 27. No. 43, at 500 yards—J. M. Gardiner, 24; G. Gilfort, J. K. Washington, 16. In each of these matches the number of rounds was 7, and the individual possibility 35 points.

CREEDMOOR CONVENTION OF RIFLEMEN.—At this convention the following organizations were represented: The National Rifle Association by Messrs. N. P. Stanton, G. W. Wingate and G. S. Schermerhorn; the Amateur Rifle Club by Col. Sanford and Mr. G. P. Waters; the Stock Exchange Rifle Club by Messrs. J. Grant and R. W. Day; the New Jersey Rifle Association by Major H. Fulton; the Massachusetts Rifle Club by Messrs. Jackson, Shepard and Rockwell; the Maryland Rifle Club by Mr. A. Canfield, and the Columbia Rifle Club, of Washington, D. C., by Mr. J. O. Burnside. General Wingate was elected president and Messrs. Schermerhorn and Johnson, secretaries. A committee was appointed to decide upon a plan for future conventions and the manner of choosing representatives to them, as well as to define the powers of delegates in convention, who reported that the powers of this convention would only extend to the recommendation to the Directors of the National Rifle Association such measures as might seem beneficial to the interests of rifle shooting. They also recommended that all future international matches be shot in the vicinity of New York, and that facilities be afforded to riflemen in other States to obtain places on the American team. These resolutions were adopted, as was also one requesting the Directors of the National Rifle Association to obtain reduced rates of fare for delegates from distant cities to the next convention and competitors in the next fall meeting. It was also proposed that an annual convention should be held during the fall meeting of the N. R. A. Acting on this, the next convention will be held as designated.

NEW YORK, May 21.—Weekly shoot; Zettler Rifle Club; Creedmoor targets reduced to gallery distance; possible 50, ten shots.

STATE CONVENTION.—Distance 100 yards; off-hand; string measure; any sights except telescope allowed, otherwise, according to the rules of the State Association. O. G. Jones, Syracuse, 20½ in.; C. E. Rider, Rochester, 27½ in.; O. P. Miller, Corning, 38½ in.; E. S. Coombs, Rochester, 47½ in.

PISTOL SHOOTING.—Deliberate; 10 shot; string measure; distance 15 yards: John B. Sage, Buffalo, 19 in.; E. Redmond, Rochester, 36 in.; E. S. Coombs, Rochester, 10 in.; George J. Marsh, Buffalo, 19½ in.; J. H. Andrews, Rochester, 20½ in. Ties: Sage, 18 3-10; Coombs, 27½.

THE NATIONAL SCHUTZENFEST.—The arrangements for the great National Schutzenfest at Union Hill, N. J., are rapidly approaching completion. Judge Gildersleeve will fill the vacancy caused by the death of Gen. Dakin. A convention of delegates from the various shooting societies in this country and abroad will be one of the features of the prize meeting, which is to take place at Union Hill on Wednesday, June 19. Additional prizes to be contested for at the "Targets of Honor" have been received, as follows: H. W. Cordts, cash, gold, \$50; Lieut. W. Jose, cash, gold, \$100; Zettler Rifle Club, a glass case containing fifty gold dollars, arranged so as to form the initials of the club; Baltimore Schutzen Corps, gold watch valued at \$125.

—At a meeting of the Schutzen Bund in this city last week, Judge Henry A. Gildersleeve was appointed as one of the Committee on Prizes and Honorary Members, in the place of General Dakin, deceased.

FIRST REGIMENT ALABAMA STATE TROOPS.—We take great pleasure in publishing the programme issued from Mobile, containing a general invitation to a rifle contest to be held on the 15th, 16th and 17th days of July next, under the auspices of the First Regiment Alabama State Troops. There will be three competitions. The following are the matches with the prizes:

Competition I.—Open to teams of five from each company, of the Organized and Uniformed Militia of the United States. Each member of the team must be an officer or a regularly enlisted member of the company he represents, and shall appear in uniform—full dress or fatigue. Distance, 200 and 500 yards, seven shots. First prize, to the team making the highest score, the Southern Company Trophy; second prize, to the highest individual score, a gold medal; third prize, to the team making the second best score, prize, or \$50 gold.

Competition II.—Open to teams of eight from each State of the Union. Each member of the team must be an officer or a regularly enlisted member of the Organized Militia of the State he represents, and shall appear in uniform—full dress or fatigue. Distance, 200 and 500 yards, seven shots. First prize, to the team making the highest score, the Southern State trophy; second prize, to the highest individual score, gold medal; third prize, to the team making the second best score, prize, or \$50 gold.

Competition III.—Open to all regularly enlisted members of the Organized and Uniformed Militia of the United States. Distance, 300 yards; position, standing; rounds, seven. First prize, to the highest score, 40 per cent of pool; second prize, the second best score, 25 per cent of pool; third prize, to

the third best score, 10 per cent. of pool. All under the rules of the N. R. A.

Any ammunition may be used and must be provided by competitors. Captains of teams will address in person Major James M. Williams, Inspector of Rifle Practice, at Headquarters in Armory Hall, at 12 m., on the day preceding the match.

TELEGRAPHIC MATCH—CHICAGO AND WARREN TEAMS.—The return match was shot on Thursday, and resulted in a victory for Chicago. We give the scores:

Chicago Team.		Warren Team.	
B G Gleason.....	5 4 5 5 6 5 4 4 5-46	J C Woodworth.....	4 5 4 4 5 5 4 4 5-44

MOTANA—Helena, May 12.—A rifle organization, with nearly fifty members, under the title of the Helens Rifle Club, has just been perfected here for the purpose of off-hand and long-range shooting. Many of the members are old riflemen, whose average is "way up" near the "possible," while others, as yet unknown to fame, manage to make the old hands mind their p's and q's. If Mr. Sitting Bull comes around this summer we will try long-range tactics on him, but we're not to say exceedingly anxious. The officers are: B. H. Tatem, Pres.; Col. W. B. Hendley, Vice-Pres., and Oranville Stuart, Sec.

CANADA.—A meeting of the Council of the Ontario Rifle Association was held at the Drill Shed, Toronto, on Thursday, the 16th instant, when it was decided that a team should not be sent this year to compete in the military match at Creedmoor.

NATURAL POINT BLANK.—Major Merrill, whose articles in our paper are considered as the best authority on all points regarding rifle matters, has very kindly placed at our disposal a letter of his addressed to Col. James G. Benton, U. S. A., commanding U. S. Arsenal at Springfield, and Col. Benton's reply. Colonel Benton's opinion, which may be considered as the soundest among professional ordnance officers, is likely to set at rest that ambiguity which has existed in regard to the terms "natural and artificial lines of sight." Communications of such a high character we appreciate very fully, and their value will be fully understood by riflemen. Colonel Benton is the author of the text book now used at West Point. Much credit is due to Major Merrill for having first defined in FOREST AND STREAM, the exact meaning of the various terms, and to have cut away a great deal of unnecessary verbiage which has hindered our riflemen:

NEW ROCHELLE, WESTCHESTER COUNTY, New York, May 7, 1878.
Col. James G. Benton, U. S. A., Commander U. S. Arsenal, Springfield, Mass.
Dear Colonel: I wish to assert, if it be true, and I think it is: First, That the rifle has no "natural point" blank and range, because it has no "natural line of sight." It does not sight over or along its "metal" in rear, which is a condition of the natural line of sight and range. The cannon has both of these. They arise from the peculiarity of its construction, and are found convenient for records, etc., in field practice. Second, That the rifle has no distinctive "artificial point blank range." The term "artificial," as used for the cannon, is in contradistinction to "natural," and if no "natural," then "artificial" falls with it. I see no use for either of these terms in reference to the rifle, and if they could be dragged into the subject, they would only serve to confuse the common reader, and hence would be decidedly objectionable. Ergo: This leaves for us simply the "point blank and range" proper for the rifle. These, with moveable sights, vary with the distance, and are always found at the second out of the trajectory by the line of sight. This definition is general, as will be seen, and at once grasps the facts and results of all point blank rifle shooting, whether it be over the level plain, up into the mountain, or down into the valley. A definition at once so simple can be easily understood by the public, and this is just what we require for the rifle as a distinct weapon from the cannon. I give, as an illustration, one example. No definition could be put for a "cross-road" than that it is the intersection of one road with another. So with the rifle point blank proper. It is the second intersection of the trajectory with the line of sight. It embraces the facts of the case, and stops there. Such a definition I have hitherto, with full explanations, put forth in FOREST AND STREAM. It is, I find, well understood and appreciated generally. The same definition, however, is exactly true for the cannon, after leaving out the two distinctions peculiar to this arm—"natural" and "artificial"—which terms I purposely dropped, as clogs to a definition for rifle and small arms practice. I know full well that we can compare and assimilate the points blank and ranges of those different arms, the one with the other, etc.; but this is confusing, and entirely unnecessary to the subject of rifle shooting and for a good, plain definition. Third, When United States arms, such as rifles, carbines and pistols, come from the manufacturer, do they come sighted on a "level," that is, with the rear sight and front sight at the same height from the axis of the bore (and thus giving no point blank), or do they come, as I suppose, with the rear sight the highest (I mean the fixed standard sight), and so give a point blank and range at once without any elevation? If so, what is the fixed or standard range, and has it any special name? If so, what is it? I feel that that small arms are sighted with sights to the "level."

I hope you will pardon me for intruding upon your time and patience, and favor me with an authoritative answer, and all *pro bono publico*, you know. Yours truly,
H. W. MERRILL.
P. S.—If you like it, or will permit me, I will have your reply published in the FOREST AND STREAM AND ROD AND GUN. It will be duly appreciated. Otherwise I will use private, of course.

NATIONAL ARMORY, SPRINGFIELD, Mass., May 14, 1878.
Major H. W. Merrill, New Rochelle, N. Y.
My Dear Major: Your note is received. The terms, "natural and artificial lines of sight," "point blank," etc., are now but little used in the military service, for the reason that aim is no longer taken along the line of the "metal" of the piece. In military rifles and carbines the lowest, or fixed line of sight, cuts the path of the bullet at 100 yards. In guns (cannon) and howitzers, the height of the front sight is made equal to that of the rear sight, and the lowest line of sight is parallel to

the axis of the bore. In mortars the line of metal is parallel to the axis of the bore. Cannon, therefore, in our service, have no point blank in the usual significance of this word. I agree with you that the further use of the words "natural and artificial," as applied to the line of sight of a fire-arm, may be dispensed with. The term point blank may be retained, understanding by it that it is the point of intersection of the fixed or lowest line of sight with the trajectory. The term "point blank range" will, of course, mean the distance of this point from the gun.

MAINE—Rangeley Lakes, May 20.—On the 11th instant Fish Commissioner H. O. Stanley, on his return from Bema Stream, where he had been engaged in depositing fry, made a few casts of the fly at the Upper Dam, and speedily hooked and captured two magnificent trout, weighing four and five pounds respectively. I believe this is the earliest catch with the fly on record in these waters. Mr. Stanley is the champion fly fisherman in this section. He has visited the Rangeley Lakes for thirty years, and has taken many hundred brook trout, weighing from three to nine and a half pounds. Probably half of these were returned to the water uninjured. He has superintended the hatching of 750,000 trout, to keep up the supply of these giants among the *Salmo fontinalis*. The first among the anglers who visited the Rangeley Lakes was Theodore L. Page, of Boston, the owner of the lovely Lake Point Cottage, at the outlet of Rangeley Lake. He arrived April 20, and will remain until October 1. Henry Lampron, of New York, is now there as his guest. Among the members of the Quosocoe Angling Association who will report at Camp Kennebec next week are J. H. Kimball, of Bath, Me., president; L. B. Reed, of New York, vice-president; James A. Williamson, of New York, secretary and treasurer; Hon. William P. Frye, M. C., of Lewiston, Me.; A. D. Lockwood, of Providence, R. I.; J. R. Payson, of Chicago; Dudley Alcott and Abraham Lansing, of Albany, and W. B. Wood, of Boston. Gentlemen and ladies desiring to be entertained at Camp Kennebec will be received during July and August without the necessity of obtaining a letter from a member. They will find excellent accommodations, good guides and boats, and very reasonable charges.

MASSACHUSETTS—New Bedford, May 21.—Our market is filled with an unusual variety of fish for this time of year; they are some three weeks earlier than usual. Bluefish are caught by the hundred. Striped bass are running up our fresh water rivers, and are caught plentifully from the bridges, etc. Sea bass, tautog, seup, etc., are for the season unusually fat and in good condition.

SEA AND RIVER FISHING.
FISH IN SEASON IN MAY.
Trout, *Salmo fontinalis*. Salmon Trout, *Salmo confinis*.
Salmon, *Salmo salar*. Shad, *Alosa*.
Grayling, *Thymallus tricolor*. Land-locked Salmon, *Salmo gloveri*.
FLIES IN SEASON IN MAY.
BLACK MAY, No. 10.—Body, black; feet, black; wings, grayish hyaline.
COW DUNG, No. 10 AND 11.—Body and feet, brownish yellow; wings, yellow-gray.
GREAT DUN, No. 9 AND 8.—Body, purple brown; feet, gray brown; wings, dark gray hyaline; setae, dark brown annulated with gray.
RED SPINNER, No. 10 AND 9.—Body, bright claret, ribbed with gold tinsel; feet, brick color; wings, gray hyal; setae, pale brick color.
YELLOW MAY, No. 10.—Body and feet, pale yellow; wings, pale yellow, mottled with brown; setae, yellow.
COACHMAN.—Body, peacock herl; feet, dark red hackle; wings, white.
KING OF THE WATER.—Same as queen of the water, with scarlet body instead of orange.
GOLD SPINNER.—Body, orange, ribbed with gold tinsel; feet, pale red hackle; wings, bright gray.
CAPTAIN.—Body, posterior half, peacock herl, anterior half, gray; white feet; red hackle; wings gray; setae, scarlet green and wood duck feathers mixed.
SOLDIER.—Body, crimson; feet, red hackle; wings, gray.
KINGDOM.—Body, white, ringed with green; feet, peacock herl, and red hackle; wings, gray, mottled with brown.
Black Palmer, Brown Palmer, Red Palmer and Gray Palmer are made respectively of the different colored hackles that distinguish them.

FISH IN MARKET—RETAIL PRICES.—Bass, 18 cents; blue fish, 12; salmon, 25; mackerel, 15; shad, 25; weakfish, 12; white perch, 15; Spanish mackerel, 50; green turtle, 15; halibut, 15; haddock, 6; king fish, 15; codfish, 6; black fish, 10; flounders, 8; porgies, 6; sea bass, 15; eels, 18; lobsters, 8; sheephead, 15; Long Island brook trout, \$1; pompano, 50; white bait, per pound, \$1 hard crabs, per 100, \$3; soft crabs, per dozen, \$1.25.

Restigouche salmon arriving in very large quantity, fully two weeks earlier than usual. Market somewhat overstocked and salmon selling for 25 cents a pound. Receipts of Connecticut salmon in New York light, but the catch said to be increasing. Prices of salmon having been cut down by the advent of fish from the Dominion, better prices can be had in Connecticut than New York. Bluefish plenty, weighing four pounds, caught on the Jersey coast and south side of Long Island. Fish much larger and in better condition than in former seasons. Very heavy hauls of striped bass have been taken in the vicinity of Westhampton and Freeport, L. I., averaging 45 pounds. Sheephead are plenty from the Chesapeake and a few from Long Island.

We noticed on the slabs of Middleton, Carman & Co., the first two red salmon caught in the Restigouche River this season; they weighed 45½ lbs. A salmon from Port Monmouth, N. J., was the novelty.

CANADA—Walkerton, Ont., May 20.—On the 15th I got a basketful of trout, from 7 to 23 and 24 ounces.

Montreal, May 23.—Salmon have arrived in large quantities at Matapedia, in the Restigouche. Some 35-pounders have been taken.

MAINE—Rangeley Lakes, May 20.—On the 11th instant Fish Commissioner H. O. Stanley, on his return from Bema Stream, where he had been engaged in depositing fry, made a few casts of the fly at the Upper Dam, and speedily hooked and captured two magnificent trout, weighing four and five pounds respectively. I believe this is the earliest catch with the fly on record in these waters. Mr. Stanley is the champion fly fisherman in this section. He has visited the Rangeley Lakes for thirty years, and has taken many hundred brook trout, weighing from three to nine and a half pounds. Probably half of these were returned to the water uninjured. He has superintended the hatching of 750,000 trout, to keep up the supply of these giants among the *Salmo fontinalis*. The first among the anglers who visited the Rangeley Lakes was Theodore L. Page, of Boston, the owner of the lovely Lake Point Cottage, at the outlet of Rangeley Lake. He arrived April 20, and will remain until October 1. Henry Lampron, of New York, is now there as his guest. Among the members of the Quosocoe Angling Association who will report at Camp Kennebec next week are J. H. Kimball, of Bath, Me., president; L. B. Reed, of New York, vice-president; James A. Williamson, of New York, secretary and treasurer; Hon. William P. Frye, M. C., of Lewiston, Me.; A. D. Lockwood, of Providence, R. I.; J. R. Payson, of Chicago; Dudley Alcott and Abraham Lansing, of Albany, and W. B. Wood, of Boston. Gentlemen and ladies desiring to be entertained at Camp Kennebec will be received during July and August without the necessity of obtaining a letter from a member. They will find excellent accommodations, good guides and boats, and very reasonable charges.

MASSACHUSETTS—New Bedford, May 21.—Our market is filled with an unusual variety of fish for this time of year; they are some three weeks earlier than usual. Bluefish are caught by the hundred. Striped bass are running up our fresh water rivers, and are caught plentifully from the bridges, etc. Sea bass, tautog, seup, etc., are for the season unusually fat and in good condition.

MOVEMENTS OF THE FISHING FLEET.—The news from the mackerel fleet is not favorable, and it begins to be feared that the schools slipped by while our vessels were seeking them at the south. Seven arrivals reported the present week, but the receipts will not exceed 100 bbls.; several vessels report damage to seines and seine-boats, and none have paid their way. A few mackerel have been taken at Cape Cod by weirs and drag-nets, and 11,000 fresh were sent to Boston Monday; large schools were reported off Cape Cod last week, but no vessels there to take them. Harwich reports four arrivals, one with 80 bbls., one with 40 bbls., and two with none. Nothing of consequence has been done on the Nova Scotia shore. The Georges fleet are meeting with rather better success, and the shore fishermen continue to do well so far as the catch is concerned. The number of Georges arrivals the past week has been 40, and the receipts 800,000 lbs. codfish. Twelve Bank arrivals have been reported, bringing 235,000 lbs. halibut. Whole number fishing arrivals for the week, 59.—*Cape Ann Advertiser, May 24.*

CONNECTICUT—New Haven, May 23.—Kingsley, the market man, opposite the Allen House, exhibited yesterday, in front of his place, a striped bass that weighed 66½ pounds, measured four feet in length, and two feet eight inches in girth. It was caught by O. Hubbard at Haddam in a shad seine.

RHODE ISLAND—Newport, May 24.—Six thousand barrels of porgies were caught off this place to-day.

THE ADIRONDACKS—Saranac Lake, May 20.—Here again for the ninth year, and find many of the sportsmen here. We left New York May 11, arrived at Port Kent 5:10 A. M. on the 12th, stage to Keeseville, and after having breakfast at the Adirondacks we started with one of Harper's covered teams for Martin's, thence to Bartlett's Sportsman's home at this place. And all the care which we could ask for is bestowed with a grace here that makes it a pleasure, almost, to be sick. This is undoubtedly the pleasantest house and location in the woods. And such trout as we caught in the upper Saranac Lake this year! I have seen three that would weigh 20 pounds each, one 26, and many 18, 16 and down to 10. Dr. Romeyn having caught one 15, 16, 20, 11½, 10 and a good many between 10 and 6 pounds each. Mr. John W. Mason caught, on May 15th, three trout, one 26, 20 and 8 pounds each. Cyrus Currier, of Newark, one 15 pounds; Mr. Seeley, of Scotch Plains, 12½, 10, and lost one that would weigh at least 20 pounds. Weather has been fine. Had season at least one month earlier. There is now at Bartlett's Cyrus Currier, of Newark; E. A. Seely, of Scotch Plains; Dr. J. R. Romeyn, of Keeseville, N. Y.; W. W. Winchester, of New Haven; Col. T. J. Hoyt, of New York; Geo. E. Hart, of Newark, N. J. Vice-President Wheeler will be here on Thursday of this week. H. E. G.

May 28, 1878.—Vice-President Wheeler, accompanied by Mrs. President Hayes and daughter, and Mrs. Dr. Woodford, of Washington, are at present at Bartlett's on the Upper Saranac. They reached the Woods via Meacham Lake and Paul Smith's. Already they have taken quite a number of trout, Mrs. Woodford taking one weighing 14 lbs. At Bartlett's I find also registered Col. T. J. Hoyt and Mr. Fred J. Phillips, of New York; Mr. W. W. Winchester, of New Haven; Dr. J. R. Romeyn, of Keeseville, N. Y.; Mr. G. E. Hart, of Newark, N. J., and the Smith party of Buffalo, N. Y. Trolling is excellent. Mr. Penfold, of New York, is at Second Pond. Romeyn-Hoyt party have been very successful in taking trout, trolling. The catch in large trout has never been equalled. Very few in the woods. Flies—the pest of the angler—have already commenced their blood sucking operations. The Upper Saranac is full of set lines and trout are taken from them in large quantities. D. B.

BUNKER FISHING AT SHELTER ISLAND.—*Shelter Island, May 21.*—The bunker fishing up to the 19th has been good, though not as successful as in the two or three weeks preceding. The steamers have done much better than the fishing vessels. One factory has been catching more fish than could be attended to, so on the 18th they gave away 60,000 to an adjoining factory. These factories employ at the work from fifteen to twenty-five men each, who have at times to work day and night at this labor, which is very severe. The fish, on the arrival of the vessel, are hoisted to the wharf, removed on a short railway to the works, and then placed in large vats, where the oil is boiled and pressed out of them into barrels to be sent to New York market. The present price is about thirty cents per gallon; and, as 1,000 fish will now produce four gallons of oil, you will perceive that the business is very remunerative, especially when one steamer can take some 700,000 per week. After the oil is pressed out the residue (called scraps) is placed on large platforms to dry, being turned over by a harrow to hasten the process. These scraps will sell for about \$12 per ton, and are sold in large quantities for manure. Large quantities of them are sold to other factories, where they are ground to a fine powder and sold as an excellent fertilizer at the rate of about \$30 per ton. This article is not considered equal in strength to the Peruvian guano, which is sold at about \$50 per ton. Still it is a powerful fertilizer and is in very great demand. Each fish vessel has a gang of seven or eight men, with two large row boats in which the big seines for surrounding the fish are carried, being towed by the vessel. A man is always stationed in the rigging on the lookout for fish, and when a school is discovered the vessel is hove to. The two boats are hastily manned, the fish are taken, and the vessel returns at once to its factory. But the steamers have a great advantage, as they can push out to sea beyond Montauk, and even for miles along the south coast of Long Island, and return at any time, in any weather, to their factories. The steamers are built for this purpose, costing from \$10,000 to \$15,000 each. They have lately been taking besides the bunkers, large quantities of bluefish and large sea porgies, and one of them brought in a large lot of codfish. The men depend for pay upon their share of the fish taken, like the mode adopted in whale ships. ISAAC McLELLAN.

FLY CASTING.—New York State Sportsmen's Association; C. C. Morse, of Rochester, and Geddes, of Syracuse, judges; J. Hoekstra, referee: Trout fly-casting—Seth Green, Rochester, 70ft.; R. Wood, Syracuse, 60ft.; Ira Wood, Syracuse, 65ft.; length of rod, 11 ft. Salmon fly-casting—R. Wood, 83ft.; Ira Wood, 78ft.; length of rod, 16ft.

THE FLY CASTING AT BUFFALO.—The following is an echo of what is much talked of in angling circles:

EDITOR FOREST AND STREAM:

For several years, I do not know how many, the first prize for fly casting at the meetings of the New York State Sportsmen's Association has been won either by Seth Green or Reuben

Wood, whom we may term professionals. This year the former took the first and the latter took the second prize. I should think that a sense of self-respect would forbid them to enter when they know that their entries keep out competitors. I heard that they were to be barred out, and myself and friend went to Buffalo to enter for the contest. Neither of us has cast over sixty feet, but when we found the same old ring there on hand we knew there was no chance. If the association wish to give them prizes every year, they should let us know; but if they wish to encourage fly-casting they go to work the wrong way. X.

NEW JERSEY—Kinsey's Ashley House, May 25.—Yesterday Noah Taylor, of Jersey City, took 18 bluefish. Blackfish and sea bass plenty and running large; some as high as 4 lbs. N. Middleton and Hon. John Lesering, of yacht *Sans Souci*, took 115 in two slack waters. Sheephead not biting yet. B.

DELAWARE SALMON.—Mr. B. W. Richards, of Philadelphia, writes that a 24½ pound salmon was caught in the Delaware off Billingsport, N. J., on the 17th inst., and another above Beverly, N. J., May 22, weighing 17 pounds.

MARYLAND—Baltimore, May 24.—Last week a party of five left Baltimore for a trout fishing expedition, via B. & O. R., to Webster, W. Va., where they embarked in wagons and proceeded overland to the head of the Elk River, in Pocahontas County. The road was extremely rough and muddy, necessitating a portion of the journey to be made on foot. At the Elk River an encampment was made. The party hooked 350 fine trout in one day's work; the second day was still better, 700 more of the princes of the fluky tribe being captured. Many of the smaller fish were thrown back into the river. After another day of the pleasant sport the total amount was aggregated and numbered 1,200, making one of the most successful fishing excursions ever known on this stream. The largest fish caught was nineteen inches long and weighing two and a quarter pounds; fully one hundred of the fish were fifteen inches in length; flies alone were used, and altogether the party, who are all experienced fishermen, pronounced it one of the most successful trout expeditions ever started. TRAYMORE.

TENNESSEE—Nashville, May 23.—Fish have begun biting again, and a number of fine ones have been caught. Three or four gentlemen took thirty pounds of bass in Crow Creek last Saturday, and some very nice black perch were caught in Mill Creek the same day. A small boy, with very poor tackle, succeeded in landing a bass in Mill Creek on Monday that weighed three and a half pounds. A gentleman from Clarksville reported to Col. Akers that last week his attention was called to a large school of fish in the Cumberland River near this place, that he believed upon close examination to be shad, and thinks that were the fishermen provided with proper seines, a large number would have been taken this season. On last Saturday about one thousand pounds of fish from different parts were shipped from this place. J. D. H.

Huntington, May 24.—Ernest Hawkins and Bill Hurt, at Jenkins' Mill Pond on Crooked Creek, four miles north of town, Wednesday last, took 27 very fine fish, mostly trout and black and goggle-eye perch. They used live minnows for bait. FORESTER.

CODFISH ON THE SOUTHERN COAST.—We are indebted to Professor Spencer F. Baird for the following interesting communication recently received by the United States Commission Fish and Fisheries, at Washington. Mr. J. M. Whitson, writing from Stumpy Point, Dare County, N. C., under date of April 30, 1878, says:

The questions embraced in your circular do not very well apply to our part of the Atlantic coast. That part of the coast with which I am acquainted extends North and South from Cape Henry, Va., to Ocracoke, N. C. On this part of the coast, so profusely washed by the waters of the Atlantic, we have never known a single codfish to be taken till the present spring. Our principal fishing in this vicinity is the white shad fishing in the waters of the Pamlico Sound during the months of February, March and April, and I think during the present spring about one dozen cod have been taken by our fishermen from their shad nets, averaging about 5½ in. mesh. The writer is not prepared to say much about the quality of the cod taken in these waters, though others say they are finely flavored, the flesh being white and of very fine texture. I had the pleasure of catching but one the whole season out in company with my associate fisherman, who claimed the right of capture and therefore appropriated the prize to his own palate. Enough of this new visitor to our waters has not yet been developed for us to give an accurate description of the time of its visitation, departure, size, etc. It would afford me great pleasure to be able to do so, but must decline trying to do this at present. There are no codfisheries either off or in shore along this part of the western coast, therefore we possess but very meagre ideas about this species of fish, but we may be able to approximate truthful statistics at some future time.

MISSISSIPPI—Aberdeen, May 20.—The fishing season has opened and is in full blast. We have some fine fishing places, as Twin, Horseshoe and Dead River lakes, and the Buttahatchie, Tipsey and Bull Mountain rivers. Those three latter are clear crystal water mountain streams, well adapted for fly and trolling fishing, and filled abundantly with trout, white perch, bream and other game fish. All the mentioned lakes and streams empty their waters into the rather muddy Tombigbee River. Bream abound in all adjacent lakes and rivers. White perch are plentiful in the rivers, and most abundant in the lakes. Dominick perch not so plentiful as the white perch, but frequently taken while fishing for white perch. Trout (black bass) in all our lakes and rivers; some reach as high as 10, 12 and 14 lbs. Channel cat found abundantly in our rivers. Drum are very abundant in the Tombigbee River; largest sizes from 10 to 20 lbs. Blue and yellow cat are taken both in lakes and rivers, and largest size caught here are 85 lbs. Shovel bill cat—Taken both in lakes and rivers in nets and traps; they rarely bite at hook on account of their long bill; from 10 to 50 lbs weight. Buffalo abounding in the rivers; largest weight 28 to 30 lbs. Sucker not numerous, but frequently taken from 6 to 8 lbs. Eel in great numbers in rivers and creeks, from 3 to 5 ft. long. Red-horse in great schools during the spawning season (March, April and May); taken mostly with the gig; average weight 5 lbs. Sturgeon, though not especially sought for, are occasionally taken on the shoal trap a few miles above Aberdeen. The largest last season pulled down 400 lbs avoidupois. Soft-shell turtle are caught chiefly in our rivers; average weight 10 to 20 lbs; largest size 40 to 50 lbs.

The seven fish first named are the finest and in the most demand in the market. All are caught with hook. The red-horse is generally harpooned, and the other larger fish are caught in wooden fish trays.

We have in our State no fish law; consequently every one has the right to seine, net or trap any fish without punishment; but all our honest and good fishermen are in strong favor that our next Legislature will make such a law, and prevent the wholesale slaughtering of fish, otherwise we will have no fish, or very few, in five years from now in these waters. W. KELLERMAN.

MICHIGAN—Detroit, May 25.—The Hon. Z. Chandler visited the Flats Thursday on the steam yacht Lillie, and caught the first bass of the season—a three pounder.

WISCONSIN.—The following letter is from Ashland, Wisconsin. Ashland lies on an arm or bay of Lake Superior, and it is around the bold rocky shores of this bay that the much-talked-of "rock fishing" is done and the immense trout are taken. The sandstone cliffs have been cut into by waves and riven by storms into all sorts of fantastic architectural forms; and it is under the natural caves and around the fragmentary rocks, which have become detached and tumbled into the water at the base of the cliffs, that the angler finds abundant elbow room for casting and big trout to reward his effort. Nowhere else can a man fish with such absolute comfort and unconcern for his back line. The editor of the *FOREST AND STREAM* wrote letters from this part of Lake Superior last year, and the help to notoriety which those letters gave may have aided in swelling the unusual number of visitors which our correspondent tells us have already gathered there. It will be seen from his letter that the best season for trout fishing is from the present date until the end of June, though we have taken trout there at the end of August. Many of our readers will be glad to receive the information which his letter gives:

Ashland, May 17.—We had a very early spring—in fact, unprecedented, the rivers and bay opening the 11th of March, the usual time being the last of April. So far, very few trout have been taken, though the streams have been in good order for fishing the past three weeks. I tried Fish Creek this week and took about 20 lbs, with minnows and flies, but am satisfied that the trout are up the streams, as they (in this vicinity) descend after the suckers have spawned—in fact, the trout follow the suckers down. I see quite a number of suckers in the streams, but am satisfied they have not spawned yet, which shows that an early opening of the streams does not affect the suckers.

I also tried the rock fishing, but with poor success, only taking five trout, the largest one pound. We had a strong south wind, which troubled the waters rather too much around and under the rocks to have good fishing. I think after the trout descend the streams they visit this rocky coast. Taking all things in consideration, the last of June, or from the 20th, would probably be a good time for fishing. If I am not mistaken, it was about the middle of June we had the best fishing last year, and the early season may change the time and make the 1st to the 15th the best this year. We have had quite a number of arrivals already, and some very fine trout taken from our streams and around the rocks. From all accounts we shall have a large number of tourists this season. Our hotel, the Chequamegon, has now a fine billiard hall, fishing boats, yachts and experienced men to run the same. We are expecting 200 editors to visit Ashland on the 27th of June. The Wisconsin Central R. R. runs trains in here at 9 P. M.; leaves here at 5 A. M. E. F. P.

IDaho—Coeur D'Alene Lake, May 2.—I am now at Coeur D'Alene Lake, Idaho, thirty-seven and a half miles northwest of Spokane Falls, and just over the Idaho line. The Spokane River is the outlet of the lake, and starts full grown one hundred yards wide at this season of high water, about ten feet deep, and with a very swift current. Coeur D'Alene Lake is about thirty miles long by two and a half broad, and is one of the most beautiful sheets of water I ever saw. Our camp is beautifully located on the shore of the lake, and I go to sleep every night lulled by the ripple on the sandy beach just back of my tent. The trout are beginning to jump, but they take the fly with reluctance. The season is much later here than at Spokane Falls, and we have ice almost every night. Three or four nights ago it froze an inch thick. I have been fishing two or three times, and had fair luck, getting mostly small fish. The big fellows are still out in the depths of the lake or the river, for one of our officers went down the river bank a few days ago and saw a fine one leap. He said it made as much noise and splash as it fell back into the water as if a baby had been thrown in.

May 8.—We also caught a trout which weighed exactly nine pounds, and so far as we could ascertain by hooks or recollect from personal experience—and there are several old trout fishers from Maine and New York here—he was a genuine *Salmo fontinalis*, or brook trout. The markings were perfect. I mention this as an item in the trout question on this coast. I thought the head a little more pointed and the nose sharper, but the others did not agree. MONMOUTH.

CALIFORNIA—San Francisco, May 18.—Have just returned from a fishing trip in Mendocino County. Found fishing superb, though running rather small on account of too much water. No end to trout in all the streams I fished. Caught over 600 in a trifle over three days' fishing, the largest weighing 1 lb. 6 oz., all taken with a yellow-jacket and coachman flies. E. T. D.

WHITEBAIT.—We stated that before long all the ichthyological facts in regard to whitebait would be determined. Dr. Bean, of the Smithsonian, writes the following as to the mixture of fish in whitebait:

"The whitebait are partly alewives and partly sea shad (*Pomolobus mediocritus*). I thought there were some true shad among them, but they proved to be *P. mediocritus*. You may readily separate *P. mediocritus* from the alewives by noticing that they have the eye slightly smaller, the snout a little longer, and the number of abdominal scutes always greater. We have not before noticed the unmistakable young of *Pomolobus mediocritus*.

A BEAUTIFUL TROUT PICTURE.—Mr. Robert Wiseman, artist, of New Haven, Conn., has presented to us for exhibition a very creditable painting of a half-pound trout, life size. The fish is represented as resting on the folds of the landing net which has just lifted him from the water, surrounded by

ferns and mosses that grow on the bank beside his native element. We are constrained to say that a most merciless criticism fails to detect any real defect in this beautiful painting, which has been subjected to severe and protracted criticism by connoisseurs. The coloring and markings, natural scene, firmness of texture, pose and technical characteristics, are all true to life and nature. The folds of the landing net, and the tension of that portion of it on which the fish rests, are most truthfully delineated. The surrounding ferns are a pretty embellishment.

The greatest obstacle to instant approval and impulsive admiration of any trout painting which has superior merit lies in the fact that trout are a hackneyed study. Every tyro makes his maiden effort on this particular fish. Trout are served in every possible attitude, with every degree of merit or default, and so many erudites meet the eye constantly in print shops, publications and studios, that the mind becomes formulated to adverse criticism before it has scarcely given a glance at the work. It is a triumph to an artist if his labor wins approval in spite of habit or prejudice, and can operate favorably upon a mind which has been negatively, so to speak. Novelty of subject or its treatment often so engages the interest of the examiner as to blind his eye to blemishes or defects; but there is no novelty, certainly, in paintings of trout. We commend Mr. Wiseman to the favorable consideration of gentlemen who may wish to test his capabilities in animal, fish or fruit portraiture. Mr. Wiseman makes a specialty of dog portraits. His studio is at New Haven, Conn., room 37, Hoadley's Building. Mr. Wiseman has on exhibition at the Academy of Design, in this city, a group of brook trout, with basket, etc., and also a group of young terriers, with a cat thrown in for variety and embellishment.

PRACTICAL LESSONS ON BASS FISHING—No 3.

[We are pleased to receive from our obliging correspondent a continuation of his series of letters on bass fishing. With the exception of this writer and Dr. Henshall, few gentlemen have attempted to instruct in the modes of angling for this species of fish. The school is altogether a new one, and there are hundreds of our readers who feel themselves under great obligations to them. We have received many letters begging for more light on the subject.—ED. F. AND S.]

CHICAGO, May 20, 1878.

EDITOR FOREST AND STREAM:

Now for that bass. I have hovered about him a long time; now inclined to rush in and finish him, and now held back by the pleasure of anticipation; but here is an end of dreaming. Now, boatman, row slowly along the windward of that sunken bar, and, my friend, cast your bait over it. Very well done for a beginner; you have got out about forty-six feet of line; let your bait sink. No bite? Well, reel in slowly for another cast. Ah! what's that? something has struck your hook. Don't pull your bait away from him; let him fumble with it a little. Now your line begins to walk off like a thing of life; let it go a little while. Now, strike him gently, not hard, but just enough to set the hook and let him know that somebody has got hold of your end of the line. Commence to reel in and find out what he is. Ah, there he goes with a rush, and the line cuts the water with a splash. That's a bass, sure; no pickerel blood in him. What are you clinging to the handle of that reel for? Drop it quick or something will break. Place your thumb upon the spool and make the pulling hard for him. The hard pulling tells on him and he turns back. Now reel him in while he is getting his breath. There he goes way off to the left; let him slide, but keep a tight rein on him with your thumb, and be quick with your reel if he turns in. Your line suddenly rises toward the surface of the water; he careful now, he is going to jump. There, he breaks the water seventy-five feet away and flings himself high into the air, and shakes his head angry at the hit. By Jove! he's a beauty, and we must have him. This is a critical moment. If the line slackens when he is in the air he will probably throw the hook from his mouth like a flash, and slap his tail at you as he goes down and away, but we will spoil that game. The moment he breaks the water, with a quick turn of the wrist bring the tip of the rod down near the water and back, keeping the line tight. This tips him over his head, he leaves the water, and stops the head shaking business. It also makes him ugly and he rushes viciously off, and now his blood is up and he means to break your line. What savage, short lunge! What are you about with your rod pointing straight at the fish and the strain of the line coming directly on the reel? Hold it up at once and give the line the benefit of the spring of the rod. Now, let your rod and line get into a straight line, or near it. See where your bass is going now! Straight for that stump. If he gets around it he'll get a purchase on your line and be off, sure. You've got to risk your line now. Don't try to stop him suddenly, but bring your rod round to the right, while you press heavily on the reel, and you will turn him to another direction. Now, Mr. Friend (who is along), you just keep still; I'm catching this fish, and you've confused my scholar enough already with your "Hold on to him," "Let him go," "Look out for him," "Stop him," "Give him the bat," etc. Where's your bass now, and what makes your line so slack? Think he's off, do you? He's running in on you. Throw your tip back as quick and far as you can, and reel in the best you know how, and find that fish. It is a miracle that he is not off already, and if I had not determined to catch him you would have lost him right here. Now you've caught up with him, and there he goes straight under the boat like a shot. Run your tip round the end of the boat, quick. There he is out of the water again, and with a slack line. What's the matter with your reel? Ah, I see. You've got the line all bunched on the centre of the spool, so that you can't work the reel. You should guide it back and forth with your left thumb when reeling so that it will wind evenly. Now you have done it. You've let the bass get among those rushes, and he has got your line wound and twisted all about among them. Boatman, row straight after him while we take up the line and drive or lead him out on the other side. Now he is pretty tired and we will take him in. Reel him in to within about eight feet of your tip (don't reel him plumb up to the tip as I've seen lots of young fishermen do), and hold him there. He makes short plunges

this way and that and to the bottom, but his force is mostly spent, and you can control him with your rod without giving him more line. Lead him gently up to the boat while your friend stands ready with the landing net. What, in heaven's name, are you diving the net at him in that savage way for? Do you want to scare him to death? He nearly parted the line with that rush. Lower the net gently and take him in as he comes alongside. There now, confound you! did you expect to take him in by the tail? Give that net to the boatman. Now he walks right into the net as if he was happy to find a resting place, and he lies panting in the bottom of the boat. He has fought his last fight, and fought it well. Isn't he a beauty? What do I think he weighs? Well, say 4½ pounds. You haven't got one of those abominable fisherman's steel-yards along, have you? No? That's right; never take one, they are horribly deceptive. Now, here is your bass that weighs 4½ pounds to an ounce; you hang him to that thing and it will tell you that he only weighs three pounds and ten ounces. Throw the nuisance away for ever, and renounce all faith in scales. I wouldn't trust the finest "Fairbanks" where a fish is concerned. They may be good for weighing other things, but they were not made for fish, and are not adapted to weighing them correctly. If you are particular to know the weight of your fish, why just "heft" him, and you can tell at once. Don't ask your boatman; he is apt to be prejudiced, and likes to take the conceit out of you a little. At Green Lake, Wisconsin, if there is any doubt about the weight of a fish, they always refer the matter to Capt. Fitzgibbon, whose decision is always final. It isn't necessary for him even to "heft" him. The bass is laid down before him; he just looks at him and marks down his figure, and that is the end. I never knew any one to appeal from his decision but once. Will Greenway and Mr. Gee, of St. Louis, once brought in a whopping great green (Oswego) bass. (By the way, they had thought it from a pot-fisher, who took it on a set-line—boys, you are both my friends, but you well deserve this punishment.) The royal fish was laid upon the hotel piazza and submitted to the inspection of the captain, who measured with his eye his length and breadth and depth and the size of his mouth, and pronounced his weight to be five pounds and six ounces. Will was dissatisfied and appealed to the scales, and the scales sustained him. He turned the balance at exactly six pounds one ounce. The captain was crestfallen, and had nothing to say except that it was an almighty heavy fish for its size. His friends looked askance upon him, and for the first and last time in my life I doubted his infallibility.

Several champagne punches were necessary to dispel the captain's gloom, and several visits to the parlor to find a lady, for he was under a vow that year to drink nothing but wine, and that only in the presence of ladies. This naturally confined him pretty close to the hotel, and we could rarely get him out fishing. In the evening it began to be whispered about that something was the matter with that fish, and finally an investigation of the servant who dressed him developed the astonishing fact that the bass had in some unaccountable manner managed to swallow just eleven ounces of shot. A dark cloud of suspicion at once rested upon Will and Joe, which, notwithstanding their protestations, finally resolved itself into a settled conviction of guilt. The captain was triumphant, and his face remained wreathed with its usual smiles during the remainder of the season. My friend, we must part company here; I cannot be with you longer in your sport. I trust that you will be successful and carry home a goodly string of beauties; and I hope that at some time I may meet you in friendly competition on the water. Suffer me to offer a parting word of advice: In fishing, be patient, and never lose your temper. When your line gets tangled and snarled on the reel, as it will at times, don't get mad and swear at it; sit quietly down and pick it out. Don't fume when your hook gets snagged. If your boat leaks, and your feet, and the lunch which you put in the box under the stern, get soaked, be calm. If it comes on to rain and you get drenched and your sport is spoiled, be philosophical; and generally be good natured. We all growl enough in our working hours without indulging that side of our nature in our recreations. Now, good-bye. I have cut out a portion of this letter to gain space for a few quiet words to "Bass." Dear Sir: In haste language you advise me to "take a tumble." Your intention doubtless was kind and praiseworthy. Prompted by the generous and genial soul of a true lover of the rod, you sought at once to purify the columns of the FOREST AND STREAM and to give me a little kindly admonition in a delicate way. It may please you to know that your shot has reached its mark and checked for the present all desire to pursue my subject. I wrote, partly, thinking that I might say something of value to the inexperienced, but principally for the pleasure it afforded me in recalling my own experiences. That pleasure has in great part given place to mortification at the result, and I have no heart for further writing, so that you and the "united several" may once more enjoy your sleep in peace. My mortification does not result from any respect for the opinion of an anonymous writer, but from the fact that it was deemed worthy of publication. I do not propose to defend my letters, at least until I know the nature of the complaint against them. If it goes to their general nature or style, I am dumb. If the objection is to the expression of individual opinion in this valuable paper as to the comparative merits of different varieties of rod, reel, hook or line, *et id omne genus*, I have nothing to say, as that is a matter exclusively within the province of the editor. If fault is found with the opinions themselves, I might feel at liberty to support them. I venture to hope that the subscription list of the FOREST AND STREAM has not been materially cut down, or its reputation as a first-class gazetteer badly damaged, and that it may in time recover its lost prestige in your eyes and in those of the "several" who "united," etc. G. C.

Rational Pastimes.

HARVARD ATHLETICS.—The spring meeting of the Harvard Athletic Association took place at Beacon Park, May 24. The contests were as follows:

One hundred yard dash—The final heat was won by Mr. Bacon, class '80, in 10½s. The one mile walk—Mr. Huidekoper, '80, in 8m. The running broad jump—Mr. Keene, '79, 14 feet 8 in. The one mile run—Mr. Hanks, '79, 5m. 2½s. A hurdle race of 120 yards, over 10 hurdles, 3 feet 6 in. high—Mr. Condon '79, in 20½s. The quarter mile run—Mr. Bacon, '80, in 5½s. The potato race—Mr. Austin, '80. The three-legged race, 100 yards—Messrs. Otis and Holden, '81, in 14½s. The bicycle race, two miles, five starters—Mr. Parker, '80, by four feet, in 12m. 27s.

THE YALE-HARVARD GAME.—The result of the game played at Cambridge on Saturday last was a surprise to almost every one, for in the previous game at New Haven the score was a close one, and the game up to the end was anybody's. About 4,000 spectators were present on Saturday, almost all of whom sported the Crimson, but it is said that during the eighth inning a very large majority of the Harvard sympathizers, seeing that their nine had no chance of winning, left the ground. Strong batting won for the Yales on Saturday last, two home runs being made by Downer and one by Brown, while the total number of base hits was 27. The Harvard catcher was disabled by a broken thumb, and his place was filled by a substitute, who, although new to the position, stopped the balls manfully and well.

This victory places Yale at the top of the list of contestants for the college championship, and if the nine do as well in the coming contests as they have in those already played, the Blue stands a very good chance of coming out ahead at the end of the season. Score, Yale 11; Harvard 5.

TRINITY COLLEGE GAMES.—The games at Hartford, May 25, resulted as follows:

One Hundred Yards Dash—Cheever, 10½s.
Putting the Shot—Appleton, 31ft 2in.
One Mile Walk—Webster, 5m 46½s.
Running Broad Jump—Campbell, 20ft 11in.
Half-Mile Run—Russell, 2m 33½s.
Three-Legged Race—Campbell and Wilcox, 16½s, distance 100 yards.
Four Hundred and Forty Yards Dash—Appleton, 2m 58s.
Running High Jump—Russell, 5ft.
Three Mile Walk—Webster, 36m ½s.
Throwing the Hammer—McBride, 68ft 8in.
Hurdle Race—100 yards, Wilcox, 13½s.
Standing Long Jump—Nelson, 9ft 6½in.
Wheelbarrow Race—Blindfolded, Kuealand.
One Mile Run—Nelson, 5m 57½s.
Pole Vaulting—Parsons, 8ft 10½in.
Sack Race—100 yards, Campbell, 24s.
Two Hundred and Twenty Yards Dash—Cheever, 25½s.

NEW YORK COLLEGE ATHLETIC CLUB.—At the annual field day, Jones' Wood, last Saturday, the contests were as follows:

One Hundred Yards Dash—First heat, three entries, Emmons won in 11½s. Second heat, three entries, Stuart won in 10½s. Third heat, three entries, Parker won in 10½s. Final heat, Stuart 10½s.
One Mile Walk—Nine entries, D Smith, Jr, won in 8m 57s.
Quarter Mile Run—First heat, three entries, Balcomb, 60s. Second heat, four entries, Callister, 66s. Third heat, two entries, Webster, 67s. Final heat, Callister, 1m 2s.
Running Long Jump—Won by Stuart, 17ft 11½in.
Five Miles Walk—Watson won in 41m 4½s.
Half-Mile Run—Won by Bomelsder in 2m 22s.
Tug of War—Freshmen vanquished Seniors.
Two Hundred and Twenty Yards Run—Parker won in 25s.

MYSTIC BOAT CLUB GAMES.—The games at Waverly Park, N. J., last Saturday, were well attended, the results being as follows:

One Hundred Yards Dash—First heat, three entries, A F Moore, Jr, and O W Thomas made a dead heat in 10½s. Second heat, five entries, J B Value, 10½s. Third heat, three entries, R Zohner, 11½s. Fourth heat, three entries, E Bousard, 10½s. Fifth heat, three entries, W M Lattell, 11s. Final heat, Value, 10s.
Running High Jump—Five entries, won by H E Ficken, N Y A C, 5ft 6in.
Four Hundred and Forty Yards Run—Four entries, W Smith handicapped eighteen yards, won in 1m 53s.
Hurdle Race—220 yards, won by J Lafon. Not timed.
One Mile Walk—O D Farmlay won in 8m 45s.
Two Hundred and Twenty Yards Club Race—Wm C Casper won.
One Mile Run—A Noel won in 5m 5s.
"Special" One Hundred and Fifty Yards Run—W C Wilmer won in 15½s.
Half-Mile Run—J Stewart, of Princeton, handicapped twenty-eight yards, won in 2m ½s.
Two Mile Relay Race—The New York Lacrosse Club had a walk-over, Princeton College and the Mystic Boat Club failing to come to time.

UNIVERSITY OF PENNSYLVANIA.—The annual spring meeting at the Germantown Cricket Grounds, last Saturday, had seventeen events, with the following successful competitors:

One Mile Walk—W N Johnson, '78, 9m 23s.
Running High Jump—O L Heins, '81, 5ft 1½in.
Four Hundred and Forty Yards Run—B Hughes, '80, 1m 10½s.
One Hundred Yards Dash—B Hughes, '80, 11s.
Putting the Shot (17 lbs)—W F Johnson, '78, 30ft 2½in.
Running Broad Jump—O Thayer, '81, 19ft 3in.
Half-Mile Run—E A White, '81, 2m 27½s.
Pole Vaulting—F Harrah, '80, 8ft 8in.
Two Hundred and Twenty Yards Dash—B Hughes, '80, 33½s.
Graduates One Hundred Yards Run—H T Gaylan, 11½s.
Graduates One Mile Walk—James Bond, 10m 52s.
Throwing the 16-pound Hammer—E S McIlvaine, 59ft 6in.
Two Mile Walk—E S McIlvaine. No time.
Hurdle Race, 120 yards—B Hughes, 19½s.
One Mile Run—O Thayer, '81, 5m 43s.
Strangers One Hundred Yards Race—Eight entries, Horace H Lee, P O C, 10s, over a grass course, up hill and against the wind. This is the fastest amateur record in the world.
The tug of war between teams from the University of Pennsylvania and from the Young America Cricket Club was won by the latter in 35s.

ORIONS.—The Orion Rowing and Athletic Association of Jersey City, will hold their second annual spring games at the West Side Driving Park, June 15, at 4 P.M. Gold and silver medals are offered for the usual athletic contests. Entries close June 8, and should be made to O. H. Taylor, Box 452, New York.

PENNINSULAR CRICKET CLUB.—A game played by the Peninsulars, of Detroit, Mich., and the London, Ont., Club, at Detroit, May 24, resulted in a score of 93 for the former, and 82 for the latter.

AMERICAN ATHLETIC CLUB.—The inaugural games will be held at the St. George's Cricket Grounds, Hoboken, June 8. Entries should be sent to S. W. Hong, P. O. Box 205, N. Y.

COACHING PARADE.—The annual spring parade of the New York Coaching Club was participated in by eleven coaches. The parade attracted great multitudes of interested spectators, and the occasion was in every way a successful one.

How to Drown.—Drowning has always been thought well of by the suicidally inclined. As a form of death it is perhaps the least painful of the more common forms with which we are familiar. "Drowning persons," Dr. R. S. Tracy, in the last *Popular Science Monthly*, tells us, "die in three different ways: 1. By syncope and asphyxia while unconscious. Some of these die instantly. 2. By apoplexy (usually congestive), common in plethoric and aged persons, followed by asphyxia while unconscious. 3. By asphyxia pure and simple. It is believed that the rapidity and painlessness of death by drowning are due chiefly to the speedy obstruction of the circulation of the blood through the lungs. In ordinary asphyxia, by the simple deprivation of air the blood throughout the body becomes charged with carbonic acid, and the arteries as well as the veins become filled with venous blood. Now, venous blood does not pass readily through the capillary vessels, and, when the accumulation of impurities has become so great as to prevent its passing at all, the circulation comes to a standstill. But the dreadful distress of suffocation comes on long before this point is reached. Now, when cold water is sucked into the lungs and comes in contact with their delicate and sensitive mucous membrane, it must cause an instant and powerful contraction of the capillaries, and obstruct the current of blood from the right side of the heart, thus indirectly damming back the venous blood in the brain. This state of things brings on unconsciousness rapidly, preceded by the pleasurable tingling sensations, rapid succession of ideas, and flashes of light and color, so often described by persons who have been rescued from drowning.

"If death by drowning be inevitable, as in a shipwreck, the easiest way to die would be to suck water into the lungs by a powerful inspiration as soon as one went beneath the surface. A person who had the courage to do this would probably become almost immediately unconscious, and never rise to the surface. As soon as the fluid filled his lungs all feelings of chilliness and pain would cease, the indescribable semi-delirium that accompanies anaesthesia would come on, with ringing in the ears and delightful visions of color and light, while he would seem to himself to be gently sinking to rest on the softest of beds and with the most delightful of dreams."

A CONSCIENTIOUS JUDGE.—Clinton Loyd, Esq., for many years Chief Clerk of the House of Representatives at Washington, and withal an enthusiastic trout fisherman, tells the following story of the late Hon. Robert C. Grier, whose example, a correspondent suggests, is worthy the imitation of all who are clothed in the sacred ermine:

"The Judge had an utter repugnance to any method of catching a trout other than with an artificial fly. On one occasion he went to Youngwoman's town on a fishing excursion. Arriving late in the afternoon he inquired of the landlord if he could give them trout for supper. 'Oh, yes,' was the reply. When supper was announced the Judge's eyes were greeted with the sight of a dish of splendid trout, cooked to a turn, and calculated to tempt the appetite of a gourmand. 'How did you catch these fellows?' asked the Judge in an excited tone. 'With a grab.' 'And what is a grab?' It was explained that it consisted of a stiff pole, on the end of which were fastened three hooks, with which the operator leaned over a deep hole where the trout lay quietly, and hooked them out by catching them under the belly. 'Take them away, take them away,' screamed the Judge. 'I wouldn't eat a trout caught that way if I was starving to death, and if I could get the scoundrel that caught them into my court in any way I would send him to the penitentiary for life.'"

HOLTM THE STRONG MAN.—They are opening their eyes in London at a Dane whose performances in the Westminster Aquarium are simply wonderful exhibitions of wonderful strength:

Holtum stretches himself along a ladder on his face, his feet against one of the rungs, and his hands clasping another. Round his wrists are bands fastened to the ladder to assist his grip. Over his shoulders and round his waist is a well-padded harness, fitting closely, with a tail, to which is attached a hook in which the chains of the traces are placed. Two good-sized van horses are fastened on, and strive their utmost to move him, but in vain; the tackle may give way but he doesn't. The strain seems to be distributed over his whole frame, and the tension, particularly in the muscles of the neck and arms, is most marked. Holtum has another feat. It consists in holding, with arms outstretched, two horses pulling opposite ways. Holtum's measurement is as follows: Chest, 41in.; neck, 16½in.; waist, 32½in.; forearm, 13in.; upper arm, 15½in.; thigh, 24½in.; calf, 16½in.; height, 5ft. 9in.; weight, 14st. 3lbs.; age, 32½ years.

The idea of catching a cannon ball, another of his wonderful feats, which he exhibits daily at the Westminster Aquarium, was first suggested to him in a dream. He draws a

salary of about £40 per week. He has shown that the body supine can stand a direct tension of over five tons.

ANOTHER PEDESTRIAN STARTED WEST.—The *Hartford Times*, May 21, has this story of a tramp who has started on a long journey:

Mr. D. H. Willard, No. 51 Capital avenue, says that in the year 1838, on the east farm, half a mile south of the Newington railroad junction, he came across a very large and beautiful spotted box or hinge tortoise (so called from its power to close its upper and under shells firmly together). Turning it upside down he inscribed on it his own initials, and the date, letting him free. In 1862 he found the same fellow again half a mile west. He had crossed two bridges or forded the streams, and three railroad tracks. The new date was then added, the first inscription being very distinct. He has not seen him since until last Saturday, 18th, when he espied him on his west farm, near the New Britain line, about one and one-half miles from the first point named, looking as hale and hearty as ever, but not increased in size perceptibly. He was duly marked 1873 and sent on his way with this query: "At this rate of travel, when will you reach the Pacific coast?"

ACCORDING TO H-OYLE.—This is the way the Rod and Gun editor of the *Bucks County Gazette* nobly comes to the front as a representative of Eastern fish story mongers:

A Western paper says: "Fish from the Allegheny river taste of coal." Perhaps the lantern at the end of the net was upset, or the cork might have dropped out of the bottle of benzine, which many fishermen carry in order to keep from catching cold. That editor ought to know that they make light houses along the streams of Pennsylvania by unrolling a ball of candle wick, immersing one end in the stream and carrying the other to the top of a long pole, where it is made fast; once lighted it never goes out until the stream dries up in summer.

AN EGOCENTRIC WAR HORSE.—The New York *World* chronicles the death of "Old Bill," the roan battle-horse of Major General W. B. Tibbits, of the Second New York Cavalry, which has died at Hoosick Falls. He was probably the only horse that served through the whole war and wound up his campaign with a visit on duty to the plains. He was a great pet of the men of the Griswold cavalry and an animal of peculiar ways. In camp or on the march he was sluggish, would not allow a pistol to be fired from his back, and if turned loose defied the efforts of a whole company to catch him, but once under fire he obeyed the slightest touch of the rein, would jump anything, paid no heed to pistol-firing from his back, and could be turned loose with the certainty that he would not stray away. In his twenty odd engagements "Old Bill" was only wounded once.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Brice-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

Musical Instruments.

HIGHEST HONORS

AT THE

Centennial World's Fair, 1876:

THE

SHONINGER ORGAN

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The B. SHONINGER ORGAN CO.'S exhibit as the best instruments at a price rendering them possible to large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS HONOR.**

There are 50,000 of our instruments in this and the European countries in use, and they are so made that they will keep in tune, and stand any climate. They contain a magnificent Chime of Bells, tuned in perfect harmony with the Reeds, producing wonderful effects. The Music Rack, when turned forward, will make a splendid writing desk, with our Book Closets and Swinging Lamp or Flower Brackets, with a fine stool boxed free with each Organ, makes the SHONINGER ORGANS the most substantial, convenient and perfect Organ.

ESTABLISHED 1850.

We are prepared to appoint a few new Agents.

A liberal discount to the Clergy, Sunday Schools, Teachers, Churches and Lodges. Illustrated Catalogues, with prices, sent by mail upon application to

READY NEXT WEEK.

HALLOCK'S American Club List, AND SPORTSMAN'S GLOSSARY.

FORMS OF ORGANIZATION AND RULES FOR PRACTICE
IN RIFLE, BASE BALL, YACHTING, PIGEON, GLASS
BALL AND OTHER PASTIMES.

* * This very much-needed Pocket Companion is edited and prepared exclusively by Chas. Hallock, Esq., editor of FOREST AND STREAM, and author of the "Sportsman's Gazetteer" and other works on Field Sports. It includes a list of several thousand clubs, embracing the principal Gun, Rifle, Cricket, Chess, Tennis, Athletic, Yacht, Boat, Game, Fish, and miscellaneous Field Clubs in the United States and Canada. It must prove of invaluable constant service to all Sportsmen and Dealers in Sporting Goods.

The Glossary comprises 700 words in local use by sportsmen throughout the country. It will prove useful to those visiting a strange region for the first time, as it will tend to prevent mistakes, and thereby save personal trouble, mortification, expense, and sometimes bodily risk.

Issued in pocket form. Cloth, price 50c. Every member of every club should have a copy. Clubs supplied at trade discount. For sale by

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner, that any ordinary stable or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed free, upon application, our book—"How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Gunpowder.

THE HAZARD POWDER CO.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casks of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. casks and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 6 (coarse). In 1 and 5 lb. casks and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. casks. Burns strong and snoot. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER, ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

GUNSMITHS AND RIFLE GALLERY,
207 Bowery, New York.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and
can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can-
not get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly
a breech loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will
fit any standard make of gun of 10 or 12 calibre—calibre of rifle 32, 38, or 44 as desired. Length of
barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s
cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P. O. box 1,178.

broken when the shot strikes
it. Price lower than any other first-
class ball.

LIBERAL DISCOUNT TO DEALERS.

Patent Applied for.

HENRY C. SQUIRES,
1 Cortlandt St., N. Y.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside.
Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents
it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fas-
tened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel
Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either
in steel or iron. These Shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.
Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses
throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
Messrs. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better
than any I have ever used. They are stronger and better in every respect, and I shall use them in all my
shooting hereafter.
Yours truly,
A. H. BOGARDUS.

The Stanton Siphon Fountain Pen Holder.

The Only Practical and Really Useful Fountain Pen-Holder
Ever Manufactured.

The only Fountain Pen-holder with a FLEXIBLE SIPHON, so that any size or make of Pen can be used.
The only Fountain Pen-holder in which the INK does not come in contact with oxidizable metal, and
therefore cannot decompose or coagulate. No spilling of ink can occur in filling, as the tube is filled by
suction from any vessel containing writing fluid.

No Inkstand or Special Ink Required.

ALWAYS READY FOR USE.

Is a very handsome and convenient pocket article; is made of strong metal, heavily nickel-plated and
polished. Contains sufficient ink to closely write twenty pages of foolscap; will feed to the point of the pen
until the last drop of ink is exhausted, and being air-tight the ink can neither evaporate nor mould. Is
easily replenished, always perfectly clean and any steel or gold pen can be substituted for the handsome
Esterbrook Indestructible Golden Pen furnished with each holder.

Sportsmen will find it a most Convenient Companion when
away from home.

Will carry sufficient ink for TEN DAYS' ordinary use. Especially adapted to the use of Doctors, Law-
yers, Commercial Travelers, Collectors, Government Officers, Railway Officials, Tourists, and all who
can appreciate the immense comfort in always having their own pen and ink with them.

Sent by mail on receipt of 25 cents, with full directions.

Sportsmen's Routes.

Chesapeake & Ohio RR.

The Route of the Sportsman and Angler
to the Best Hunting and Fishing
Grounds of Virginia and
West Virginia.

Comprising those of Central and Piedmont Virginia,
Blue Ridge Mountains, Valley of Virginia, Alleghany
Mountains, Greenbrier and New Rivers, and Kan-
awha Valley, and including in their varieties of game
and fish, deer, bear, wild turkeys, wild duck, grouse,
quail, snipe, woodcock, mountain trout, bass, pike,
pickrel, etc., etc.

Guns, fishing tackle, and one dog for each sports-
man carried free.

The Route of the Tourist

through the most beautiful and picturesque scenery
of the Virginia Mountains to their most famous
watering places and summer resorts.

The Only Route via White Sulphur Springs.

Railroad connections at Cincinnati, with the West,
Northwest and Southeast; at Gordonsville, with the
North and Northwest; and at Richmond and Char-
lotteville with the South. All modern improvements
in equipment.

CONWAY R. HOWARD,
Gen. Passenger and Ticket Agent,
Richmond, Va.

The Route of the Tourist, Sportsman and Pleasure Seeker.

TAKE THE

People's Line Steamer.

FROM PIER 41, N. R., foot of Canal St., daily,
except Sunday, at 5 P. M., connecting at Albany
with Express Trains

FOR

Savannah, Lake Champlain, Lake George,
the Adirondacks, Montreal, and all points
North and West.

This is the only steamboat line selling tickets
and checking baggage to places on the N. Y. C. & R. R.

FIRST CLASS FARE \$1. DECK, 25c.

EXCURSION TICKETS TO ALBANY AND
RETURN, \$1.50.

THROUGH TICKETS can be had at the
"Place on the pier, at all West-
cott Express offices, at all the hotel and ticket
offices in New York, or of connecting Railroad and
Steamboat Lines.

S. E. MAYO, Gen'l Passenger Agent.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
and return for \$20 are sold at 63 Clark street, or the
C. M. and St. Paul, Madison Street Depot, Chicago;
also at low rates from Milwaukee. Dogs, guns and
camp equipage taken free.

The points of attraction to sportsmen on this
"Forest and Stream" route are Menasha and Green
Bay for bass fishing; Butternut Creek and Lake for
muscatel; the many branches and lakes of the
Flambeau and Chippewa which teem with bass, pike
and pickerel, never till last season fished by sports-
men. Between Silver Creek and Ashland all are
trout streams, and many others can be easily reached
along the shore from Ashland or Bayfield, while
rock fishing for speckled trout and trolling in the
Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
year, has been enlarged, and is supplied with a
steam-yacht, sail and rowing, and excellent guides.
The atmosphere at Ashland is a sure preventive of
hay fever.

Steamers from Ashland to all Lake Ports.

Send for Guide Book.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR

(Vashaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly, or trolled a spoon

in the

Grand Traverse Region

will come again without solicitation. All other lovers

of the Rod are invited to try these waters, wherein

the fish, named above, as also Muscalouge, Pike and

Pickeral abound.

In no other streams east of the Rocky Mountains

is the famous AMERICAN GRAYLING found in

such numbers.

BROOK TROUT Season opens May 1.

GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his

skill to his friends or "Club" at home, as ice for

packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery

of the North Woods and Lakes is very beautiful.

The air is pure, dry and bracing. The climate is

peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are most far surpassing

the average in countries new enough to afford

the finest of fishing.

On and after June 1 Round Trip Excursion Tickets

sent to Points in Grand Traverse Region, and all re-
 spective train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets.
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.
 Camp Cars for fishing parties and families at low
 rates.
 It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds send to
 A. B. LEET, G. P. A.,

 ally fine display of Duck, Mole-skin and
 Leather

HUNTING SUITS,

which attracted great attention and were
 much admired by all Sportsmen.

THE BOSTON

SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON.

BOSTON, MASS.

NEW YORK AGENTS:

Fowler & Fulton,

300 BROADWAY,

The Best in Use.

ONLY ONE QUALITY MADE, AND THAT IS
 THE VERY BEST.

Flexible Waterproof, Tan-Color Duck.

Each article—coat, trousers, vest and hat
 cap—has the name and manufacturers' ad-
 dress stamped upon it, and no suit is genuine
 without it bears this imprint.

We make no discount except to the trade.
 The price of the suit complete is \$13.

The material is of the best quality of duck,
 waterproofed by a patent process. The color
 is that known as "dead grass shade."

The seams and pocket corners are copper-
 riveted, and nothing is neglected to make the
 whole suit complete in every way.

This is what one of our best sportsmen says
 of it, writing from camp: "Although I had
 been nearly eight hours under incessant rain,
 laboring and striving along under adverse
 circumstances, yet I found myself compara-
 tively dry, and my clothes without a tear. For
 the benefit of our brother sportsmen, let me
 advise one of Messrs. Simmons' (of Boston,
 Mass.) Waterproof Suits. Oh! what a relief
 it was to find one's tobacco was dry, and that
 one could light a pipe; that you could laugh
 at your miserable friend, who stood shivering
 and shaking as if he had the palsy; and then,
 next morning, oh! what fun it was to see him
 mending his clothes, while I had not a tear to
 complain of! Ventilation, that great bugbear
 of waterproof suits, is legislated for in the
 most ingenious manner. No sportsman should
 fail to supply himself with a suit which is at
 once cheap, practical, and will last an almost
 indefinite time."

Our Flexible Tan-Colored Water-Proof
 Leather Coats, Breeches, Vest, Leg-
 gings and Caps are considered the best
 things ever made.

SCHUETZENFEST

The FOREST AND STREAM AND ROYAL AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forester and Stream and Roy and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be on the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. HAKENBURG, Treasurer of the Sharpshooters' Union, No. 100 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their team without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President. J. H. BEHRENS, Cor. Sec., 31 Bowery, New York.

Adapted to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES and several Foreign Governments. Rim-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

Send for Illustrated Catalogue.

FOWLER & FULTON, General Agents, 300 Broadway, N. Y.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Beel Verner Scale, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart s sound and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for F. WEBLEY & SON'S BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

HOMER FISHER, 260 Broadway, Cor. Warren St., New York.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade. MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$5. Old style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street. FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Ind. Co., Ill. Dec6 17

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsteady articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is eminently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.

THE WINNING GUN.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 36 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1876, killing 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,325. BEWARE OF INFRINGEMENTS OR IMITATIONS.

For Forest and Stream and Rod and Gun.
THE KING-FISH OR BARB—
(*Umbrina nebulosa*).

OFT where the slender lighthouse soars,
Like sheeted ghost above the surge,
Casting its warning flames at night,
Far to the dim horizon's verge;
Round sunken reef and hidden rock,
Where shells and sands inlay the floor
Of ocean, hungry king-fish glide,
And the deep's mysteries explore.

Resplendent with their russet head,
Their silvery and azure sides,
They dart like meteoric shafts
Across the salt, tempestuous tides;
There anchor'd, when the tides are low,
When first the young food bubbling flows,
The fisher for his spinning line,
Deep down with hopeful ardor throws.

Seek them where roars the tumbling surf,
Along the inlets of the shore;
Where swift between the sandy banks
The tides thro' deepen'd channels pour;
Go where Fire Island opens its gate,
To let the flooding currents in;
Or where the surf at Barnegat
Mingles its hoarse, incessant din;
And there within the inlet jaws,
Where deep and darkest flows the tide,
Feeding in vast schools, numberless,
The greedy king-fish gleam and glide.

When upland pastures swoon with heat,
And red midsummer fires the air;
When breezeless is the city street,
And dome and spire are all a glare;
How pleasant to pass forth and taste
The salt air of the watery waste,
And in the sparkling ocean brine
To dip the hook and cast the line!

ISAAC McLELLAN.

For Forest and Stream and Rod and Gun.
Canoe Life.

EXPLORATION OF THE UPPER PASSAIC.

HAVING previously forwarded our canoes to Chatham, Morris County, N. J., as the most convenient point along the line of the D. L. & W. R. R. from which to reach the headwaters of the Passaic River, my companion and I took cars early on a bright October morning, and within the hour were inspecting our pets. Rejoiced to find them uninjured by the journey, we busily pursued our preparations for the trip. Paddles, sails, aprons, cordage, etc., were overhauled, and our provisions, blankets, waterproof coats, cartridges, cooking utensils, together with white lead, putty, tacks, screws, tin and nails for the repairing of any damage our canoes might sustain, were snugly stowed away below decks.

A rustic genius named Miller, who happily possessed a wagon, not over large, and an apology for a horse, agreed, for a consideration, to transport our boats across country to a place on the map where a road from Meyersville crossed Great Brook. The canoes being properly loaded and securely lashed, we started. Chatham and its wondering inhabitants were soon left behind. Up the not very moderate slope of Long Hill we crawled, our caravan presenting this appearance: Miller pulling the horse; the horse dragging the wagon; Fred and I, gun on shoulder, occasionally lending assistance. In this manner, at a funereal pace, enlivened now and then by a trot, where a fair slope and a pressure behind encouraged the sleepy quadruped, we proceeded, till at 4 P. M. the long-wished-for stream was reached. The talkative countryman was a beaver at work. We had the canoes unlashed and on the bank in a twinkling, and presently afloat. The native wagoner, much astonished at the behavior of the little craft, followed, in rattle-headed admiration, along the shore. It was sport to see him stare, as we, purposely, after receiving his noisy admonition, would dash upon a stone. Being unable comfortably to keep pace with us along the bank, he would dash along the banks and halloo as we passed in childish delight. At length he reluctantly bade us farewell, evidently determined to be charmed no further. Great Brook, some twenty feet broad where we launched and rifted, soon narrowed to a five foot channel, and serpentine threaded its

way through a broad expanse of low meadow, till it joined the equally sinuous but more rapid Passaic.

An hour and a half after our launch we entered the river, and shortly passed under a substantial-looking, whitewashed arrangement, spanning the stream, labeled in huge black letters, "White Bridge." We could not satisfactorily determine whether this glaring announcement of the structure's hue was intended as a work of art or a stupendous joke on the traveling public. To state that the affair was a bridge was all well enough. A traveler familiar with modern architecture and engineering would certainly never have arrived at that conclusion unaided unless possessed of a strong desire to cross the stream. But to declare the color of a thing so manifestly white, to us, seemed quite unnecessary.

A half mile further down, the sky having become overcast and darkness gaining rapidly, we drew out at a hickory grove, and soon our bright camp-fire lit up the sombre woods and threw a glare over the darkening river. A hearty supper over, we arranged our canoes and blankets for the night, then comfortably settled ourselves by the fire for a talk. While engaged in conversation we caught the sound of footsteps on the opposite bank, and presently an angry bass voice commanded: "Get out of them hickory nuts!"

Having received the assurance that we were not marauders, but innocent canoeists, our unwelcome visitor withdrew; and we, after a look at our breech-loaders, turned into our canoe beds to sleep quietly till morning.

Daylight awakened us to a gloomy prospect of rain and dripping woods. At six o'clock, after a hot breakfast, we started. Obstructions in the river, such as fallen trees, wire cables, cattle fences and jams of assorted debris, bothered us outrageously. Several times we were obliged to carry round or use the ax, not an over pleasant exercise in wet weather. About noon we reached the cut, where the river parts Long Hill. Here we landed, and with some difficulty gained the summit of the bluff. The magnificent view obtained amply repaid us for our hard climb. The N. J. West Line R. R. bridged the river within a half mile of us, and two stations were in full sight. The valley was blocked off in squares of brown-green grass and browner stubble, separated by stone walls. Further down the white houses of the village of Millington could be seen. Great red farm barns and more cosy white houses dotted, at intervals, the landscape. Under a sunny sky we could have enjoyed the view for hours; as it was, the rain soon drove us riverward.

Relaunching, we proceeded down. The stream here was a succession of rapids, and every few minutes we were obliged to wade over some unusually swift and rocky rift. Fred shot a gray squirrel and went ashore to secure him, while I entered a mill race and soon effected a landing at Millington. The inhabitants, as usual, turned out, and I had quite a talk with one old rustic, who, among other things equally queer, spoke of hearing that "muskies were plenty down to Staten Island," and said he intended going down in his dugout on a trapping expedition. The old fellow evidently had no idea of the distance or obstacles in the way of his proposed excursion.

Portaging around the mill we put into the race again, while the rosy faced miller in the proverbial white hat goodnaturedly started the wheel to give us water. On reaching the river we were troubled much by shallows, and often obliged to wade. After a little pleasurable excitement in the shape of a duck chase, which resulted only in the wetting of our guns, we settled down to a steady, swinging stroke.

Faster and faster came the rain, and more and more cheerless grew our situation, as we wound through, mile after mile of reeking, gloomy swamp. A half hour after passing the mouth of Dead River—appropriately named—we drew out at a pine-oak wood, amid the deafening caws of thousands of disturbed crows. The wind being strong, we were careful to place our canoe bows to it, and see that they were firmly lashed. With the help of a sapling and rubber blanket, I rigged a tight tent over my well. An armful of straw from a friendly stack furnished us with very good beds. They might have been a little damp, but they were certainly very comfortable. After a fair supper we turned in, and I, for my part, was soon asleep.

Twice during the night I got up to feed the fire, and at four A. M. we turned out into the darkness and same dismal rain. After a light breakfast, we arranged things so as to keep dry as possible, then pushed off and commenced our day's journey. Until noon we continued on our wet and weary way without incident, nothing occurring to disturb the unceasing dip of our double-bladders. About mid-day, feeling hungry, I ran my canoe alongside of Fred's, and thrusting my hand in aft succeeded in extracting from the provision box a score or so of crackers. Placing these upon our aprons till completely soaked, we lunched on cracker and water.

About two P. M. we arrived at a dam. After a little reconnoitering we debarked on the right bank of the pond, and portaged forty yards to the river below. We launched just above a bridge, and in spite of the storm had some curious spectators.

Some four miles farther down we came to another dam. Here we made a portage from the left across a road, and put into the race.

Half an hour after we reached another mill, and our third dam. In all the rain we unloaded the canoes. Carrying them up a steep bank, and across a rough, stony place, we put them

down a stone wall, six feet high, into a raceway, a short distance above where a turbine wheel discharged an eighteen inch stream across from the left.

At last we were loaded, and Fred, leading, made toward the hoiling discharge, which, at a right angle, impetuously dashed across, and piled up white against the opposing masonry. The whirling foam, a foot high, regurgitated madly for a second, then sped away down channel. The venture was an awkward one, and, to add to the difficulties, we were directly under a mill, and double paddles were useless. I watched Fred carefully, in order to turn his experience to my benefit. Just as his bow entered the first foam it struck a stone, and he was forced to take the hazard at an angle. In a twinkling the bow of his canoe was lifted and dashed to starboard. A paddle stroke, and the stern felt the water's force; another, and he was safe in the open rapid.

Then I urged my light craft forward, and with a strong half shove, half stroke, sent her flying into the midst of the seething mass. Quick as a flash the bow was tossed in air and hurled to the right. But I was ready for it, and with two quick, sharp strokes averted the danger and forced the canoe ahead. Then the stern lifted, and before I could change my paddle, or at least before I could take a stroke the rushing water had thrown it violently against the wall. As I felt the jar I sent all my strength into that paddle stroke, and shot out from under the mill, when, having the current squarely astern, I was all right. Resuming my double paddle I soon overtook Fred, who continued to use his single.

That mill race was long and swift, carrying the whole volume of the stream, which it resubmerged at its most rapid points. As we rounded the last bend I was appalled to see how far the river channel was below us. An exclamation from Fred reached me, and, looking forward, I beheld the worst rapid we had yet encountered.

"Can you do it?" I roared.

"I'll try," came the response.

With all my force I backed water, but my utmost exertion failed to keep the canoe from advancing.

The water of the race converged to some ten feet of rock-flanked channel, leaped with a smooth curve at the head of the decline, then, torn and fretted into angry whiteness, rushed wildly down to join the river.

Fred took the fall, and I held my breath. When he had made some twenty yards I stopped backing, and was hurried on my irremediable way.

There is something exhilarating in rapid running. Once fairly in the rush, I really enjoyed it. The wild jumps of my canoe just suited me, requiring, as they did, prompt action, a steady hand and a quick eye. Half down the rift, and used to the motion, I looked for Fred. His single paddle was flashing spitefully as he endeavored to pass to the right of a small island upon which the rapid divided. Suddenly, while I looked, his canoe struck a submerged rock with a violence that obliged him, with a rolling jump, to take to the water. Exerting all my strength, I passed to the left of the island and gained the open and quiet river in safety. Fred soon joined me.

Two miles more and we arrived at Chatham dam. Here we completely unloaded, carried our baggage and then our canoes across a grassy place, over a plank, and in at what had once been the cellar window of an old mill. From the window in the stone foundation there was a steep slope to the other side of the cellar, where the race was situated. The ground was hard, wet, slippery clay, with a few half buried stones lying around; just enough to crack a man's skull on in case he should be so unfortunate as to fall. When half the things had been transported to the water's edge, the ill luck began. Fred brought his gun and the coffee-pot containing my cartridges, which had been stowed there to keep dry, and deposited them at the window in such a manner that when he walked away the jarring of the plank shook them down. I made a bound half way up the slippery slope, and caught the gun as it was sliding toward the water. The coffee-pot flew open, and my cartridges rolled about in all directions, coating themselves with clayey mud, and some taking water.

At last, with many slips and some bruises, we succeeded in getting the canoes fairly into the shallow race, and were proceeding as fast as possible with our howling when the contemptible miller lowered the gates, stopped the mill, and then came out upon the bridge to enjoy our discomfiture. We knew if we delayed it would be impossible to get away; so, heaping silent anathemas upon the pusillanimous corn-grinder, we tumbled our effects confusedly into the canoes and pushed forward. With not a little trouble, owing to the rapidly shoaling water, we reached the river. Once there we had clear running, save that the stream was a little inclined to be rocky and rapid, to the house of a farmer-naturalist with whom we were acquainted.

It was dark when we debarked at the foot of the lane, and two more weary, wet and hungry explorers never sought shelter of house more thankfully than we. Received with a warm grasp of the hand and a hearty hunter's welcome, dried by a hot fire and invigorated by a hountiful supper, we passed a pleasant evening in the inspection of a fine collection of birds' eggs and stuffed birds. At an early hour we turned into a white spread bed, which, to our tired frames, seemed luxury sufficient. It was a fearful night. The rain had ceased, but the wind was up, fierce and cold. We were not sorry to be within doors.

The following forenoon was spent in drying and arranging our cargo. At noon, in the warm sunlight, we started. At

the mouth of Black Brook we separated, and in different directions penetrated the flooded woods in search of ducks. For a quiet half hour I proceeded through alternate patches of meadow and wooded freshet, then debouched upon a broad expanse of shallow, wind-ruffled water, coruscant in the bright sun. In the dim distance I spied the figure of a solitary duck under the lee of a reedy point. With single paddle I approached. The distance narrowed to some fifty yards, a charge of No. 6 did the work, and I had the satisfaction of boating a dusky duck. Some twenty minutes later a pin-tail passed on wing, and I heard quacka just ahead. Noiselessly I moved forward. Suddenly a pair of mallards flushed scarce twenty yards away. Both barrels spoke. The first bird dropped dead. The second towered high in air, then, setting his wings, shot with the speed of light to water. Both were dead when I retrieved them. After two ineffectual shots at long range, I joined Fred on the river. He had been as fortunate as myself, having secured one black and two wood-ducks.

Our little diversion over, we paddled hard, passing Columbia, Hanover and Swinefield, and reaching a known campsite at dusk. The canoe again provided us with couch and shelter, and we spent the night in refreshing sleep.

The first peep of dawn found our camp fire alight and breakfast in preparation. The sun had not yet put in an appearance when we left the bank. About seven o'clock we passed Pine Brook. The sudden appearance of two canoes at his very elbow rather astonished an old duck-shooter ensconced on a reedy island. At noon we partook of a good dinner, garnished with apples from a neighboring orchard. During the afternoon we fired several shots, bagging a black duck, a teal, an owl, four snipe, and a dozen of blackbirds. At six o'clock we encamped at Little Falls. After a hot supper we lay down on our blankets, feet to the fire, and slept, first agreeing that we should move on at the rising of the moon. Shortly after eleven, Fred awoke me, and twenty minutes later we were afloat. A moonlight paddle of some seven miles and we passed through sleeping Paterson. Then a long, monotonous stretch of canal seemed to mock our sleepy efforts to put its weary miles behind us. At last we arrived at Stonehouse Place and portaged to its foot. At daylight we had just cleared from Bloomfield lock. At seven o'clock we carried from the canal to a pond. A few minutes of paddling and we drew out for the last time at the house of a friend. Depositing the canoes in his barn, we shouldered our guns and game and proceeded homeward. Satisfied with the trip, we undoubtedly were; but could we have had cloudless skies and favoring, gentle breezes, instead of heating rain and northerly gales, the pleasure of the excursion would certainly have been greatly enhanced. MAGUA.

TROUTING IN THE BOARDMAN RIVER, MICHIGAN.—A Grand Rapids correspondent, H. B. W., relates the experiences of himself and a friend, who put a skiff into the Boardman River about eight miles below Kalkaska, early last June, and fished down toward Traverse City. The first morning they took 33 trout to one rod and 44 to another, and the like success continued throughout. The first portion of the route was much obstructed by fallen timber, but the fish were in great abundance, rising to the fly readily, so that it took no effort to kill them. Many large fish were taken with angle worms and flies. On the morning of the second day the timber completely harrassed their farther passage by boat, and so they abandoned her. They found the stream filled with a mass of felled timber for several miles; nevertheless they found many eligible fishing places. At one place where the water had been set back by a beaver dam, the pond seemed alive with trout jumping at flies, and they took two and even three fish at a cast. In one pool a trout was caught which measured 16½ inches, and in another a single rod took 16 fish in as many minutes. We conclude our correspondent's narrative in his own words:

Having decided to reach the R. R. at Mayfield that day, and being in an unknown country and wilderness, we took our course by the compass and traveled along steadily, passing many beautiful small lakes abounding in pickerel and bass, and the woods with deer. By noon we looked down the Valley of the Boardman four or five miles, and saw a clearing which we concluded must be where the Traverse State road crossed the river, and hastened on toward the first sign of civilization we had seen since leaving Kalkaska. At one o'clock we reached the house we had seen, and, after partaking of a hearty dinner, including desert of strawberries and cream, we again entered the stream and fished down to Mayfield. Here we stopped with Mr. Dowdy, a genuine sportsman, who keeps a comfortable hotel for the convenience of those wishing to spend their time in fishing and hunting in season, and who is not only thoroughly posted regarding the best localities for trout, bass and pickerel fishing, but who keeps a full kennel of deer and foxhounds, and knows where they can be used within an hour's tramp. When we made our appearance in the evening he was taking care of a large bear skin that had been worn by old bruin only the day before. Mr. Dowdy at once gave directions to have our trout taken care of and packed in ice and have them in readiness for the next morning's express to send them to our homes. The next morning we took the train for home. We often think of that trip and promise to again visit the Boardman River this summer, but not go as far up as we did last year.

Grand Rapids, Mich.

H. B. W.

Fish Culture.

Report of the Fish Commissioners of New Hampshire, June Session, 1878.

THE Fish Commission reports are changing in character. For a series of years we have had statements of the work done in different States. Now, pages of these valuable and interesting public documents are being filled with reports of the rich results of these labors. The time of sowing and waiting has given place to the happy harvest home, and as we have ever expressed our interest in the work as it proceeded, we now take especial pleasure in adding our compliments and congratulations to those States which are receiving the benefit of intelligent activity in this division of their economic interests.

The appearance of the salmon in the Merrimack, the Connecticut, the Housatonic, the Delaware, the Susquehanna, the Hudson and the Mississippi, are facts full of significance, and, as we have before remarked, the most effective possible arguments for the increased united efforts of State and Government fish-culturists.

In the gratification at this general promise of effort rewarded, the New Hampshire Commissioners have every reason to participate, and it is therefore with great pleasure that they herald in this last report the return of salmon to the Merrimack. The long-needed and finally accomplished alterations in the Lawrence (Mass.) Fishway have allowed the unobstructed ascent of these fish, and they have been seen in the upper waters of the Merrimack and in the Pemigewasset in large numbers. This event has already been recorded in this journal, and was referred to not long since in the abstract of the Massachusetts Report, where the observations of the Superintendent of the Lawrence Fishway in May, June and July, and the subsequent observations of other parties, confirmed the passage of these fish in quantities sufficient to insure their regular appearance in the future.

As to other fish, the commissioners have procured during the past season from the Holyoke, Mass., hatchery, 200,000 young shad, which were evenly divided between the Winnepesaukee River at Tilton, and the Contoocook at Contoocookville. Of California salmon 100,000 eggs were hatched at Livermore Falls, and distributed to Baker's, Contoocook and Pemigewasset rivers. Twenty thousand land-locked salmon eggs, 15,000 Rangely Lake trout and 5,000 California trout were hatched for the State at the Massachusetts Hatching House, and have been distributed to the waters best adapted to their growth. A large number of ponds have been stocked with black bass, and the report states that these fish are distributing themselves much faster than the efforts of the Commissioners could accomplish it. *Appropos* of the pugnacity of this fish we extract a page of the report:

"The writer of this report spent the first week in March at Fishkill Landing, on the Hudson River, where he made the acquaintance of Mr. W. G. Van Buskirk, the master mechanic of the Dutchess & Columbia railroad, who has paid a great deal of attention to the habits of the bass and who fully confirms our previous ideas as to their voracity and pugnacity. Mr. Van Buskirk told the writer that he had repeatedly seen them 'drive' pickerel of twice their size, and says they will whip any fish of their weight that swims.

"He also stated, that, to the best of his knowledge, the female bass would not take the hook during the spawning season, and said he had himself experimented on them by tempting a large bass, who was hovering over her spawning-bed, successively with live bait and grub-worms, the only result being that the bass took the bait gently in her mouth and carried it outside of the nest, where she dropped it. He then dropped a bare hook and sinker into the nest, and she quietly took up the sinker and carried them out and dropped them as before.

"He stated that the bass attacked the pickerel by cutting their throats, a statement which is in some measure confirmed by the observation of a son of the writer, who, while hunting on Connecticut River last summer, in the neighborhood of a long, rocky ledge which forms the Vermont bank for some distance and seems to be a favorite haunt of the bass, saw two quite good sized pike floating down stream with their throats torn open by some unknown enemy. It may not be generally known that the Connecticut River has been stocked to some extent, for a long time, with the Lake Champlain pike, or northern pickerel (not the muskalonge), which escaped from a pond at Northfield, Vt., stocked by the late Gov. Paine, in a heavy freshet in 1840; and these fish have been caught in the eddy below the fall at Bellows Falls, weighing as high as seventeen pounds. These pike had, to a great extent, exterminated all the smaller fish in the river, but have now got to contest their claim to sovereignty of the waters with the bass, whose accidental advent is so far desirable, though it remains to be seen what the result will be when we succeed in getting salmon and shad again into the upper waters of the Connecticut."

The New Hampshire Commissioners refer to the favorable character of the various reports of different States and Territories (of which twenty-seven are now engaged in this work) as generally encouraging, *FOREST AND STREAM* AND *ROD AND GUN* being more than once cited, as indeed it is in nearly every report now upon our table.

ONE MILLION PER DAY.—Advices from Washington, May 31, say that over 1,000,000 shad eggs are hatched at Havre de Grace, Md., daily. These eggs are shipped each night to streams in the South and Southwest and Missouri. Professor Baird says that twelve to fifteen million of young shad will have been distributed before the season closes. The salmon hatching season begins at the end of July.

VIRGINIA.—Five hundred thousand shad fry are to be placed in the Rivanna at Charlottesville, and in the south branch of the Shenandoah at Waynesboro. At Tahago Bay, on the Rappahannock, the agent has had very fair success. He has already hatched 1,200,000 shad, and is still at work—the cold weather in May prolonging the spawning season.

TENNESSEE.—Fifty thousand shad have been put into a stream near Huntington. A singular fact in connection with the shad taken in the Cumberland River is that out of the thirteen or fourteen fish examined by the State Fish Commissioner not one was found to have any eggs in them.

MISSISSIPPI.—One hundred thousand shad have been deposited in the Pascagoula River at Meridian.

WISCONSIN—Madison, May 25.—Thirty-five thousand Macinac trout have just been placed in Lake Kegonsa, not far from this city. One hundred and fifty thousand lake trout were also placed in the Nashota lakes this week and the same number were shipped to Oconomowoc to be distributed in the small lakes in the vicinity. The fish were from the Milwaukee hatching house.

ROVER.

—We had the pleasure of a visit from B. F. Shaw, Esq., of Anamosa, Fish Commissioner of Iowa. Mr. Shaw is on his way to Havre de Grace, Maryland, to obtain shad for the waters of his State. We may state that the amount of work done by the Fish Commissioners of Iowa has been of the most remarkable character, and that they are most zealous in their labors.

Natural History.

THE RED SNAPPER.

[*Lutjanus Blackfordii*—GOODE AND BEAN.]

[An interesting account of red snapper fishing on the east coast of Florida may be found in *FOREST AND STREAM* for May 25, 1876; another article on snapper fishing in the Gulf of Mexico was published in the same paper for Aug. 30, 1877.]

By a singular oversight the well-known red snapper of our Southern waters has never been described, and is without a scientific name. This is due to an erroneous identification of this species with an allied form occurring in the West Indies, the *Lutjanus ayo*, from which, however, it differs in several important respects. Its closest affinity is with the *Lutjanus torridus*, described by Professor Cope, from St. Kitts, which is separated clearly enough however from *L. Blackfordii*, though suspiciously similar to Professor Poey's *L. Campechanus*.

It is needless to describe at length the habits of this most beautiful fish. It is the most voracious and the pluckiest of the Southern fish, and is entitled to a prominent place on the list of American game fishes. It attains the weight of forty or fifty pounds, and by reason of its brilliant scarlet is the most conspicuous fish of our coast. I knew ninety of them to be caught in two hours by six men in April, 1878. This was on the snapper bank off the mouth of the St. Johns River, Fla., in about 13 fathoms of water. These fish weighed upon an average 20 pounds, and were sold at Mayport for \$1 each, packed in ice and shipped to New York.

The species is named in honor of Mr. E. G. Blackford, of New York City, a gentleman whose enthusiastic pursuit of natural history and public spirited support of all worthy enterprises need no commendation in the columns of a New York newspaper, assuredly not in those of *FOREST AND STREAM*. The U. S. National Museum is indebted to him for many hundreds of specimens of rare fishes. The Fish Commission has found in him one of its staunchest friends. Ichthyology owes to him the addition of several species to the fauna of the United States.

A full account of this new species will soon be published.

A brief synopsis of the differential characters is given here:

DIAGNOSIS.—*A. Lutjanus* with profile ascending from snout, with slight concavity in front of eye, to origin of dorsal, thence in a long curve to base of caudal; under profile much less arched. Upper and lower jaw of even extent. Height of body equal to length of head, least height of caudal peduncle equal to one-third the distance from snout to pectoral. Maxillary falling short of vertical from anterior margin of orbit, the mandibular, of that from middle of orbit. Eye circular; its diameter 6 to 7½ times in length of head. Distance of dorsal from snout 3 times length of snout. Longest dorsal ray equals first anal ray, which is from 2.3 to 6.7 of longest anal ray. Pectoral inserted at 1.3, anal at 2.3 of the distance from snout to base of caudal rays. Caudal crescent shaped, its median rays 2.3 of external rays in length. Length of pectoral twice that of upper jaw. Distance of ventral from snout equals height of body, its length three times that of a second anal spine. Radial formula—D. X., 14; A. III., 9; C. x. 17 x.; P. I., 16; V. I., 5. Scales, 50 in longitudinal series, 8 above and 15 below the lateral line. Color, uniform scarlet, except the throat which is silvery.

A CORRECTION.—In writing in our last issue about a load of red-snappers coming from Florida, we were made to say "the first" instead of "the finest." The *Lutjanus blackfordii* has been seen in the market for quite a number of years, though without having had any scientific name given to it.

DEER SINKING AND FLOATING.

NEW WESTMINSTER, British Columbia, March 20, 1878.

EDITOR *FOREST AND STREAM*:

In an answer in a late issue to one of your numerous correspondents, I see you attribute the sinking of the deer when shot in the water while in the red coat, and the floating of the deer when in the blue coat, to the condition of the animal, and not to the buoyancy of the hair. After a series of observations and a good deal of inquiry, my experience is that the deer in the red coat sinks, while that in the blue coat floats without regard to the fatness or leanness of the animal in question, and in every case falling within my scope this has held good. I have seen deer shot while in the red coat sink like a stone, and when recovered have found them to have an inch of fat on the brisket, and others shot while in the blue and so lean as to be almost worthless as food, float like a cork.

This subject has been of considerable interest to me, and I have formed the opinion, and hold to it, that the floating or sinking of the deer is due entirely to the greater buoyancy of the blue coat over the red; and perhaps I have been in a position to better judge of this than many others. In the locality where I have been hunting for the past fifteen years, in addition to what deer I have had a hand in killing or killed myself, nearly all the deer secured by still hunting were killed in a tract traversed by a large mill flume and ditch, which was made the medium of transport, and the invariable custom when killing a deer was to make for this ditch, alongside of which was the only path or trail leading out of the woods. If the deer was in the blue coat it was thrown in the ditch and floated to the mill. The hunter, walking along the trail, was thus saved from the labor of carrying his game, and it made no matter whether the deer was fat or lean, entrails in or out, if in the blue coat it floated, but if in the red the converse was the case, and if put into the ditch it sank to the bottom.

The hair is much longer and more of it on the deer while in the blue coat, and as the hairs are hollow inclosing a certain amount of air resembling in a small degree the tube of a feather, it follows as a natural consequence that the longer these tubes are and the greater their number, so in proportion

is the buoyancy of the animal increased. My opinion in regard to this is further strengthened by the statement of practical tanners who inform me that it is impossible to keep a deer skin submerged in a tan vat except by placing heavy weights upon it. Other hides, such as ox or horse hides, placed on top, will not answer the purpose. No matter how many of these you place on top in a few hours the deer skin will work out from under them and float at the top.

I read an article in your paper last year in which the statement was made that a deer in the red coat, if not killed too quickly after taking water and allowed to become blown, would not sink; and following this idea, more with a view to test its truthfulness than otherwise (for it was contrary to my own convictions), one day last August I drove a buck twice across a lake and then to the middle, where I shot him, and he immediately sank, and in trying to grasp him I upset rather a cranky canoe, and after about an hour's work paddling said canoe to shore, sitting astride the bottom with my legs dangling in the water and my body as wet as a drowned rat, mourning the loss of a fine double-barreled breech-loader and some other hunting implements, had I then met the writer of that article I am somewhat afraid my remarks to him would have been the reverse of complimentary.

I write this in a spirit of friendly caution to brother sportsmen who may not have many opportunities of killing a deer, and to whom the loss of a fine buck by sinking would be perhaps a matter of more regret than the loss of my gun was to me, and advise them that the only rule safe to be followed is this: If a deer is in the blue coat, kill him whenever you please; but if in the red, drive him ashore and kill him when he is landing.

It is due to others, holding contrary opinions to mine, to say that the deer I speak of are the black-tailed deer of the Pacific Coast, as my experience is principally confined to them; but I may mention that many hunters of my acquaintance agree in this theory as applicable to the white-tailed deer east of the Rocky Mountains.

Yours truly,
MOWITCH.
[We must acknowledge that the views advanced by our correspondent are new to us, and also that they seem very plausible.—Ed.]

MORE ABOUT DEER.

THEIR HORNS AND HABITS.

WILLIS, Texas, April 16, 1878.

EDITOR FOREST AND STREAM:

"Do deer bury their horns?" I say emphatically they do not. I mean the red deer of this country. Of what tame deer may do in confinement I can say nothing; but wild deer do not make a funeral of their antlers after shedding, nor do they knock, butt or rub them off against trees, nor do they crawl into some secret cavern or cross-hatched jungle to drop them, but drop them, when ready to come off, at any place and at any time. Generally they are dropped off as the animal is lying down quietly, ruminating his food, which is usually in a nearly open space on a dry hill or knoll, the kind of places old bucks prefer lying when in an undisturbed locality, or when the weather is warm and pleasant; but when it is cool or cold, he repairs to a thicket for protection from cold and may drop his horns there; but he does not seek such places to hide, shed, or bury his horns. It is only a matter of chance about that. When the horn is about to turn loose from the head there ensues an itching process at the base of the horn, just as in the gums of a child, when its teeth are becoming loose, and this itching often causes the buck to rub the place against a tree on that account, and during the operation the horns sometimes fall off, then the place bleeds a few drops, and a scab forms over the wound, which itself scales off in a week or two, and in the course of a month or six weeks the new or young horn begins to peep out, which, in this climate, is about March 1. The

bucks shed their horns here from Christmas Day to the middle of February. They then drop them, sometimes one, and sometimes both together. I have found them both ways. They drop them on the top of the ground or leaves, and pay no further attention to them, except to give a farewell look, smell or lick. The buck is now quite poor and shabby, and cowardly in his gray or drab suit, and is apt to seek the company of a lot of deer and yearlings, and with them remain until say 15th April or along in May, when the does begin to have their fawns. Now the old bucks begin to grow their horns, shed off their old gray winter clothes, and put on a thin coat of beautiful red or bay, and then get themselves together in herds of from two to ten or more, and thus remain until the horns are full grown, the velvet shed off, and the running or rutting season begins. This takes place the last of September in this region, and extends through to October and November. Then they quarrel and fight, and separate as though entire strangers to each other. The old bucks, of course, receive about all the attention of the does at this time, but the spike, or forked horn, insists on standing in sight, pawing the ground, rubbing the saplings and looking "lonesome" and mad. And as to the spike buck doing all the rubbing of the bark off saplings, that's all bosh. All bucks do the rubbing and barking of saplings, and twisting their overhanging branches into whistles with their horns; all paw and dig up the earth; all chase the does, and all fight. We call the places where they wound the trees "rubs," and the places dug and pawed "scrapses."

They visit their scrapes nearly every day, and paw and stamp and cut up all sorts of antics. But the "scrape" is not confined to the visits of one deer. The bucks, does and all, go to them, and paw and prance, and drop their excrement, and especially urine, in and around these scrapes, and others come along and do the same; this is kept up during the running season, and from persons seeing these scrapes or the deer pawing at them, has no doubt sprung the idea that "deer bury their horns," and these are the places where the funeral obsequies take place.

This rubbing of the horns is done during the running season alone, and not, as many think, that the buck does it to get the velvet off. Deer do not rub the velvet off. The velvet is simply a delicate skin, covered with a soft dove-colored bristle or hair. This skin possesses nerves and blood vessels, and has all the functions and vitality of any other skin of the body until the antlers are fully developed, then this skin dies around the base of the horn, and, all vitality and circulation being cut off, the "velvet skin" splits up and peels off in strips and shreds and falls off itself, the deer having nothing to do with rubbing it off, for at that time the antler has lost all sensibility from base to point. If you think the old buck does not rub the bark off saplings, you examine any old buck's horns two weeks after the running season has begun, and you will find the *rougar* or rough parts about the front of the base of the horns all filled with particles of green bark. Many a time have I sat near these scrapes at daybreak with rifle awaiting an old buck, and seldom failed to get him between the dawn of day and sun-up—and have killed three or four in one morning in this way. Some would be chasing a doe, some playing, some walking moodily along as though they had been keeping late hours last night.

Now, about the "fawn and his spots." A fawn does not lose his spots as long as he is a fawn, which time is from the birth until he sheds entirely his red spotted coat, and then puts on his blue winter goods. He then becomes a "yearling" deer. The spots are confined to the original or fawn-colored coat that he wears first, and are never lost until that whole coat is entirely removed, although become very pale toward shedding time. The "Pawnee chief" is nearer right than any of you, though he is modest in what he says; and in conclusion, I trust that my brother sportsmen will not blame me too severely for differing so widely from them. But if there is any merit in an experience of years in the woods, day and night, in all seasons of the year, and hunting these splendid animals with all the eagerness and zeal of the sportsman, and quietly and dispassionately watching all their characteristics, movements and actions, with all the anxiety of a naturalist, then it appears that I should know whereof I speak.

O. L. J.

SALMO SPILURUS.—Length, 14 inches.

THE SALMONIDÆ OF TEXAS.

HOUSTON, Texas, May 18, 1878.

EDITOR FOREST AND STREAM:

I am much disappointed at not getting the continuation in your number, May 2, of the letters on bass fishing. What objection your anonymous correspondent has to urge against them I cannot possibly see. At any rate, we here who get your journal, were not only interested in, but exceedingly anxious for, the continuation of these letters. Recent railroad extensions from the City of Houston have opened up facilities for pursuing the piscatory art which has given a new and vigorous impulse to this noble sport. Bass and trout are the principal fish taken at these new places, and any practical information in regard to the method of capturing them would be thankfully received. It is now sport to the most of us, our fishing having been confined heretofore, for the most part, to the streams adjacent to the city, and the fish taken being those common to these streams—the buffalo, the cat, an occasional trout, but principally perch. By the way, I see a communication from Mr. N. A. Taylor, in this number, in regard to the *Salmo fontinalis* in Texas. During my student life in New Haven, Conn., I invariably spent the summer vacation in pedestrian tours through the country. Angling was our chief source of amusement. On these trips I have lifted many of the speckled beauties from the sparkling element, and hence know them well when I see them. During the late war I was assistant surgeon of the Second Texas Rifles, and accompanied an expedition through the northwestern portion of Texas and New Mexico. If my recollection serves me at this distance of time, that being 1861, I think I have taken the *Salmo fontinalis* from the San Felipe Springs, twenty-five miles above Fort Clark. Of this, however

I will not be positive. I was stationed at Fort Hudson, on the Devil's River, and have a distinct recollection of having taken the speckled trout from this stream. At Fort Davis I remained several months, during which time I caught many trout from the Limpia. This was in Texas, and covers my fishing experience in that portion of the State. After crossing the line, however, into New Mexico, I have seen many fine specimens of speckled trout taken from the Rio Benito at Fort Stanton, and from other mountain streams in the Territory. I add this simply to establish a fact which seems to be in dispute, and which I can do by positive knowledge and actual experience. There may be some little difference in regard to the size and color of the spots on the fish, but the variation is so slight from their New England cousins as not to make it remarkable. Hoping to see a continuation of the "Practical Lessons on Bass Fishing," I remain,

Yours respectfully,

J. W. DANIEL, M. D.

[The origin of the question whether speckled trout of the family of Salmonidæ existed in Texas, arose from a disputed statement made in "Hallock's Gazetteer." Ample testimony has been printed in FOREST AND STREAM, from army officers and others, supporting the assertions of the Gazetteer, and what is now added above is a valued substantiation for which we feel very grateful. The Gazetteer is exceptionally accurate and can generally be relied on with perfect faith. In further confirmation we print herewith a portrait of the fish itself: Color, yellowish brown above, spotted with black; a red band on each side of the chin.—Ed.]

MIGRATIONS OF THE CRAPPIE.—In your last number I noticed an article from "Yell," headed "What a Crappie Is," which evidently describes with accuracy a fish well known here. Our river, the Big Barren, is a tributary of Green, and it of the Ohio. These fish appeared here about thirty or thirty-five years ago, and are generally believed to be a lake fish, reaching the Ohio and tributaries through the Erie Canal. They also appearing simultaneously with the Alexander Campbell reformation in the West, were, according to the varying designation of this movement in different localities, called Campbellites, Newlights, Reformers, Christians, etc. In some localities on Green River they are also known as calico perch, bachelor, tin mouth, etc. They are a fine pan fish, gregarious, nearly always in schools, and love deep still water. Bowling Green, Ky., May 26, 1878. S. W. C.

A GRATER'S FAMILY.—An Albany, N. Y., correspondent writes that a grouse at Tribe's Hill, near that city, having appropriated a hen's nest full of eggs, has hatched out a brood of chickens, and is now caring for them. We have chronicled several cases of a similar nature before.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUESDAY, MAY 25.—One broad-winged huzzard, *Buteo pennsylvanicus*, presented; one hog-nosed snake, *Heterodon platyrhina*, presented; one pine snake, *Pituophis melanoleucus*, presented; one glass snake, *Ophiocercus ventralis*, presented; one opossum and seven young, *Didelphys virginiana*, presented; one scurlet ibis, *Ibis rubra*, presented; two copperheads, *Agkistrodon contortrix*, presented; one Gt. horned owl, *Bubo virginianus*, presented.

ARTHUR E. BROWN, Gen. Supt.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 25.—One black-eared marmoset, *Myiophobus jacchus*, presented by Mr. G. S. McWaters, N. Y. City; one opossum and five young, *Didelphys virginiana*, presented by Mr. Frank F. Kinney, N. Y. City; two Solanopolegones, *Anser domesticus*, presented by Mr. William Shapson, Jr., N. Y. City; one Angora goat and young, *Capra hircus*; six black swans, *Cygnus atratus*, bred in the menagerie.

W. A. CONKLIN, Director.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age.
2. Food and medicine given.
3. Appearance of the eye of the coat; of the tongue and lips.
4. Any changes in the appearance of the body, including drawing in of the flanks, etc.
5. Breathing, the number of respirations per minute, and whether labored or not.
6. Condition of the bowels and secretions of the kidneys, color, etc.
7. Appetite; regular, variable, etc.
8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg.
9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

THE DOG CAREFULLY CONSIDERED.

HOW MANY SHEEP DOES HE KILL? HOW MANY PERSONS DIE OF HYDROPHOBIA?

To confess to an affection for the dog—

"Man's faithful friend,

"The first to welcome, the foremost to defend,"

is to do more than to acknowledge the influence of a feeling common to all. The boy who grows up without experiencing the delight of canine proprietorship has had no childhood to boast of. Although Tray has his faults, his virtues so greatly overbalance them that he will always retain his old place in the affections of man. He was made for man, and has come to stay.

Dr. Alexander Hadden, of this city, is a discreet admirer of the race. In a paper read by him at a recent meeting of a section of the American Institute, the doctor traced the dog's history, and extolled the brute's fidelity to his human master, his intelligence, and his usefulness. The paper is an interesting one, but of too great length to warrant its publication in full in these columns. Dr. Hadden has a theory, as will be seen by that part of his address reproduced below.

The principal cause which seems to lower the dog in the esteem of many is hydrophobia. To show how little this was to be feared, Dr. Hadden gives abundant statistics. In the year ending June 30, 1870, there were 333,169 deaths from all causes in the United States. Of these 63 are attributed to hydrophobia; thus in a population of over 40,000,000, out of 28,729 deaths in this city during 1874, only five are credited as due to hydrophobia. In 1875 there were 30,709 deaths, none from hydrophobia. In 1876, out of 29,123 deaths but five are set down to hydrophobia. During the twenty-five years ending in 1872 there were in England and Wales 11,220,724 deaths, 373 of which were credited to hydrophobia. How many of these reported deaths from hydrophobia were from other diseases simulating that malady cannot be estimated. The cat, the fox and the wolf should be credited with causing some of these deaths. "Surely," adds the doctor, "this statistical review must convince any reasonable mind that the persecution now carried on against this noble, sensitive and loving servant of mankind is almost senseless and highly unjust."

The agricultural reports are not so favorable to this animal. The U. S. Commission of Agriculture gives, in his report of 1865, a shocking statement of the ravages of this brute among the flocks. He gives the return from 373 counties of twenty-three States of the number of sheep killed by him during that year as follows—77,851; and estimates the whole number killed in the United States during the same period to be about 500,000, and the loss to the growers to be about \$2,000,000.

Since 1865 no report of these facts has been made, but

there are ample reasons to believe that the ravages are no less. This offence is about the only one of importance that can be charged to this animal. This propensity seems to be the sole remaining vice of his wild state, from which he has doubtless been so far reclaimed by domestication. He is never stimulated to this act by hunger, but does it in wild mischief. The male canine only is given to this evil, the female never, unless in the wild state or gathering food for young. It is also a remarkable fact that this animal never goes alone on these raids, but always with a companion dog at least—sometimes in packs. Although one only may be in the chase, the other is near. It is always remarkable that these raids are always preceded by an intimate association of neighboring dogs. It is doubtless out of these associations the mischief springs. To break up this disposition should be our aim, and this is most effectually done by castration. By this he is so changed that his attachments are for his home and his master only and not for those of his kind. I suggested and put this in practice about four years ago. The animal was only a mongrel, but has made a very fine and handsome watch dog and has no disposition to run with those of his kind. He has not grown fat or sluggish, as some authors state they do, but has remained bright, active and very docile. One of my friends who owns a very fine, well-trained shepherd dog, which he raised, had him castrated by my advice when he was about a year old, for the purpose of breaking up his tendency to run with other dogs. Its owner reports that the operation proved successful, and further, that the dog has retained all his useful qualities as a farm dog. He is now four years old. Dr. Burdick, a veterinary surgeon, stated to me that one of the best rat terriers he ever knew was castrated. I have like testimony from others which it is unnecessary to quote. They would only further illustrate the same fact. It is my belief that should this operation be performed on all dogs that are allowed to run at large, the ravages on the flocks of sheep would cease entirely.

The effect of this operation on the bull, horse and sheep, etc., is good, and that it increases their docility, usefulness and intelligence all will admit. If the operation is delayed until the animal becomes old, when habits are formed, it certainly does produce sluggishness and uselessness, unless the animal is intended for food. It has other advantages. He becomes a less objectionable house-pet, and far superior to the bitch. He is not as likely to be decoyed away by another dog when left to watch premises, a stratagem that thieves and burglars often use. He will also, like the castrated cat, live and be useful to a greater age. That he would be less likely to develop hydrophobia is also probable, for he would be less exposed to inoculation by his association with those of his kind. I may also add that the frequent street scenes of a disgusting character would be by this prevented, an advantage which all good citizens would recognize. There is a law to prevent stallions or rams going at large; let it be extended to the dog.

From the foregoing facts Dr. Hadden is led to make the following deductions:

That the long association of the dog with human society renders the possibility of his being cast out highly improbable. That there is a mutual love existing between mankind and this animal is an incontrovertible fact. That he has become a necessity in many of the pleasures and vocations of the human family no one can reasonably doubt. That he sometimes communicates a very fatal disease to human beings, and is frequently the destroyer of valuable property and interest is well supported by statistics. That it is our duty to prevent this destruction of life and property, and yet retain the animal in all his usefulness, is unquestionable. That castration is a step in the right direction will be doubtless proven by a fair trial.

THE GRAY FOX HOUND AND RED FOX HOUND.—The question having been asked as to the difference between the dog to be used for the gray fox or his red brother, at our request a gentleman, whose acquaintance with hounds has no superior, writes us as follows:

WASHINGTON, D. C., May 18.

EDITOR FOREST AND STREAM:

I believe it is the accepted idea that the gray fox dog should be a light, wiry animal with some beagle blood in him, a close trailer, and never inclined to run except by the nose. In Maryland and Virginia these dogs are sometimes as light as thirty-one or two pounds. The red fox dog is often as heavy as sixty pounds, being essentially different in size, and in requirements for a long, straight run, not essentially a close trailer, but with the intelligence to take short cuts and keep as close to the fox as possible. The gray fox circles, doubles and uses all sorts of tricks rather than trust to his speed; the red goes straight off for a long run, and, therefore, the dog, to catch him, must never loller for a second, for if the trail gets cold there is no chance to find it by the close and careful beating of the field and cover as would do in case of the gray.

Along the Potomac River the best dogs are from the Northern Neck, the ancient domain of Lord Fairfax, who was a famous huntsman and taught Gen. Washington the noble sport. From his day down to the present a fine breed of dogs has been kept in that country. I think the best imported blood was from Kildare, Ireland. P. McC.

A NEW KIND OF DOG MURDER.—A scamp in Franklin, N. H., has conceived and put into practice a most diabolically ingenious method of killing valuable dogs in his neighborhood. His method is simply to prepare a—his desist. It would only be teaching other scamps how to do it too.

PHILADELPHIA KENNEL CLUB.—We are in receipt of the constitution and by-laws of this club, which seem to us to be formed with great good judgment. The officers of the club are: Pres., John O. Johnson; Cor. Sec., James N. Wheeler; Sec. and Treas., P. C. De Sauque.

MINNESOTA KENNEL CLUB.—The President is B. Beaupre, and the officers are gentlemen from Minnesota. In a late issue the name of Mr. Beaupre was misspelled.

PEDIGREE.—Mr. C. N. Whitman, of Leavenworth, Kansas, gives us the following information as to Pedigree. He was bred by Edward Laverack in 1875, and imported by Mr. C. S. Westcott, of Philadelphia, and purchased by Mr. Whitman last summer. Pedigree has won several first prizes, but has not been exhibited of late.

—Two dogs paraded in the New York Decoration Day procession. One belonged to the cavalry and the other to the fire department.

—A dog sat in front of a restaurant window near this office, last Saturday afternoon, and eyed a beefsteak and licked his chops for just two hours.

NAME CLAIMED.—Mr. William Shaw, of Rouse's Point, May 17th, claims the name of Flusher for his liver colored cocker spaniel, from Mr. P. McKoon's kennel, whelped April 6th, 1878.

VISITS.—Columbia, Tenn., May 25.—Mr. Joe Dew's Fannie was visited by Bryson's Gladstone, winner 1st at St. Louis and Baltimore. VAL.

HUDSON RIVER TRAVEL.—The Popular and favorite People's Line of Albany steamers have decided to send one of their boats to Albany every day in the week, leaving their dock at 6 o'clock P. M. This is an accommodation that will be appreciated by travelers and tourists.

Yachting and Boating.

YACHTING NEWS.

ATLANTIC YACHT CLUB.—The opening cruise of the Atlantic Yacht Club, despite bad weather, must be set down a decided success. The morning of May 30th broke with the sky overcast and a wet, chilly breeze from the East. The fleet, which included about twenty-five sail, had assembled in Gowanus Bay and lay at anchor with lower sails and topsails set, a few venturing to hoist their elubs, a questionable piece of seamanship under ordinary circumstances, but as the day was to include something like a race, skippers were a little more free with their muslin. At 10:30 the fleet went away promptly at the second gun fire from the Commodore. Jibs were hoisted and all hands were short round, shaping a course directly down the bay with booms over the starboard quarter. The smaller yachts feeling the breeze the quickest, led the way with *Atalanta*, *Meta*, *Peerless* and *Triton* close astern with the larger sloops, including the new *Imperia*, led by the *Orion*. The wind hauled to the Southward and freshened, putting lee rails under, and it was not long before kites were handed and fore-topsails clewed down. *Tidal Wave* had joined the fleet in the meantime, proposing to give her new rig and centre-board a test alongside of Mr. Astor's smart schooner. *Tidal* has been in the hands of Mr. A. Carey Smith for alterations for some time past, and the very satisfactory manner in which she worked is much to that gentleman's credit, and another illustration of the value of scientific design in securing desired ends at the outset without the fearful "botching" too often witnessed in changing a yacht's rig. Her board has been lengthened 7ft., a new set of sticks 5ft. longer than her old ones stepped, and new canvas supplied all round. She now carries a lug-foresail and staysail supplied by Sawyer, whose name is a guarantee for as snugly fitting canvas as any maker can turn out on either side of the Atlantic. Off Owl's Head *Triton*, *Meta* and *Peerless* had a little brush, *Meta* doing well, but *Triton* rapidly gaining on the other two. Through the Narrows sheets were trimmed in flat, the wind having gone round more to the Eastward. The big schooners drew out ahead in the stiffening breeze while the sloops were left in a bunch astern, *Orion*, however, having a long lead in her class. Indeed, this sloop's sailing must have been gratifying to her owner, for though always known as a fast one, the way she showed up to-day with a free sheet and on the wind proves her to be in finer trim than ever before, and we predict for her a season of wonderful success. Her power in a sea and the neat way she has of screwing out to windward were demonstrated during this opening cruise to a high degree. Buoy 8½ on the S. W. Spit was rounded as follows:

SCHOONERS.			
Name.	H.	M.	S.
Atalanta.....	11	48	00
Tidal Wave.....	11	50	00
Meta.....	11	50	30
SLOOPS.			
Orion.....	11	56	00
Sadie.....	12	00	00
Dolphin.....	12	02	00

The rest were not timed, *Imperia*, Mr. Pearce's new sloop, did very well considering that she is only afloat a short time, and has not yet had opportunity to get her best trim or to stretch her canvas properly. From the buoy the fleet made for Gravesend Bay, where the scrub race was to end, with a free wind, the strong ebb tide compelling them to put their helms up a bit and point to leeward of their true course. *Atalanta* was the first to come to after a spirited tussel with the Californian's big schooner, the time of the fleet being:

SCHOONERS.			
Name.	H.	M.	S.
Atalanta.....	12	37	30
Tidal Wave.....	12	39	20
Meta.....	12	45	25
SLOOPS.			
Orion.....	12	44	40
Sadie.....	1	00	30
Dolphin.....	1	07	08
Imperia.....	1	19	40
Kaiser.....	1	18	45

The smaller craft put in at Stillwell's landing. Pilot was the only one of the open boats to round the S. W. Spit. After dinner, at 2:35 P. M., the gun from the Commodore, aboard his schooner *Triton*, brought all hands on deck again, and chains hove short. At 2:40 the second gun sent the fleet away homeward bound. *Meta* took the lead with *Orion*, *Sadie*, *Peerless* and *Triton* following. It was a best home up the bay, the wind having backed more to the northward, and now was the time for *Orion* to show the stuff she was made of. One by one she picked up the leading schooners and dropped them under her lee with the exception of the flag officers' schooner which led clear up to the anchorage at Gowanus, letting go her mud hook a scant half minute ahead of the weatherly sloop at 3:35 P. M.

As the yachts came to anchor the leaders were timed as under:

SCHOONERS.		SLOOPS.	
Name.	Time.	Name.	Time.
Atalanta.....	3 35 30	Orion.....	3 35 00
Peerless.....	3 38 00	Sadie.....	3 40 30
Meta.....	3 38 00		

The rest came in straggling. The Atlantic Yacht Club must be congratulated upon so successful an opening cruise, one which was spiritedly sailed and brought to a satisfactory conclusion without anything to mar the event.

MASSACHUSETTS YACHTING.—Boston, May 27.—Commodore Peabody's new cutter-sloop was out yesterday in the harbor. She excites various comments among yachting men here, and has been likened to an Irish "moss boat" magnified three or four times. She seems to move easily through the water, but might be improved by an increased area of canvas, unless Com. Peabody intends to go to sea or sail through the winter months. By the way, not content with an English rig, he has got an idea—borrowed from whom or where no one knows—and that is of having his coat of arms painted in his gig—*Chacun a son gout*. Commodore Grant has been out in his new cat *Fancy*, and appears very well satisfied with her, though we understand that he thinks of increasing her sail. The *Fancy* has fine, graceful lines, a good deal of beam, and promises to be speedy. From what we have seen of her she sails close and is fast off the wind. The *Brenda*, Capt. Little, arrived Saturday afternoon. She has been coppered and has rattlines on her rigging, and her captain says, is to be used for cruising only. The rattlines do not show till one is close aboard of her, being made of wire. They are an experiment, and would seem to be a success as far as the judgment and opinion of her sailing-master is concerned. CRUISER.

QUAKER CITY YACHT CLUB.—Philadelphia.—With a fine day and a good wind from the Northwest, the regatta of the Quaker City Yacht Club passed off last week to the satisfaction of all concerned. The course was from Laurel street wharf to and around Chester Buoy and return, a distance of thirty-two miles. There were eleven yachts at the start—the *Coquette*, *Clara*, *Minerva*, *Phantom*, *N. Spring* and *White Wing*, of the first class; the *Stella*, *Chris Gallagher* and *Lillie*, of the second class; and the *Post* and *Bianca*, of the third. The *Columbia*, of the first class, was high and dry in her dock, and was impossible to get her off in time; the *Gypsy*, of the second class, withdrew the night before. The start was made at 10:32 A. M. *Lillie* fouled *Stella*'s boom, and carried away her topmast. She kept on her course, however, and managed to come in a good second. *Minerva* took the lead, with *Bianca* close astern. By the time Gloucester was reached, *Clara* had the best of it, with some distance between herself and the next yacht, when suddenly, off the Horseshoe Buoy, snap went her mast, and with it her chances for the prize. The accident gave the lead again to *Minerva*, with *Bianca* not far astern. Off Red Bank *Phantom* split her jib, but the crew were not slow in rigging out the flying jib in its place. The Chester Buoy was rounded in the following manner: *Minerva* at 12:17 P. M.; *Lillie*, 12:19½; *Spring*, 12:21; *Coquette*, 12:25½; *White Wing*, 12:28; *Stella*, 12:28½; *Phantom*, 12:33; *Post*, 12:35; *Bianca*, 12:35½; and the *Gallagher* at 12:43. The return home was made pretty much in the same order. Off Red Bank *Spring* set her jib topsail; but it was too much for her topmast to carry, and away it went to leeward. *Minerva* passed the stakeboat off Laurel street at 3:18 P. M.; *Lillie* at 3:25; *Spring*, 3:26½; *Post*, 3:33½; *Bianca*, 3:33½; *Stella*, 3:35½; *Phantom*, 3:56½; *White Wing*, 3:57; *Gallagher*, 3:59½; and *Coquette* at 4 P. M. The race throughout was a very spirited one, and the number of large yachts it brought together speaks well for the future of the sport in the Quaker City. *Minerva* was declared winner in the first class and *Spring* second; *Lillie* first in the second class and *Stella* second; and in the third class *Post* took the first prize and *Bianca* second. The Geo. W. Barrow Challenge Cup, to be awarded to the yacht of any class making best time over the course, went to *Minerva*, making this the second year that sloop has enjoyed the honor.

DELAWARE YACHT CLUB.—The spring regatta of the Delaware River Yacht Club, comprising open yachts between 22 and 26 feet in length, took place on Monday, May 20. The course sailed was from Starr's wharf, Camden, to Chester buoy and return. The following yachts participated in the regatta: *Bianca*, *Adelphi*, *Sappho*, *Minerva*, *Fashion* and *Camden*. The start was made at 10:25 A. M., with a stiff breeze blowing from the southeast and a heavy rain falling. Off Tinicum on the return the *Minerva*, which was fourth boat, sprung her mast and was taken in tow by a tug, this was a particularly unfortunate accident, as she has recently been sold to parties in Trenton, N. J., and had come from there a distance of 40 miles to participate in the regatta. On her return home on Sunday afternoon they met with another misfortune by capsizing in a squall when off Bridesburg, Pa. They rounded the home stake boat in the following order: *Adelphi*, 1:40½; *Bianca*, 1:48½; *Sappho*, 1:48½; *Fashion*, 1:49; *Camden*, 1:53½. The judges were Frank Kleinz and William Post; referee, Captain William Hall.

MISSISSIPPI VALLEY REGATTA.—Arrangements are almost complete for the regatta to be held in Peoria on June 19 and 20. The Peoria Boat Club have several crews in active training, and from present appearances the attendance from abroad will be very large. It is expected that more boats will start in the four-oared race than were ever in a field before, while at least thirty single sculls will compete for prizes. A grand stand, capable of accommodating four thousand people, is in course of erection on the levee. Great interest is taken in the forthcoming regatta. ROYCE.

WILLIAMSBURG YACHT CLUB.—The regatta of this club, which was to have taken place June 4, has been indefinitely postponed.

NEW YORK YACHT CLUB.—Thursday, the 13th inst., the regular regatta of the club will take place over the usual course, and under the by-laws governing sailing matches. Yachts will be divided into one class for keel schooners, one for schooners over 7,000 cubic feet and a second for those

Under that. Also two classes for sloops, the first for those over 2,000ft. and the second for those under 2,000ft. The Bennett Cup will also be sailed for, regardless of classification. The Regatta Committee consists of Messrs. Stebbins, Taylor and Krebs.

QUEENS COUNTY YACHT CLUB.—This organization held its regular annual regatta Tuesday, June 4.

CHARLESTOWN, S. C., REGATTA.—We have a full report of this event from our regular correspondent, which we are obliged to postpone until next week.

BROOKLYN YACHT CLUB REGATTA.—The Brooklyn Club has issued the programme for its Twenty-first Annual Regatta, fixed for June 18. Being a union match, yachts of any recognized club will be admitted. They will be sailed in five classes—one for schooners; the second for sloops 45ft. long and over on water line; the third for sloops under 45ft. long; the fourth for open boats 25ft on water line or over; the fifth a special class for catamarans. Club prizes will go to yachts belonging to the club, on time allowance; but the Flag Officer's prize will be open to all yachts, and goes to the second one in all classes, while union prizes will be given to the first yachts in of any club, provided that the Flag Officer's prize cannot be awarded to any yacht winning the regular club prize. Time allowance will be granted in all classes, also for catamarans. Two yachts to start, or no race. Course, for schooners and first class sloops, from stakeboat off Bay Ridge, turning stakeboat at Buoy 8, on S. W. Spit, on port hand, thence to Sandy Hook Lightship, leaving same on starboard hand, and return. For second class sloops, from stakeboat off Bay Ridge, round S. W. Spit, to stakeboat in Gedney's Channel, leaving it on starboard hand, and return. Third class sloops and catamarans, from Bay Ridge to S. W. Spit and return.

CHANGE OF DATES.—Newburgh Bay Regatta has been fixed for July 10 instead of July 4, so as not to conflict with the New York Bay Regatta, and the Manhattan Club has postponed their match until fall. For the former event there will be five classes, 26 feet and over, 23 to 28 feet, 20 to 23 feet, and 20 feet and under, also one for catamarans. No restriction as to ballast or crew. Entrance free. Allowance of time, 2m. to the foot on water lines. Entries to be sent to the secretary, James T. Sloan, before July 8.

SEAWANAKA OCEAN RACE.—The ocean match under the auspices of the Seawanaka Club will be sailed June 22, for both sloops and schooners. The match is open to yachts of any recognized club. There will be two classes for schooners; first, those whose area exceeds 1,950 square feet; second class, those whose area is 1,950 square feet or less. For sloop, first class, whose area exceeds 900 square feet; second class, whose area is 900 square feet, or less, and over 550 square feet. The area is obtained by multiplying beam by mean length on water-line and over all. The course will be from Buoy No. 5, off Sandy Hook, twenty miles to windward and return if wind permits, otherwise to leeward and return. The start will be a flying one. Fifteen minutes will be allowed for crossing the line, after which yachts time will be counted from the expiration of that period. Entries should be sent to M. Roosevelt Schuyler, 32 Pine street, before noon, June 21. Judge's steamer leaves barge office at 7 A. M. on the day of the race.

CENTRAL HUDSON YACHT CLUB.—At a meeting held May 22, the annual regatta was fixed for June 18. The following officers for the current year were elected: Commodore, Irving Grinnell, New Hamburg; Vice Commodore, Frank Brown, Newburgh; Rear Commodore, J. R. Roosevelt, Hyde Park; Secretary, F. Newbold, Hyde Park; Treasurer, J. Van Wyck, New Hamburg; Measurer, P. A. Van Wyck, New Hamburg; Regatta Committee and Committee on prizes the same as last year.

FROM ABROAD.—Thursday, May 30, there arrived in this port the British schooner yacht *Oneagh*, from Campbelltown, Scotland. She dropped her anchor off the Battery, where she now lies. The run across was made in twenty days, winds light and variable until Thursday morning, when she ran into the N. E. storm which has for several days been raging on the coast. The *Oneagh* was scudded along before it, and on Thursday evening picked up a pilot who, a few hours afterward, brought her "to" off Lower Quarantine. She flies the pennant of the Royal St. George Yacht Club of Kingstown, Ireland, and the blue ensign. Her owner, Mr. C. R. Cope, has not yet decided upon his future movements, but will not race his schooner in American waters. She is a fairly handsome and solid looking craft, one that can stand plenty of work at sea, but is not fast compared with American yachts. She was built by Hansen of Cowes in 1876, and is 103 feet long on deck, 20 feet 3 inches beam, draft aft 9 feet 6 inches, and measures 188 tons according to the Thames rule, though in reality she is much larger.

NEW YORK BAY REGATTA.—A list of the yachts already entered will soon be published by the committee in charge, but it is desired that all contemplating coming to the starting line send in their names as soon as possible. *Thistle* and *Nettle*, both from Wallin's shops, are among the smart ones of their class. It will be remembered that *Thistle*, upon more than one occasion, gave *Pluck* and *Luck* a pretty close race, and as she has had a longer stick stepped this spring, a hollow one, we believe, she will probably hurry up the best of them. *Nettle* will be sailed by David Snedcor of Gravesend.

FINGER-VICTORIA MATCH.—Commodore Grinnell's famous flyer *Fidget* and Mr. Roosevelt's *Victoria* will not sail their match as appointed, it having been postponed to June 6. *Fidget*, built by Pat McGilhan, who never seems to touch timber but what it sails like lightning, has been overhauled this spring, and has received a jib and mainsail rig with a 24 bowsprit. It is probable that she will sail the *Victoria* in her old cat rig, however; it was under this rig that she did so well in the Newport races last year, and though we should prefer to see her tackle *Victoria* under jib and mainsail, she may give the sloop a lively chase as it is, should there be a stiff breeze and a little sea on at the time.

A NEW CUTTER.—Under the directions of Mr. Pepprasa (formerly with Steers, of Greenpoint), Mr. Stillman, of the schooner *Wanderer*, is having a full-fledged cutter built. The design was furnished by Mr. A. C. Smith. On deck the cutter will measure 46ft., beam 9ft. and water 7ft. Spars, mast deck to hounds, 21ft. topmast, 28ft. 10in., and mast-head, 4ft. 6in.; bowsprit outboard, 18ft. 3in.; boom, 33ft. 9in.; gaff, 19ft. 3in.; boist of mainsail, 2ft. 3in. From these dimensions it will be seen that the new boat is to be a genuine cutter throughout. She will be built in response to the growing desire for genuine sea-going craft of moderate dimensions noticeable among many yachtsmen. Though Mr. Stillman does not propose to race his new boat, she will cer-

tainly be able to give the go-by to her shallow sisters out at sea, which is her proper element. We do not think this cutter will be the last of the kind by any means. Besides her we have down East the *Saxon*, imported from abroad, and nearer home the *Volante* and *Petrel*, all of the cutter class.

TAKE NOTICE.—*Pacific Life*, ahoy! The Commodore is wanted on deck. Your "first luff" has laid violent hands on a column of steam yachting from the FOREST AND STREAM, and failed to enter on the log where he raised it from.

To Regatta Committees.—The various committees having races and matches under their management, and desiring to have them ably and correctly reported are requested to send their prospectus and tickets to this office at as early a date as convenient. The FOREST AND STREAM is the only journal the yachting columns of which are edited by a professional-y competent person.

YACHTING DRIFT.

Commodore Baker will change his craft's name from *Emma T.* to *Evangeline*. The pretty *Arrow*, Mr. Winan's, will hail from Newport. In the match between the *A. Varian* and *Mattie M.*, of the Empire Club on the Harlem, May 30, the *Varian* capsized, leaving *Mattie* a walk-over under her jib. *Varian* was sailed by Alouzo Gibson, and *Mattie* by L. Wright. Schooner *Intrepid* is cruising to the Eastward. *Madeline*, *Viking* and *Vision* are lying in ordinary at Essex, Conn. Alouzo Smith is building a sloop 56ft. long for New York parties. *Tarantula*, *Josephine* and *Egeria* will be sold at auction shortly; there is a good chance for some one to get a bargain. *Egeria* is a handsome and handy sloop, and a size of craft at present much sought after. *Niantic*, Mr. Huntly, will not race this season; her spars will be cut down. Saucelita property has split the San Francisco Yacht Club, and the offshoot will form a new organization, the chief object of which appears to be the ownership of a grand club house. Come, gentlemen, it's less club houses and more boats you want. Wonder what *Ariel* was doing the last six months trying to get out to California. Well, she was a small boat and had to pick her weather. *Petrel*, Commodore Hyslop, of the Manhattan Club, has gone into commission. *Imperia* went down the Bay Sunday last; her mainsail wants stretching along the foot. Several yachts at Gowanus have their jacks cock killed; square them up.

THE OAR AND PADDLE.

THE WATKINS REGATTA.—The races at Watkins, Seneca Lake, were opened May 28 with the pair-oared match. It was not until twenty minutes to seven that the preparatory gun was fired, owing to the rough state of the water during the earlier part of the day. The four pairs were started in a breast race, Courtney preferring to start them this way in order to save time. The course was one and a half mile down the lake, from above Coal Point to the finish, off the grand stand, near the village. The Detroit pair won the inside; next Emerson and Jerome, of the Northwesterns; then Eustice and Downs, of the Atlatantas; and outside Havens and Curtis, also of the Northwesterns. At 6h. 55m. 20s. they were sent off by Courtney. Atlatantas immediately went to the fore, and then settled down to steady work, regardless, apparently, of the doings of the other crews. Havens slipped his seat off the slides, and from that moment the famous Curtis and his partner were virtually out of the race. Atlatantas retained their lead until the finish, making the distance in 8m. 5s.; Detroit next in 8m. 15s.; Jerome's pair in 8m. 17s.; and Curtis and Havens in 8m. 30s. Eustice and Downs, therefore, go to Europe as the representative American pair. The junior singles were next got into line, and the four of them sent off as rapidly as possible. McLafferty, of Watkins, took the lead; McMullen, of Pittsburgh, went over to the westward on his own hook, pulling a quick arm stroke of forty-one. Larmon, of Union Springs, and Gaisel, of the Graineries, kept to work at a steady stroke. A minute out and Gaisel went to the front, McLafferty second, and some ten feet astern of him comes Larmon, with the Pittsburgh man beginning to show signs of weakening. McLafferty spurred near the turning stake and caught up even with Gaisel, the buoy being turned in 7m. 15s. Gaisel soon met with a misfortune, the Pittsburgh man running into him and staying in the bow of Gaisel's shell so badly that the latter had to be rescued from sinking by a boat from shore. With a steady 30-stroke, McLafferty kept on his way, crossing the line in 15m. 41s., an easy winner, Larmon next in 16m. 16s., for he had beaten McMullen, though considerably staying for a while by Gaisel in his misfortune. The Pittsburgher was distanced. No races came off on the 29th, owing to the high wind and sea on the lake. On the morning of the 30th, however, the three crews to pull in the first beat of four-oared shells were got in line and sent away in spite of a drizzling rain and threatening sky. The Carman crew were on the outside, the Atlatantas on the inside, with the Northwesterns between. The crew from Washington Heights took the lead, the Atlatantas hugging the shore and pulling at the rate of thirty-four against the Carman's forty-two. The Northwesterns somehow did not seem to make their heat jump, as Courtney expressed it; the crew was wrong-end-to. Carman led all the way down until near the finish, when Eustice called on his crew for a spurt, which sent them ahead and first over the line in the remarkably quick time of 7m. 22s., Carman's half a second later, and the Chicago crew bringing up the rear in 7m. 30s.

Friday, May 31, opened again stormy and unfavorable. The second beat of the four-oared shells was to be pulled, but the prospects being poor, the Zephy crew of Detroit took their departure by an early train, business affairs requiring their return home. They had hardly left when the wind went down and the lake became smooth enough to pull. Courtney lost no time in sending off the second heat of fours, the Shoe-wae-cae-mettes, Floral City and Watkins crew being the only ones in line. Floral City soon went to the front with a very rapid stroke, Watkins pulling nondescript, and the Shoes showing what practice and training can do for a raw set of men in bringing them down to style and finish. The Florals gave out before long, and the western crew went to the front, when one of the Watkins' caught an undisguised cumb on account of the rough state of the water. The Shoes went across the line winners by three-quarters of a length in 7m. 36fs. Watkins two seconds later with the Floral City high pressure crew several lengths astern. Mr. Rathbone, who was the favorite among the senior singles, returned home leaving Mr. Lee the principal man for one of the events the next day. Saturday, June 1, the final race between the Atlatantas and Shoe-wae-cae-mettes took place at an early hour. At 6h. 24m. A. M. they went away, the Shoes taking the lead, pulling 41; the Atlatantas 36. At the half-mile race their positions remained unchanged, when the Western crew spurred up to 43, making a wonderful burst of speed, and passed the line in 7m. 17fs., with their opponents a length be-

hind. The names of the successful four who go to Europe are: S. S. Dusear, J. Nadeau, W. H. Durrell and M. Nadeau. They propose going to Henley and Paris. At the close of this race the single scullers were immediately called and took up the following positions: Gaisel, of New York, first; then Robinson, of Union Springs; Lee, of Newark; Hall, of Perth Amboy, and McLafferty, of Watkins, fifth. The latter caught the water first with 34 strokes; Gaisel next with 40; Robinson, 34; Lee, 36, and Hall, of a former Yale crew, with 32. Lee, pulling a long, powerful stroke of 28, soon went to the front. Near the close Gaisel passed McLafferty, taking second place, and two lengths behind Lee, who won the race in 3m. 36fs., and who will consequently be sent to Europe as our representative oarsman in the senior single sculls at Henley. The double scull race was called at half-past nine, only two boats coming to the line. After an uneventful contest the Watkins crew beat the Hudsons, of Pittsburg, in 14m. 34s. For the four-oared three-mile race, the last of the matches at Watkins, the Floral Citys, Shoe-wae-cae-mettes and North Westerns came to the line. At eight minutes to ten Courtney gave the word "Go," the Shoes at once taking the lead with a stroke of 40. At the turning stake the Northwesterns fell behind and the Floral Citys brought up the rear. The latter weakened considerably on their way home, and abandoned the contest. The Shoes had a safe thing of it, and with a wonderful stroke of 50 crossed the winning line in 18m. 44fs.

SILVER LAKE REGATTA.—The great event of the year, which has been agitating Boston rowing circles, took place on Silver Lake, near that city, May 30, as per programme. The chief interest centered in the single scull race of the professionals, which had brought out no less than thirteen entries. Eight, however, only came to the line, as follows: Jeremiah Driscoll, of Brookline; Frenchy A. Johnson, P. H. Driscoll, and M. J. Mahoney, of Boston; James H. Riley, of Saratoga; James A. Ten Eyck, of Peekskill; Daniel F. Sullivan and David Kennedy, of Lowell. As a matter of course Riley was the favorite, and the way the colored knight of the oar polished him off was a surprise to many. Johnson, known as Frenchy, at once took the lead, with Riley, second. The three-mile course, including turn, was rowed by Johnson in 21m. 36fs.; Riley, second, in 21m. 44s.; Sullivan, third, in 23m. 23s., and Ten Eyck fourth. The latter was allowed third money on a claim of a foul. In the four-oared race for working boats there were also eight starters. The Lakemans were the favorites, but again the knowing ones were doomed to disappointment, for the race was won by the Chelsea in 19m. 55fs., the West Ends second, Riverdales third and Lakemans fourth. For the pair-oared race four boats were started. It was won by the Longshore crew, of Portland, in 21m. 14s.; the Goodkias next in 21m. 23fs., and the Connolly brothers third in 21m. 56s. Seven crews came to the line in the amateur single scull race for a distance of two miles. Mr. F. E. Holmes won in 14m. 13fs.; Mr. Isaac Houghton, of the Union Club, second, and Mr. W. R. Goddard, of Harvard, third.

PATAPSCO RACING.—The four-oared shell race between the Analostans, of Washington, and the Undines, of Baltimore, as previously announced in the FOREST AND STREAM, took place on Tuesday afternoon, May 28. It will be remembered that last year the Baltimore crew went to the Potomac and were defeated by the men of the capital. The course was at Ferry Bar, one and a half mile and return. Washingtonians naturally were prepared to back the victorious men of last year, especially as the Baltimore crew were the same, with one exception, whom they had defeated. Among the many steamers in attendance was Winan's cigar boat, from which a large number of spectators viewed the race. The judges were Mr. Geo. S. Brown for the Undines, and Major Bailey for the Analostans, and W. T. Frick, of the Ariels, at the finish. Rules of the N. A. of A. O. were observed. The crew of the Washington Club was composed of J. R. White, stroke, 163 lbs.; J. O. Campbell, No. 3, 160 lbs.; P. W. Page, No. 2, 155 lbs.; C. L. Burdette, bow, 145 lbs. The Undines were composed of J. H. C. Watts, stroke, 160 lbs.; Dr. J. D. Inglehart, No. 3, 152 lbs.; Irvine Cross, No. 2, 156 lbs.; R. K. Cross, bow, 151 lbs. The word "Go" was given at 6:14 P. M., when the Analostans shot ahead, pulling 37 strokes, and soon gained a lead of two lengths. About half way to Long Bridge two Undines, who had been doing steady work, began to pick up, and drew even at the turn. The Washingtonians, however, owing to a little wild steering on the part of their opponents, again went to the front and looked like winners for a time. At the last half mile Baltimore spurred over 40 strokes and managed to cross the line several seconds ahead of the Analostans in 20m. 54fs.

CANOEING.—Rushton, of Canton, N. Y., has made some improvements in his *Rob Roy*. He has added a little more depth of keel and one and a half inch to the top streaks, also more crown to the deck. This gives his canoe ample room for sleeping in, the depth being 13in., and also renders his boat more seaworthy. He finishes his decks by "rough stuffing," which consists of the application of a dozen or more coats of paint, which are each rubbed down, ending with color and varnish. This method, well known to carriage painters, is very effectual in doing away with the annoying splitting of canoes' decks when much exposed to the sun, and keeps them always tight. The width of his *Rob Roy* model is 22in. inside, at a height of one inch above the floor, so that this model has ample bearings and stability. It is extensively used on our rivers and by hunting parties, and has from them universally received hearty endorsement. The canoe is supplied with a single lug-sail and with Lyman's Patent Bow-facing Rowing Gear when desired, so that it may be paddled or pulled according to preference. Considering the amount of work and finish put on his boats, Mr. Rushton certainly supplies them at very reasonable figures—so low, in fact, that it would be difficult for any one to compete with him in the same class of work.

ROWING RIPPLES.

Empire Navy Regatta, June 18. Palisades mustered nine boats at their review last Saturday. The four-oared shell *Keyser* beat the eight-oared barge *Resolute*, both of the Palisade Club, on that day. The crew of the gig *Blonde* also beat the crew of the *Brunette*. Peoria will have a great time with the Mississippi Valley Rowing Association June 19 and 20. Five boat-houses in a row on Oakland Creek, San Francisco. Neptune Club of that city has ceased to live.

—The perfect horse-shoe, so highly recommended in our advertising columns, and concerning which pamphlets are sent free, is evidently worthy the attention of all who think economy an object, and likewise have regard for the comfort of the noblest of all animals.

—Trains for Meriden, Hartford, Springfield, White Mountains, etc., connecting with the New Haven steamers, which leave pier 25 E. R. at 3 and 11 P. M., began running June 3. The steamers of this line have been thoroughly overhauled and refitted for summer travel.

The Game of Chess.

NOTICE.—Chess exchanges, communications and solutions should be addressed "Chess Editor FOREST AND STREAM, P. O. box 54, Wolcottville, Conn."

Remember that our Problem Tourney closes July 1, 1878. We expect that all our friends will enter at least one set.

Problem No. 18.

Tourney set, No. 14. Motto: Crossing the Danube.

White to play and give mate in three moves.

Game No. G3.—PETROFF DEFENCE.

85—Kt-K5	85—Kt-K5	100—P-K4	100—P-K4

NOTES BY "ANN ARBOR."

- P-K4 is preferable.
- P-Q4 is the correct move here, and gives the defence the better game.
- This move is not to be commended.
- Castles K R would have been better, and the game would then have had some life in it.
- Black should have moved P-K3, with a winning position.
- A blunder.
- At this stage the game was agreed to be called a draw.

Game No. G5.—SICILIAN OPENING.

Played by telegraph between the Ann Arbor and Jackson, Mich., chess clubs:

White. Ann Arbor.	Black. Jackson.	White. Ann Arbor.	Black. Jackson.
1—P-K4	1—P-K4	16—Kt-K5	16—P-K4
2—P-Q4	2—P-Q4	17—P-K4	17—P-K4
3—S-B B3	3—S-B B3	18—Kt-K5	18—P-K4
4—K-B B4	4—K-B B4	19—P-K4	19—P-K4
5—P-B3	5—P-B3	20—P-K4	20—P-K4
6—Q-K3	6—Q-K3	21—P-K4	21—P-K4

15—S-K3	15—S-K3	30—P-K4	30—P-K4

NOTES.

- An unusual move, but a good one, we think.
- Much preferable is S-P-Q5, blocking up the Black K's side for a long time. His replying by S-Kt-K5 would have been harmless; S-P-Q5, S-Kt-K5; 9—B-Kt5, 9—B-Q2; 10—Q-B3, with the better game.
- Why not 11—Q-Q5?
- Well played. Black now gets the advantage, and ought to have kept it.
- A mistake. The K will be wanted as a fighting piece, and should have gone at once to K2.
- Better have played P-K3.

(c) Move, undoing the advantage of their doubled Rooks. They should have played B-Q5, threatening to advance P-K B4, and presently, to win the Q R P.

(d) Too late now; the B should have retreated to Q3.

(e) Rather than have thus drawn the game we would have run the chances of P-K B1.

(f) Up to this stage the game was played by telegraph; the conclusion is by postal card.

Game No. G6.

Mr. Thornton, of Buffalo, gives Tyro the odds of Q R and the two Springers:

White. Mr. Thornton.	Black. Tyro.	White. Mr. Thornton.	Black. Tyro.

7—R-K3 P	7—B-K2		

White mates in four moves

CURSORY JOTTINGS.

Our Problem Tourney closes July 1, 1878. One and all respond to this call.

A one chess column has been added to the *Argus and Express*, of Ayr, Scotland. It is edited by Mr. Norton, we believe.

MacKenzie and Mason will represent America in the Players' International Tourney at Paris. Loyd will also participate in the problem tourney.

Again we call the attention of our readers to our photographic problem tourney. Friends, do not fail to send us a two-move problem and a photograph, together with a tourney set.

The annual later-university chess match, between Oxford and Cambridge Universities, took place at the rooms of the St. George Chess Club, London, Eng., and resulted in a victory for the Cambridge representatives by a score of 10 to 2.

The Detroit Free Press Problem Tourney No. 3 is a decided success. Thirty-five sets, containing one hundred and five problems, have been entered. Mr. Bull's problem department is the best that appears in any newspaper that reaches our table.

The Chess Players' Chronicle is now published by W. W. Morgan, 67 Barbican, E. C., London, Eng. This chess magazine is ably edited by Rev. C. E. Ranken, with the co-operation of G. B. Fraser, Esq., Rev. A. B. Skipworth, Rev. Professor Wylie and J. Crum, Esq. The terms of subscription are six shillings and postage per annum.

Connecticut friends request that we call upon resident players to form a State Chess Association and solicit subscriptions for a State Challenge Championship Cup. This we willingly do, and in a way that insures the success of such an undertaking. Bro. Belden, of the *Times*, we request you to take this matter in hand. "Do not fall in this."

Belden and success are synonyms in Connecticut chess.

The chess department in the *Hartford Globe* has made its reappearance under the management of Mr. A. N. Cunningham, one of the strongest players in Connecticut. Mr. Cunningham's predecessor and our successor, Mr. Max Peller, discontinued this column on account of ill health. We congratulate the proprietors that they have obtained so able and competent a chess editor.

The American Chess Journal (March and April) has made its appearance under the metropolitan management. The editors are Dr. C. C. Moore, Samuel Loyd, G. H. MacKenzie and James Mason. This publication has been improved in every respect, and should be in the hands of every lover of chess. It is not necessary that we give space to an extended notice of this magazine, as it "speaks for itself." We, however, advise our chess readers to subscribe for it without further delay. The price is only \$3 per annum. Address Dr. C. C. Moore, No. 63 Courtland st., New York.

Thompson, of the *Derbyshire Advertiser and Journal*, of Derby, Eng., occasionally gives the Chess Editor of the *Cleveland Voice* a hard hit, and above the belt, too. The latter, of course, responds in his usual manner. We admire Thompson's spirit of independence and fearless expression of his opinions. Mr. McKim was, sooner or later, and out that men of independence and opinions are respected by the chess public, and are entitled to decent treatment by contemporaries.

The International Tourney is no longer one-sided. Honors are now easy, the score standing 4 to 4. Belden has been coaching "our side."

Friend K., of the *FOREST AND STREAM*, spurs us up to do a little coaching in the International Tourney. We take the hint, friend, and we will begin with you. Now, Mr. Kunkel, America expects you to win a majority of the games from your antagonist. Nothing less than three out of four will satisfy us. Do not fail in this.

Friend Belden, we shall fall in this, as our opponent is too slow in transmitting moves. Thus far, we have received and answered five letters. If the games are continued at this rate you will, at the expiration of the two years, be called upon, as the American umpire, to end them; consequently, there is no necessity that you begin coaching in this quarter. Belden very sensibly paraphrased us as follows last week:

"In *FOREST AND STREAM* Mr. Kunkel has resumed, or at least intimates that he will resume very soon, his 'Cursory Jottings,' or gossip notes, which promised to make his column so interesting when it first started. Dropping this feature, friend K., was a mistake."

This opinion of the leading paragrapher of the world is but too true, notwithstanding several chess editors are of a contrary opinion. However, we are not altogether in the fault, as this week's "jottings" have long been crowded out by the demand for space by other departments of this paper. In fact this is interpolated in order to impart a "freshened flavor" to the balance of the "Cursory." That we so often, especially this week, quote from the *Hartford Times*, may appear inexplicable to many of our readers, and we therefore state, by way of explanation and justification, that "for good things we are always truly grateful," and are not slow to avail ourselves of them.

One of the most interesting features of the *Times* chess column is the correspondence department, which the chess editor has long neglected until quite recently. We extract from a recent issue the following, which, we do not doubt, will interest and amuse our readers: Here is a "chat" with John Gardner, of Boston Mass.:

"You will observe that Mr. Luster acknowledges the corn in a many way, but look out, bye and bye 'de later may have de doah.'"

With Luster, of Elizabeth, N. J., the "chat" runs:

"Of course. That's all right. A man must step up occasionally. Remember dat

'De big snafawer may rise above

'De modest taler vine,

An' brag about its Sunday clothes,

An' pal on airs so fine."

But when de winter howls around,

An' de snow lies at de doat,

De big snafawer—oh! whar am he?

De later hez de doah!"

The *Westminster Papers* is, if we may be allowed the expression, not only the chess classical magazine of the day, but its editor possesses a vein of sarcasm, combined with a felicitous manner of communicating it to a reader. The following is a part of an answer to a speech of Mr. Minchin, at the dinner given the Oxford and Cambridge teams by the St. George Chess Club, upon the conclusion of the recent annual chess match between these "varsities":

" * * * And thereat, a singular exhibition of bad taste took place, in the shape of a wild and violent attack, made by Mr. J. J. Minchin, upon this and other journals, comprising, to use his own words, 'the greater portion of the metropolitan chess press.' It may be objected that Mr. Minchin did not mention names, and, in fact, that objection has been put forward by persons of a Coriolanus turn of mind, save that to do the turn-out Roman justice, he did not abjectly wave his country's flag. However, such evasions are nothing to us. Mr. Minchin's meaning was well understood, and were he of any authority in the chess world, we might condescend to answer him. However, he has never shone either as a player or a writer, or in any other way. He is simply the Secretary of the St. George Chess Club, and we take it upon ourselves to disavow that old and respectable association from the action of their official in this matter, and we do not consider them responsible in any way. In putting Mr. Minchin aside, we may just demur from any assertion of his. He claimed to make his ill-mannered attack in the character of an 'English gentleman.' It would be as easy to cut a mutton chop in the character of a vegetarian."

"We expect at least one tourney set from each reader. Oblige."

W. A. Shenkman, the famous American problemist, has composed 1,200 chess problems. As a two-move problem composer Mr. Shenkman is probably the finest and most successful in the world, and a book containing his beautiful and charming two-move ideas, will meet with a favorable reception.

We hope that all of our problem friends will not forget to contribute a set to our problem tourney. We are especially anxious that our foreign friends compete, and as an inducement, guarantee the fairness and impartiality of the umpire. One and all should hear in mind that the tourney closes the world over July 1, 1878. Do not delay your sets.

The *Schach Zeitung* has failed to reach our new address thus far, but we nevertheless live in hope. Will Dr. Schwede give the matter its attention, as well as call Dr. Gold's attention to the fact that he is equally negligent? *Es ist nicht sehr schwer!*

Mr. Kelmhelm, of the *Chess Record*, is one of the "big gun" problemists. His last elaboration is a 151-move problem, which, he asserts is sound, and that Waterbury, the great solver, is wrong in his solution in a less number of moves.

The *Cleveland Voice* gives Loyd's Centennial two-mover, for the third or fourth time, the benefit of a diagram. This time, Mr. Carpenter's analysis are published, which, we believe, is the first time that the *Voice* has presented the merits of this problem in that light. The *Voice* should now give space to a live issue, and let the past alone for awhile, as "variety is the spice of life."

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME

GAME IN MARKET.—RETAIL PRICES, POULTRY AND GAME.—Game.—Wilson Snipe, \$3 per dozen; plover, \$3 per dozen; bay birds, large, \$2.50 per dozen; small do, 50 cents; wild pigeons, flights, \$1; stall fed do, \$1.50; Philadelphia squabs, \$2.50; wild do, \$1.

Poultry.—Philadelphia and Bucks County dry pickled chickens, 25 cents per pound; do fowls, 16 cents; do turkeys, 16 cents; State and Western chickens, 16 cents; do turkeys, 14 cents; do fowls, 13 cents; spring chickens 20 to 35 cents.

ADIRONDACKS.—Deer prospects are good at Rainbow, Big Clear and Little Clear Ponds. C. C. M.

HOW NEW YORK SPORTSMEN SNOOT.—That was good work of Mr. P. Helz, of the Buffalo Audubon Club, at the State shoot for the Pierce Diamond Badge—a clean score of fifteen straight birds; five clean on ties at twenty-six yards, and the same number at thirty-one yards! Contest No. 4, with ten ties on fourteen birds, was good work also. We might afford to chance that team in a match with our Western friends.

OHIO.—*Ashtabula*, May 31.—Quail, partridge and woodcock more abundant than for several years past. Good outlook for sport this fall. J. G.

MINNESOTA.—*Leroy*, May 30.—We have every indication of having plenty of pinnated grouse this season, as they are very plenty this spring. No ducks or geese stop here. V. G. N.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

L. L. C., Boston.—No special value to white pigeons.

E. D., Washington.—A first-class target, and hard to make better.

R. H. D., Warrington, Va.—A very excellent target for the cheaper gun.

CONSTANT READER.—Train your spits pnp to retrieve your neighbors' spring chickens.

W. H. C., Winchester, Mass.—No close season specified for sand-pipers in your State.

J. B. T., Boston.—We knew nothing about it, but have written to Chicago for information.

J. C. M., Hastings, Minn.—It may take some days before we can find P's standing. Will probably write you.

C. A. G., Condersport, Pa.—An advertisement in this paper would probably find a sale for your young trout.

ASHANTSE, Sing Sing.—You will find trout fishing in Jessup River, Hamilton Co., N. Y. You will receive the rod all right.

W. B. F., Rochester.—Jas. Campbell & Son, 26 Yonge street, Toronto, Canada, will supply you with maps of the Ottawa district.

G. N. B., Delphos, Kansas.—Write to Gonpli, Fifth av., or to Schans, Broadway—both print sellers—for photographs of Landseer's works.

W. K. O., City.—Will you please let me know in your next issue what is your opinion of — best guns? Ans. There are no makers in higher repute.

C. T. J., Salem, Mass.—Is there any person at Rice Lake, Canada, from whom wild rice may be obtained? Ans. A. V. Denio, Harwood, Rice Lake, Ontario, Canada.

HAYLAND, Minnesota.—We will shortly eliminate the cat's eye question photographically, though we are not responsible for the rhapsodies of writers. See kennel column for correction.

R. B. C., Paducah, Ky.—We could not recommend a gun to you, and is our invariable rule; nor with whom you could effect a barter. You can use areca nut with impunity, providing you use castor oil after it.

F. F., Columbus, Ohio.—The Chesapeake Bay dog can be better purchased in Baltimore than elsewhere. Could not tell you price. Address R. M. Taylor, Perrymanville, Md., or S. A. Camp, Langford, Kent Co., Md.

F. McK., Erie, Pa.—Can you put me in communication with the manufacturers or general agents of the Dittmar powder? We find it highly spoken of by sportsmen. Ans. H. C. Squires, No. 1 Cortlandt st., New York.

H. G. L., Bangor, Maine.—Not a good target. From the high character of the maker of your gun you must have been at fault some way. Repeat your experiments more carefully. Possibly you overloaded and shot wild.

R. M. C., Spottsylvania.—Would have published your note, but want of space prevented. Fetch is Miltonian, Speocorian and Bihloal. In good old English it is said—just as we use it—that "the sudden trip fetches a man to the ground."

J. E. M., Saco.—1. What make of rifle would you recommend to a person wishing to pay \$20 or \$25? 2. Do you know anything about the — rifles? Ans. 1. You can get most of the leading rifles now at about your figure. 2. A fair rifle.

H. C., West Philadelphia.—About Cheyenne, Wyoming Territory, are deer, elk, antelope, mountain sheep, bears and mountain lions; and excellent trout fishing. Buy a dog there. Take heavier clothing than a duck suit. Do not want a venier sight.

J. K., Lake Co., Ill.—A 10 bore is used where four-footed game is found; a 12 for all other purposes. It all depends very much on the kind of gun and the strength of the man. See former numbers of F. and S., where this question was fully discussed.

H. C. P., Brooklyn.—Do not know where you can get Babbitt patent bronze blocks in this neighborhood. You had better inquire of Mallory & Co., 50 South st., N. Y., or of Whitlock, 57 South st., who will be able to procure them for you, if they are in the market.

E. W. S., Sandy Spring, Maryland.—Your questions are so interesting that we have requested the ablest rifle expert in the country to answer them. This reply may take some space. Are you very sure you are right? If so, detail to us briefly your experiments.

V. A. N.—Best book on fly-tying is Hallock's "Gazetteer," price \$3. There is no publication containing the lines of a Nautlius canoe, but we can procure a set for you if wanted. The "daudy" is a small sail set near the stern of the canoe, generally of triangular shape.

SNIPES, Port Richmond, N. Y.—Where may I obtain good shooting on Long Island, both bay and inland, and also fresh and salt water fishing? Ans. Go to Good Ground, or anywhere along that shore. You will find bay birds and snipe there if you wish to go to July or August.

W. E. J., Richmond, Va.—1. Which do you consider best for off-hand shooting, the shot-gun or rifle stock? 2. How much powder should be used in shooting a 200 grain bullet at 200 yards? 3. Should the bullet be dipped in the lubricant after it is in the shell? Ans. 1. The gun stock is the better. 2. 40 grains. 3. Before it is in the shell.

C. G. N., Oakland, Cal.—"The Upland Game Birds" is published by subscription (Scribner & Co.), ten parts, \$2.50 per part. Twenty-six numbers of FOREST AND STREAM constitute a volume. The first issue was Aug. 14, 1873. Price of back volumes unbound, \$2.50 each for first four, \$2 each for subsequent volumes. Both guns mentioned are very fair.

REMSX, East Templeton, Mass.—You can procure a license for collecting birds and their eggs of any organized Natural History Society. You will need to send them proper credentials. Gray's Botany will give you the scientific names of plants, Jordan's Manual of Vertebrates those of vertebrates. For insects consult Packard's "Our Common Insects."

MIRON, Sloatsburg.—Please inform me if there is any other process than Banting's for reducing obesity by a system of diet and training? Ans. We have recently seen much commendation made of a remedy mentioned as perfectly harmless. It is a vegetable compound and is called macerate. Address T. G. Hull, P. O. Box 217, New York City.

DECKEN, Delaware City.—The first show of dogs ever held in England, and we believe anywhere, was in 1859. It was confined to sporting dogs only. Mr. Walsh, of The London Field, was one of the judges. The next show was in 1863, when the surprisingly large number of entries was 1,600. These have always resulted in dissatisfaction of exhibitors and disgusted award.

J. S. C., New York.—At Creedmoor on Friday last in match No. 6, open to military rifles only, at 300 yards off-hand, the score of 80 out of a possible 35 was made by the winner. Is there any record of a higher score at this distance with a military gun off-hand, open sights? Score in detail was 4 3 4 5 5—30. Ans. It is the best we know of in 7 shots. Mr. John made 33 in 10 shots this spring.

WOODHILL GUN.—In regard to the name of a maker Mr. Greener, of England, writes from Birmingham, May 16, 1874: "We have made all inquiries we can about a Fred Woodhill, but cannot hear of any gun-maker or dealer of that name in town or country. Messrs. Eley Bros., who are supposed to know all concerned in the gun trade, have never done business or heard of any one by the name of Alfred Woodhill."

W. A. P., New Haven.—Would it be within the Creedmoor rules to admit the Shelton auxiliary rifle and breech-loading shot-guns to compete in all-comers' match, 300 yards, for prizes? If so a party will march to the front to compete with other rifles at any time that such trial takes place. Ans. The rule as to "any rifle" will admit the auxiliary if gun and all do not weigh ten pounds. Trigger pull, etc., must be according to rule of N. R. A.

J. W. C., Bowling Green, Ky.—1. What is the price of an auxiliary barrel adapted to 12 bore? 2. Have a Ballard breech-loading rifle 40 cal., 30 inch barrel and 8 pounds weight. The best gun I ever saw at 300 yards, but the sights are coarse, as it was manufactured for military purposes. What changes, if any, would you suggest to adapt to sporting uses? Ans. 1. \$12, we believe. 2. Have an adjustable peep-sight and a Beach glance-sight put on the rifle.

M. M., Reading, Me.—The gun you mention is considered excellent. You can get a good one for the price named. To fish for black bass with live bait use either olick or halsaco reel, price \$4.00 to \$5; 100 yards line. To rid your settlers of lice anoint with mercurial ointment, muzzling the dog so that he cannot lick it. After it has been thoroughly rubbed on let it remain three or four hours. Then wash off with soap and warm water. Or use Persian insect powder.

NEMO, Catskill.—We have wasted a good deal of powder and paper in replying by mail to assumed correspondents who have addressed their inquiries to us relative to specified guns, gunmakers, etc., asking an answer through the Correspondents' Column; but as these letters are invariably returned by the post office as uncalled for we conclude that there is "no such feller" as "Chas. A. Kobh, Pittsburg," et al. There may be corn on that cob, but we can't see it. It is too fresh.

F. N. N., Concord, N. H.—1. Some glass ball snipe use shells to catch the broken glass. The size depends upon trap and manner of throwing balls. Should be at least 30 feet square. 2. For prices of balls see our advertising columns. 3. Size of shot used is No. 8. 4. The laws of Massachusetts require mill owners to provide suitable fishways. 5. There are fishways at the Lowell and Billerica dams. 6. The State Fish Commissioners are the parties to apply to in these matters.

F. S., Aberdeen.—1. I have a fine muzzle-loading shot-gun, known here as the best penetration and shooting gun. Laminated steel barrels, 12 bore, 32 inches. What is the proper charge to shoot at glass balls and what No. of shot? 2. Where can I obtain a correct pocket map of the States of Florida, Louisiana and Texas, and what is the price of each of them? Ans. 1. Three and a half dollars powder, one and a quarter oz. of No. 8. 2. Of M. Dripps, No. 111 Fulton st. Florida costs 50 cents, Louisiana 80 cents and Texas \$1.25.

S. J. S., Sandy Spring, Md.—Where can I procure bass fry, or could I propagate them? If so, how? Ans. You had better write to your State Fish Commissioner for fry or spawners. If the State has not got them we will tell you where to procure some. Milton P. Pierce, of Wenonah, New Jersey, used to propagate black bass for market, but we are not sure that he does now. Your best plan is to catch some old spawners right away in the nearest water and turn them into your pond. Do not forget to turn loose a lot of minnows for the bass to eat.

TYRO, Richmond, Va.—1. Do you consider the No. 2 Remington rifle perfectly safe with an extra long .38 cartridge (37 grains powder and 175 grains lead)? 2. Can the extra long .38 cartridge be used in a rifle chambered for the long .38? 3. Will the extra long .38 give better results in target shooting at 300 yards than the long? 4. Taking into consideration original cost of gun and exposure of ammunition what rifle and cartridge would you advise for target shooting up to 300 yards? 5. Are the .38 and .38 central-fire cartridges better than the rim-fire? Ans. 1. Yes. 2. No. 3. No. 4. 40 calibre, 60 grains. 5. Yes.

SCARLETT.—1. What is the chicken law in Nebraska and Iowa? 2. I have a setter bitch three years old that does not "shed her coat;" only shed about one half of her old hair last year. She is strong and well, but very fat. 3. Please give me the address of the owner of the champion setter Lark. 4. Do you think the use of the "auxiliary rifle barrel" will injure a shot gun barrel for shooting shot? Ans. 1. In Iowa, close season from January 1 to September 1; in Nebraska, from January 1 to August 1. 2. Nothing but regular feeding and plenty of exercise will do it. A little purgative might bring up condition, if she is too gross. 3. P. H. Morris, Esq., 79 Deane st., New York. 4. Not in the least.

MEMBER OF STATE ASSOCIATION.—1. Under what conditions was the R. V. Pierce badge shot for this year, and where did the entrance money go? 2. Under what conditions was the Greene Smith badge shot for last year, and where is the entrance money? Ans. 1. Fifteen birds, twenty-one yards rise. Open only to members of clubs belonging to the State Association. To be held by the winner each year in trust, and to be accounted for to the State Association. Said winner to receive the entrance fees from the next annual contest. Entrance fee, \$10. 2. Open to all organized clubs which were members of Association. To become property of club winning it. English rules, 5 traps, 80 yards. Entrance fee, \$50.

AVIS, Jersey City.—In our badge shooting one rule states that no member can change his handicap without permission of the committee. Another rule is that the member winning the badge shall be handicapped three yards from the winning score. A member is handicapped under the rules at 13 yards, but he claims that he can shoot from any distance providing he does not go ahead of his handicap; takes his position at 16 yards and wins the badge. At the next shoot he claims he has the right to shoot again at 16 yards as his handicap is fixed by the committee. Ans. According to the first rule mentioned, unless the committee give their permission, the man must shoot at 13 yards or may be ruled out. If, with permission, he shoots at 16 yards, he must, at the next match, take his position at 19 yards.

TAXIDERMISTS.—In response to several inquiries we give this list of works upon taxidermy: "Coner's Manual of Ornithology," a manual of taxidermy and field work, price \$2.50, published by Govt. printing office; C. J. Maynard's "Naturalist's Guide," price \$2, Naturalist's Agency, Salem, Mass.; Brown's "Taxidermist's Manual," price \$1, Orange Judd & Co., New York; "Taxidermist's Manual," published by Jesse Hanley & Co., 112 Nassau st., N. Y.; J. B. Davies' "Naturalist's Guide" and R. Avia's "Bird Preserving" are English books and can be obtained of Sabin & Sons, Nassau st., N. Y. In addition to these works especially devoted to the subject, Hallock's "Sportsman's Gazetteer" has several pages of practical instruction. "Wrinkles and Receipts," published by Munro & Co., N. Y., also treats of the subject. Please cut this out this time and don't ask the same question so often.

AN ARTIST AT WORK.—Mr. S. A. Kilbourne, whose clever paintings and sketches of fish have been so favorably commented upon, is now hard at work completing a series of careful studies on the game fish of the United States.

It is in Fulton Market, at Mr. E. G. Blackford's, that the artist has his temporary atelier, and each day new and beautiful models are brought before Mr. Kilbourne. It is not easy to paint a fish glowing with wonderful colors. The obvious reason is that with every moment out of the water the colors of the subject fade. There are, however, some curious divergences from this. When a cod is just captured he bleaches sometimes in an albinistic manner, recovering to a darker shade afterward. Nothing can equal the intensity of the color of the red snapper (*Lutjanus blackfordii*) when first captured. It is intensely carmine, with red hot gleams. In a short time, though it pales, it is still beautiful, taking on rose-leaf tints, until, at last, the glow all fades out like a sunset. In painting, then, many of his subjects, the cry of Mr. Kilbourne is always "Fresh Fish!" The shape—the contour of a fish—is not so hard to get, but sometimes the dripping paints on the palette seem to be taxed to their utmost to match the colors of a fish.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

NO. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 60 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 6, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 7.—Championship Walk at the Rink, N. Y. Base Ball: Buffalo vs. Allegheny, at Allegheny. Trotting: Plainville, Conn.; Milwaukee, Wis.; Adrian, Mich.; Dayton, O. Running Meeting at St. Louis, Mo.

Saturday, June 8.—Championship Walk as above. American Athletic Club Opening Games, at Hoboken. Montreal Lacrosse Club Annual Spring Games. Mystic Boat Club Regatta, at Newark, N. J.; Schuylkill Navy Open Amateur Regatta. Rossmore Rifle Club, at Staten Island; Regimental Rifle Match, at Creedmoor. Cricket: St. Timothy vs. St. George, at Roxborough; Doran vs. University of Pa., at Haverford; Belmont vs. Merion, at West Philadelphia; Philadelphia (2d) vs. Young America, at Nicetown. Base Ball: Milwaukee vs. Boston, at Boston; Chicago vs. Providence, at Providence; Cincinnati vs. Indianapolis, at Indianapolis; Star vs. Springfield, at Springfield; Buffalo vs. Allegheny, at Allegheny. Running Meeting as above.

Monday, June 10.—Quaker City Club (Phila.) Annual Regatta. Base ball: Rochester vs. Tecumseh, at London, Can.; Hornell vs. Allegheny, at Allegheny; Hartford vs. Springfield, at Hartford.

Tuesday, June 11.—Illinois Sportsmen's Convention at Quincy. Base ball: Rochester, as above; Hornell, as above; Milwaukee vs. Chicago at Chicago; Indianapolis vs. Boston, at Boston. Trotting: Edinburgh, Pa.; Watertown, N. Y.; Providence, R. I.; Fleetwood Park, N. Y.; Jackson, Mich.; Peru, Ind.; Cedar Rapids, Ia.; Kalamazoo, Mich.

Wednesday, June 12.—Illinois State Association as above. Upper Hudson Regatta Ass. Spring Regatta. Base ball: Rochester vs. Buffalo, at Buffalo; Hartford vs. Lowell, at Lowell. Trotting as above and at Massillon, O. Running Meeting at Columbus, O.

Thursday, June 13.—Illinois Convention as above. New York Yacht Club Annual Regatta; New Jersey (Hoboken) Yacht Club Annual Regatta. Boston Yacht Club Excursion; Upper Hudson Regatta Ass. as above; Layberger-Felsinger Match, at Pittsburgh, Pa. Base ball: Hornell vs. Tecumseh, at London, Can.; Hartford vs. Manchester, at Manchester; Indianapolis vs. Boston, at Boston; Milwaukee vs. Chicago, at Chicago. Trotting as above. Running Meeting as above.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

THE WATKINS REGATTA.

THE test races at Watkins have come to an end. The importance naturally attaching to this event, which was to be nominally of international reputation and results, renders a brief survey of the contests a paramount necessity in view of the weight likely to be attached by uninformed parties to the victories on Seneca Lake, and the position among amateur oarsmen, the fortunate few may claim as per programme. The original intention of the promoters of the event was to select by fair and open competition among American oarsmen those whom the fates at Watkins would justly declare the champions of this continent. They were to pull under such enviable distinction in the various races open to them, both in England and France, and it was hoped, with some show of reason, that they might prove victorious across the ocean and bring back with them to the West fresh proofs of the prowess of our country in friendly rivalry with the Old World.

Had the regatta in question been a success, in other words, had it been carried out in the spirit at first announced, there can be little doubt but that the races at Watkins would have really been regarded as actual tests and the winners would in all fairness have represented the championship of America. Under such circumstances the public would have abided by whatever they might possibly have done ahead. Defeat would have been acquiesced in without complaint, and our oarsmen would have profited by the lesson and set to work with renewed vigor and hope of wresting from their British friends the coveted laurel wreath of victory some future season. As it is, however, the test races of Watkins can only be looked upon as decided failures. In place of having led to some final and mutually satisfactory ending, the fates and circumstances have been unpropitious. Not that we refer to the overrunning of the town of Watkins with a crowd of strangers, many of whom were not of the most reputable sort, nor to the apparent shortcomings of the committees directly in charge of the arrangements, but to the inexcusable apathy of our best clubs throughout the country in general. That a small county town should have been the centre of attraction for a handful of bad characters, and that the rustic constables were not equal to coping with such an unlooked for invasion is comparatively a matter of small moment. Concerning the operations of the landsharks present in the picturesque little village on the lake it is not necessary here to digress, save, perhaps, to remark that they were by no means either so numerous or prominent as the cavillings of certain fault-finders by nature would have the public believe. It is quite safe to say that Watkins was no more forced to contribute to the wily machinations of blacklegs or humbugs than is any other meeting of a like kind where the victims to the gamblers' spoils congregate in large numbers. That the Regatta Committee could in any sense be held responsible for the town authorities, and their derelictions or incapacity, for the clerk of the weather, or for the rulings of the N. A. of A. O. is equally ridiculous, and the attempts made to saddle Gen. Magee or Mr. Gano with the failure to provide smooth water and comfortable accommodations for certain privileged parties will fall in their object.

The responsibility for the shortcomings of the races themselves rest largely with our amateur oarsmen, and much as we regret the fact, it cannot be denied that the results of the Watkins trials have fallen far below the estimate the public has looked for. The entries were meagre, and remarkable for the absence of our best known clubs and scullers of reputation. The list was still further clipped of representative men when Messrs. Walsh and Levein were set aside by disqualification in accord with a silly rule of the N. A. of A. O. That the committee were compelled to disqualify the pair is not a reflection upon either the authorities of the regatta or upon the two gentlemen who suffered under the ruling: it is simply a comment upon the assassin's rule of the rules of the only and the universally recognized boating association of national standing in America. We opine that when the cast-iron rule under which the Nautilus pair have technically been put under a cloud was first devised, its progenitors were not aware of the future havoc it would create, and it is not much to the credit of the association that the rule has not yet been modified in such a manner as to admit of rational application to different cases and circumstances. It is probable that the relief into which it has been brought through the action forced upon the Watkins Regatta Committee, will cause a review of some of the inelastic and harsh axioms of the N. A. of A. O., if not, the organization may set down its popularity as on the wane.

What with the mixed nature of the races, some in heats, others abreast, the paucity of entrances from our best men, the rough water, and the inflexible rules concerning amateurs, we must enter our decided protest against the claims of any oarsmen that finally do reach European shores to represent the championship of America. The public has been sadly disappointed in the Seneca Lake races, and is in no mood to be charged with the fresh defeats that await the traveling crews abroad; for it would be idle speculation to close our eyes to the fact that there is not the ghost of a chance for the men from Watkins either at Henley or on the Seine.

DOG LORE IN AMERICA.

CAPT. John M. Taylor, the first Kennel Editor of FOREST AND STREAM, and at present its special correspondent in England, has recently been made an honorary member of the Kennel Club of England, in consideration of his signal services during the past twenty-two years in improving the character and breed of dogs, and educating

sportsmen to their proper care and use. This period of twenty-two years Capt. Taylor has passed in America, with the exception of occasional trips to Europe; and, of course, his efforts and usefulness have been applied directly and immediately to dogs and their fanciers in America, and correlatively to promoting friendly intercourse and intelligent investigation between gentlemen sportsmen on both sides of the Atlantic. The reciprocal acquaintance and knowledge thus obtained through Capt. Taylor's instrumentality have enabled them to co-operate intelligibly in various ways to improve canine stock, and to create and establish thoroughbred dogs of all classes as nearly perfect as possible in physical points and their adaptation to the different kinds of field work required of them. The results, so far as America is concerned, are abundantly obvious in our Bench Shows and Field Trial Exhibitions. Whether England has drawn equal material benefit from the comparative study is not so apparent.

Capt. Taylor's efforts first became conspicuous through the medium of the FOREST AND STREAM. The establishment of its Kennel Department, under his management, afforded the opportunity. This was nearly five years ago. The United States had never previously possessed a journal to advocate the betterments of dogs. Papers which have since sought a front place as "dog organs" had no existence then, nor were they projected until long afterward. The whole field of study and investigation was unoccupied and comparatively new. Very little had been written about dogs in America before FOREST AND STREAM was started. What we learned of ourselves was gathered from the contributions to London *Field and Fancier's Gazette* of casual correspondents like "Podgers," "Forest Aisle," and other well-known writers, many of whom are now on our own list of contributors. Very little consideration was paid in those days to the comforts, rights and belongings of dogs or their owners. Fine breeds were not recognized by the uneducated eye; they were hardly more respected than curs, because the public were unable to distinguish their points of difference or superiority. The whole canine race, once a notable factor in America, especially among the "hard-goers" of Virginia and the Carolinians, had deteriorated, through neglect and unexpected vicissitudes, into a mongrel pack worthy of Constantinople. Scarcely a trace of the aristocratic kennels of the old southern States survived the rebellion, and the strains which were preserved came by the interposition of appreciative northern soldiers of genteel education, into whose hands the old stock passed as contraband of war.

Precisely what Capt. Taylor has done to restore and revive; and how systematically he went to work at the outset to develop and adapt the course of instruction which he intended those who matriculated should pursue, can be ascertained by referring to the early files of FOREST AND STREAM. His opening sentence in the first number touches the fountain source, viz., *man's instinctive love for the dog*, the possession of which alone enables him to analyze and estimate the canine character. He treats the animal as a sentient creature, and not as a brute.

In the third number of the paper (1873) the distinguishing excellencies and points of difference of the pointer and setter are given; and all that has since been written in books and papers merely amplifies what is there said about color, strains, management, nose, staunchness, etc., etc., of the several crosses of Gordon, red Irish, English and American setters. In one paragraph Capt. Taylor, with the positivity of one who is master of what he knows, states that "a pure blood English setter, crossed with an American, will be a far more useful animal than the high-priced imported English setter, as 'high-priced dogs are only valuable to get the best strains from.'" Crucial tests have since proved the truth of this assertion. In subsequent numbers of the paper there follow descriptions of beagles, spaniels, Scotch deerhounds, foxhounds, retrievers, greyhounds, Chesapeake dogs, mastiffs, harriers, and all other varieties of sporting dogs, with their characteristics, relative degrees of intelligence, illa and humors, methods of feeding and breaking, and other knowledge necessary to prepare the sportsmen for their employment in their respective fields of service. In October, 1873, field trials and their importance were first brought to notice, and illustrated by a full account of the trials at Ipswich, England. In the same month (Oct 1873) we have an account of the Nottingham Dog Show. To most dog owners in this country the written information thus imparted was as novel as Gospel to an unconverted sinner. It was a new literature and a new revelation. The first fruits of Capt. Taylor's efforts came sooner than might naturally have been hoped for in written congratulations from leading celebrities abroad, who were encouraged by the interest so unexpectedly manifested here. Direct overture came from English gentlemen, recognized as authorities and competent to act, who hastened to foster the impulse engendered by giving Americans an opportunity to see how the thing was done at home. The letter appended is in evidence. It is sufficiently assuring. The writer, Mr. Price, is the owner of "Belle," whose portrait we printed April 9, 1874:

GREAT WESTERN HOTEL, Birmingham, Eng.,
November 29th, 1873.

EDITOR FOREST AND STREAM:

We are pleased to hear that our respected consins on the other side of the Atlantic are beginning to take an interest in field trials on game for pointers and setters, the newest, and by many thought the most interesting of all our British sports, and in order to give these sportsmen in America, who have taken up shooting dogs, an opportunity of seeing the best animals perform that England can produce, Mr. Madons and myself will be glad to make a friendly match against any pointers or setters now in America; not English dogs, imported for the purpose—these we can run at home—but bona fide American animals. If the

owners of the American team consent to run in England, we will gladly pay expenses, and in this case a well known sportsman and master of fox hounds, Sir Watkin Wm. Wynn, of Wynnstay, will lend the requisite ground and game. I should propose that a double match, brace against brace, should first be run off, then two single matches to follow. I would suggest as the English judge the name of Viscount Combermere, a well known arbitrator at field trials, and a renowned sportsman. Also, the 18th and 14th of August next as the date for running off the match, and, if preferred, two brace from each country can take part in it. Your obedient servant,
R. L. PRICE.

Following the publication of this letter, and pending the acceptance of the international challenge, all means were employed by Capt. Taylor to acquaint our sportsmen with the rules governing field trials in England, and to inform them of the qualifications of dogs and the requisites for performance in the field; scales of points were published by which their merits could be rated, here or there, (in America or England;) and preliminary details were arranged with greatest care. Finally, he sketched the English Kennel Club, defining its objects and duties, and urged (Feb. 5, 1874, F. & S., Vol. I, p. 409) the sportsmen of America to form in New York an organization similar to it. The article referred to says: "We have been in correspondence with several prominent gentlemen, owners of sportsmen's dogs, as to making the preliminary arrangements, and we have their entire support as to the founding of just such a kennel club in this country."

From what has been stated it will be seen that FOREST AND STREAM, through its kennel editor, not only introduced Field Trials and Beueh Shows into America, but laid the foundation of its first Kennel Club. We respectfully refer owners and trainers of dogs to these editorial articles for many valuable suggestions.

Unfortunately the International Field Trial never took place, although it was everywhere regarded with the greatest interest, many entries being conditionally made, and passages actually provided for two brace of dogs by the Williams & Oulton steamship line, either way; it failed, simply because it was impossible to reconcile the English rules of merit with our own ideas of a dog's field qualities—they allowing no points whatever for retrieving, while we claimed fifteen. The whole difficulty of adjustment arose from the fact of the character of the ground hunted over in the two countries requiring different qualities; the English also making a great point of "dropping," while we consider it of no account, preferring to see our dogs and know where they are, which would be impossible in our tall prairie grass and native cover if they practiced the habit.

Meanwhile, before it became conclusive that there was to be no international field trial, Capt. Taylor published (April 9th, 1874) a code of regulations to govern Field Trials in America, which he submitted, through the columns of FOREST AND STREAM, to the various State Sportsmen's Associations, whose Conventions were announced to occur in the following months of May and June, hoping that they would order a preliminary trial in the fall and so designate the times of holding their conventions of the year following, as to permit of field trials being held at such times under their auspices. He also prepared a scale of points to suit American bred setters, (the value of which is apparent,) and began (June 4) to republish from English authority a series of articles giving the points by which every variety of dog is judged on the Show Bench in England. This important work accomplished, he devoted himself through the columns of this paper to bettering the blood of dogs. The best native strains, like the Webster and Gildersleeve (northern and southern), were traced out; and it was believed that by engrafting and crossing these with the best imported blood the desideratum would be secured. Then followed discussion of the merits of all breeds, Irish, Oordon, Laverack, English, etc., by writers on both sides of the Atlantic. On June 14, 1874, Capt. Taylor imported for Chas. H. Raymond, Esq., the two celebrated Laveracks, the first ever brought to America with the exception of Dr. Gautier's dog imported two years previously. About the same time the Macdona dogs, Kirby and Milo, came over to Dr. Rowe, through Capt. Taylor, and also the Ranger pup Venus and the bitch Brosna, in whelp by Ranger, to the same gentleman. Other valued stock succeeded. Then pedigrees began to be asked for and scrutinized, and purchasers gradually became more particular, until now a dog without a record is no dog at all. A stuffed defunct dog will bring more money at a sale.

We have made this cursory sketch of what may be called the "Dog's Rise and Progress" in America for several reasons. 1st. Because it is news to three-fourths of our readers; 2d. To show what an important part the FOREST AND STREAM and its whilom Kennel Editor have played in bringing the dog to its present reputation; and 3d. To preserve this instrumentality from oblivion, and hold our claim good against denials of what became a matter of record so long ago that priority and precedence are looked upon by unprincipled men as merely a lease expired and not a right guaranteed. On May 7, 1874, we predicted that field trials would eventually become as popular in this country as they were abroad at that time, and we believe that they will, although the initiatory step taken by Tennessee in October, 1874, has not been so frequently repeated as to amount to a complete fulfillment of the prophecy. The same cannot be said of bench shows. The first American bench show was held at Chicago, June 2, 1874, under the auspices of the Illinois State Sportsman's Association. Those at Memphis and Mineola, L. I., followed in October, and since then they have multiplied until their name is a noun of multitude. The first plan of awards ever devised for bench shows in America was published in the FOREST AND STREAM in January, 1875.

In the fall of 1874, while on a tour through the West with the Irish Team, the desirability of establishing a mileage system of dog transportation on railroads was advocated by us, and in the January following (1875), the Missouri, Kansas and Texas road took the initiative.

Keeping pace with the requirements of sportsmen as they developed, we instituted a Kennel Register, in February, 1876, for the registration of pedigrees. Subsequently (1) the Chicago Field opened a competitive register. Then (2) a National Kennel Club, of seven self-appointed delegates, was formed, of which the editor of the Field was made President. Next (3), in February, 1877, a year afterward, the National Kennel Club announced that it was "about to take immediate steps toward publishing a Kennel Club Stud Book;" that (4) it was prejudicial to the interests of dogs to publish two stud books; and (5) as the N. K. C. stud book would necessarily be considered the authority, ours (6) would make confusion and dissatisfaction; therefore (7), for the sake of harmony, it was desirable that the FOREST AND STREAM and the Chicago paper should both turn over their lists to the clubs to manipulate, possess and publish. We needed—for the simple reason that our Register would not be perfect, if any portion of the pedigrees entered in the Chicago Field should be withheld, and we knew that they would be. Having turned over and dispossessed ourselves of our hard-earned and accumulated property, the loss of which has placed us at a great disadvantage ever since, the Kennel Club placed the work in the hands of Mr. Arnold Burges (the kennel editor of the Chicago Field) to edit. This was the final move on the board. The confidence game worked to a charm, and Dr. Rowe enured us with a natural point in our hand! Joekeys will admire the smartness. The fraternity of sportsmen ought to deprecate a measure which has already kept the Register from publication and delivery for more than a year.

Had this book been issued within a reasonable time we would have kept silent and swallowed our chagrin; as it is, we take this opportunity to show the cause of our apparent delinquency, in hope that any who may have judged us blame-worthy will acquit us. In the main, our efforts in behalf of sportsmen have been successful. If they have ever failed, it has been because they have been defeated by direct instrument-alties like this, prompted by jealousy or business rivalry. Prestige or honor, we verily believe, do not attach to such methods of circumvention.

Since Capt. Taylor took up his residence in Virginia, he has sent to FOREST AND STREAM many useful suggestions. His last one was, to have a series of Eastern Field Trials in the fall. It has been taken up by the Baltimore Kennel Club, and the event will come off soon after Capt. Taylor's return from England. No doubt the Captain will make the information which he gains abroad most useful in its practical application here. By comparative analysis he will be able to eliminate what is bad and add what is desirable to our own category.

TRIBUTE TO FRANK FORESTER.

In the last issue of FOREST AND STREAM I observed and read with much interest a fine tribute to the worth of that inspired genius, "Frank Forester," now, alas! gone to the "shadow land," and wish to thank "Gellert" for the melancholy pleasure I have taken in the perusal of his reminiscences of one endeared by tenderest ties to every true American sportsman. There is, however, one slight error in the kindly tribute of "Gellert" which I desire to correct. In his last touching and plaintive letter to the press of America, written just previous to his tragic death, (and with which, I think, most of our native sportsmen are familiar, as it is embodied in the later editions of Forester's incomparable "Field Sports," in a beautiful memoir by a personal friend of the lamented author), Herbert did not, as misquoted by "Gellert," remark: "You will miss me when I am gone." Ah, no! his mood was too melancholy, too hopeless and forlorn to pen such a remark. There is indeed but a change of one word in that sentence, but what a wide difference that slight error gives to the sense of the remark. Poor Herbert remarked: "Few will miss me when I am gone; probably none lament me—so be it, only I implore you do not misrepresent and malign me." (The italics are my own.) This will serve to show how utterly crushed and broken was the naturally proud spirit of "our Frank," as he is still lovingly and tenderly known, in memory, by the fraternity of which he was, while living, the acknowledged leader. There is little doubt that poor Herbert had become upon the subject of his domestic woes, a monomaniac, otherwise he could never have rashly destroyed his own life. His deep and pitiful despair speaks out in mute but touching language through every sentence in the few last letters to those dear friends, I. Anson, Kinney, Anthon, as well as in his epistle to the press and note to the coroner. All bespeak a spirit wholly and irrevocably crushed by overwhelming sorrow, whence he was plunged from the very pinnacle of happiness, as it were, having three months previously wedded a young and beautiful wife, the cause (unintentional, let us hope, on her part) of his premature death.

To leave a melancholy topic: it may not be generally known that Frank Forester's genius as a poet was deemed by many equal, if not superior, to his brilliancy as a prose writer. The three stanzas quoted in the department of "Field Sports" devoted to Autumn Shooting, wherein he alludes to the season as "the time of year the poor ballad-monger (Herbert), above quoted, has, perhaps, labored to depict," is a fine speci-

men of the author's genius in poetry; though, in truth, all the productions of his pen, whether prose or verse, have the true ring and sentiment of real poetry, not cramped or trammelled by mere jingling rhymes and measure, but genuine soul-stirring poetry in the actual sense of that term, and this quotation, referred to in his "Field Sports" occurs originally in his beautiful poem, "Jane Melthea," one of a series written by Herbert under the running title of "Ballads of the American Revolution." A very fine poem, entitled "The Hawk In Party," is worthy in dash and spirit to be the production of the grand sportsman-bard—Sir Walter Scott—was published from the pen of Herbert, in an early number of "Graham's Magazine." I might, perhaps, did space permit, quote a few verses from his more pretentious poetic productions, but having drawn my humble jottings out to a greater length than anticipated, will close for the time, and beg leave to subscribe myself as ever, Thine fraternally,
WILL WILDWOOD.

J. O. WHITNEY.—We regret to announce the death, at the early age of twenty-five years, of Mr. J. O. Whitney, the editor of the St. Augustine Florida Press. As a newspaper man Mr. Whitney was widely known in Florida and the Southern States. He was a frequent and valued contributor to this journal, and to his uniform courtesy we have been in past years indebted for many substantial services at the South.

EXCURSION TO LABRADOR.—The summer excursion to Labrador, under the care of Mr. M. M. Chick, 41 Franklin st., Boston, leaves that city about the 8th of July. The party sail in a fast clipper schooner, and are to be absent during the heated term. The scenery, cool climate and the rare sport offer strong inducements to recreation seekers. Mr. Chick has conducted similar excursions before, the one of last year proving a most pleasant trip. Naturalists, photographers, sportsmen and pleasure seekers make up the present party. There is room for a few more, as the number is not quite full.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

- National Sportsmen's Association, Wilkesbarre, Pa., June 11.
- Illinois State Sportsmen's Association, Quincy, June 11; Secty., Geo. E. Wheeler.
- The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Secty., Benj. F. Dorrance.
- Ohio State Sportsmen's Association, Cincinnati, June 15; Secty., Wiltbank, Toledo.
- Tennessee State Sportsmen's Association, Nashville, Dec. 2 Sect'y., Clark Pritchett, Nashville, Tenn.
- Wisconsin State Sportsmen's Association.
- Massachusetts State Sportsmen's Association, at call of President
- Missouri State Sportsmen's Association.

NATIONAL SPORTSMAN'S ASSOCIATION.—*The Beginning.*—We have before us a rather soiled sheet of printing paper, written with lead pencil, which recalls to mind the origin of the National Sportsman's Association. This paper is the first rough draft, in the handwriting of T. C. Banks, Esq., now the efficient business manager of FOREST AND STREAM AND ROD AND GUN. The annual convention of this important body will take place at Wilkesbarre, Pa., on the 11th instant. It is most essential that its working forces should be strengthened and its vitality stimulated. State Associations which are to meet this month, and those to follow, should not fail to appoint delegates to the next National Convention who will pledge themselves to attend and promote its praiseworthy objects. Its usefulness will be commensurate with the efforts to make it useful.

MOOSE IN THE ADIRONDACKS.—A two-years-old bull moose has been received at the park of the Adirondacks Hunting and Fishing Club, in Essex County.

IOWA STATE ASSOCIATION.—The last annual convention met at Des Moines, May 23, and three days following. The following clubs were represented: Des Moines Sportsmen Club, Marshalltown Shooting Club, Atlantic Gun Club, Missouri Valley Gun Club, Keosauqua Sportsmen Club, Franklin County Audubon Club, Council Bluffs Sportsmen Club, Centennial Sportsmen Club, Gate City Sporting Club, Burlington Sportsmen Association and Creston Sportsmen Association. Several interesting papers were read before the association, among them one by Mr. Miller on the Iowa Game Law. The officers for the ensuing year are: Pres., L. L. De Lano; First Vice-Pres., H. W. Smythe; Second Vice-Pres., W. C. Ellis; Rec. Sec., D. C. Beaman; Cor. Sec., Samuel Lowe; Treas., G. W. Ogilvie. Board of Directors—J. C. Hoffmayer, E. A. Abbott, R. H. Taylor, Geo. C. Henry and Geo. Waddington. As Law Committee—J. L. Williams, E. J. Ingersoll and B. F. Montgomery. The next convention will be held at Marshalltown, on the third Tuesday of May, 1879.

The Rifle.

MASSACHUSETTS—Boston, May 31.—Rifle gallery, 655 Washington street. Three best scores for three prizes; eight shots per man:

J. H. Harris.....5 5 5 5 5 4 5—39 J. Cowan.....5 5 4 4 4 4 5—35
F. E. Hall.....4 5 5 4 5 5 4—37 E. B.

CONNECTICUT—Willowbrook, May 25, 1878.—The first fortnightly competition for prizes offered by the Connecticut Rifle Association. The attendance was good, though on account of a shower of rain in the midst of the shooting, several withdrew before finishing their scores. C. O. Case, New Britain, was the winner of the long-range match; W. H. Binn, Hartford, of the mid-range, Remington prize; Jas. Johnson, New Britain, of the all-comers' match, 200

yards; Lieut. Osgood, New Britain, of the military match, 200 and 500 yards. The scores are as follows:

Long-Range Match.									
C O Case, New Britain.									
800	5	5	5	5	5	5	5	5	46
900	3	5	5	5	5	5	5	5	41
1,000	3	5	5	5	5	5	5	5	127
W H Blinn, Hartford.									
800	3	3	3	3	3	3	3	3	34
900	0	5	5	5	5	5	5	5	39
1,000	2	5	5	5	5	5	5	5	118

I N Camp, Middletown.									
800	4	4	4	4	4	4	4	4	42
900	5	4	4	4	4	4	4	4	40
1,000	3	8	8	8	8	8	8	8	110

O V Coffin, Middletown.									
800	4	4	4	4	4	4	4	4	44
900	3	2	2	2	2	2	2	2	30
1,000	5	0	4	4	4	4	4	4	104

Mid-Range Match, Remington prize, 500 yards.									
W H Blinn, Hartford.	3	5	5	5	5	5	5	5	46
F Wessell, New Britain.	8	4	4	4	4	4	4	4	45

All-Comers' Match, 200 yards, any rifle.									
Jas Johnson, New Britain.	4	4	4	4	4	4	4	4	39
J D Marks, Collinsville.	5	4	4	4	4	4	4	4	41
O E Pillard, New Britain.	5	4	4	4	4	4	4	4	40
J B Atkinson.	4	4	4	4	4	4	4	4	40
O B Hull, New Britain.	4	4	4	4	4	4	4	4	40
J W Carlton, New Britain.	4	4	4	4	4	4	4	4	40
C H Paughman.	4	4	4	4	4	4	4	4	40
Azro Spaulding, New Britain.	3	4	4	4	4	4	4	4	38
Dudley Seymour, Hartford.	4	3	3	3	3	3	3	3	35
I A Barbour, Hartford.	4	3	3	3	3	3	3	3	35
J F Fletcher.	4	3	3	3	3	3	3	3	35
W I Fielding, New Britain.	4	3	3	3	3	3	3	3	35
F E Watkins.	4	3	3	3	3	3	3	3	35
Julius Pease, New Britain.	4	3	3	3	3	3	3	3	35

Military Match, 200 and 500 yards.									
Lieut J S Osgood, New Britain.	200	5	4	4	4	4	4	4	30
Lieut Wm Clark, Hartford.	200	5	4	4	4	4	4	4	30
Corp F V Chapin, Hartford.	200	4	4	4	4	4	4	4	28
G A Cornell, Hartford.	200	4	4	4	4	4	4	4	28
Lieut Col Barbour, Hartford.	200	4	4	4	4	4	4	4	28

NEW YORK—Willink, May 21.—Grand prize shoot at North Collins, N. Y. The shoot at Collins was well attended. The first prize was an organ, the second a Maynard rifle, the third a watch and chain. The rifles used were breech-loaders, Remingtons, Maynards and others. There were three muzzle-loaders in the match. Dr. Moyer, of Lockport, N. Y., was the winner of the first prize with a Remington Creedmoor breech-loader, making a string of one inch in three consecutive shots. H. V. Perry, of Jamestown, N. Y., gunsmith, winning second and third prizes with a muzzle-loader of his own make, his strings being 1 5-16 and 2 5-16. For good, steady average shooting, the best shooting in this match was done by J. F. Champlin, of Willink, N. Y., with a muzzle-loader made by J. O. Robson, of Buffalo, twenty years ago. Mr. Champlin used the old style common peep and bead sights, as also the common home-made bullet without swaging. The following is the average score of the three gentlemen named as reported to me by H. H. Whitt, secretary North Collins prize shoot:

Dr. Moyer, of Lockport, N. Y.—Target No. 16, 5 11-16th in.; target No. 27, 6 5-8th in.; target No. 32, 1 in. Average, 4 81-48.

H. V. Perry, of Jamestown, N. Y.—Target No. 24, 3 in.; target No. 46, 1 5-16th in.; target No. 55, 6 3-16th in.; target No. 91, 2 5-15th in.; target No. 93, 2 11-16th in. Average, 3 1-10.

J. F. Champlin, of Willink, N. Y.—Target No. 52, 2 1-2 in.; target No. 58, 2 7-8th in.; target No. 65, 3 1-16th in. Average, 2 13-16.

Rules and Regulations—Distance, 165 yards; any rifle; any sights except telescope; targets of any pattern; four shots for a string. J. W. P.

NEW YORK—Ogdensburg.—The Ogdensburg Rifle Club have been practicing of late on their new range, called the Oawegatchie. On May 18, 73 at 900 yards; May 28, 22 consecutive bull's-eyes at 800 yards were made by James Ives, and May 30, 70 points at 900 yards by A. Callaghan. On the 30th the following scores were made: James Ives, 800 yds., 73; 900, 69; 1,000, 68; total, 210. A. Callaghan, 900, 70; 1,000, 64. M. S. See, 900, 65; 1,000, 62. R. B. Pickup, 1,000, 68.

RIFLE PRACTICE IN NEW YORK.—The amendments to the military code by the last legislature has placed the rifle practice of the National Guard in a separate department instead of having it, as heretofore, a bureau in the Inspector-General's office. Colonel Geo. W. Wingate has been commissioned by Governor Robinson as its chief, with the rank of Brigadier-General, but retaining his former title of General-Inspector of Rifle Practice. He has appointed as his assistant (with the rank of Colonel) Major T. Howard Cowperthwait, formerly Inspector of Rifle Practice of the First Brigade. Colonel Cowperthwait has been one of the most efficient Brigade Inspectors in the National Guard, and his appointment is a well-deserved promotion.

ZETTLER RIFLE CLUB—Guttenberg, June 1.—Ring target, 200 yards, off-hand; 10 shots, possible 250:

W M Farrow.	221	B Zettler.	203
M Dorrier.	217	H Oehl.	196
F Fenning.	212	F Broadway.	195
D Miller.	209	C Zettler.	192

June 3—Competition for Zettler badge; conditions as above:

F Fenning.	214	H Oehl.	192
M Dorrier.	208	G A Sherman.	188
M W Farrow.	205	N D Ward.	185
C Jackson.	200	F Farbarus.	182
B Zettler.	196	O G Zettler.	182
R Zimmerman.	199	M L Riggs.	178
D Miller.	192	T Broadway.	170
M B Engel.	190	J Dutil.	169

CREEDMOOR, May 29.—Fifth competition, Wylie badge. Conditions—Military rifle, 300 and 500 yards; seven rounds, off-hand; score:

W R Livermore.	20	30	50	W Mangam.	21	8	29
W M Farrow.	27	23	50	M Maltby.	16	11	27
F Hyde.	23	27	49	A M Miller.	16	8	24
J R Grobman.	24	18	42	P McMorow.	16	7	23
J L Paulding.	19	18	37	W W Gray.	10	9	12
A B Van Hensen.	25	8	33				

Amateur Rifle Club match at 200 yards; 15 scoring shots, any rifle, for badge:

F H Holton.	68	N D Ward.	60
W M Farrow.	67	H Fisher.	60
F Hyde.	66	P G Sandford.	60
R H Keene.	63	T Lamb.	60
M M Maltby.	63	J A Hairy.	60
C E Eldenburgh.	61		

TURNER CADETS.—First team shoot, Zettler's gallery, New York, May 29; 200 yds; Creedmoor reduced targets:

Illwitzer Team.		Recht Team.	
G Illwitzer.	39	H Spieser.	43
T Schmager.	37	C J Recht.	39
C Binn.	33	F Sauter.	34
H Spärmer.	30	L Biehoff.	30
F Bayek Jr.	30	G Banzer.	27
L Biehoff.	28	J Rosenbaum.	26
A Litterat.	27	J Gewandt.	22
H Niebling.	25	Wm Elisinger.	19
	249		259

YORKVILLE RIFLE CLUB.—At the weekly contest for I. R. Grobman's 2d challenge badge, Mr. E. Giesfuss won for the third successive time. The badge became his property. J. R. G.

CREEDMOOR.—On Monday last, notwithstanding rain and fog, the competition for the marksmen's badge of the National Guard took place. Distance, 300 and 500 yards; five rounds at each range, with no sighting shots. To secure a badge 25 in a possible 50 was necessary. Of the Thirtieth Regiment, 24 men; of the Fourteenth, 13 men; of the Fifteenth Battalion, four were qualified; of the Twenty-third Regiment, 43 men; of the Twenty-second Regiment, 20 men, and of the Forty-second Regiment 20 men won badges.

ARMS AND AMMUNITION AT CREEDMOOR.—By an arrangement made with Mr. Homer Fisher and the National Rifle Association, Mr. Fisher will have the exclusive sale of rifles and ammunition on the range at Creedmoor. This measure will allow riflemen to obtain all the supplies necessary for rifle shooting, and will save a great deal of trouble. A very full and complete supply of every kind of ammunition will be kept on hand, and rifles of the best makers will be on sale. Purchasers will be enabled to try their arms at once; also any rifle purchased can be fully tested as to elevation, etc., and the targets made, as in shot-guns, can accompany the arms. Shot-guns will also be targeted, and pattern and penetration shown. We consider that Mr. Homer Fisher's arrangement is an excellent one, and from his method of conducting business we feel quite certain that he will be well patronized.

Gold and Stock Rifle Club and Western Union Telegraph. Distance, 100 yards with Ballard rifles. Gold and Stock won with 241. Western Union, 231.

MOUNTAIN VIEW—New Jersey, May 28.—We are honored with a number of distinguished guests at this place to-day. Mr. Bliss, President, and Mr. Olds, Superintendent of the Schaghticoke Powder Works, are looking over the extensive works, while Captain Jackson is trying his best to make ten consecutive bull's-eyes. With a flickle wind, Mr. Greene, Treasurer of the L. & R. P. Co., coaches and scores. A. T. H.

MATCH BY MAIL.—Match between the Montgomery Rifle Club, of Sandy Spring, Md., and the Maynard Rifle Club, of Wheeling, W. Va., on May 24, 1878. Distances, 200 and 500 yards; teams of four, fifteen shots at each distance:

Montgomery Rifle Club.									
200 yards.									
S S Scott.	4	5	4	4	4	4	4	4	0-50
S B Wetherald.	3	3	3	3	3	3	3	3	4-52
E W Scott.	5	4	4	4	4	4	4	4	4-53
W Scott.	4	3	3	3	3	3	3	3	4-50-211
500 yards.									
S I Scott.	5	5	4	4	4	4	4	4	5-71
Wetherald.	5	4	4	4	4	4	4	4	4-53
E W Scott.	5	4	4	4	4	4	4	4	5-74
W Scott.	4	5	4	4	4	4	4	4	5-72-270
Total.									431

The 200-yard score was shot in a pouring rain, and many of the cartridges hung fire badly.

Maynard Rifle Club.									
200 yards.									
C B Dwight.	4	4	4	4	4	4	4	4	4-56
Stanton.	3	4	4	4	4	4	4	4	4-53
E B Worthen.	4	3	3	3	3	3	3	3	4-54
S K Wallace.	4	3	4	4	4	4	4	4	5-56-216
500 yards.									
C B Dwight.	5	4	4	4	4	4	4	4	5-70
J D Stanton.	4	4	4	4	4	4	4	4	4-57
E B Worthen.	4	5	4	4	4	4	4	4	5-61
S K Wallace.	4	3	3	3	3	3	3	3	4-51-249
Total, 200 and 500 yards.									475

Weather threatening, with a very strong wind. E. S.

A NEW SIGHT.—A rifleman in Richmond, Va. (and it may be well to mention that in Richmond rifle shooting both practically and theoretically is admirably well understood) has been experimenting with a novel sight, made of a crystal, so cut as to prevent the refraction of the rays of light. This new sight has been sent to some of our leading riflemen, and we expect to hear good results derived from its use.

DUDLEY SELPH.—We regret to hear through the public prints that an accident has happened to Mr. Dudley Selph, the well-known New Orleans rifleman. We forbear mentioning further particulars, until we have the fullest statement of the nature of the accident—if any accident there is—and the arm used on the occasion.

DE. W. F. CARVER.—Dr. W. F. Carver paid us a visit on Monday last, and we were glad to welcome this remarkable rifleman. The Doctor stands six feet two inches, and is as handsome a specimen of a man as we would like to look at. The theory that all riflemen should have gray eyes is at fault in the present instance, as Dr. Carver's eyes are hazel. There is a peculiarity, however, in these eyes which are remarkable. They are very mobile, lustrous, full and large, though soft and winning. Perhaps the constant watchfulness of these eyes may have arisen from Indian habits, the Doctor having lived among the savages for many years. The Doctor is some thirty-eight years of age and in the prime of life, and total abstinence from spirits and tobacco has given him robust strength, with a most shapely form. On asking the Doctor how he learned to shoot, he said "There was no time when he could not shoot." He mentioned his skill with the bow and arrow in the Indian fashion, and declared that if he set at it, in two months' time, when his arms and fingers were toughened, that he thought he could shoot with the bow as well as ever. Our readers have been already informed of the Doctor's performances. With a Winchester rifle, he can break glass

balls just as does Captain Bogardus. In some of his fancy shots, the objects being stationary, the Doctor shoots from his hip. He cuts five-cent pieces, nickels, half-dollars or dollars while in the air. The great match Doctor Carver proposes to accomplish is to break 5,500 glass balls in 500 minutes. Perfectly conscious of the great tax on the strength of any one endeavoring to perform this feat, the Doctor, nevertheless, believes he can accomplish it. The place and time when this match is to take place will be duly announced in our columns. The Doctor is the recipient of some very superb gold medals and badges, presented to him by his numerous California admirers. On Monday night this champion rifleman left for New Haven, in order to give an exhibition of his skill to the employees of the Winchester Repeating Fire-Arms Company. While in New York Dr. Carver's headquarters will be at the office of the Winchester Rifle Company. Though speaking with proper pride of his achievements with the rifle, Dr. Carver is no hoaster, and is sure to make numerous friends from his retiring and quiet manner. We shall keep our readers fully informed of Dr. Carver's movements, and will give the details of his matches. He remains in New Haven until the end of the week, the guest of the Winchester Arms Co., and will give an exhibition there to-morrow.

RECOIL.

THE FOREST AND STREAM AND ROD AND GUN has perhaps given the fullest ventilation to the subject of recoil. It is surprising when a topic of this character is discussed how many different views are promulgated. Of course we by no means indorse some of the very extraordinary views which were published. Still, from the miscellaneous character of the many papers we have printed on recoil, we have no doubt a great many novel points have been presented. At our request, Mr. C. T. Stokes wrote to Col. Scott Ship, of the Virginia Military Institute, requesting him to give in full the subject of recoil. This communication, of an exhaustive character, we now take great pleasure in publishing. We beg also to state that, until further notice, the recoil matter may be considered as closed:

VIRGINIA MILITARY INSTITUTE,
Lexington, Va. May 5, 1878.

C. T. STOKES, Esq., Richmond, Va.:
My Dear Sir—Recoil is the retrograde motion impressed upon a piece by the pressure resulting from the expansive force of the gases generated by the explosion of the charge of powder. Gunpowder is a mechanical mixture of certain definite proportions of nitre, charcoal and sulphur. In its normal condition it is an inert solid, occupying comparatively little space, but possessed of rare potential energy. By the application of the requisite degree of heat, about 572 deg. Fahr., combustion is produced; the ingredients combine according to the law of their chemical affinities. The state of aggregation of the particles of the ingredients is altered, the solid is converted into gas, the volume of which vastly exceeds that of the solid. This conversion is attended with the evolution of great heat, by which the volume and expansive force of the gas is still further increased. Now, it is a property of confined gas that it presses with equal force in all directions, and this pressure varies with gunpowder gases according to circumstances, from 10,000 to 200,000 lbs. per square inch of surface. Here, then, we have the force which imparts its energy to the projectile; but every force must have a point d'appui from which to act. Archimedes asserted that if provided with a fulcrum he could construct a lever which would be capable of moving the earth. In the case of a fire-arm, the bottom of the bore is the point d'appui, the fulcrum, of the powder. It is a fundamental principle of mechanics that action and reaction are equal in intensity and opposite in direction. The powder then acts upon the projectile, and the column of air in front of the projectile; it reacts upon the bottom of the bore, and this action and reaction are equal and opposite. The action moves the ball to the front with a certain velocity, the reaction moves the piece to the rear; that is, causes it to recoil. Now, the velocity imparted by the same force to unequal masses will be in the inverse ratio of the masses. If the gun weighs 150 times as much as the ball its mass is 150 times as great, and the velocity of recoil of the gun will be the 150th of that imparted by the same force to the projectile; that is, if the projectile has an initial velocity of 1,500 feet, the retrograde velocity of the gun will be ten feet. The momentum being the product of the mass by the velocity, will be the same for both, since action and reaction must be equal. You see I speak merely of the action of the powder upon the projectile, but it acts also upon the column of air in front of the projectile, and this action must increase the reaction, so that in the case supposed the velocity of recoil would be more than ten feet. Within certain limits the force of powder increases with the resistance it encounters. Hence, the heavier the ball the greater its resistance to motion; the greater will be the force of the powder; the action being greater, the reaction will be greater; that is, the force of the recoil will be greater. It is a very common error to suppose that the whole of the powder is instantaneously converted into gas. The combustion of powder is not instantaneous, but progressive; and its velocity depends upon the size, shape, density of grain, upon the proportion and purity of the ingredients, upon the mode of manufacture, upon the hygrometric character of the powder, etc. It is true that much the greater part of the charge is converted into gas in the first moments of combustion; and it is further true that the time required for the combustion of the whole charge is so brief as to be inappreciable to the senses; but it is very appreciable to calculation, and by varying the conditions mentioned above the velocity of combustion of powder can be varied at will. So we see that the combustion being progressive, the gas will continue to act upon the piece after the bullet has left the piece, still further increasing the recoil; but this effect is comparatively small; the principal reaction upon the piece results from the action upon the projectile. Now, remembering that velocities are in the inverse ratio of masses, let us suppose a rifle weighing ten pounds and a bullet weighing 400 grains. There are 7,000 grains in a pound avoirdupois, so the gun will weigh 70,000 grains, and will be 175 times the weight of the ball. Suppose the ball has an initial velocity of 1,750 feet per second; then the gun should have a velocity of ten feet. Suppose the barrel of the rifle thirty inches long; then when the bullet leaves the muzzle, having traversed the length of the barrel, the gun will have moved only 17-100ths of an

inch; its motion will be directly opposite to that of the ball, and so can produce no effect upon the aim. If the gun weighs ten pounds and has a velocity of recoil of ten feet, its momentum will be 100 pounds, and the "kick," as it is called, would seem a serious matter. But the piece is closely pressed against the shoulder, and the mass of the marksmen is, as it were, incorporated with that of the piece, so that the velocity of recoil is proportionally reduced. Again, the stock of the piece being a broken line, the whole force of the recoil is not directly transmitted to the shoulder. It is resolved into two components, one of which is expended in producing or tending to produce rotation around the point of contact with the shoulder. Hence, if the stock be too much bent there is a tendency of the butt to strike the marksmen in the face. From all this, it follows that if the gun were of the same weight as the ball, and if its shape were such that it would encounter a resistance from the air only equal to that encountered by the ball, it would move to the rear more rapidly than the ball would move to the front, for the pressure continues to act upon the piece after the ball has left the muzzle; and the reaction resulting from the force of the powder expended in overcoming the resistance of the air would also make the quantity of motion of the gun greater than that of the ball. Suppose a three-inch rifled cannon, loaded with one pound of powder and a ten-pound shot; let this gun be fired. How will the force of the charge be expended? The gas generated will exert equal pressure in all directions; its force will be expended in overcoming the inertia and friction of the shot, in changing the shape of the shot, in setting in motion, or, what amounts to the same thing, in overcoming the resistance of a column of air, of which the cross section is equal to the cross section of the shot, and the height of which column will be proportional to the square of the velocity of the shot, plus a constant, representing the increased resistance due to increased density of the air; it will be expended in straining and altering the shape of the piece—this effect only appreciable to calculation—in overcoming the inertia and friction of the gun carriage, and in imparting motion to the gun and carriage. In this manner will the force of the charge be expended, whether fired from a cannon or a small arm. From what has gone before, it follows that the recoil is increased by increasing the weight of the charge or of the projectile, the gun remaining the same, and *vice versa*. The recoil is diminished by increasing the weight of the gun, charge and projectile remaining the same, and *vice versa*; that the recoil is inappreciable before the projectile leaves the muzzle, and hence does not affect the aim. Of course the time required for the projectile to traverse the length of the bore is inappreciable to the senses, and the recoil appears to be instantaneous. Krupp has recently exhibited an experiment with his armored gun in the presence of the Emperor of Germany and the representatives of foreign governments, attended with perfect success and with great applause. I refer to this because one of his objects was to neutralize the effect of recoil. The gun was protected by a turret of steel half a metre thick. In the wall of the turret was fitted, in a spherical socket, a spherical ball, perforated along its diameter; the threads of a screw were cut in this perforation, and corresponding threads were cut on the muzzle-end of the gun. The gun was then screwed into the sphere of metal, and thus the mass of the turret was, as it were, combined with the mass of the gun; the sum of these two masses vastly exceeded the mass of the projectile fired from the gun, and thus the recoil was practically neutralized. I have only seen a very imperfect account of the experiment, and have given such explanation as the facts seem to warrant. Hoping this may prove satisfactory, I remain, SCOTT SHIP.

HOW TO AIM.

A PROBLEM IN MOUNTAIN HUNTING.

There is no problem which has so vexed the brain of the hunter, and is still so little understood, as to know how to aim with a rifle at game, either much above you or much below you, on a mountain and steep hill-side. The old rule was: "If above, aim high; if below, aim low." This is not correct. For want of a proper understanding of this problem I missed a half-dozen good shots when hunting black-tail last winter among deep and precipitous coulees, where they are at that season, and determined, after going into winter quarters, to solve it. I at first applied the calculus, but soon found myself so rusty in that science, and the known and unknown quantities became so mixed, that I threw up the sponge and determined to work it out by "rule of thumb." I accordingly made careful experiments at distances from 116 to 200 yards (on the horizontal line) from the target, and on mountain sides having an inclination of twenty to twenty-five degrees, and arrived at, I think, substantially a correct solution, which can be explained in fewer words by reference to the accompanying diagram:

Let A be the position of the hunter, B the position of the animal aimed at on mountain side. The solution is: In aiming be governed by the horizontal distance A, C, or distance to a point perpendicularly over the animal. Reversing the positions, with the hunter at B and animal at A, in aiming he still governed by the horizontal distance A, C. In other words, take no account of the height (C, B) you may be above the animal, or the air-line distance A, B, but be governed entirely by the horizontal distance, A, C, which is much more easily estimated than the distance A, B, generally thought to control the aim. In afterward bringing these principles into practice I never failed to hit my game. The last time they were used were upon two bull-elk, at least 200 yards down a mountain side, which was estimated to be much farther. From an over estimate of distance the two first shots missed. Taking new

reckoning of distance, and making use of above principles, the elk standing apparently dazed from the unexpected reports, the next eight consecutive shots were put through the two elk before getting out of reach. If Col. Ship or any other expert in the calculus will put the above solution into a mathematical formula, or if found incorrect will demonstrate it, he will oblige W. D. P.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropristis atraricus</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archosargus probatocephalus</i> .
Salmon Trout, <i>Salmo confinis</i> .	Striped Bass, <i>Morone americana</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	White Perch, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	Weakfish, <i>Cynoscion regalis</i> .
<i>M. nigricans</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Muskellunge, <i>Esox nobilior</i> .	Spanish Mackerel, <i>Cybinus maculatus</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Cero, <i>Cybinus regalis</i> .
Yellow Perch, <i>Perca flavescens</i> .	Bonito, <i>Sarda pelamys</i> .
	Kingfish, <i>Menticirrhus nebulosus</i> .

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings, bright hyaline.
Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark glomer; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setae, mottled woodcock.
Black June, No. 10.—Body, peacock's herl; feet and wings black.
Dark Stone, Nos. 8 and 9.—Body, dark brown; feet, yellow brown; wings, luteous.
Governor, No. 10.—Body, peacock's herl; feet, dark red backle; wings, made of the darkest part of the bittern's wing or brown hen.
Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setae, dark brown.
Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setae, dark brown.
Raven, No. 11.—Body, feet and wings, black.
Wren Fly, No. 9.—Body, clay yellow; feet, made from the scapular feathers of the English wren or quail; wings and setae, mottled widegreen.

FISH IN MARKET—RETAIL PRICES.—Bass, 10 to 18 cents; blue fish, 10; salmon, 15; mackerel, 20; shad, 50; weakfish, 10; Spanish mackerel, 30; green turtle, 12½; halibut, 15; haddock, 6; king fish, 15; codfish, 6; black fish, 10; flounders, 8; porgies, 6; sea bass, 15; eels, 18; lobsters, 8; sheepshead, 18; frogs, 40; Canada brook trout, 30; Long Island brook trout, \$1; white bait, per pound, \$1; hard crabs, per 100, \$3; soft crabs, per dozen, \$1.50.

General sea fish very scarce, owing to the storms of last week. Salmon, however, is in the most wonderful abundance. Larger quantities, taking the early season into account, have been forwarded to New York from the Restigouche than in former years. Wholesale, they have been disposed of at ten cents a pound; average weight, thirty pounds.

MAINE—Solon, Somerset Co.—We have some good hunting in this country. The best way to come is via North Ansonby Railroad. There is a daily stage to Solon, and there is some talk of putting on a daily stage from Solon to the Forks—thirty-one miles; the Forks to Moose River, thirty miles. In Solon are some fine trout brooks, and five miles from the village is a good trout pond. One mile from the village, at Carrington Falls, on Kennebec River, we get magnificent trout. Some caught there last summer tipped four pounds, and I shot one that tipped three pounds. I was watching for ducks with my rifle. Where I was lying there was a spring, and the trout came up in shallow water, and I thought he was as good as a duck, so I took him. In Carrying-place Town there are three good ponds. In the first pond they get trout that weigh about half a pound. A Mr. Ellis has a camp there and keeps a kind of a hotel, where he has a good deal of company in the summer. This pond is three miles from the river and four miles from J. Carney's Hotel in Moscow. In Carrington is Pleasant Pond, where you have to fish at night. The water is so clear you can see the bottom of the pond, where there is fifty or sixty feet of water, as plain as if there were no more than five or six feet. It is fringing around the pond and very cold water. From The Forks, five miles, is Moxie Pond, with very good fishing. There is a road to the Moxie. Some very good trout streams are in the vicinity of The Forks, and from here to Moose River one will find partridges. I have shot seventeen partridges from The Forks to Parlin Pond, fourteen miles, and shot them all from a wagon in and on the side of the road. Parlin Pond is one of the best places that I find to go a-fishing, as it is right by a hotel and on the stage road. The boats in the pond are not as good as they should be, but I think Mr. Bean, the landlord, will get some new ones this season. A stranger can go to Parlin Pond and get all the fish he wants in the summer and fall, and he does not need a guide. This is a good place for partridge. Fifteen miles from Parlin Pond we come to Moose River settlement; two hotels. Here is fishing enough. Six miles southwest is Long Pond; east from Moose River is Wood Pond, with three wood ponds. South is Attian Pond. East from Attian Pond is Holeb Pond. Moose River flows through all these ponds, and it is good boating from the Attian Pond to Holeb Pond. It is twelve or fourteen miles by river, with a carry about half a mile. I see in FOREST AND STREAM, March 21, your answer to "L. H., Waltham," that the Kennebec River is navigable from Augusta to Moosehead Lake with a portable boat. They go up the river in canoe to the Forks, and if they want to go to Moosehead Lake they have the boats carried to Moose River settlement and go down Moose River. From The Forks to Moosehead Lake it is very rough water; from The Forks up the Kennebec River there are ten miles that you can go with a boat, then nine miles that a boat never runs and never will unless it goes to pieces. From Indian Pond you can go to Moosehead Lake with a boat, but it is rough water part of the way. Two years ago there were two men coming down in a birch canoe; their birch was swamped and they were drowned. I generally go up river a-fishing in July. The flies are mostly gone then. Few sportsmen come up here. E. G.

Our readers may obtain fuller information by writing to Mr. E. Gordon at the above address.

Rangeley Lakes, May 27.—The large Rangeley Lakes are still so cold that no fly fishing has been had on them, and the unusually large party of forty persons at the Upper Dam had

no use for their leaders and flies except for hat ornaments. We found the water of some small lakes or ponds, a few miles through the woods, north of the main chain of lakes, quite warm, and trout of a pound and a pound and a half rose freely to the fly, and those of us who went there had good sport for two days. My biggest pull was a four and a half pounder, although I saw two killed by other parties that weighed five and three-quarters and six respectively. Parties visiting this region, whether making a circuit of the lakes from Farmington to Aadorer, or visiting any particular point, will find the keepers of hotels and camps prepared, and fair accommodations all along the line. A new house will accommodate forty at the Middle Dam. A steamboat landing is a need here that will, no doubt, be soon supplied. The logs will soon be out of the way of the anglers. Two boats reached the Upper Dam Thursday night, having made the run of the entire length of the Mooseheadmagantic in one day, something never before accomplished in the era of log driving. M.

MASSACHUSETTS—Adams, June 1.—E. D. Joucks, Jaa. A. Osborne, R. B. Deane, A. E. Maynard and J. Howland caught 500 brook trout in a stream a few miles from here Decoration Day.

New Bedford, May 29.—An abundant supply reported of striped bass. Mr. W. T. Grant, of Fall River, caught one at Westport Point weighing 49½ pounds, and mine host of the Parker House served up one to-day weighing 48 pounds, caught in our lower harbor. The specimens weigh from one to ten pounds are too numerous to mention.

CONNAH.

MOVEMENTS OF THE FISHING FLEET.—Only two Bank arrivals have been reported the past week, bringing 15,000 lbs. fresh halibut. The mackerel fleet are working this way, and 28 arrivals have been reported for the week. The catch has been small and the quality inferior. The receipts for the week have been about 600 bbls. The number of Georges arrivals reported has been 41, bringing 800,000 lbs. codfish. Two herring vessels have arrived the past week, one from Newfoundland via Boston, and one from the Magdalen Islands, reporting the fishery at the latter place a failure. Whole number of fishing arrivals for the week, 73.—Cape Ann Advertiser, May 31.

CONNECTICUT—Walcottville.—Trout fishing in this section is unusually good. Of course one should first know just where to go. The American House of this place had a two-days' supply donated them by Mr. Dolbey of Baltimore, Md., who is indulging in a little fishing hereabouts. In company with a resident he had a good day's trout fishing last week, and succeeded in filling a large soap box with fine brook trout averaging about 8½ to the pound. The entire number caught by them on that day exceeded 400. A brother of mine also caught 198 in one day about the same time, but in an opposite direction from this place than that taken by Mr. Dolbey. The average of trout to the pound in his case was still better—about 7½. Black bass fishing is also very good in West Hill pond in this neighborhood. This pond is located beautifully both as regards bass and scenery, and is, I maintain, the best water in the State in which to find black bass. From 20 to 70 is a day's catch for a fisherman. The last legislature (1878) removed all restrictions against black bass in the Farmington, Housatonic and Connecticut rivers and rivers emptying into the Connecticut; and this law, it is claimed by some, includes this pond as it empties into the Farmington river, and the latter into the Connecticut river. This, however, is extending and construing the Statute amazingly liberally. I do not think any one would be prosecuted and fined even if this view of the case is not sustained, as every one is of the opinion that they are too plenty in this pond, and should be caught. The restriction on black bass in Connecticut exists only in the month of June as the law now stands. K.

NEW YORK—Albany, June 1.—We were on the Mohawk, May 30th, in hopes of securing a few black bass. Weather very unfavorable, cold rain all day, with light northwest winds, water clear but covered with small black flies. Fish would not take the fly, spoon or bait. Secured one bass, weighing fourteen ounces. On opening found stomach empty of food, but fish filled with spawn, which is more evidence to show the close season expires too soon. Last fall many bass were taken weighing about ten or twelve ounces. They are lighter than the old residents of the Mohawk, and do not have the dark bars on the side after being caught. It is supposed they are some of the fish put in a short time ago. DARTER.

ADIRONDACKS.—A Brooklyn correspondent, Mr. C. O. Markham, the artist, is in receipt of letters from Rainbow Pond, which report that trolling and brook trout fishing there just now is very fine. Wardner, of the Rainbow Park Hotel, is building an immense dam at the inlet of the lake, so that his guests may have beating and trout fishing at all times. A letter from Big Clear Pond reports excellent fishing there.

Greenwood Lake, June 1.—There is no truth whatever in the report that the fish are dying in Greenwood Lake. This report originated from the fact that some parties are supposed to have used nitro-glycerine in the "Little Long Pond" near Monroe, as many dead fish are seen there, and the original name of Greenwood Lake was Long Pond. We would suggest to anglers to return to the water such fish as their judgment and sportsmanlike spirit pronounces unfit for capture. G.

Lakeport, June 1.—A piscatorial lady and gentleman went out on Oneida Lake with Mr. Coas, fisherman of the "Avon House," and caught 50 lbs. of bass and pike on Friday 31st of May. Fish are now biting very well, and large quantities are being taken. J. J. D.

NEW JERSEY—Kinsey's Ashley House, Barnegat Inlet, June 1.—A few parties took some seven to eight bluefish per hour on Wednesday, but the run is only about 1½ to 2 lbs. The natives, who know where to drop their anchor, still catch plenty of black and sea-bass running large. No sheepshead yet. They generally commence biting about the second week of June; last year first caught was June 12. B.

BLOOMING GROVE PARK.—Since the year began very important accessions of members and meads have been made to this association, and most of the long contemplated improvements have been made:

The new road to the park via Millville is nearly completed and will be very attractive. All the vacant rooms at the club house will be furnished, and from present indications all will be filled with members and their guests during the season. A new road has been opened to Lake Laura. Boats will be placed on the lake and a gamekeeper stationed there during the black bass fishing. The trout fishing is better than usual this season in the Shohola and Blooming Grove streams.

PENNSYLVANIA—*Johnstown, May 30.*—Quite a number of trout and jack-salmon of good weight caught here. *ICZ.*

TENNESSEE—*Nashville, May 29.*—The season for squirrel shooting is now open, and game very abundant. A friend of mine residing three miles from the city bagged eighteen one day last week in about two hours. *J. D. H.*

Columbia, May 35.—Recently Mr. Joe Dew and Joseph Bailey, fishing at Arnold's Dam, Rutherford Creek, caught several salmon or Jack, weighing about half a pound each. These are the first we have heard of being caught in Rutherford. *VAL.*

Nashville, June 1.—A great many drum and buffalo are being caught in the Cumberland River. On Saturday I saw a catfish which measured over four feet in length. Minnows are used exclusively for fishing for game fish in our waters, and there is no difficulty in procuring them, but the great trouble is to preserve them alive and transport them from place to place. It invariably happens that the fishing grounds are some distance from where the minnows are taken, and no means has yet been devised by which the tiny fish can be kept alive. *J. D. H.*

We have found this to be a very satisfactory method for transporting minnows: In a large bucket, holding, say four gallons, place a smaller vessel which will have plenty of play and is thoroughly perforated. Keep ice constantly on the top of the inner bucket and move the bucket up and down to aerate the water. If the inside bucket has an oval bottom the motion of the wagon or boat will keep it in motion.

FLORIDA—*Lake Grandin, via Putnam Hall, Putnam Co.,—Editor Forest and Stream and Rod and Gun:* This section of Florida is one of the most delightful fishing and hunting grounds under the sun. It abounds with numerous lakes of beautiful, clear water, filled with fish, fowl and flesh of nearly every aquatic variety. Wild ducks, geese, crane, and many other water fowls, the names of which I do not know, almost cover the water in winter, and many wild ducks and other fowls remain here the year round. Fish, trout, salmon, jack, bass, bream, perch, and many others too numerous to mention, are in great abundance in all of the lakes. The other day I caught a bass that weighed 8 pounds net dressed ready for the pot, and a jack that weighed 6 pounds net. Many bass have been caught which weighed as high as 13 and 14 pounds net. Wild turkeys, deer, squirrels, rabbits or hares, quails, etc., are very numerous. The climate is perfectly delightful, thermometer rarely ever gets up into the nineties during the hottest period of summer, and only once in a great while does it get down to a frost basis during our coldest winters. If any of your very many intelligent readers wish to know more as to game, fish, fowl or flesh, or soil and other productions, I will cheerfully answer if they will enclose stamps for return postage. *AMOS L. GRIFFITH.*

WISCONSIN—*Ashland, May 26.*—Trouting is now excellent at Fish Creek, Whittlessey's Creek, Trout Brook, Brunswick and Marengo. One gentleman brought to basket ninety five trout in one day's fishing on Fish Creek, and the following day caught one hundred in the same stream. Still finer sport is anticipated when the larger trout, now at the headwaters of the stream, turn their course downward to the bay. In June the trout of this section rise readily to the fly, but are most frequently taken by resident sportsmen and anglers with small minnows and with angle-worms. Excellent sport is anticipated at "The Rocks," about ten miles from Ashland, across Chequamegon Bay, during June. For bass fishing there is in all probability no finer resort in Wisconsin than that near Chippewa, where lies a beautiful lake abounding with black bass of the finest game qualities. This wood-embowered lakelet was discovered only last autumn, and has as yet received no name. Lying, as it does, only two miles from the railroad, with a fine trout stream upon each side, it is a most desirable spot for the angler. The fishing at Butterut Lake is still as delightful as formerly, and several large muscalonge have been taken there during the present month (May). The fishing here is considered best during June. Then the muscalonge bite more readily, and larger fish are taken than at any other season of the year. Butterut Lake is probably the finest in all our Northern States for this species of fishing, and larger fish (muscalonge) are taken here than at any other resort in Wisconsin. He who desires a taste of wild life, and superb trout-fishing should visit the Nepigon, easily reached from Ashland, and the unexcelled trouting of that far-famed stream would repay the tourist tenfold. *W. W.*

CALIFORNIA SALMON.—The salmon arrivals from Canada show an unusually early season, and from the Pacific Slope comes the same report. The salmon in the McCloud and Sacramento rivers have already passed up to the spawning grounds at the headwaters, in the middle part of May, giving the fishermen the slip, and completely putting at fault the wisest prognostications of the *Sal. Doctores* by appearing a month ahead of time.

CANADA—*Milltown, St. Stephen, May 29.*—The salmon fishing at Grand Lake Stream is very good. One lady caught twenty in a day. They run much larger than usual; some four and five pounders are taken, and fishermen kill a large number every day. *G. A. B.*

THE SALMON SEASON.—Advices from the salmon rivers show that the season this year is at least three weeks earlier than that of last year. The water is generally low. Those who contemplate a salmon campaign should be early in the field this year. Do not make a mistake by going too late.

KILL YOUR FISH AS SOON AS CAUGHT.—Our recent suggestion has met with general approval. The numerous responses it has elicited indicate that anglers are both sensible and humane. The innate goodness which is in them is easily evolved by proper advice and direction, and all that is needed is, to put them in the way they should go, and they will go it. There is no doubt that both the flavor and quality of the flesh of fish is improved and preserved by killing the fish at once instead of permitting them to linger. We suggested as the most expeditious methods, that the angler should tap his fish on the head with a stick, or insert the blade of a knife to the cervical column back of the head. If fishing from a boat, the most convenient way is to knock the head against the

gunwale or thwart. *J. S. M.*, of Newark, advises to cut the throat; to sever the part where the gills join the belly. The fish will thereby not only die quickly, but bleed, leaving the flesh perfectly white, and "enabling it to keep much longer than when the blood is allowed to remain and settle all through the flesh." There is common sense in this. *K. T. M.* says he has always practiced killing his fish. His habit is to carry a little heavy cudgel in his pocket for the purpose. "Tap them on the nose, or just over the eyes." By wrapping each fish separately in a dock or hellebore leaf, as soon as taken from the water, their beautiful colors and shape are preserved. He says, moreover:

"If I am off for a two or three days' trip I find it advisable to dress the fish as soon as convenient. This may be very neatly done by pulling open one of the gill covers, slipping the blade of a knife under the gills, and carrying it forward; severing them with one cut at their ventral attachment. The gills should be then seized with the fingers and torn loose, and with them will be removed almost the entire viscera. If your fish lose their color somewhat, as they probably will if kept two or three days, lay them between two damp towels on reaching home, and after a couple of hours they will be found much more distinctly colored."

A PLEASANT ENDORSEMENT.—Bro. George Dawson, of the *Albany Journal*, has seen fit to print a portion of a private letter of ours, which possibly containing some observations instructive, or otherwise worthy of interest, we may be pardoned for reproducing in our columns. We quote from his paper of May 22:

WHAT AN EXPERT THINKS AND SAYS ABOUT THE HABITS OF FISH, AND SO FORTH.—Charles Hallock, editor of *FOREST AND STREAM*, has written more, and more wisely, on Fish and Fishing than any of his contemporaries. Here is a pleasant specimen of his graceful style when discoursing upon his favorite theme:

New York, May 13, 1878.

Dear Mr. D.: I took your last sketch into my garden this morning after finishing my breakfast, and have just now (7:45) finished it. I perceive that you are a close student, and that you will soon be able to tell the old salmon fishers more than they ever knew. It does seem strange that most men become so dazed the moment they contemplate the subjects of fish and fishing! They seem bewildered by the glare of the multiplied lights which fill the chamber of their investigations. Men do not consider, examine, analyze, compare, reason, or adopt any of the common mental processes which they employ in considering other subjects with which they often come in contact. There are analogies all through nature, and I never could understand why there should not be some variations and peculiarities in the same variety of fish as there are in the same family of beasts or human beings, in respect to manner, complexion, shape, habit, etc. I would as soon puzzle my brain to discover why active fish do certain things as to explain why Deacon So-and-So blows his nose with a snort, while the Elder quietly sops his. A fellow in the market the other day was perplexed with the discoloration on the bodies of trout. I told him the vendor had depreciated their value by not properly bestowing them in his wagon or basket. In an hour or two the color would be uniform, but the brighter hue would fade down to the pale, and not the paler up to the brightness.

I do not marvel why trout do not uninterruptedly feed; nor why they change their location; or why they prefer some kind of food to others; or why they vary in appearance. If the mystified student will apply these queries to his fellow men, he will wonder why he considered them worthy of attention. The great point is to discover the causes which make the fish do certain things at certain times. Well, as to food: it is easy to trace the cause of surfeit or change of diet, by careful observation of the weather, whether it has been warm or cold, bright or rainy, along drought or a deluge; and you must apply to these observations a positive knowledge of certain branches of botany and entomology. Rough, unlettered men have this knowledge in a crude state, but it serves them just as well as crude petroleum does the manufacturer who uses its light in refining the more merchantable article for others. The food question as to fishes depends as much on meteorology as the questions of famine or abundance do in respect to men.

When we have found out the habits of creatures, we have only to study what artifices to use to engage a damsel, bumbling a green horn, or outwile a fish. You may lose all three, after fastening to them, by bungling in the manipulation.

As to salmon, the study is as much a higher branch as the differential calculus grades above vulgar fractions; but what we learn in the primary trout stream will serve us well in the normal school.

I have ceased to consider the journeys of salmon to fresh water as anything worth mention. One-third of our edible fish go to the deep sea for rest and procreation—the other two-thirds are in-shore fishes, and are, to a certain extent, anadromous, shifting their locations in spawning time and following the movements of the great variety of things they feed on. As to variety, a trout, you know, will chase anything which has life and moves, just as a kitten plays with anything in motion. A cat will amuse itself with a hornet and a trout will swallow a snake. I have told anglers that fish chase a trailing fly from the natural instinct of chasing, far more frequently than from a desire to eat it. A great many of the predaceous creatures gorge themselves on what has already been caught instead of on what they catch. In other words, it is a mistake to suppose that they eat only what they have chased and captured.

Now, tell me if you have ever seen a kitten which was always in a playful mood? The vagaries of cats, dogs and game fish can be compared with profit to the student.

Yours, fraternally,

C. H.

—A salmon was caught in Scotland with eighty yards of tapeworm, three-sixteenths of an inch in breadth, in the pyloric portion of the gut.

WRIT IN GORE.—There was received at this office last Saturday a most warlike postal card bearing date of May 30. Post mark blotted out in gore. From a legible word here and there among the intersecting lines we infer that the writer has been waging a most sanguinary war upon the big and little fishes of Long Island. His hand—or at least his pen—was dyed in blood. The missive makes us crawl. *Aha!*

PIJAMAS.—For the luxury of a cool sleep in warm weather we particularly recommend the *pijama*. Many of our friends who have reveled in *pijamas* and slippers, and sipped bitter beer and smoked cheroots in the East, may find the vestments at Messrs. Simmons & Son, Oak Hall, Boston, all same Canton. The Messrs. Simmons also manufacture the celebrated Boston Shooting suits. As to cut, finish and convenience they have no equal. [See advertisement.]

Rational Pastimes.

YALE COLLEGE ATHLETICS.—In the spring athletic games of the Yale Athletic Association, at New Haven, May 29, the following were the winners among a large number of contestants: The 100-yards dash, F. W. Brown, in 10½s; high leap, O. D. Thompson, 5ft. 2in.; throwing the baseball, W. F. Hutchinson, 343ft. 8in.; the tug of war by the freshmen class, defeating the classes of '79 and '80; the senior race dash over 440 yards, T. E. Mower, 69s; hammer throwing, O. D. Thompson, 71ft. 3in.; quarter-mile run, Herman Livingston, 54½s; hurdle race, 8 hurdles, distance 120 yards, W. C. Cump. O. H. Briggs won the mile walk in 8m. 36s.

ADELPHI ATHLETIC CLUB.—The second annual games of the Adelphi Athletic Club, of Brooklyn, at the Capitoline Grounds, last Thursday, were well contested and resulted as follows: One hundred yards race—A. S. Hooper. Throwing hammer—E. Flynt, 67ft. 7in. Standing long jump—E. Hillier, 8ft. 8in. Hitch and kick—H. Stokum, 7ft. 11in. Pole vaulting—A. Hooper, 7ft. 6in. Four hundred and forty yards run—Stokum. Putting shot—Stokum, 28ft. 8in. Standing jump—Hooper, 4ft. 8in. Two hundred and twenty yards race—Hooper. Running high jump—Hooper, 4ft. 10in. Half-mile race—Stokum. Professional running high jump handicap—W. Laird, 9ft. 4in. Running long jump—Hillier, 15ft. 9in. Mile walk, J. L. Ramsay, 8m. 2s.

MANHATTAN ATHLETIC CLUB.—The games at the club grounds, this city, last Monday, resulted as follows:

Two hundred and twenty yards run—H. P. Pike and R. Greig ran a dead heat in 28s. Second trial won by Greig in 28½s. Two hundred and twenty yards for school boys—Fifteen entries—H. J. Wilson won in 31½s. Handicap 100 yards—Twenty-five contestants—J. W. Murray won in 10½s. Handicap three miles walk—Twelve contestants—E. B. Wall, A. A. C. handicapped 1m. 40s., in 25m. 6s. Handicap half-mile run—Eleven starters—Won by N. Rowland, Yonkers Lyceum, with 10 yards start, in 2m. 5s.

LACROSSE.—The Toronto Lacrosse Club met the Shamrock Lacrosse Club, of Montreal, in a match for the championship last Friday. The teams were made up as follows:

Toronto Club—J. Hughes, goal; Ross Mackenzie, point; W. O. Ross, coverpoint; H. O. Ross and J. Inness, defence field; C. H. Nelson, C. E. Robinson, T. Mitchell, fielders; S. Hughes, W. T. Arthurs, home field; R. H. Mitchell, H. E. Suckling, home; J. Massey, field captain. Shamrock Club—Murphy, goal; Hoobin, point; J. McGuire, Hyland, defence field; Morton, Butler, Giroux, J. McHugh, fielders; C. McHugh, Farmer, home field; Lynch, Brennan, home; McKeown, field captain.

The score made was: Torontos, 3; Shamrocks, 2. This gives the championship to the Toronto boys. They have work before them to keep it, however, as challenges have already been received from the Shamrocks and the Montreals.

THE AUSTRALIAN CRICKETERS.—The Australian cricketers who have gone to England to try their skill with England's players, made their *debut* in a game with the Nottingham eleven. Owing to bad weather the game lasted three days and resulted in the success of the English eleven by an inning and 14 runs. The Australians scored only 63 runs in their first inning and 76 in their second, of which Midwinter, Garrett and C. Bannerman only scored double figures, and the last-named only in the second inning. The Nottinghamians scored 153 runs in their first inning, of which Mr. J. Selby contributed 66.

CRICKET.—A match of cricket at Prospect Park, May 29, between the Polytechnic Institute Base Ball Club and the Manhattan Cricket Club, resulted in the following score:

POLO.—Wednesdays and Saturdays have been set apart by the governors of the Westchester Polo Club for play at Jerome Park.

SANGUINARY BASE BALL.—The Patersons and Passaics had a high time of it the other day. The fun began when the pitcher put in a red hot curve ball which took the batter in the back of the neck—the bawl coming out of his mouth. The batter thereupon pitched his bat at the catcher's head and a pitched battle ensued. The whole field was instantaneously transformed into a scene of carnage—converted by a bat war into an *abattoir*, which is French for slaughter-house. Bats and brick-bats flew in every direction; balls were hurled in and eye-balls hurled out; the "fair foul" of American Freedom screeched and the umpire got his back up; or, as the Englishman would say, "got 'is 'ump 'igher," because there was an appeal from his decision. Thereupon a peeler appeared and put out the whole crowd, who all made a home run and left the field, which was consequently a left-field, the Patersons having the worst of it because the others held the bats.

THE CIRCUM-AMBULATOR.—*Kington, Ont., May 31.*—Henderson, the pedestrian, who started on May 1, at Toronto, to walk 25,000 miles in two years, arrived here to-day, having completed his 1,010th mile.

—Juan Gonzales, a Mexican of Fort Concho, Texas, will throw a lasso 225 feet in length as accurately as a marksman could shoot with a rifle.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

APOLLINARIS NATURAL Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the *Académie de Médecine* of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York as
 "A great relief for acidity."
 "A delightful beverage."
 "Far superior to Vichy, Seltzer, or any other."
 "Most grateful and refreshing."
 "Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Carbon and artificially aerated waters."
 "Unpregnated only with its own gas."
 "Useful and very agreeable."
 "Healthful and well suited for Dyspepsia and cases of acute disease."
 "Mildly antacid; agrees well with dyspeptics, and where there is a gouty diathesis."
 "By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."
 "Not only a luxury, but a necessity."
 To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

Breech Loading Guns
A SPECIALTY

AGENTS

FOR THE FOLLOWING CELEBRATED MAKERS
W. & C. Scott & Sons (winners at the International Gun Trial of 1873); J. P. Clabrough & Bro.; P. Webber & Sons, and Westley Richards.
Thomson's Bunting Suits and Oil Finished Graines
Leather Shoe Packs.
Dilsons & Bawley's Shooting Tackle.
Sturtevant Brass Shot Shells.
Bussey's Patent Gyro Pigeon and Trap, with case and 100 birds.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the heads down in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result.

In ordering send measurement round the chest.
PRICE \$7.50.

AGENTS FOR THE UNION METALLIC CARTRIDGE CO'S. AMMUNITION.
Warranted the Best in the Market.

ABBEEY & IMBRIE,

Successors to ANDREW CLERK & CO.,

SOLE AGENTS for the Manufacture and Sale of
SETH GREEN'S
Patent Needle-Pointed Hooks.
Trout Flies tied to order, \$2 per doz.
Trout Hooks snelled to order, \$1 per doz.

FISHING TACKLE.

Guns, Etc.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6½ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFG and FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb. All of the above give high velocities and less residuum than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World." BLASTING POWDER and ELECTRICAL BLAST-ING APPARATUS, MILITARY POWDER of all kinds on hand and made to order.

Safely Fuse, Frictional and Platinum Fuses.

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

Auxiliary Rifle

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can-not get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

NEW HAVEN, CONN.

HENRY C. SQUIRES,

1 Cortlandt St., N. Y.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fast-tened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fires when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2¼ to 3½ inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.

MESSES. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

The Stanton Siphon Fountain Pen Holder.

The Only Practical and Really Useful Fountain Pen-Holder Ever Manufactured.

The only Fountain Pen-holder with a FLEXIBLE SIPHON, so that any size or make of Pen can be used. The only Fountain Pen-holder in which the INK does not come in contact with oxidizable metal, and therefore cannot decompose or coagulate. No spilling of ink can occur in filling, as the tube is filled by suction from any vessel containing writing fluid.

No Inkstand or Special Ink Required.

ALWAYS READY FOR USE.

Is a very handsome and convenient pocket article; is made of strong metal, heavily nickel-plated and polished. Contains sufficient ink to closely write twenty pages of foolscap; will feed to the point of the pen until the last drop of ink is exhausted, and being air-tight the ink can neither evaporate nor mold. Is easily replenished, always perfectly clean, and any steel or gold pen can be substituted for the handsome Esterbrook Indestructible Golden Pen furnished with each holder.

Sportsmen will find it a most Convenient Companion when away from home.

Will carry sufficient ink for TEN DAYS' ordinary use. Especially adapted to the use of Doctors, Law-ers, Commercial Travelers, Collectors, Government Officers, Railway Officials, Tourists, and all who can appreciate the immense comfort in always having their own pen and ink with them.

STENT & CO., Manufacturers' Agents, 132 Nassau St., New York. P. O. Box 2,997. The Trade Supplied. Send for Catalogue of Useful Novelties.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bore, modified chokes and cylinders. Gun chilled shot will be found free from shrinkage, more spherical, more uniform in size, harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COM-PRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

Gunpowder.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks as any other brand, and is equally serviceable for maul or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½ and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFO are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN GR, PROOF, MANU-FACTURED TO ORDER.

The above can be had of dealers, or of the Com-pany's Agents in every prominent city, or wholesale at our office.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,
 VIA THE

Grand Rapids & Indiana R.R.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly, or trolled a spoon in
 the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.

In no other streams east of the Rocky Mountains
 is the famous AMERICAN GRAYLING found in
 such numbers.

BROOK TROUT Season opens May 1.
 GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpassing
 the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attractive
 train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets.
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

A. B. LEET, G. P. A.,
 Grand Rapids, Mich.
 Eastern Agent, 116 Market St., Phila., Pa.

TAKE THE

People's Line Steamer.

FROM PIER 41, N. R., foot of Canal St., daily,
 including Sunday, at 5 P. M., connecting at Albany
 with Express Trains

FOR

Saratoga, Lake Champlain, Lake George,
 the Adirondacks, Montreal, and all points
 North and West.

This is the only steamboat line selling tickets
 and checking baggage to places on the N. Y. C. & R. R.

FIRST CLASS FARE \$1. DECK, 25c.

EXCURSION TICKETS TO ALBANY AND
 RETURN, \$1.50.

THROUGH TICKETS can be had at the
 Office on the pier, at all Western Express offices,
 at all the hotels and ticket offices in New York,
 or of connecting Railroad and Steamboat Lines.

S. E. MAYO, Gen'l Passenger Agent.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipage taken free.

The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butternut Creek and Lake for
 muscalonge; the many branches and lakes of the
 Plover and Chippewa which team with bass, pike
 and pickerel, never till last season fished by sports-
 men. Between Silver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ashland or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.

The Chequamegon Hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam yacht, sail and rowboats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.

Steamers from Ashland to all Lake Ports,
 Send for Guide Book.

Hotels and Resorts for Sportsmen.

CRYSTAL SPRING
Fish Farm and
Pic-Nic Grounds,
ARE NOW OPEN TO VISITORS.

These grounds have been fitted up for large or
 small parties, with a splendid pavilion for dancing
 parties, Sabbath school picnics, or private parties,
 etc. Lemnards, ice cream and other luxuries in
 their season, furnished on reasonable terms. A
 limited amount of trout fishing allowed in season.
 These grounds will be open for visitors during the
 whole year.

The Fish Farm is located in the Ramapo Valley,
 where the scenery, historical reminiscences and
 healthfulness is unsurpassed.

From New York it is thirty-one miles, via the
 N. J. Midland R. R. to Oakland Station, from Pat-
 eron, N. J., by wagon road, eight miles. The
 spring is located in a beautiful grove, one mile from
 Oakland Station, Bergen Co., N. J., and is one of
 the largest and finest springs in the United States.
 It is without doubt one of the best known springs
 for the propagation of the fish of the salmon family.

It has an immense flow of water, from 1,500 to
 2,000 gallons per minute. A severe drought does not
 diminish it, or a very wet season does not
 increase it. The water is pure, and of a temperature
 of 53 degrees Fahrenheit, and is in summer, all the natural
 advantages are combined in and about this remarkable
 spring for the propagation and raising of brook
 trout, viz:

1st. A large and constant flow of water.

2d. Uniformity of temperature during the whole
 year.

3d. A fall of nearly 40 feet in 600, a gradual de-
 scent.

4th. No liability of being washed out by floods.

5th. By having been a natural stream for trout.

6th. By being located in a grove of trees from
 25 feet in diameter down to the smallest shrub.

In June, 1875, Mr. B. H. Porter commenced op-
 erations at this spring for the purpose of fish culture,
 and making the grove a permanent unit attractive
 place of public resort. Since then the place has
 been visited by thousands of persons from nearly
 every State, besides many from foreign countries,
 and so far have pronounced it the most perfect es-
 tablishment of the kind they had ever visited, and
 the most beautiful place.

We beg leave to inform the public that we open
 the grounds as a place of resort, believing there is
 no place of the kind now open to the public during
 the whole year, where they can see all the stages

Sportsmen's Goods.

SCHUETZENFEST

The FOREST AND STREAM AND ROY AND OUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Roy and Oun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be of the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 19, 1878, to Mr. F. HARENBURG, Treasurer of the Sharpshooters' Union, No. 130 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERT, President. J. H. BARKENS, Cor. Sec., 31 Bowery, New York.

United States Cartridge Company,

LOWELL, MASS.,

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS, AND CARTRIDGES.

Adapted to all military and sporting rifles and pistols, and to use by the ARMY AND NAVY OF THE UNITED STATES and several Foreign Governments. Rim-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

Send for Illustrated Catalogue.

FOWLER & FULTON, General Agents, 300 Broadway, N. Y.

Fisher's Muzzle-Loading Long-Range Match Rifle.

Interchangeable Grip and Head Verner Scales, and Wind-Gauge Front Sight, with Spirit Level. Fine English Walnut Pistol-Grip Stock.

This Rifle requires no patent muzzle to load it. Uses the same bullet as the Sharps and Remington rifles. Loads the same as breech-loaders, where they do their best work, viz., from the muzzle. As Perry's Score-book says: "No shells to cart around and pay for. Can be used at one-half the expense of the breech-loader. With powder and balls always ready for a day's sport." Every rifle guaranteed. Breech-loading rifles at manufacturers' prices. All long-range rifles sighted and tested at Creedmoor without extra charge. Agent for P. WEBLEY & SONS' BREECH-LOADING SHOT-GUNS. Send for Circulars. H. FISHER'S Illustrated Catalogue and Score-book for Rifle Practice, price 25 cents.

HOMER FISHER, 260 Broadway, Cor. Warren St., New York.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade. will throw a ball in any direction from the shooter at the option of the potter, is now ready for the market. Price \$8. Old style, \$6. Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Flint Street, N. Y. City. FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Logan Co., Ill. Dec 6 4t

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore wo would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £169, and a money prize of £105, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 60 guineas, presented by Mr. J. Purdey, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 88 birds out of 100, using one barrel only. The winning gun also at the great London Gun Trial, 1876, beating 103 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 163,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

For Forest and Stream and Rod and Gun.

MY OLD ROD.

WHEN this old rod was new
The brooks were full of trout—
Good, active fish, and stout—
The anglers then were few;
Men mostly fished with bait
In eighteen twenty-eight,
When this old rod was new.

When this old rod was new
The salmon did abound—
Sold for ten cents a pound—
But Canadian waters through,
To no fly would they rise
Which anglers could devise,
When this old rod was new.

When this old rod was new—
In London it was made,
And full a pound it weighed—
Its ash, its timber, grew;
No lancewood joints or tips,
Or split bamboo in strips,
When this old rod was new.

When this old rod was new
The fishing grounds were near.
To walk we did not fear
At more a mile or two;
And then return at night,
Creel filled with beauties bright,
When this old rod was new.

When this old rod was new
No poachers with their net
Despoiled our brooks, or set—
A prowling, robber crew—
Their night lines in our lake,
Our quest fish to take,
When this old rod was new.

When this old rod was new
No monster trout were known
In Neponset or Rangely, grown;
A fish in weight a pound or two
Was thought to be the largest size
That ever gladdened anglers' eyes,
When this old rod was new.

When this old rod was new
The bass had never here been seen,
Big-mouthed or small-mouthed, black or green,
For western streams alone it knew;
Nor grayling in swift Maudslayi
With brilliant dorsal rising free,
When this old rod was new.

When this old rod was new
Few angling books to read had we,
Save Walton and Sir Humphrey D.—
From them our scanty lore we drew,
Then forests and streams abounded,
But no FOREST AND STREAM was founded,
When this old rod was new.

S. C. C.

For Forest and Stream.

Trout in the Rocky Mountains.

IT was in July, 1863, that I first crossed over the snowy range to the Middle Park, in the heart of the Rocky Mountains, and the centre of Colorado, on a trout expedition. True, I had a broken clavicle, and my best arm was bound firmly to my body so that I was not exactly calculated for a lively campaign, yet I rode fifty miles in a day over the ruggedest heights, and the wildest gorges and the thickest forest on the most stubborn and headstrong of ancient Government mules. After that my fishing was mainly by proxy. A company of soldiers were stationed on the bank of Grand River at Hot Sulphur Springs in the middle of the park, and they were catching trout from that stream every day literally by the gunny-bag full. I remember them now as the fattest, slickest, jolliest lot of men I ever saw, and they said it was the result of a strictly speckled trout diet. At that time fish of three to five pounds weight were common, and specimens weighing from six to seven pounds were occasionally taken. The fishing was all with hook and line, but science or skill, or fancy tackle were unknown.

Two years later I went again and by accident found that a little creek on the way, at which we threw off our saddles for a noon rest, was literally alive with speckled beauties. In Grand River the sport was equally good and the fish much larger. I caught one that measured twenty-two and a half

inches; first losing two hooks by his strikes, and finally breaking my rod in landing him. Since that year I believe I have missed but one summer without making one or more excursions to that locality. In 1863 I did my best fishing. There were a good many people at the springs; a large party of Government explorers, camps of pleasure seekers, etc., numbering altogether nearly one hundred and fifty people, all living in tents or the open air. Whilst many were fishing but few were fishermen, so that those who could catch trout were at perfect liberty to take all they pleased since none would be wasted. I found a new (to me) stream about four miles away, Williams River, in which were numerous rapids interspersed with deep pools, and about two miles above its mouth a fall of twelve or fourteen feet. It had a beautiful little valley with luxuriant vegetation, abundant wild fruit and dense groves of lofty, wide spreading cottonwoods. For five days in succession I saddled my horse and cantered over the hills to this lovely stream, fished from three to four hours and brought back all that my horse could well carry. The smallest catch of the five days was seventy-two pounds, as weighed and reported by Samuel Bowles, Vice-President Colfax and Governor Bross. I never weigh or count my fish. On one of the days I certainly brought in ninety pounds, and on that particular day I caught all from one pool and standing in one place. Other seasons I have done quite as well in other streams, but generally indulged in the sport only at odd hours or during fragments of days, often taking fifteen or twenty pounds at noon rest while my horse was taking his lunch of grass.

Up to 1874 this region could be reached only on horseback with pack mules for the transportation of camp equipage and supplies. From the termini of the wagon roads on the eastern slope of the mountains, the way was by intricate and difficult Indian trails, over the main range and through dense woods for twenty-five miles, and then as much further through the open vales and grassy meadows of the park. In the year named a wagon road was opened and the next year another. The latter, from Georgetown, is a magnificent road and a splendid drive. In the summer there is a tri-weekly stage, and the time from the end of the railroad is reduced to ten hours, between breakfast and supper. In winter this road is hurried under ten or twenty feet of snow, which does not permit wheel travel until the latter part of June, and then only between high crystal walls. But that is early enough. The sport begins in July and grows better until late in the fall. A village has grown up at the Springs. Settlers are scattered along all the larger streams. Herds of horses, cattle and sheep are sprinkled over the prairies, and the charm of camp life in the wilderness is passing away. However, it is not yet difficult to get beyond the settlements, away up the streams in the pine woods. About the Springs fishing is overdone. From twenty-five to fifty hotel guests can be seen each day sauntering up and down the river for two or three miles, catching a few trout each and in the aggregate quite a number. But fair sport can be enjoyed by mounting a horse and riding from five to six miles away. Four miles down stream comes in Williams River from the south; twelve miles down, Troublesome River from the north. Seven miles up, Fmzer River enters from the south; five miles further, Willow Creek from north; four miles further, the South Fork from the southeast; six miles above that, the North Fork from the northeast, and five miles above that, or twenty-five miles from the Springs, is Grand Lake—the nicest, the easiest and the laziest place to take trout in that whole region. It is a real Alpine sheet of water, close up against the foot of lofty snow-crowned peaks, walled in by moraine deposits. Two and a half or three miles long and half that in width, its depth is unknown. The river flows out to the West and there is a narrow space of level ground and open pine woods on that side. Elsewhere the mountains rise abruptly from the water's edge. In this level space there are three or four rude cabins, and one man, J. C. Westcott, has lived a kind of hermit life here for ten or twelve years. In summer he follows fishing, generally having a partner or two and plenty of company. Some seasons there are other regular fishermen, but the great majority are transient visitors. To carry on the business of fishing for market requires three or four men operating together. The fish are caught from boats or rafts and kept alive in ponds until three or four hundred weight are collected, when they are hastily dressed, packed with green grass in baskets or open boxes and carried on donkeys to market at Georgetown, Central City and other mining camps, with an occasional cargo to Denver. They travel at night across the park, lie by the next day high up on the mountains, where it is cool, and reach their destination the next night. One or two men accompany the animals, sell the fish and return with loads of flour and other supplies. Three or four men operating in this way will, from the middle of July to the middle of September, catch from three thousand to four thousand pounds of trout. While some are marketing the catch the others are collecting another load. The trout of the lake are mostly small, weighing from four to eight ounces when dressed. The fishing ground is from three hundred feet to five hundred feet off shore, where the water is from twenty to thirty feet deep. It is on the brink of a ledge, beyond which the bottom drops off to an unknown depth. At times the schools of fish visit other places. Several streams enter from the mountain side, and late in the sea-

son there are certain hours of certain days when the water about these rivulets are fairly alive with fish. There are also spots in which at certain times quite large trout can be taken, generally after dark, by still-fishing with bait. Nearly all the fish taken are with bait, grasshoppers being the best, and from ten to twenty feet beneath the surface. Those who fish for a business will handle three or four lines, each with a short rod, and take them in as fast as possible. It is the worst kind of "pot-hunting" that can be done under cover of law.

Half a mile above the lake, on the main stream, there is a waterfall and the head of trout navigation. The stream comes down through an impassable canyon, which, looked down into from above, is a chain of lakelets and cascades. The roar of the lower fall can be heard from the west side of the lake; but what is very strange, its location or direction cannot be determined from the sound. One day it may seem to be steadily at one point of the shore, the next day at another, or it may change with the hours or minutes. Sudden gusts of wind are common and very dangerous. From a dead calm the surface of the water is often churned into foam in a few moments, the gale seeming to blow from all quarters as well as straight downward. Persons drowned in the deep portion of the lake sink to rise no more. An Indian legend states that ages ago a band of Utes were camped on the margin of the lake, when they were attacked by a war party of Arapahoes. The battle waged long and disastrously to the Utes, who at last placed their women, children and wounded on rafts of timber and pushed them out into the lake, when a sudden gale swept down from the mountains and destroyed them all. Whether true or false the story, it is certain that the savages have a superstitious fear of the locality, and never venture near the lake if they can avoid it.

There is generally the very best of fishing in the outlet from the lake. The river for a considerable distance is wide and shallow, with an uneven bed of stones sprinkled here and there, with immense boulders that rise above the water. Then it changes to a succession of rapids, with deep, glassy pools between. The neighboring country is alternate open meadow glades and billowy hills covered with pines. Immediately north of Grand Lake is an extensive area of forest, so dense and choked with fallen trees and brush as to be almost impenetrable. In it are several other lakes, visible from the high mountains above, which are doubtless equally well stocked with fish, but I never yet have seen any one who had tried them or even visited them. Coming down through this forest is the north fork of the river and really its main branch. Judging from appearances, it should afford excellent sport for twenty miles further up. All this wooded country abounds with bear and elk, and on the mountain slopes above the lake, to the eastward, near the timber line, are great numbers of mountain sheep and mule deer. The streams have plenty of heavier, mink and marten along them everywhere.

Last summer a friend and myself went to Grand River about the middle of July for a month's sport. We established headquarters at Hot Sulphur Springs and fished up the river, down the river, and in all the neighboring streams. Mounting our horses in the morning, we would ride to the locality determined upon, picket them in the rich grass, one of us go down the stream and the other up, putting in three or four hours, and always returning with well filled baskets. Over but very little water did we fish a second time. The last week of our intended stay we decided upon something more of an adventure. I had recently heard of a newly discovered lake away off in the southwestern rim of the park. A roving and romantic preacher, who had taken his vacation of the summer before in the woods, had told me of it. He called it Black Lake, and said that it was literally full of trout. But he could not give very definite directions how to find it, but described the crossing of the creek that ran from it to Blue River. Packing our blankets, coffee-pot, frying pan, and some provisions on an extra pony, we set out to find the new paradise. Three young men, or large boys—two of them from Denver and one from Tennessee—who were vagabondizing in the mountains for a couple of months, joined our cavalcade; also a young man who belonged at the Springs but was going on a business trip to the Breckenridge, so that we numbered six horsemen and had two extra animals for the impedimenta. We struck across the hills southwest, crossed Williams River eight or ten miles above its mouth, and turned up its wide valley between the inclosing mountain spurs. It is a delightful region of rolling grassy hills, interspersed with groves and belts of timber. Hundreds of antelopes were grazing in groups of from five to fifty, but they were wary and wild. Although the boys did considerable firing at long range, they got no meat, and the march we had laid out for the day did not admit of wasting time for a systematic hunt. At the head of the valley we had to turn to the right and pass over a high mountain ridge. I had passed it eleven years before in company with Bayard Taylor by a well beaten Indian trail, and trusted to finding the route as good, or better, now. In that I was disappointed. As we got into the timber and began the steep ascent, the trail scattered out. Fallen timber had greatly obstructed it, and a young growth of pines formed an impenetrable jungle. The party got scattered and confusion reigned. My friend, who was not used to "roughing it," became exceedingly fatigued and much discouraged. But all things must have an end, and at length we reached the summit and traversed an open forest of living timber with most beautiful intervals of luxuriant meadows, with grass and flowering plants higher than our horses' backs and springs of

or no chance of Va. getting any more this season; but about a week ago Professor Baird telegraphed our commissioner that we could have more from Havre De Grace, and we are now continuing the distribution and have sent 200,000 to Shenandoah, at Front Royal, and 175,000 to Shadwell, just below Charlottesville, on the Rivanna River. We hope to get a few hundred thousand more.

W. G. W.

Natural History.

A NEW SPAROID FISH.

[*Sargus holbrookii*—BEAN.]

On the 28th of March, 1878, Mr. G. Brown Goode, assistant curator of the U. S. National Museum, brought in Charleston, South Carolina, a fish known in that market as the "bream." It was brought to Charleston from the Savannah Banks in great abundance and sold in readiness.

An examination of the specimens proved them to represent a species of *Sargus* not known to be described, for which I propose the name given above.

The description is based upon six specimens, catalogue No. 20,979, varying in length from 256 to 300 millimetres (10 1/2 to 11 1/2 inches) to end of middle caudal rays.

DIAGNOSIS: Body ovate, resembling in shape *Sargus vulgaris* (Geoffr.), rather than *S. candinacola* (Pocoy), compressed, a very slight protuberance above the upper anterior margin of the orbit, and a very marked one in the supraoccipital region. The height at ventrals is contained slightly less than 2 1/2 times in length of body, and in four of the six specimens it equals the distance of dorsal from end of upper jaw. The least height of tail is about equal to upper jaw, and is contained from 10 to 10 1/2 times in total length. Head 3 1/2 times in total. Interorbital area slightly less than 1 1/2 times diameter of eye. Snout, measuring from end of upper jaw to perpendicular through anterior margin of orbit, about equals mandible, which is contained 10 times in total. Eye 4 1/2 times in head, and nearly 16 times in total length. The first dorsal spine is contained from 1 1/2 to 2 times in the second, and is shorter than the first anal. The longest dorsal spine is contained from 8 1/2 to 10 times in length of body. The dorsal rays gradually decrease in length from the first to the last but one, which is shorter than the last. The distance of the anal from snout is contained 1 1/2 times in total length. The first anal spine is usually half as long as the second, which is somewhat longer, and stronger than the third. The second spine is 1-12th of total length of body. The anal rays diminish in length to the one before the last. The middle caudal rays are about 5-12ths as long as the external rays, and 1-10th of total length. The distance of pectoral from snout is contained 3 1/2 times, and its length about three times in total. The distance of the ventral from snout is slightly more than the length of pectoral, and its length is contained from 4 7/11 to 5 1/2 times in length of body.

RADIAL FORMULA: BV. D.XII, 13-14. A.III, 13-14.

P. 15-16. V.I, 5.

SCALES: 8, 60-62, 16.

Teeth: Eight incisors in each jaw, their greatest width equal to half their length. Many small, granular teeth behind the incisors. Three rows of molars in the upper jaw, two in the lower. Two of the specimens examined show a slight tendency to increase the number of rows of molars.

Color: Dorsal, caudal anal ventrals, axil of pectoral, posterior border of operculum, upper part of head, blackish. A black spot on the caudal peduncle extending almost as far below as above the lateral line, and involving about eight longitudinal rows of scales. Cheeks and greater part of body dull silvery. No cross bands.

This *Sargus* is the one referred to in FOREST AND STREAM, May 30, 1878, as resembling a Cuban form. I dedicate the species to Dr. John Edwards Holbrook, to whom ichthyologists are so greatly indebted for their knowledge of the fishes of South Carolina.

TARLETON H. BEAN.

U. S. National Museum, June 3, 1878.

THE "BUCK FLY."

WILLIS, Texas, May 1, 1878.

EDITOR FOREST AND STREAM:

When the trouble is over about the "deer shedding their horns," I want you to bring forward a subject that I have not yet seen discussed, but one, I think, of no mean importance, and one, too, that will puzzle the knowing ones not a little, and that is an insect or grub found in the deer in the Southern States at certain seasons of the year, say from January to April, and peculiar to the deer alone, and known to all hunters as the "buck fly."

What this animal is, or its purpose in the deer, or its destiny, has ever been a mystery to me, and, I presume, to all others who know anything of it. They are found in the chrysalis form in the deer's head, sometimes around near the brain, in the cells of the skull (don't know the technicals) near that organ, at other times in the upper part of the throat in the epiglottic region, and in the upper nasal region; sometimes in large quantities, at other times only few individuals, but they never seem to be of any inconvenience to the deer, and when about to change from the chrysalis to the full fledged fly, they approach the nasal apparatus and are blown out by the deer or make their way out by their own efforts; but tradition says the deer blows them out. They then either fly away or drop upon the ground until they gain sufficient strength and development, then fly. The chrysalis at first is flattish and of a whitish color, but just before changing into the fly becomes a brownish gray color and wrinkly and rough, and an inch in length. By the time the deer have shed their winter hair and turned red, these worms have all disappeared from the animal and he begins to look sleek and grow fat.

After leaving the deer and becoming fully fledged, the "buck fly" is of a dark, brownish or gray color, with the under or second wings a bright scarlet. And further than this I could not describe it, as I have never been able to capture or kill one or known any one else to do so, for they are as timid as the deer, and the only time you ever see one is in the early spring. As you ride through the brush you may rouse one up like an old buck, when off he goes with the like graceful bounds and zig-zag gait of the deer in whose head he has been a recent tenant. Will some of your correspondents, who are better posted on this subject, give us their views through the FOREST AND STREAM? Respectfully,

O. L. J.

[We have no definite information to offer on this subject, although we have often observed the larva of this or a similar parasite in the throat of the deer. We presume that the insect is a near relative of *Estrus ovis*, which sometimes proves so troublesome to sheep.—Ed.]

BIRD NOTES FROM ILLINOIS.

LEBANON, Illinois, April 29, 1878.

EDITOR FOREST AND STREAM:

The weather has for the past winter been almost unprecidentally mild in this locality. But little snow fell, and the ground was not frozen exceeding two inches at any time. As a consequence of the open weather we were not favored with our usual amount of duck shooting this season. The ducks were less plentiful than last year, and made their migrations at very irregular periods. We were recompensed for this privation, however, by very fair snipe shooting this spring. The first Wilson's snipe of the year was seen January 26. This bird was but a straggler, as no others put in their appearance until March 6. The weather being mild and pleasant during the early part of the latter month, the snipe arrived in considerable abundance, and at any time from the 15th of March to the 10th of April a bag of twenty-five or thirty plump Wilson's snipe might easily have been made in an afternoon's shoot. The last snipe of the season was killed by your correspondent, April 20. We anticipate elegant quail shooting here next fall, as they are very plenty. They are all now paired, and have begun to construct nests. I will now give you date of the arrival of the migratory songsters, etc., up to the present date:

February 8, '78, wild pigeons; 18, cow birds; 19, killdeer plover; 26, red-winged blackbirds; March 6, Carolina rail, Wilson's snipe; 8, king fisher; 9, peewee (*Sayornis fuscus*); 15, crow blackbirds, first butterfly of year seen to-day; 20, jack snipe (*Tringa maculata*), and field plover, or Bartram's plover; 25, white bellied swallows; 29, yellow-legs (*G. flaxipes*) stone birds *G. melanoleuca*; 30, purple martins; April 5, solitary sandpipers, blue warbler. A Carolina dove's nest was found to-day on the ground containing one egg—a very unusual occurrence.

April 6, brown thrush; 12, chimney swallows, and noticed for the first time this year gold finches in summer plumage; 13, hawk swallows; 16, house wren; 18, king birds, Baltimore oriole and whip-poor-will; 20, wood thrush, olive-backed thrush, blue-gray gnat catcher and prothonotary warbler; 21, orchard oriole; 23, cat-bird, night-hawk, scarlet tanager and great crested fly-catcher.

The arrivals as noted above are in nearly all cases several days ahead of the arrivals in former years. Our summer visitors have almost all arrived. Some few, however, are needed to complete the list.

PTARMIGAN.

ALBINO.

THREE RIVERS, P. Q., May 1, 1878.

EDITOR FOREST AND STREAM:

Some four years since Mr. S—, who takes pride in his "black Spanish" fowl, and has a fine flock of the same, evidently well-bred gentlemen and ladies, hatched out a brood of chicks under a toster mother. They were all jet black in plumage, and perfect specimens of the breed. He has never known any of his Spanish hens to sit since he has owned them (several years), save one of this "clutch," who when about three years old raised a brood of chicks. When she moulted shortly after she put on white, and has since so remained. There are a few black feathers left, but she is nearly all white; is well and hearty, a good layer, and apparently has suffered no change of condition, save in the color of her "outer garments." My friend mentioned the incident to me a few days since, and I was a little incredulous; asked him if the eyes were pink, and he did not know. To-day I went to see the hen; found her among her sisters (and brothers), and found also that her eyes are pink.

Some time ago there was a discussion in F. AND S. as to whether "Albinism" was congenital or not, and I believe that there is a difference of opinion among naturalists upon the question. This case will settle one point, however—that albinism is not always congenital, at least among birds.

The proof is positive; this bird has been bred and reared, and always owned by my friend, who has seen the change go on under his own eye, and I think never heard of the term "albino," or knew of the existence thereof until after he had told me of this strange thing.

It seems to me that some of the zoological gardens or scientific institutions ought to secure this specimen; and if any of them agree to take it and care for it, and make good use of it for increasing the knowledge of the world concerning this curious disease or condition, or whatever one chooses to call it beside Albinism, I think I can obtain the bird; and, if so, will present it to any proper association applying for it through you, and can procure affidavits as to the facts, although the hen herself shows every point of a well-bred black Spanish fowl (save color), and it is a breed that is noted for "throwing true."

Yours, hastily,

MAC.

BREEDING OF THE PINE FINCH IN WINTER.—The interesting information that the pine finch (*Chrysomitris pinus*) breeds in the Northern States in winter will be news to many of our readers. We are promised some valuable notes on this topic by Mr. C. H. Merriam, the President of the Linnean Society of New York, which we hope to be able to lay before our readers in a short time.

PROCEEDINGS OF THE U. S. NATIONAL MUSEUM.—We notice in the advance sheets of the proceedings for 1878, a part of which have just reached us, several papers of considerable importance to zoologists. Mr. W. H. Dall describes a number of new forms of mollusks (recent) from Alaska, and also a number of fossil forms from the later tertiary of California. Professor G. Brown Goode identifies the *Clupea tyrannus* of Latrobe with the mossbunker or menhaden, and that species will henceforth be known by the name *Brevoortia tyrannus* (Latrobe), Gill. Prof. Goode also announces the capture, in Buzzard's Bay, Mass., of *Belone latimans*, a fish hitherto known only from Cuban waters. The same writer's article, on the "Voices of Crustaceans," is noticed in another column. A paper of interest to ornithologists is Mr. Ridgway's description of "A New Humming-Bird from Guatemala." This species, which has apparently been confounded with *Atthis helioise*, Mr. Ridgway describes under the name of *A. ellioti*.

WHY CARCASSES FLOAT.—Mr. Editor: I read with great interest the different reasons given for deer sinking in the red and not in the blue coat. While hunting a year ago last October with an old friend who had seen and taken part in many a chase across the lake after deer, and had shot them in both the red and blue coat, I found he held the same view as does "Mowich," which I believe the true one.

W. A. T.

[The theory of our correspondent has been corroborated in

the most substantial manner by the fact that there are firms in this city which manufacture mattresses, cushions and life preservers, filled with deer hair, which is more buoyant than cork, and sustains a weight of ten pounds of iron to one pound of hair. Both blue and red hair are used, the red having least buoyancy. A microscopic examination will readily reveal why the deer's hair is so buoyant.—Ed. F. & S.]

A NOTABLE COLLECTION.—Mr. Henry Edwards, of San Francisco, has the largest and most valuable collection of bugs in America. They number over 200,000 and represent 60,000 species. It will probably be purchased by the citizens of San Francisco for the public scientific institutions of that city.

MESSINA QUAIL.—We have received from Captain Wild, of Fort McKavitt, Texas, a specimen of the Messina quail, which has been beautifully mounted by Chas. H. Raymond, Esq., and can now be seen at the store of Abbey & Imbrie, 408 Main Lane. We understand that the Messina quail are not numerous in Texas.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR WEEK ENDING TUESDAY, JUNE 1.—Two wild boars, *Sus scrofa*, presented; two great horned owls, *B. virginianus*, presented; one purple gallinule; one raccoon, *P. lotor*, presented; three hog-nosed snakes, *Heterodon platyrhincus*, presented; one hog-nosed snake, *H. Simus*, presented; two chain snakes, *Ophibolus dolatus-triangulus*, presented; two snakes, *Coluber obsoletus*, presented; two water snakes, *Tropidonotus niger*, presented; three garter snakes, *Eutamias sirtalis*, presented; two black snakes, *Batrachoseps constrictor*, presented; one copperhead, *Agkistrodon contortrix*, presented; one snake, *Coluber obsoletus-conspicua*, presented; one pine snake, *P. melanoleuca*, presented; fourteen prairie dogs, *Cynomys ludovicianus*, born in the garden.

ARRIVALS AT THE CINCINNATI ZOOLOGICAL GARDEN UP TO JUNE 1, 1878.—Four ponies, *Equus caballus*, deposited by Mr. A. Robinson; one woodchuck, *Arctomys monax*, presented by Mr. J. C. Folger; one mock-bird, *Mimus polyglottus*, presented by Mr. C. Osceamp; one fox squirrel, *Sciurus vulpinus*, presented by Mr. S. G. Harbaugh; two six-banded armadillos, *Dasypus sexcinctus*, presented by Mr. J. J. Bantila; two American buffaloes, *Bison americanus*, born in garden; one fox squirrel, *Sciurus vulpinus*, presented by M. C. Colebraut; two black snakes, *Batrachoseps constrictor*, two chicken snakes, *Ophibolus eximius*, one water snake, *Tripidonotus niger*, three hog-nosed snakes, *Heterodon platyrhincus*, two hog-nosed black, *Heterodon nigris*, two garter snakes, *Tripidonotus sirtalis*, presented by Messrs. Thall & Mumford; one white crane, *Grus americana*, purchased; one alligator, *A. mississippiensis*, presented; one pony, *Equus caballus*, born in garden; one white-headed goose, *Anser carolinensis*, purchased; two prairie owls, *Brachyotus palustris*, presented; one black snake, *Batrachoseps constrictor*, presented; one night heron, *Nycticorax nycticorax*, presented by A. Hoffeld; six undulater grass parakeets, *Melospiza undulata*, hatched in garden; one yak, *Bos grunniens*, born in garden; two raccoons, *Procyon lotor*, born in garden; fifteen English pheasants, *Phasianus colchicus*, hatched in garden; seventeen silver pheasants, *Buphthalmus nycthemerus*, hatched in garden; nine gilt pheasants, *Thaumalea picta*, hatched in garden; twenty-three prairie dogs, *Cynomys ludovicianus*, born in garden; one Virginia deer, *Cervus virginianus*, born in garden; two passenger pigeons, *Ectopistes migratorius*, hatched in garden.

H. P. INGALLS, Esq.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEO. N. Y. HORTICULTURAL SOCIETY.

MEETING OF THE NEW YORK HORTICULTURAL SOCIETY.—The regular June meeting of this society, though there were not so many plants and flowers exhibited, was one of the most interesting that it has yet held. Not only were the plants and flowers shown of extra merit, but some of them were very rare and shown in bloom for the first time in this country. Messrs. Beach, Son & Co., 7 Barclay st., led the way with a fine display of Hardy Azaleas and Rhododendrons, including some fine new sorts. Irises, Paeonias, the beautiful yellow bulbous plant from California; Cyclobothra lutea, that had stood the winter without protection; a very fine spike of the curious Hyacinthus plumosus; immense blooms of Clematis lanuginosa and C. Azurra grandiflora, etc. Mr. Jas. Taplin, manager to George Such, Esq., showed the rare and beautiful light-pink Liliun Kraueri and a fine spike of L. Auratum; C. L. Allen, blooms of the scarce Beaumontia grandiflora and Magnolia Macrophylla; John Henderson, immense heads of the new Hydrangea Otaksa, very like the old variety in color but a much freer bloomer and superior to it in every way. The gems among the plants, however, were the Orchids, brought by Mr. A. Mayne, Gardener to Mrs. Mary Jane Morgan, 26th st. These consisted of Odontoglossum, Razili and O. vexillarium, both very rare varieties, and on exhibition for the first time; a very fine variety of Cypripedium Stonei, and a good plant of the lovely Dendrobium Pierardi latifolia well bloomed. Mr. C. D. Dickey, of Hunt's Point, N. Y., sent two plates of President Lincoln Strawberry, which received a certificate of merit from the society last season, one of the berries weighing considerably over two ounces. Messrs. Peter Henderson, E. P. Roe, J. Riddle and others also sent very fine strawberries, and a variety called Beauty, sent by Mr. Henderson, received special notice. Although early for Roses, Mr. Wm. Burgess, Glen-cove, L. I., put up a beautiful group, principal among which were Souvenir de William Wood, Marechal Neil, Mad A. Leroy, Blanchefleur, Marechal Vaillant, William Griffith, a number of varieties of Moss Roses, including the best of them all, the old English Moss, and a new seedling Rose of his own which he has named George Washington, of exquisite shape, color and fragrance. A most interesting and thoroughly practical address was delivered by P. T. Quinn, Esq., Newark, N. J., on "The Summer Management of Fruit Trees." Mr. Quinn took the opportunity to warn all against the unprincipled tree peddler, who had done more to bring discredit of Horticulture and Horticulturists than all other causes put to

gether. He also warned the novice against planting too many trees at once, to test a few varieties thoroughly for a few years, find out those best suited for that particular soil and locality, and then plant as largely of those varieties that he found best suited as taste or circumstances might dictate. He followed by inveighing strongly against the practice, too prevalent, of allowing orchards to run to grass, having practically tried it, leaving a few rows in his orchard to grow in the sward while the rest was cultivated. In a few years the fruit became small, juiceless and of no commercial value. When growing fruit for the market he advocated strongly to allow the tree to grow vigorously at first, and not to let it bear until it had a good sound constitution and vigor enough to carry it through; condemning in toto the cultivation of dwarf pear trees for market purposes; finishing up his address by practical illustrations of his method of thinning the fruit during June and July so as to get the maximum of size as well as weight from the tree; enforcing his remarks by saying that small or medium sized fruit will not bring in market much more than one-half of what large fruit will do, that it is worse for the tree, and, worse than all, worse for the pocket. A vote of thanks was most heartily awarded him, and an interesting discussion followed on the relative value of dwarf Pears and Apples, versus Standards. The semi-annual exhibition of the society takes place at Gilmore's Garden, May 19th to 21st, and those of our readers who remember last season's display need not be asked not to forget to go to see it. The society hope this season to make a still finer display, and we advise all to go and see for themselves. Any information will be gladly furnished by the Secretary, W. L. Davidson, Box 191, Brooklyn, N. Y.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

A TERRIER BEAR DOG.—An old bear hunter in Mississippi was once saved from death, or being badly hurt, by a very small terrier dog. While out still hunting he came across a tree in the hollow of which was a bear's den with two very young cubs in it. As he found ready sale for these little beasts, he was anxious to capture them. Knowing that the old one was not far off, he determined to await her appearance, shoot her, and carry off the young. As she did not return as soon as he expected, he made bold to capture the cubs and start away with them. It was not long, however, before his position became quite unenviable. The old one, returning and finding her babies gone, became savage and started in search of them. It was but a short time before she was on the right trail, and would have soon overtaken her hero, but for the timely interference of the little dog, which, seeing the excitement, flew at the bear, biting it about the hind legs, and so annoying her that she would turn to strike at it, all of which retarded her charge upon the hunter; the dog, being so small, could dodge the blows of the infuriated beast and be ready at a moment to begin the attack again. The hunter, who was as cool under the circumstances as possible, finding that he had gained a little, wheeled to fire at the bear, when, to his horror, the gun missed fire. Seeing his utter helplessness, he threw down the cubs; but so savage was the bear that this did not check her, and she had come so close that the hunter, but for the persistent attacks of the terrier, would have been caught. At last he succeeded in getting up a tree too small for the bear to follow him. She lingered about the spot for a long time, evidently anxious to punish the offender. The hunter, too, was not content to leave until he had bagged his game, nor did he. Waiting until the old bear had gone away, he descended from the tree, got his rifle ready, and in a short while had killed the mother and recaptured the cubs. The little dog did not escape unhurt, having received a blow by which it lost one of its eyes. I know the person of whom the above adventure is told, and do not believe him to have exaggerated the facts in the least. *Nashville, June 5, 1878.* J. D. H.

MR. LORT, ESQ., AND DR. STRACHAN—Editor *Forest and Stream*: The very large number of letters (twenty-eight) which I have received from gentlemen, experts and lovers of the sporting dog, congratulating me upon my criticism of Mr. Lort, in the letter which appeared in your issue of May 23, and urging me in many instances to further discussion and reply to various correspondents, leads me to ask you to permit me through your columns to reply to one and all that I have neither time nor inclination to continue such controversy. I wrote what I did because it was forced upon me as a duty, although an unpleasant one, and I said what I had to say, or at least as nearly so as your printer would allow me; and now am quite content to leave the matter in the hands of others. The character of such replies as have been brought to my notice is at any rate not of such a nature as to be entitled to any reply from me, but I feel inclined to thank the large number of prominent gentlemen who have personally written to me and to whom I find it out of my power separately to reply. By giving this space in your valuable and increasingly delightful paper, Mr. Editor, you will confer a favor upon yours sincerely, A. RUSSELL STRACHAN. 51 E. 23d st., N. Y.

A COMPLIMENT PAID TO MR. LINCOLN.—The following pleasant letter was received by Mr. Charles Lincoln, just prior to his departure for St. Paul, where he goes to arrange

the prize list of the forthcoming Bench Show to be held there. Mr. Lincoln is quite sanguine that the show there will be a remarkably good one:

MASSACHUSETTS KENNEL CLUB, }
BOSTON, May 6, 1878. }

CHARLES LINCOLN, ESQ.:

My Dear Sir—I have the pleasure to inform you that at a meeting of the club, held this day, it was voted that the thanks of the club be given to Mr. Charles Lincoln, the Superintendent of our recent Bench Show, for the very efficient and satisfactory manner in which he discharged his duties, and that the Secretary send him a copy of this vote.

I am yours very truly,

EDWARD J. FORSTER, Sec.

CANINE DEGRADATION.—There is no telling to what depths even a dog may fall. Securely muzzled, coupled, held by a leash, and accompanied by a sturdy attendant armed with a cruel lash, two magnificent, strong-limbed bloodhounds, whose every movement bespoke fleetness and endurance, were led down Broadway one day last week, bearing on their dishonored backs the gaudy blazons of a corn doctor. We thought we detected in their eyes that peculiar light that shone in the eyes of the untamed Spartan captive in the streets of Rome.

NAME CLAIMED.—*Bloomsburg, Pa., June 6.*—I claim name of Lorna Doone for my Irish red setter bitch puppy, bred from Sprague's Ruby II. (Tippe—Ruby, Ducat stock), sired by Ranger.

J. R. SCHUYLER.

St. Louis, Mo.—I wish to claim the names Surprise and Missouri for my two C. W. bitch puppies out of Russia G. Champion France, born Dec. 18, 1877.

W. VIE.

Visits.—*Bloomsburg, Pa., June 6.*—My Irish red setter bitch Nell II. (Plunket—Nell) has visited Dr. Jarvis' Champion Elcho.

J. R. SCHUYLER.

Gentlemen wishing to form Clubs will find rules of organization in the "Club List," price, 50 cents.

BOAT AND YACHT BUILDING.

BY NAUTICS.

STEAM YACHTS.

IN the past ten years small screw steamers for use as yachts or for business purposes have taken a leading position. The first attempts at building small screw steamers were crude: the hulls were poorly modeled, the engines too heavy and slow, and the boilers not only too large and heavy, but deficient in heating surfaces and not able to carry the requisite amount of steam necessary to make such boats a success. As an aid to those wishing to build or buy a steam yacht, the following remarks may be of service: The hull should be light and stiff. The proportion of width to length depends, first, on the size of the boat. A small boat should not be less than four feet beam, otherwise there will be no room, and the boat

DIAGRAM No 52

will be "cranky." If a boat is wanted for speed the proportion of length to width must be one foot beam to eight feet of length of load line, or more. The water lines should be fine, and midship section small. If the boat is to be used in shoal water the screw should be placed in such a manner that it will not project below the bottom of the boat; in this case the water lines must be hollowed considerably toward the stern, so as to give as easy a run as possible. The best plan is to place the screw low down, so that one-third or one-half of its diameter will be below the bottom of the boat, thereby obtaining solid water to work in and consequently a greater percentage of speed. To protect the screw the keel is made of an extra depth. The deep keel also gives a firm, stiff floor, thereby preventing the shaft from being twisted out of alignment. The boiler should be constructed with the greatest possible amount of heating surface compatible with good circulation. The shell may be constructed of iron, but is best of steel, and should stand a working pressure of at least one hundred pounds to the square inch. The riveting should be double, thereby admitting the use of lighter plates. (The time is not far distant when small boilers will be welded up solid, without any rivets, thereby reducing the weight of boilers largely.) The fire box is usually made of iron or steel in this

country. The English use copper, as it is a better conductor of heat, and will give better results from the same amount of fuel: brass and copper tubes are used for the same reason. The cheapest boiler, and the one most extensively used, is the vertical tubular. This form of boiler should be of larger diameter and less height than the patterns in common use: larger diameter to admit of a larger number of tubes, and less height to bring the centre of gravity of the boiler as low down as possible. This form of boiler is not the most economical of fuel—but that is of secondary importance to stability. The return tubular boiler is more expensive, but is probably the best type that can be used for steam yachts; the centre of gravity is low down, and it is very economical. The diameter of this boiler should also be large compared to its length, the objection to a long boiler being founded on the fact that the water level is hard to find when the boat is used in rough water, owing to the pitching of the boat. The locomotive boiler is used in racing boats of the Thornycroft type. It is desirable that the engineer knows how to test a boiler in the absence of a professional inspector. The following mode is easy, safe and conclusive: Fill the boiler and its connections to the steam valve (which should be shut tightly) full of cold water; build a fire under the boiler, which will soon cause the water to expand; watch the pressure gauge, and the moment the pressure reaches the point determined on for the test open the blow off valve and thus relieve the pressure. Steam should not be carried to more than two-thirds the amount of the test pressure. There is no danger in testing boilers by this method, as if a rupture should occur there is no steam, and there can be nothing but an escape of water. Steam pressure gauges should be graduated to two or more times the number of pounds it is proposed to carry in the boiler, for the reason that gauges are more reliable in their indications at mid scale than at either high or low points. It is best to use two gauges so that one may be a check on the other. For the same reason it is better to use two safety valves, as sometimes one may refuse to act. Safety valves, with nickel-plated valves and valve seats, are best.

The engines should be light and fast running, developing their power from high steam pressure and speed of piston. They require more attention being given to good fitting than would be necessary with heavy, slow running engines. The most satisfactory type of engine is the English double cylinder vertical; single engines are cheaper, but will not work as smoothly at high speeds. The water supply may be maintained by either a pump or an injector; their is but little to choose between them, the injector is the handiest and probably the best for non-condensing engines. Small boilers may be fed by an equilibrium chamber filled by hand, and provided with a glass water gauge—this is the simplest method of any. A galvanized iron pan should extend under the boiler to catch and prevent ashes from mixing with the bilge water. A similar pan should be placed under the engine to catch oil drippings, which would otherwise injure the boat. The engine and boiler should be well protected by covering and lagging to prevent radiation of heat. The sleeve for the shaft should be long, and formed in such a manner as to strengthen instead of weaken the deadwood. The stuffing box on its inner end should be long, so as not to require repacking often. The outside bearing is best made by shrinking a brass sleeve on the shaft, and making the housing of lignum-vitis wood; this, if well fitted, will last a long time and give no trouble. The working parts of the engine should be made of steel, and the crank balanced. For small boats it is hardly necessary to use ordinary link motion. If the valve is set to cut off at three-quarter stroke, it will give the maximum effect that can be expected from the expansion of steam, and some simple device may be used for reversing, doing away

with the complexity and expense of a link motion. There are several compact forms of fast running engines that may take the place of the vertical. Unfortunately the best are made in England, and import duties are high. I refer particularly to Willans' three cylinder engines and also to Halsley's, both of which are simple, compact, capable of high speed, and last, but not least, their centre of gravity is very low down, adding greatly to the stability of the boat. The thrust-block is an important part of the shaft fittings. The best plan is a series of solid rings on the shaft running in a box with grooves to correspond, and kept well oiled. A surface condenser may be made by running hard drawn brass pipe from the exhaust down through the bottom of the boat, carrying them along the keel and to the stern post and back on the other side of the keel to a connection with a hot well and air pump. This plan is often used for boats that run much on salt water, as but little fresh water need be carried in the tank. It is preferable, however, to dispense with this refinement in small boats. The model with this article is designed to show the best mode of placing the screw, it is also suggestive of a boat that will give a moderate speed—ten to twelve miles per hour, if well engineered. The following tables of sizes of boats, engines, etc., have been compiled from the best examples of home and foreign practice, and will be found a good guide. Where indicated horse power is mentioned, it means that the engines are measured by an engine indicator, and are actual horse powers—not the nominal horse power of engine builders founded on the size of the cylinder. John Penn & Son, the eminent engineers of Greenwich, use the following dimensions for small launches.

Length of launch—21ft., 31ft., 52ft. Beam—5ft. 4in., 6ft., 9ft. Draft—1ft. 2in., and 2ft. 3in.; 1ft. 2in., and 2ft. 3in.; 1ft. 4in., and 3ft. Diameter of cylinder—4½in., 5in., 7in. Stroke—5in., 6in., 6in. Indicated H. P.—5½, 10½, 20. Weight, E. and boiler with water—900lbs., 1,700lbs., 3,600lbs.

Yarrow & Hedley, Poplar, London, one of the most extensive builders of steam launches in the world, and who have made the business a specialty for years, furnish the following standard sizes:

Length of launch—23ft., 30ft., 37ft., 43ft., 50ft. Beam—5ft. 3in., 6ft., 6ft. 6in., 8ft. 9ft. 6in. Draft—2ft., 2ft. 3in., 2ft. 6in., 2ft. 9in., 3ft. Indicated H. P.—5, 7, 12, 16, 30.

The steam yacht *Hermione*, constructed by Edwards & Symes, London, is 55ft. long, 11ft. beam, 5½ft. deep. Engines, two cylinders, each 8in. diameter and 9in. stroke; heating surface of boiler, 32½ square ft.; grate surface 13 square ft. When worked with eighty lbs. of steam, the engines make 220 revolutions per minute, and the speed is thirteen miles per hour. When working at full speed the engines develop 120 indicated horse power and the boat makes fifteen miles per hour easily.

Mr J. S. White, of Cowes, England, constructed a steam yacht for the Khedive of Egypt, which is noted as a fine sea boat with a good medium speed—a perfect success every way. The following are the dimensions: Length, 50ft.; beam, 10 ft.; draft, forward, 2ft. 10in.; draft, aft, 3ft. 6in.; displacement, 11 tons; screw (four bladed), 3ft. 6in. diameter; pitch (average), 3ft. 10in.; engine, two cylinders, 7½in. diameter and 6in. stroke; grate surface, 5½ square feet; speed, 11 to 12 miles an hour; indicated horse power, 43.

Thornycroft & Co., of Cheswick, England, build the fastest steam yachts known. The *Miranda* is 50ft. long over all; on water line, 45ft. 6in.; beam, 6ft. 6in.; on the water line, 5ft. 0in.; draft of water at the stern in running trim, with six persons and 336 pounds of coal aboard, is 2ft. 6in. taking extreme depth of the screw. The hull is built entirely of Bessemer steel, and is from 1-16 to ¼ of an inch thick. The engines have two cylinders, 6in. diameter, and 8in. stroke. The screw is two bladed, 2ft. 6in. in diameter, and 3ft. 4in. pitch. The screw shaft is inclined one foot in 28 feet. Heating surface in boiler, 116 square feet; grate surface, 4½ square feet. Locomotive boiler, plates steel, 5-16in. thick; fire box copper, 3-8in. thick; fire box stays, ½in. thick, placed 4in. apart. A 3 millimetre Giffard injector is used to feed the boiler. The boiler is 30in. diameter, and 3ft. 5½in. between tube plates; 74 brass tubes, 1½in. outside diameter. Working pressure of steam, 120 pounds; weight of engines, machinery and boiler (with water up to working level), 4,500 pounds. At 300 revolutions per minute the speed is 11 miles per hour; and the engines indicate 11 horse power; slip of the screw at this speed 13.9 per cent.; at 500 revolutions per minute, the speed is 16 miles per hour, the engines indicate 42 horse power, and the slip of the screw is 14.7 per cent.; at 555 revolutions per minute the speed is 18½ miles per hour and the slip of the screw 11.3 per cent.; at 600 revolutions per minute, the speed is over 20 miles per hour, and the engines indicate 71 horse power. The displacement of the *Miranda* is 3.73 tons running trim with six persons aboard. Several yachts, built in imitation of the *Miranda*, both abroad and at home, have been equally successful; notable examples are the *Queen Mab*, built at St. Petersburg, and the *Continental*, built in this country. The former boat is constructed almost wholly of Muntz metal, and the latter of steel. The fastest steam yacht in the world is the *Gilana*, built for the Baroness Rothschild by Messrs. Thornycroft, and now on Lake Geneva. The principal dimensions of this prodigy are as follows: 91ft. long, 13ft. 6in. beam; engines compound, with three cylinders and injection condenser; the high pressure cylinder is 13.5in. diameter, and the two low-pressure cylinders are each 15in. diameter; the stroke of all is 16 inches. Boiler of the locomotive type, with copper fire box and brass tubes; the working pressure of steam is one hundred pounds. On the trial trip 43 miles were run in one hour, 48 minutes and 22 seconds equal to 23.89 miles per hour! The boiler pressure was one hundred pounds to the square inch; vacuum, an average of 24 inches, and indicated horse power 450; mean number of revolutions 318 per minute. Unfortunately the diameter and pitch of screw, displacement of boat, etc., cannot be obtained. The New York Safety Steam Co. use the following formulae and have built some very successful boats:

Length—25ft., 28ft., 32ft., 38ft., 50ft., 60ft., 68ft., 75ft. Beam—5ft. 8in., 5ft. 10in., 6ft. 4in., 7ft. 6in., 8ft., 10ft., 11ft., 12ft. Draught—2ft. 3in., 2ft. 4in., 2ft. 6in., 3ft. 2in., 3ft. 6in., 4ft. 2in., 4ft. 8in., 4ft. 10in. Diameter of cylinder—3in., 3½in., 4in., 5½in., 7in., 9in., 10in., 12in. Stroke—5in., 5in., 6in., 7in., 9in., 12in., 12in. Diameter of screw—23in., 28in., 30in., 36in., 42in., 48in., 54in., 56in. Pitch, 3ft., 3ft., 3½ft., 4ft., 5ft., 5ft., 6ft., 7ft. Boiler. Diameter of shell—28in., 30in., 33in., 36in., 46in., 50in., 54in., 60in. Height—45in., 46in., 48in., 56in., 76in., 82in., 86in., 90in. Heating surface—75 sq. ft., 90 sq. ft., 115 sq. ft., 170 sq. ft., 246 sq. ft., 332 sq. ft., 402 sq. ft., 504 sq. ft. Weight completed—1,500lbs., 1,700lbs., 2,000lbs., 3,000lbs., 4,800lbs., 7,500lbs., 8,500lbs., 10,000lbs. The *Furt*, built by Mr. H. S. Maxim, is a very successful small launch: length, 21ft.; beam, 4ft. 2in.; depth, 21in.; one cylinder, 3½ inches diameter, and three inches stroke; steam ports, 2½ inches by ½ inch; engines make 700 revolutions per

minute. Boiler, 26 inches long, and 20 inches diameter, of the return tubular type, constructed of 3-16 inch steel, with cylindrical furnace 11 inches diameter and 16 inches long; grate surface, 1 square foot; heating surface, 34 square feet; tubes, 1½ inches diameter. The boiler is tested to 450 pounds to the square inch; working pressure, 150 to 200 pounds; screw, two bladed, eighteen inches diameter. Mean pitch, 2½ in. Draft aft, loaded, 32in. Weight of boiler, 260lbs.; of engine, 75lbs.; weight of machinery, complete, 400lbs.; speed, 10 to 12 miles per hour. The *Cinderella*, built by Mr. W. Baxter, is 30 feet 10 inches long, 5 feet 3 inch beam, and is 32 inch draught aft. The cylinder is 4 inches diameter and 4 inches stroke; revolutions per minute, 325 with 100lbs. of steam. Boiler upright, 23in. diameter and 36in. high; furnace, 15in. high; grate surface, 255 sq. in.; boiler contains 37 tubes, 1½in. diameter, and a superheater of one 8in. central globe, surrounded by 9 globes, 4in. diameter. The screw is two-bladed, 26in. diameter and 30in. pitch. Speed, 10 to 12 miles per hour. It is hoped that the above examples may be of use to some of the readers of FOREST AND STREAM. Many more might be given, but the length of this article warns me to close. The subject demands a volume, which may at some time be undertaken. With the present paper Nauticus completes the series on Boat and Yacht Building, and, for the present, bids the reader adieu.

YACHTING NEWS.

NARANT REGATTA.—The Boston Yacht Club in conjunction with the Dorchester, will hold a "Union" regatta off Nahant, Mass., June 17, at 11 A. M. Schooners will be divided in two classes—the first comprising those over 40ft. of sailing length, the second those of less length. Sloops will be divided into four classes—the first for all over 40ft., sailing length; the second for all from 26ft. to 40ft.; the third for all from 20ft. to 26ft., and the fourth for all under 20ft. Course for first class, 23 miles; for second and third classes, 10½ miles, and for fourth class, 7 miles. One prize will be given in each class, and a second if four or more boats start. Ten minutes allowed for crossing the starting line, after that, time to be counted from expiration of that period. Boston Y. C. measurement will be in force. Shifting ballast or heaving overboard any ballast not allowed. One man for each 5ft. of length only or fractional part thereof. Yachts, excepting fourth class sloops and cats may carry any sails. Rouse out those spinnakers and let us have some lively seamanship for once! The old fogie rule of limiting canvas excepting in Corinthian matches should be abolished altogether. First class yachts must carry a boat not less than 10ft. long. It would be a good plan to make smaller craft carry a circular life preserver over or near the stern where it can be cut adrift readily. The Regatta Committee is a strong one, headed by Frank E. Penhody as chairman, and this is a guarantee of a successful race, wind and weather permitting. Owing to the proximity of the metropolitan matches it is not likely that any New York craft will be able to get round the Cape to take part in the event.

SEAWANNAKA CORINTHIAN MATCH.—It is not certain, we believe, where the peculiar designation "Corinthian" was originally devised, nor is its meaning to be interpreted exactly. The first use of the word in its present sense seems to date from the Corinthian Yacht Club, an organization which flourishes on the south coast of England. It is said of them that their title was derived from the hardy fishermen in the neighborhood, who used to race their boats and were styled in the local vernacular "Corinthians." The yacht club in question, in starting sailing matches, limited the boats' crews to strictly amateur sailors, and, in imitation of their prototypes, the fishermen, soon became known as Corinthians likewise, an appellation which was finally adopted by the club and incorporated in its title. From that date on the term seems suddenly to have sprung into popularity until at the present day it has come into universal application among yachting men as denoting crews composed of amateur sailors in lieu of professional tars. In America sailing matches with yachts manned from lay ranks reached back many years, though only among our smaller craft. Jib and mainsail and small sloop races were, we believe, carried on systematically under stringent rules among some of the junior clubs of Boston and vicinity, and prizes set apart for helmsman and crew in orthodox Corinthian fashion. But it was not until the Seawannaka Yacht Club, at the time a young and enterprising concern, took hold of the matter in earnest that Corinthian yachting among the larger boats actually came into vogue. To that club justly belongs the credit of having taken the first decided step in the direction of popularizing the sport of yachting and of educating the rising generation to a full appreciation of the wonderful benefits and pleasurable experiences to be had from "padding one's own canoe." The success that has attended their efforts was noteworthy from the very first, and to-day the Corinthian matches under their auspices are looked forward to with great anticipation by all who follow the sport with spirit and those who are fortunate enough to be drafted into the amateur service for racing days. While it does not seem likely at present that we will see many of the larger yachts come to the start this season, the public is promised a lively match among the sloops. Among others, there will be *Volante*, *Petrel*, *Midge*, *Julian* and *Blanche*. If these crafts are fortunate enough to strike a brisk norther there will be just enough sea on to give them a fine test all around. *Volante* and *Petrel* are of the modified cutter type, and *Julian* is a centre-board sloop of heavy displacement, while the other two are light draught craft of the usual description. There will thus be representatives of all three types in the match, and the results will be most interesting to watch. In a very heavy sea we should pin our faith on *Volante*, in moderate weather on *Petrel* or *Julian*, and in light winds and smooth sea on one of the remaining two. *Julian* is said to be sailing in fine form, and as this is the first time she will hoist racing colors, her debut will be closely watched.

REGATTA ASSOCIATION OF SOUTH CAROLINA.—Charleston, S. C.—After the rowing races the craft that were to participate in the sailing races began to take position off of East Battery, the starting point, and by 12 o'clock there were twenty-two boats in position, with mainsails up, ready and anxious for the start. There were four distinct courses to be run by the different classes, and the entries were as follows: For first-class yachts, thirty feet and over, distance twenty miles—*Eleanor*, 36ft. 6in., flag blue, Capt. Tbos. Young; *Hattie* (of Savannah), 30ft., flag white, Capt. A. W. Clark; *Unnamed*, 30ft., flag red, H. C. Cheves; *Wildbird*, 30ft., W. Lawton Mikell. Time allowance, 1m. 30s. per foot, measured on water line; entrance fee, \$5; prize, \$75.

Second-class yacht race; distance, sixteen miles; entrance fee, \$3; first prize, \$40; second, \$10. Time allowance, one minute per foot. Entries—*Annie*, 17ft., Robert Chisholm,

Jr.; *Ella*, 18ft., Wm. Trenholm; *Cideline*, 13ft. 6in., Frank Porcher; *Hector*, 23ft., R. Maywood; *Madcap*, 17ft., J. E. Mikell; *Uncle Peter*, 23ft., R. Murphy; *Pleasuring of Savannah*, 21ft. 6in., Dr. Wm. Waring. First-class batteau race; distance, twelve miles; entrance fee, \$2.50; prize, \$30. Time allowance, one minute per foot. Entries—*Marion*, 21ft., M. L. Doar; *Fox*, 23ft., J. P. Duva; *Arctic*, 23ft., M. A. Jones; *Othello*, 25ft., E. R. Middleton; *Mary Louisa*, 21ft., C. Plaine; *Arrows*, 25ft., C. Becker; *Josephine*, 20ft.; *Evangeline*, 21ft. Second-class batteau race; course same as for first-class batteaux; prize, \$20. Entries—*Petrel*, 16ft., F. Jones; *Dream*, 17ft., R. Puckney; *Glide*, 16ft., W. H. Puckney. At 12:15 precisely the starting gun for the first-class yachts was fired, and a gun at intervals of one minute to start the second-class yachts, and first and second-class batteaux. The wind had increased considerably since morning, and was now blowing stiffly from the northeast. The association steamer *Sappho*, which was crowded with members of the Regatta Association and their friends, started with the racers. For the first three miles the four first-class yachts held well together, led however by the *Eleanor*, who had the advantage of her large sails. On nearing Sumter some very pretty sailing was done by the *Wildbird*, and she very soon was on even terms with the *Eleanor*, who had to luff and lose some little time in repairing her halyards, which had given way. The *Hattie* followed third, and the *Unnamed* was some distance astern. The wind now increased almost to a gale, and the race became exciting. The second-class yachts and batteaux were clear in the distance. Soon after passing Sumter the *Hattie*, who held third position in the race, capsized, but a steamer was very near the scene of accident, and rescued the fourteen composing the crew. Soon after this accident the *Unnamed* began to show signs of distress, and it was discovered that she had shipped several heavy seas, owing to the loss of her tiller, and was almost in a sinking condition. Her crew succeeded in bringing her up to the wind, and after bailing some time were enabled to start again. The *Eleanor* now led a little. The contest between her and *Wildbird* was extremely exciting up to the very end, and after they had passed the stakeboat it was impossible to tell who had won, until reference was made to the terminal judge, who gave the official time as follows: *Eleanor*, first, 3h. 19m.; *Wildbird*, second, 3h. 27m. The time allowed the *Wildbird* by the *Eleanor* being 9m. 45s., the *Wildbird* wins the race by 1m. 45s. The *Wildbird* is owned by Mr. C. H. Glidden, and was built by P. McGibban, of New York, only a short time since. She is the prettiest yacht in our harbor, and her sailing in the race proves that she is one of, if not, the fastest. The second-class yachts passed the stakeboat in the following order: *Hector* first, *Pleasuring* and *Annie*. The *Ella* and *Cideline* withdrew from the race soon after passing Fort Johnson, and the *Madcap* lost her mast just before reaching Sumter. The first-class batteau race resulted as follows: *Arctic* first, *Fox* second. The *Marion* and *Arrows* were compelled to drop out of the race owing to the heavy seas, and the *Othello* was capsized near Fort Ripley. The second-class batteaux came in as follows: *Petrel* first, *Glide* second, *Dream* third. Thus ended one of the most exciting regattas that Charleston has ever had.

YENOTS.

WISCONSIN YACHTING.—Madison, June 3.—Several regattas will be held, the first of which will be held this month, when the usual prizes will be offered and the yacht club rules prevail. In July the annual regatta will be held. Our clubs are now in active training for the purpose of taking part in the Mississippi Valley Amateur Rowing Association, to be held at Peoria, Illinois, June 19. Lake Mendota is fairly swarming with water craft from the unpretending row-boat to the magnificent steam yacht *Mendota*, which, by the way, is one of the finest boats in Western waters. She is owned by Captain Freeman. The captain's boats for speed and safety cannot be surpassed. The latest improvement at his boat-house has been the addition of a telegraphic machine by which dispatches may be sent therefrom to all parts of the country.

ROVER.

VICTORIA-FIDGET MATCH.—These two sloops, belonging to the Central Hudson River Yacht Club, had been matched for some time by their owners and finally met on June 6 to sail over the regular club course twice around. The owners were to sail the yachts themselves and were allowed a crew of six besides sailing master. No shifting of ballast was allowed. This latter rule was perhaps the most satisfactory feature of the programme, for as long as sand bags can be piled up to windward *ad libitum*, the yachts become more sailing machines, and whatever the results, they are of little value in determining the relative speeds of competitors, but represent rather an excess of brute force, coupled generally with recklessness on the part of the crew. Matches sailed with shifting ballast may be very interesting when considered in the light of mere betting or gaming events, and serve the ends of excitement and physical exercise, but they cannot but be considered as devoid of all elements of true seamanship and competition in scientific design. The race at New Hamburg is a praiseworthy example of deference to the nobler purposes of yachting when carried out in a true sporting spirit, and we do not think that any one will consider the race between the crack sloops *Fidget* and *Victoria* any the less impressive because ballast was kept fast and models and seamanship had a fair show. *Fidget* was sailed by Commodore Irving Grinnel, and *Victoria* by Mr. Roosevelt, Mr. Van Wick acting as judge and Mr. A. Meyers as umpire. Both yachts stood to the westward, then, tacking, watched for a favorable slant and crossed the line as follows: *Fidget*, 10h. 42m.; *Victoria*, 10h. 44m. 2s. *Victoria* held her wind well, and running up on *Fidget's* quarter, gave her a blanketing and left her astern. The wind was blowing fresh, and when above Marlborough the leading sloop was knocked down and had to be closely watched and luffed through. *Victoria* rounded the buoy with a good lead. It was now a leading wind for her, and canvas was goose-winged and topsail set. When *Fidget* got round the upper buoy and her skipper gave her sheet and putting up his helm, her large area of canvas began to tell, and she lessened the gap, *Victoria* trimming aft for the second thrash two minutes ahead of her rival. On the beat to the windward the boats broke tacks and parted company. Off Jowa Creek *Fidget* found the wind more from the westward, enabling her to fetch the Rensselaer buoy in a single tack, while *Victoria*, off to leeward, had almost a dead heat of it. If this was not a streak of luck on the part of the Commodore it was certainly a fine piece of tooling, for he crossed the bows of *Victoria* to windward and bore up, rounding the upper buoy with a good lead that sent joy to the hearts of *Fidget's* New Hamburg backers. This lead she maintained round the Low Point buoy, and *Victoria's* running out of the wind for a while served to increase the gap between them. No sooner had the latter got down to her work again on the wind, than she again rapidly caught up to New Hamburg's pet; but the distance

remaining was short, and *Fidget* passed the line a leader by one minute and ten seconds. Time allowance, 1 1/2 m. to the foot, however, gave the challenge pennant to Mr. Roosevelt, *Victoria's* length being 27 ft. 6 in. against *Fidget's* 28 ft.

BROOKLYN UNION REGATTA.—The entrance promises to be large for this event. It brings together many of the best craft of different clubs, and affords an opportunity not often met with of testing the qualities of the leading yachts in metropolitan and foreign waters. The race has been fixed for the 18th inst., and it is to be hoped that fickle June may send us a snorter, for nothing is more unsatisfactory than a cup won by flukes and slants. Probably more large schooners will show up with colors a-peak than for any other match of the season, and that is saying a good deal, in view of the many still lying in ordinary and for sale or "to be let furnished." *Dreadnaught*, *Estelle*, *Comet*, *Mytic*, *Tidal Wave*, *Clytie* and *Atalanta* form a list containing half a dozen of the fastest schooners in America, and if *Intrepid* and the Scotch *Oneagh* would join, the race would be second to none witnessed in New York waters for some years past. Though we have no knowledge of Mr. Francis Cope's intentions, we should very much like to see *Oneagh* compare notes with the American fleet, for Hansen, of Cowes, has certainly turned out as handsome a clipper in *Oneagh* as is to be met with in British waters. Though she may not be a racing craft in British eyes, she would belie her appearance if she could not show her wake to *Cambria* or *Livonia*. To be sure, she would have to do so by a knot or two to stand any chance with such flyers as *Atalanta*, *Tidal* or *Clytie*, and would find it a tough job to hold her own with the New York schooners, either on the wind or with her boom over the quarter; but, at all events, should she not be actually raced, we hope to see her under weigh and may then be able to estimate her calibre to some purpose. Not the least interesting chapter of the forthcoming match will be the special class devoted to greased lightning, in which Mr. Meigs' favorite double-barrel invention will meet to the number of three and show the sand bug heavers what a real racing machine ought to be.

SOUTH BOSTON YACHT CLUB REGATTA.—The opening regatta of the South Boston Yacht Club took place June 2. Twenty yachts were started. *Lilly* from Lynn took the first prize in the first class centre-boards, leading all the way and winning easily. *Lottie* failed to round a buoy, and being disqualified the first prize for keel sloops went to *Gael*. *Actress*, in the third class, lost the prize for the same reason *Lottie* did, the course being a new one and apparently not well understood. In the second class *Anonyma* capsized and spilled her crew, and *Pony* and *Ripple* protested, claiming a foul each, while the regatta committee will have to unravel. The large number of keels entered for the race is noteworthy. Prizes were awarded to *Lillie* and *Gael*, and also to *Mystic* and *Breeze*. In the second class, to *Sunbeam* and *Fagin*, second prizes being protested as above, while in the third class first prizes were awarded to *Druid* and *Chiquita*, and a second one to *Clara B*.

THE YACHT AGENCY.—Mr. Thos. Manning has removed his agency for the purchase and sale of yachts to No. 53 Beaver street. He has on his lists a large number of desirable vessels for sale at figures much below their value. It will be remembered that he recently effected the sale of *Mohawk* and *Fleur-de-Lis*, the latter to Mr. Bouccault, who has deferred building a steamer until next year. Mr. Manning, a short time ago, offered \$2,500 for the sloop *Egeria*, which could not bring over \$1,000 at a recent auction. *Egeria* happens to be just one of those craft which are in every way desirable and of ready sale. The failure to get a respectable bid for her rests with that short-sighted policy which does not avail itself of legitimate advertising mediums, but trusts to such cheap means as handbills, etc., for making known a sale. Result, no bidders and no price. Had the proposed sale of *Egeria*, *Tarolinta* and *Josephine* been thoroughly ventilated through the columns of the FOREST AND STREAM, genuine buyers would have appeared in place of an idle crowd of the curious, of which the proverbial "small boy" formed a large contingent.

AUTOMATIC RUDERS FOR MODEL YACHTS.—When sailing on a wind, a small rudder with very little lead on it will suffice to keep a model yacht full, and she will gain yards to windward of the craft that is depending on the preponderance of head-sail to keep her going. The rudder for reaching must be a size larger, and proportionately heavier than that for turning to windward, while the quartering and running rudders will partake somewhat of the barn-door character. A model two feet long requires from half an ounce to one ounce of lead for a turning rudder, two ounces to three ounces for reaching, three ounces to four ounces for quartering, and five ounces to six ounces for running. I generally use six rudders, as I find that great nicety in trim can be gained by so doing. Of course much depends upon the shape and rig of the model. A very broad model will require about double the weight of rudder that a narrow model will. With respect to the main-sheet fast to the tiller, I have tried that also, and although it answered after a fashion, yet it is not so sure a method as the weighted rudder.—L. E. Biddell in London Field.

—Mr. N. H. Bishop has been elected honorary member of the New York Canoe Club, a compliment he well deserves. His book, "Voyage of the Paper Canoe," is about to be published by David Douglas, of Edinburgh, Scotland.

A NEW MODEL.—Editor *Forest and Stream*: I send you a design for a hunting and fishing boat, which also can be used for canoeing, which I think possesses some advantages over its cousins german. I also send you the photograph of the boat I designed and built in 1874 for hunting purposes. The merits of this mode of construction are that the boat cannot sink, even if full of water, being kept afloat by the air-tight tin tanks or boxes, which are of three hundred and sixty pounds floating capacity. The centre of gravity being in the longitudinal middle line, at bottom of boat, it is next to impossible to upset it. The skeg and centre-board (which the balance of the type do not possess) make it a splendid sailer, and for paddling or rowing in a heavy wind is admirable. The centre-board is hinged at the heel and closes up when you run the boat on the beach or run over a log. When the boat is run ashore you step out on the deck, the same as on a gang plank. There are hooks, three on each side, on which guns or rods are hung, insuring them and yourself from accident, and from rain as they are under deck. The deck plan is admirably adapted for Lyman's bow-fencing rowing gear. The opening in the deck five feet six inches long by fourteen inches wide gives great comfort of position, and the space under decks from air tank to air tank is eight feet six inches by twenty-six inches nearly for the length. The "captain and crew" can use the moveable bench for seat or take his

case on an air cushion on the floor board, which is the best when using the Lyman oars. In sailing I use a rudder. The boat is built with bulkheads, which gives it the shape desired, the sides being screwed on first and shaped or trimmed down after the bottom boards and deck are on. The bulkheads are fastened to a board ten inches wide, solidly, and placed on another board, or work bench, to prevent bending. The end pieces or blocks remain in the boat, and are also fastened to the board from the under side, and only loosened from the board when the sidings and bottom are fitted on the bulkheads, the decking being the last work done. When the boat is turned up and the bulkheads taken out, battens the two joints at bottom on the inside, 1 1/2 in. wide, the length of the joints, white leaded, 3/4 of an inch, pressed tight to the boards, and then closely tacked along the edges. In caulking be careful not to force the battens out. Put in the bows, fasten them from the outside, then put in the knees, not forgetting the gun racks. The skeg is fastened from the inside with suitable screws and a walnut rudder post screwed to the end block of the boat and skeag. The rail is placed on each side of the boat, covering the joint made by the deck and siding, and should be 1 1/2 in. over the deck to prevent anything from slipping off into the water. The combing around deck 1 1/2 in. above deck and 1/2 in. thick. The centre-board should swing quite free, as it is intended that it should take care of itself. The draft will be from 4 to 5 inches; load, 800 lbs.; weight of boat, 40 to 50 lbs., and I think an expert could make it far less; cost of boat should not be over \$35. The model is fast, and 70 ft. of sail can be used with safety.

PERDRIX.

[The above described model partakes in general of some of the features of the Barnegat Sneak Boat, though much better fitted for sailing and general purposes. It can be recommended for sailing, fishing and hunting on inland waters, though for rough water we should judge it not as well adapted as the shadow type owing to its flat floor forward and beamy nose. Working drawings and photograph can be seen at our office, and we will take pleasure in submitting them for inspection.—Ed.]

EASTERN NEWS.—Boston, June 8.—*Halycon*, Mr. Brooks, has appeared off Rowe's wharf, and is in commission. *Undine*, Captain Bryant, sailed for New York to go into races there. *Alice*, *Narragansett*, *Thistle*, *Nautibus*, sloops, at anchor on the flats. *Pleur-de-Lis*, sold to Bouccault, is to lie off Cohasset this summer. *City Point* is alive with small craft, while the *Wivern*, *Julia*, *Idler*, Mr. Dexter's new sloop, bought of Salem parties, *Enterprise*, *Magic* and *Viking* are among the larger ones. The Nassett club book for 1878 is out and shows a good list of boats and members. The *Intrepid* was in the harbor last Sunday, but went out again.

CRUISER.

JERSEY CITY YACHT CLUB.—This club held its twentieth annual regatta, Tuesday, June 11. In the first class *Genia* was declared winner in 5h. 33m. 47s. In the second class *Lurline* finished first boat; in the third class, *Knights Templar*; in the fourth class, *Willie* won in 5h. 8m. 9s.; in the fifth *Annie Forsythe* was victorious.

ADDIE TAYLOR AND H. H. HOLMES MATCH.—The match between these two famous open boats was sailed June 11, hut on account of light and variable winds was not brought to a satisfactory conclusion, and will soon be sailed over again.

YACHTING DRIFT.

That is right, Commodore; go for "Along the Wharves." A man that does not know a tigger from a yaal had better pack his duds and ship. Mr. Dion Bouccault paid \$7,500 for the *Pleur de Lis*; she was built in 1865 by Van Dusen, and altered in 1872 by Carl of City Island. The attempt at auctioning off *Tarolinta*, *Josephine* and *Egeria* was a failure, owing to the bad management of the sale. A Clatham-street Jew knows enough to advertise his wares. *Mohawk's* name will be changed to *Eugre*; can't find the thing in Webster; somebody says it means one tide whirling above another, and that the name is peculiarly appropriate. *Nettle* has been off soundings on a four days' cruise; all hands satisfied with her. Mr. Astor has gone to Europe, and *Ambassadors* will not race. *Madeleine* will be out shortly. Every yachtsman should have a copy of some coast pilot. Capt. Pratt's new book is the best. Marblehead will hold a regatta June 17. All the yachts of the vicinity will participate. Several yachts are building in San Francisco; the sport is looking up in the stepping-off State. Pacific yachtsmen are anxious to know what *Ariel* can do. Canoeing has been actively undertaken on the Sacramento, Cal. Schooner *Rambler* is in commission; one of the late birds. *Idler* goes to Stapleton to lay up. *Blanche*, who will race in the Corinthian, June 15, is a Boston sloop. The catamaran *Amargyll* has been sold for \$300 to a Chicago gentleman, who will ship her to that city in the fall, after giving *Tarantella*, *Gilpin* and others all they can do to beat her. Smedley is building a sloop for Mr. J. G. Fowler, B. Y. C., 37 ft. long, 12 ft. beam and 4 ft. deep, with 10 ft. board; mast, 36 ft. 6 in. long; boom, 31 ft.; gaff, 16 ft.; bowsprit on board, 17 ft.

OAR AND PADDLE.

THE ENGLISH CHAMPIONSHIP.—In the single scull race from Putney to Mortlake, Higgins, of the Thames, beat Elliott, of the Tyne, winning \$2,000 and retaining the championship of England. Time, 24m. 38s.; slower than he had made on previous occasions.

THE AMERICAN FOUR.—The Shoc-wae-cac-mettes, of Monroe, Mich., the champion four of Watkins, left for England in the Anchor Line steamer *Alsatia*, for London. They take out their old paper shell with stationary seats, and their enterprise and modesty in carrying out the leading feature of the Watkins races deserves commendation. They lack all training and style, and though they will be laughed at abroad, they have our best wishes, and that they may make a tolerably creditable finish, at least, we hope. Mr. Geo. W. Lee, of the Tritons, who won in the single scull race, accompanies them with his paper boat, 28 ft. by 12 in. Mr. F. W. Jackson, Secretary of the Watkins Association, goes out in the same steamer, and will have general supervision of the American oarsmen.

VIRGINIA BOATING.—The Kanawha Rowing Club had their first regular race May 28, under the auspices of Mrs. M. L. Branch, at Richmond, Va. Mr. W. H. Habliston, in his *Coquette*, defeated *Sylph* and *Oriole*. The course was on the canal from the Pump House to Eighth street.

SOUTH CAROLINA ROWING.—Charleston, S. C.—Our regatta commenced on the morning of the 30th. There was scarcely a ripple on our beautiful bay. At half-past seven the whistle of the Regatta Association steamer gave warning to the boat-

men that it was time for them to take their positions. The first and most important race of the day was the race for four-oared shells. Distance, two miles; prize, a silver goblet, and a gold medal for each member of the winning crew. There were only two entries for this race. The Palmetto B. C. entered the four-oared shell *Annie Owens*. Crew: Bow, H. B. Bull, 145 lbs.; No. 3, James P. DeSaussure, 145 lbs.; No. 2, Wm. M. S. Cesene, 104 lbs.; stroke, H. Nott Parker, 146 lbs. The Electric Independent B. C. entered the four-oared shell *Nora*. Crew: Bow, J. T. Flynn, 130 lbs.; No. 3, M. J. Mahony, 139 lbs.; No. 2, H. G. Leach, 142 lbs.; stroke, T. L. Alston, 134 lbs. Mr. Henry Cheves, who was to have pulled bow oar in the Palmetto crew, unfortunately strained himself the day previous to the race. Mr. H. B. Bull had to take Mr. Cheves' place, and Mr. J. P. DeSaussure took Mr. Bull's position, No. 3. The Palmettos seemed to be the favorites. Most of the steamers and sailing craft anchored near the terminal yacht, on which was stationed Mr. J. L. Walker, terminal judge. The starting judge, Mr. J. D. Easterlin, the umpire, Mr. E. L. Wells, and E. De B. Hunter were on board the steamer *Moccasin*, which was at the head of the course preparing the crews for the start. A few minutes after eight o'clock the crews took their positions, the *Nora* on the St. Andrews side of the river and the *Annie Owens* on the city side. The two boats started off almost at the same instant. A short distance from the starting point the Palmettos were pulling about 36 to 38 and the Electrics about 38. Both boats kept well together for the first half mile, when the Palmettos forged about a length ahead, which they kept until they had nearly reached the first mile flag. Here the Electrics pulled up to them again, and from this point to the terminal flag the race was one of the closest and most exciting that has ever been seen on our harbor. From the battery to the terminal flag the race belonged to either crew. Both now spurred, and when the two boats rushed across the line apparently exactly even, no one knew to whom victory belonged. Upon going up to the judges' yacht, however, Mr. Walker announced the actual result; the Electrics had won the race by three-quarters of a length and by one second. Electrics, 13m. 4s.; Palmettos, 13m. 1 1/2 s. Distance, two miles. The second race was for four-oared gigs, forty-two feet and under. Crews under twenty-one years of age. Prize, silver goblet. Distance, one and one half mile. The entries were as follows: Electric Independent B. C. entered gig *Ella Lee*. Crew: Bow, John B. Kenny, 121 lbs.; No. 3, Geo. Wharton, 145 lbs.; No. 2, Charles Plane, 134 lbs.; stroke, D. McDougal, Palmetto B. C. entered gig *Azile*. Crew: Bow, K. S. Tupper, 120 lbs.; No. 3, H. Dotterer, 135 lbs.; No. 2, P. L. Bissell, 127 lbs.; stroke, J. D. Kirkpatrick, Jr., 128 lbs. Same club entered gig *Minnie*. Crew: Bow, C. S. Matheson; No. 3, J. Drake; No. 2, Felix Holmes; stroke, W. B. Means, Jr. The start was a capital one, and the boats kept well together for the first half mile.

The superior rowing of the Electrics began to tell, and they forged slowly but surely ahead, and crossed the line about four lengths ahead of the *Azile*. *Ella Lee*, 9m. 7s.; *Azile*, 9m. 13s.; *Minnie*, distanced. Distance, 1 1/2 mile.

The third race of the day was for Whitehall boats, 21 ft. and under. Distance, one mile; prize, silver cup. The entries were as follows:

Independent B. C. entered the *Wave*. Crew: Stroke, B. S. Inglesby; No. 3, A. S. Easterly; No. 2, W. H. Cogswell; bow, E. F. West; coxswain, A. J. Salinas.

Same club entered *Water Lilly*. Crew: Stroke, W. B. Holmes; No. 2, J. H. Beebe; No. 3, J. B. Walpole; bow, G. Inglesby; coxswain, E. R. Venning.

Palmetto B. C. entered *Minnie*. Crew: Bow, K. S. Tupper; No. 2, P. L. Bissell; No. 3, H. Dotterer; stroke, J. D. Kirkpatrick, Jr.; coxswain, J. B. Bissell, Jr. The *Water Lilly* only entered so as to make up the race, and after rowing but a short distance dropped out and left the race to the *Wave* and *Minnie*. The *Wave* took the lead from the start. The crew of the *Minnie*, however, seemed to improve with every stroke, and pulled right away from the *Wave*, beating her at least six lengths.

The fourth race, for boys under seventeen years of age, distance, half mile, prize silver cup, was the last for the day.

The Independent B. C. entered *Wave*. Same crew as rowed in the third race.

Palmetto B. C. entered *The Meteor*. Crew: Bow, F. K. Hunter; No. 2, F. R. Frost; No. 3, J. C. Simmonds; stroke, J. D. Kirkpatrick, Jr.; coxswain, J. P. DeSaussure.

Same club entered *Minnie*. Crew: R. N. G. Smith; No. 2, W. H. Parker, Jr.; No. 3, Kirby S. Tupper; stroke, L. F. Robertson, Jr.; coxswain, J. B. Bissell, Jr. This race was a very close and exciting one, as the boats all started together and kept almost even the entire course to within a few yards of the terminal flag, when the *Minnie* and *Meteor* shot ahead, carrying the color of the Palmettos first across the line for the second time that day.

Second day.—On the morning of the 31st there was quite a fresh breeze blowing, which made the water lumpy. The first race for the day was the English Challenge Cup Race, open only to Charleston crews, four-oared shells; distance, two miles. The prize—a very handsome silver cup—was presented to the Regatta Association in 1875 by Messrs. Hume and Hill, on the conditions that any club winning it three successive years should be entitled to it. It was won by the Palmettos the first year and by the Carolina Independents the second year. The same crews and boats that pulled in the four-oared shell race the day previous were entered for the challenge cup. A capital start was obtained, the Electrics taking a slight lead, with a 38 stroke, the Palmettos following with a clean, steady stroke of about 36. A short distance from the mile post the Electrics, who had been leading, did some bad steering, and their stroke became ragged and uneven. From this point the Palmettos began to gain on them, and very soon were running bow and bow. The steady clean stroke of the Palmettos began to send them ahead gradually. The Electrics' rowing became uneven. It was soon very clear that the race belonged to the Palmettos; their steady, powerful pulling and splendid spurt for the last hundred yards sent them past the flag four lengths ahead. Summary: Palmettos, 12m. 20s.; Electrics, 12m. 28s.; distance, two miles.

The second rowing race for the day, and last for the regatta, came off next. Single sculls, distance, half mile. There were five entries for this race, as follows: F. F. Thurston, K. S. Tupper, J. B. Bennett, I. B. Drake, W. W. Shackelford, Jr. The start was a good one, but Thurston dropped out before they had pulled half the course, as his shell was filling with water, and a short distance further Bennett dropped out, leaving the race to Tupper, Drake and Shackelford, who pulled well together until within about a hundred yards of the terminal flag, when Drake went ahead with a splendid stroke, and crossed the line four lengths ahead of Tupper and about six lengths ahead of Shackelford.

YENOTS.

Curtis,.....0 0 0 0 1-1 Walker.....1 1 1 1 1-5

LIEUTENANT WHEELER'S REPORT.—We have received the Annual Report Upon the Geographical Surveys West of the One hundredth Meridian," by George M. Wheeler, First Lieutenant of Engineers, U. S. A. This report is Appendix NN of the "Annual Report of the Chief of Engineers for 1874," and embraces the report of work done in California, Oregon, Nevada, Texas, Arizona, Colorado, Idaho, Montana, New Mexico, Utah and Wyoming. The pages are filled with information of great value, and in their exhibit of the work accomplished under the able direction of Lieut. Wheeler, are

Scientific men, naturalists, future immigrants, prospective miners and other classes will find much here that is of new interest and really invaluable.

SHOOTING STARS as observed from the "Sixth Column" of the *Times*. By W. L. Alden. New York: G. P. Putnam's Sons, 1878. Paper 50 cents; cloth \$1.00.

He is a public benefactor who makes two grins grow where there was only one grin before. He is more of a benefactor who makes a thousand grins appear where no grins were ever known before. Accepting these premises we may accord to Mr. W. L. Alden, the well known "Fanny man of the New York Times," the honor which of right attaches to a public missionary of mirth and health. We have known physicians to prescribe "Sixth Column" doses to their patients with most happy results. Fat Men's Associations are constantly passing resolutions of regard for the man whose effusions have made them laugh and grow fat in spite of themselves. We have breakfasted in most exemplary family circles where that funny column was read at the breakfast table, the younger members snickering all through the family prayers which followed and getting soundly trounced therefor. We have seen impressive young ladies on the street cars go into hysterics over those *Times* jokes. We have been kept awake for the best part of a whole night in a sleeping car by a man in the berth next to us retelling those editorials to his wife, and hawhawing over what he thought was "so funny." What the effect of a whole book of these things will be we cannot tell. If the books are sold promiscuously on the horse cars we shall look for as great a panic among the passengers as the elevated railroad creates among the horses.

REPORT UPON FORESTRY.—We are indebted to the courtesy of Hon. Wm. G. De Loe, Commissioner of Agriculture, for the Report of Dr. Franklin B. Hough upon Forestry, and we shall treat it somewhat at length at an early day.

BULLETIN OF THE ESSEX INSTITUTE.—Nos. 1, 2 and 3, of Vol. X of this publication have just reached us, and we have read with great interest Prof. J. A. Allen's valuable paper on the "Birds of Massachusetts," Massachusetts, and especially the Eastern portion of the State, has so many skillful and enthusiastic collectors that its avifauna has been very thoroughly worked up, and the result, as given in the present list, is 817 species of birds actually taken in the State, while there are perhaps twenty-four others which are known to occur so near its borders that there can be little doubt but that they will ultimately be added to the list as it stands at present. In addition to the "List" and the "Annotations" thereto, the author gives a very valuable history of what has hitherto been written on the subject, and also pays a high compliment to Messrs. Brewster, Purdie, Deane and Maynard, a quartet to whom all American ornithologists owe a debt of gratitude for the earnestness with which they have labored in behalf of the science in the East. Another very interesting paper in the *Bulletin* is Mr. Leonard Waldo's lecture, entitled, "Telling the Time."

THE NATURALIST.—In the June *Naturalist* Mr. Charles Sedgwick Minot gives us "A Lesson in Comparative Histology" which, besides being in itself very interesting, abounds in valuable information and is well worth the careful perusal of all young students. "Rambles Round San Francisco," by W. A. Lockington, is really a delightful sketch. It is so seldom that we find any writer who is able to see and describe the common things in Nature, those which we see so often that we come finally to pass them by without notice—that when we do meet with one so observant we are impelled to call special attention to his writings. It is this same power of observation and detailed description that has given some of our most charming authors their reputation and we shall hope in the future to hear more of Mr. Lockington. Mrs. V. O. King contributes to the present number an article on "Phosphorescent Insects—Their Metamorphoses," and Mr. Lester F. Ward one on the "Genealogy of Plants," both of which are valuable; and Dr. A. S. Packard, Jr., the editor of the *Naturalist*, tells us what is now known of "The Mode of Extrication of Silkworm Moths from their Cocoons," a subject of high interest to all entomologists. The Departments of Recent Literature and General Notes are no less interesting than usual, and contain many items of value.

BOOKS RECEIVED.

AUNT PATTY'S SORAP BAG, by Caroline Lee Hentz. Philadelphia: T. B. Peterson & Bro. Price \$1.

NORA RAY, THE CHILD MEDIUM.—A spiritualistic story. Gloucester, Mass.: Proctor Brothers. Price 50 cents.

Clubs ordering several copies of the Club List will be allowed 30 per cent. discount.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

E. E. L., Philadelphia.—The black bass season in Pennsylvania opens July 1.

R., Wethersfield, Conn.—You can collect nothing but the fee, if you paid that.

SCHOTZGUTH, Painesville, O.—Bogardus and his son shoot with both eyes open.

J. C. M., Hastings, Minn.—The puppies are from Sensation and party is reliable.

J. Y. Y.—There is shell on which we deem safe to put the cap after having loaded it.

OSPOHN, New York City.—In pigeon shooting it is allowable to use both barrels on one bird.

E. A. A.—Having mislaid our copy of rules must defer answering your query until next week.

H. C. P., Brooklyn.—You can procure the Babbitt patent bronze blocks of A. B. Babbitt, Tiverton, R. I.

WARR, Boston.—You can buy a coach horn at the store of any dealer in martial instruments we should think.

C. N. Q., Collingwood, O.—You will find about Manistee, Mich., excellent grayling fishing and some wild fowl shooting.

H. H. T., Leland, Ill.—The rifle and pistol mentioned are both good. You will find quail and pinated grouse about Storm Lake, Iowa.

J. R., New York.—We have not yet received the new game laws of Maryland. Under the old law the season for woodcock in that State opened Oct. 1.

C. O. F., Sullivan.—No game law as to frogs. They are good to eat from now right on until you can no longer get them. They are selling all the time in the market.

H. W. N., Lawville, N. Y.—Write to Mr. Frank Porter, Sec. Narragansett Gun Club, Newwot, R. I., for the Narragansett rules which

L. S., New Orleans, La.—Gas machines of the character you describe are obtainable, but the cost depends upon number of burners required.

R., New Brunswick, N. J.—What game is there around Shark River N. J. in July and August? Ans. Perhaps a few woodcock on the main land opposite the beach.

W. P. S., Cincinnati, O.—Two pounds of meat to one of meat (beef's heart) is about right for your dogs, unless they are being worked hard; if the latter then increase quantity of meat.

T.—What is the number of grains of strychnine to kill a large dog? Ans. Canines are very susceptible to this drug, but if necessary it is well to give about two grains and make certain of the result.

J. W. K., Elkhart, Ind.—The engineer of a yacht must procure a United States license from the inspectors of your district, or he will be liable to arrest. The pilot is not required to take out any license, however.

MONROE INQUIRER.—Your description answers that of a remarkably good pointer, and the picture, so far as it can be made out, fortifies that opinion. Of course it is useless to speculate on the strain. No evidence of blood.

F. C. H., Elizabethtown, Pa.—You can procure a county and township map of Pennsylvania at the Coltons, 172 William st., New York. For general hunting and trapping in Pa. go to any of the mountain forest tracts.

H., Worcester, Mass.—Setter dog; no appetite, nose hot and dry, slight discharge from eyes, breathing short, bowels constive, coat dry and wiry. Ans. Your dog has distemper and should be treated systematically for that disease.

A. J. B., Yonkers.—Dog has fits. Good appetite, fits slight, about eight, two or three days apart. Ans. The fits are probably due to some intestinal irritation. Give him a large teaspoonful of castor oil once a day for about four days, and note effects.

A. F. V., New London.—Dog's eyes running; he coughs and sneezes, danks drawn in, eats very little, breathing regular and seems lively. Ans. Give him two grains of quinine three times a day and be particular about his food and sleeping quarters.

Geo. H., Jacksonville, Ill.—Where is the best place to purchase archery goods? Ans. Of Fish & Simpson, 132 Nassau st., or Hetherington & Co., 117 Fulton st., New York. Would refer you to parties in Chicago, but none of them advertise with us.

E. B. G., Elmira, N. Y.—W. C. Coop founded the New York Aquarium. To measure the circumference of birds' eggs use a pair of calipers made for the purpose and for sale by C. J. Maynard, Ipswich Mass., who deals in all taxidermist's materials.

POETRO SOUL, Jersey City.—I venture to inclose this poem for publication. If you doubt its genuineness I can call and vouch for the same. Ans. The poem received. We do not doubt its authenticity. Call at your peril. We are ready. "Forwarned is forearmed."

J. L., Austin.—Would a 26 barrel 32 in. long cal. rifle be large enough for small game such as ducks, or geese, and could it be used for target shooting? What is the range of such a rifle? Ans. Would do admirably well; accurate for 100 yards for target shooting.

SURCOU BOY.—Which is the correct expression, "a three mile walk," or "a three miles walk?" Ans. The latter is grammatically correct; the former incorrect. The frequent use of "three mile walk," "hundred yard dash," etc., does not make them any the less ungrammatical.

F. J. F., Chicago.—The fish you speak of as now being taken at St. Joseph, Michigan, may be a Geneva elscu, which is found in quite a number of other places besides Geneva Lake. See "Sportsman's Gazetteer." Why don't you send a specimen to Prof. Jordan, at Indianapolis, Ind?

W. A. F., Baltimore.—Will you kindly give me the address of any one in this country who makes the Berthon Folding Boats mentioned on pages 635-6 of your "Sportsman's Gazetteer?" Ans. There are no agents in this country at present. Address Berthon Boat Company, limited, 30 Bedford Row, London, W. C.

C. F., Philadelphia.—About Renovo, Pa., is trout and other fishing. The forests abound in game. The insect powders mentioned in "Hall's Gazetteer" are not disagreeable to use. You will find good summer lodging at almost any of the farmhouses about Renovo, Youngstown, and neighboring villages.

C. M. S., Danborton, N. H.—1. Can you tell me through your next paper whether there is a daily or weekly paper published in St. Augustine, Florida? 2. Also whether the Shelton auxiliary rifle barrel would be useful for deer shooting in Florida? Ans. 1. A weekly only. The Press. 2. It would be found most useful and effective.

J. W. M., Rochester.—My spaniel is somewhat over six years old, abdomen swollen hard and distended. Wheezes somewhat; sometimes eats ground peas, shells and all. What shall I do for him? Ans. There is probably some bowel obstruction. Would advise soft nourishing food for a time, and now and again a dose of castor oil in warm milk.

ENQUIRER, N. Y.—You can find excellent pinated grouse shooting on the line of Chicago and Northwestern railroad. If you followed the "Editorial Rambles" published last fall and winter you should be posted from them. Trouting all along the Cedar and Grand Rapids road. The law for chickens is in Michigan and Iowa Sept. 1, and in Minnesota Aug. 14.

J. B., Boston.—You can hardly go amiss for game in any of the middle, or western counties of Texas. As to ten men making their living by hunting that depends upon the hunters and the market. You have violated our rules in not sending your name, or we should return you the dollar you inclose, as we make no charge for answering correspondents.

SUBSCRIBER, Menomonee, Wis.—Gordon setter dog about two years old. His eyelids, or eyes, have secreted for a year past a thick miter, creamy in appearance. He is healthy otherwise and eats well of food from the table—bread, milk, etc. Ans. Probably is overfed. Give a little sulphur and castor oil, and wash the eyes with weak alum water once a day.

SUBSCRIBER, New York.—What would five acres of ground and a small house for breeder cost in a country adapted to a kennel. What would be the running expenses? Ans. Such a place is often to be had for \$1,000 to \$1,500, and if the kennel is small running expenses will be about \$500 a year exclusive of cost of stock, which may be much or little according to choice.

W. W. D., Erie, Pa.—In a pigeon shoot with three prizes and five entries four men tie on three birds each, the other killing two. How should the money be divided? Ans. If it is close shooting the ties on three should shoot off for first; second goes to the man who killed two; third may be divided up as the shooters shall agree, or kept for another shoot by same parties.

J. F., Wilkes Barre, Pa.—Setter dog two years old has running at the eyes; coat rough and bad color; nose moist of the time cold and moist; appetite good. Fed on scraps from the table, plenty of exercise and

lively as usual until last few days. Gave him sassafras a few weeks ago, when he passed a few worms. Ans. Give him a little sulphur and castor oil twice a week.

J. W. H., New Brunswick.—Have some setter pups twelve weeks old. They pass worms one and a half to seven inches long. Have given them sassafras. Have put sulphur in their water. Will you kindly prescribe? Ans. Leave the sulphur in the water and give a little in warm milk once a day for three days; then a couple of doses of castor oil, say two teaspoonfuls.

W. B. MoA., Baltimore.—Do you think I will be in time for some good salmon fishing by leaving here on the 30th of June for New Brunswick? Ans. Many gentlemen now about starting for Canadian rivers. You may get good salmon fishing at any time during the season until Sept. 15, provided there is a rise in the rivers. The 30th of June will be in ample season, although there has been an early run of fish.

C. K. S., Nunda, N. Y.—I have a pointer fourteen months old. About three months ago a lump about the size of a BB shot formed inside one of his ears and it is now as large round as a silver dime. It is hard, of a light red color and particularly transparent. Ans. Any surgeon in your neighborhood will be able to give you correct advice about this; probably it should be cut through with a knife and then destroyed by caustic.

S. L., Urbana, Ill.—Setter dog six years old had tumor come on his throat last summer the size of two fists. Taken out by surgeon. Last February he had a cough which continued. About March 15 noticed enlargement of abdomen which has increased. Slight exercise causes wheezing and coughing. Does not seem to suffer much pain; appetite fair. Ans. He is probably developing tumor in abdomen. Let the surgeon examine him again.

H. S., Erie, Pa.—We want to find out what the Brayton motor is our selves; but some inventors and manufacturers understand their own interests so little that they remain as dumb as oysters, when a little publicity of their inventions might fill their purses to repletion. The Brayton motor, if placed before the public, would be in demand for every screw yacht in the country, but in spite of that, letters and queries failed to elicit anything concerning it. Can any of our readers enlighten us?

D. P., Brookline, Mass.—Setter dog troubled with some disease of ears; shakes his head continually and suffers great pain. How is his sleep as if from pain; otherwise very active and well. In the field he often rises on his hind legs and shakes his head violently. Ans. The dog has cancer of ear. Keep them clean with white castile soap suds once a day and then pour in a little dilute lead water, holding it there for a minute. Use some contrivance to keep the ears from being shaken.

F. C. M., Elizabethtown.—Will you be kind enough to tell me what you consider the best work on dog breaking? I have a Gordon pup three months old. Is he old enough to commence out? In next issue will you please give Sauch's and Lady May's pedigree? Ans. Would advise you to buy the "Sportsman's Gazetteer" in preference to other works. It is very simple to understand, concise and comprehensive. A dog is never too young to teach. If you begin early to teach you will have little "breaking" to do. For pedigrees address Arnold Burges, Hillsdale, Michigan.

W. A. Mc., Milwaukee.—The shell you send us belongs to the *Scalaris*, though there are a great many species. They are found mostly in tropical seas, though some are met with in Greenland, Norway, Britain and also in the West Indies, China, Australia and the west coast of America. The shell you send us we do not think is a *Scalaris pyretosa*. We may take some time before we can positively classify it. Will you kindly write us exactly how you obtained it? If we remember rightly it was from the stomach of a fish. As to the milberry wood it has for bow making the advantage of not being affected by moisture. Hickory is good for strength when lateral strain is wanted, its long fibres allowing great tension; but it does not recover.

G. W. K., New York.—Would trout thrive in well water? I jump from a well on my premises in quantities averaging between one and two hundred gallons per minute constantly into a tank on my roof, say two feet deep. The water is the same temperature all the year (32 degrees). It comes from a strata of gravel about 30 feet below the surface and is inexhaustible. If the experiment is feasible should they be fed, and if so with what, flesh or vegetables, and what particular trout should I get? Ans. Your trout will not thrive in well water, which does not contain food enough. Should you care to experiment you must put a lot of aquatic plants into your pond, or inclosure, and feed the trout with bread crumbs, maggots, chopped cooked liver, curds, small minnows, etc., etc.

F. W. B., Boston.—Foxhound 12 months; food, meat, bread and milk. Eyes dull, half closed and discharges a good deal from the corners; tongue and lips very red. He is drawn in at the flanks a good deal and has lost flesh; breathing does not seem labored; bowels are bound up; secretion of the kidneys is not much colored; appetite very changeable; cares most for milk. He sleeps in the house nights. During the day he sleeps out of doors under the trees. He lies with his head close to the ground. He will lie in the sun for five or ten minutes, then go lie in the shade. Have been giving him one grain of calomel in his milk for the last three days. Between his hind legs the leg is very red and the skin is cracked open in a good many places. Ans. You should have followed the calomel with a couple of small doses of castor oil; do so now and stop feeding meat. It is probable the dog is having distemper.

T. C. H.—1. Which is the most direct way and what is the distance between Troy and Lake George? 2. What game is in season along the latter part of August? 3. What is the fare by rail from Troy to Lake George? 4. For how much can a boat be hired, and where is the best place to hire one at Lake George? 5. Are there any restrictions on hunting or fishing parties in that locality, and if any what are they? 6. Which part of vicinity of the lake is the best for hunting? Ans. 1. Take Rensselaer and Saratoga railroad to Fort Edward and the lake, terminals at Caldwell. 2. No game in August except a few woodcock and pigeons. 3. Distance 70 miles or so; fare something over \$2. 4. Boats at Caldwell, Bolton, Fortenau, Milton Island and all the landings; charges \$2.50 per day with man, or \$3 per week without. 5. You can hunt as much as you like, but we advise you not to kill anything but the kinds of game we have mentioned. 6. You can get the most hunting where there is the least game.

W. V. J., New York.—We propose to take a trip from Waiton to the west branch of the Delaware to Trenton, N. J. Can you inform us if such a trip taken in a canoe or flat bottom boat would pay for the trouble? Would we get any black bass, or trout fishing on our way down? We have a flat bottomed boat built of zinc that we think of using. Would a Herald canoe be better? What could we buy one for, and is there any duty to be paid on one coming from Canada? Would like to buy a second-hand one if in good order. Ans. There ought to be good bass fishing now in the Delaware and both its branches, especially the west branch. A great many fish have been put in it. At the same time serious complaints have been made about the destruction, especially of yearlings, by small mesh-nets, notably at Port Jervis. Numerous trout streams en route. We prefer a Herald canoe to a skiff, or an English or Gordon, which are cheaper if not better. The latter are made at Peterboro and Escondido, Canada, cost \$25; freight and duty at least \$12 more. Ship via Port Hope, Rochester and N. Y. Central, R. R.]

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

Thursday, June 20.—Creedmoor: Twenty-third Regt. Mississippi Valley A. R. A., as above. Seawanhaka Club Regatta, at Columbia Grove. Haulan-Morris Match, Pittsburg, Pa.; Potomac Amateur Regatta.

What is a Dingledebooch? See Sportsman's Glossary.

SPORTSMEN'S PROTECTIVE GAME CLUBS.

FIVE years ago the number of societies organized for the avowed purpose of protecting game and fish could almost be counted on one's fingers. Now they number hundreds. A glance at "Hallock's American Club List" will convey an idea of how they have multiplied. Many societies are devoted to angling, and a very large number to practice at the pigeon or glass ball trap; but nearly all these are composed of intelligent sportsmen; and presumably they countenance the protection of game, although it is not so written in the letter of their constitutions. The club list referred to contains the names of six hundred organizations included under the titles of Angling, Gun and Sportsmen's Clubs, and exclusive of Rifle, Athletic, Kennel, Yachting, Boating, and other kindred clubs, which number fully thirteen hundred more. In the State of New York alone there are over one hundred, and fifty of these were represented at the recent convention at Buffalo. The number of new applications this year for affiliation with the State Association shows that interest in the general subject of sport and protection is increasing, and no doubt time will prove the benefits which must accrue from combinations of men determined to prevent the game of the country from being killed out of season and wasted.

It is not to be supposed that all the twenty-five thousand men which these six hundred clubs represent are earnest advocates or supporters of game laws, or vigilant in their espionage of transgressors; but there is a goodly leaven among the number which will permeate the whole mass by and by and extend its usefulness throughout the population of the States. There is but little encouragement just now to sustain or comply with game laws which for the most part, if nothing worse, are a batch of crudities; but when wisdom shall hereafter sway and shape legislation (as it certainly will do under the increasing knowledge disseminated by those who are sustaining the hands of Prof. Spencer F. Baird and his little junta of conservators), there will be felt a sympathetic throb from one end of the country to the other. Efforts will be made of practical worth. Constables and prosecuting attorneys will not mock the conscientious endeavors of game protective clubs by purchasing from poachers the things forbidden to be killed or eaten; and judges will not forestall the opening day of the season by stealing a march upon those more scrupulous.

With the growth of population and the parcelling and enclosing of lands, private rights and boundary lines will come to be respected by sportsmen; farmers will not be stimulated to trap and snare the game on their possessions in order to prevent it falling into the hands of men who despise their trespass notices. The small gains from the sale of a few bunches of birds will be considered no emolument whatever. Instead of field and cover being swept of every pin-feather, year after year, the growing wheat and leafy copse will become nurseries for small game; and complaisant sportsmen who shoot for pleasure will look upon the farmers as benefactors, to perpetuate their sport, and not as harpies, to snatch the dainties from their bag and larder. The sportsmen, in turn, no longer unbidden, will come in proper season—after the harvest—no more vexing the farmers with dreams and apprehensions of trampled fields and patches. Poachers will then be estimated as horse thieves are, and receive no better countenance or shrift. Mercenary hotel keepers, unable to purchase game, because the farmer, the sportsman and the appointed constable stand watch and ward together to protect it, will no longer pander to the depravity of snobs, who sicken their stomachs with unfit food in order to show how easily they can defy the laws with impunity.

But before we can realize any such millennium as this, the public mind has got to be thoroughly inoculated with a sense of its practicability and advantages; and the surest means to such an end will be found in the organization of game protective clubs all over the land. Instead of a few hundred as now, there will be a host like the Grand Army of the Republic, every man an enlisted defender of legitimate sport, a conservator of the species, a promoter of health and good living, and a "hale fellow well met" in the fullest significance of the term. In order to assist the good work, the editor, who has prepared the club list referred to, has included a suitable form of constitution and by-laws under which clubs may organize; so that the lack of information will no longer be an excuse or obstacle to any consummation of this sort. Every sportsman should possess a copy of the book.

—The following pertinent and conscientious communication was received after the foregoing paragraphs were printed. While our correspondent's arguments are eminently logical, we think the state of things complained of is accounted for in the second and fourth paragraphs above written:

EDITOR FOREST AND STREAM:

There is in this State an association of gentlemen, the full title of which is, "The New York State Association for the Protection of Fish and Game." As far as I can learn, its history and, theoretically, its aim and would-be attainments are somewhat as follows: The necessity of a thorough and efficient system of game protection was recognized. To secure necessary legislation and to properly enforce the laws when made, local clubs were organized in different parts of the State, whose members are pledged, individually, to observe the laws, and, unitedly, to enforce their observation upon others. The sphere of each separate club is limited, and probably no one club would be possessed of sufficient means to secure legislation; therefore, the clubs unite to form one central club, with a management and officers of its own, whose duty it is to look after those things which are beyond the reach of individual clubs, or which are for the general interest of all. Delegates—who form this main organization, and from whom its officers are

chosen—are sent yearly from each of the interested organizations to an appointed rendezvous, in order to unite more firmly the bonds which hold them together, to facilitate an exchange of views and ideas, to report past progress and devise means for future improvement, and, not least, in order to come boldly and prominently before the people to show their might and set such an example as will exert a powerful influence in turning public opinion in their favor. When they adjourn, their power for good is increased, and past imperfections brushed away. Thus, year by year, the difficulties in their path become less and less, until, at last, a proper protection of game becomes one of our most firmly rooted institutions.

Now, in theory, what better system of united action to secure the best laws, what more thorough network of surveillance could be devised for the protection and multiplication of our stock of game and fish? But, alas! This is theory only. True, we have many good local clubs, and we have one Central Association, which got a most excellent start by assuming the name in its title to its ideal work; but, like a ironing school-boy, it soon got tired of work, and went to playing, and, like the same school-boy when unrestrained, its play became largely interspersed with mischief.

It is fair to suppose, from the original aims of the Association, so incontrovertibly set forth in its title, that whatever it directly pertaining to the protection of fish or game should form a part of the proceedings at its yearly meetings, to add a zest and attraction to the whole thing, but in no wise to interfere with or overshadow its real work. To show that the reverse of this is the true state of affairs I need only refer to the proceedings of the Convention [in other States as well as this—Ed. F. & S.] for the last few years, which are on record in the files of the various sportsmen's papers, and which are easily accessible to any one who may doubt the truth of my statements. Every year there has been less and less interest shown in game protection, and more and more in trap shooting, till the climax was reached this year, when absolutely nothing was done toward the object for which the Association was formed. The President made a short speech, mainly for the purpose of saying that "the object of this Convention is the protection of fish and game, and it is not, as some people would suppose, merely a trap shoot." This, I may say, was the nearest approach to the ostensible purposes of the Convention; yet it lasted only five days, and slaughtered about 6,000 pigeons! Now, in the name of common sense, what does the President mean by telling us that the Convention was not a trap shoot, but for the protection of fish and game?

The general public must, by this time, be pretty well convinced that game protection consists in killing pigeons. If it is not so convinced, it is not the fault of the New York Association for the Protection of Fish and Game.

OSWINGO.

THE SCHUTZENFEST.—Our German and American readers will remember that on Monday, the 17th of June, the matches of the Sharpshooters' Union of the United States will commence. The programme extends over the whole week, and on Monday, June 24th, the gold medal offered by the FOREST AND STREAM AND ROD AND GUN to the best team will be shot for.

Montag, 24ten Juni.—Concurrenz Schiessen für die goldene FOREST AND STREAM AND ROD AND GUN medaille. Anfang 11 Uhr im Schützenpark. Beitrag jedes concurrend-n corps \$15. 8 Schützen jedes Teams. Berechtigt alle Schützengesellschaften, wenn sie auch nicht zum Bund! Gehören, which translated means that the entrance fee of each competing corps will be \$15; that teams are composed of eight men, and that any associations, not members of the Union, can enter. We trust to see a large assemblage, of our friends, during the whole week. Our medal is now in the jeweler's hands, and we believe that it will be worthy of the occasion. Hoping that there will be fine weather during the week, and with our best wishes for the success of the meeting, we say, "Hoch liebe die siegreichen Schützen."

THE KIND OF STUFF CANADIAN SPORTSMEN ARE MADE OF.—One of the most valued correspondents of the earlier life of our paper was Geo. M. Fairchild, Esq., of Valcartier, Canada, who used to write us spicy sketches of his winter camps in the snow, and his chases after caribou among the Laurentian Mountains. It seems to be a proclivity of Canadians to winter it out. While we are snug around the hearth or taking indulgence in the semi-tropical warmth of Florida, these bardy craftsmen are tripping their snow-clogged snowshoes over the trackless barrens, and banking up their tents with shovels to keep out the frost. Their activity keeps their blood warm in the day-time, and in the night they draw their capotes over their heads and curl themselves up in the tents like bears. Often they kick aside their rugs and blankets so as to cool off in the night, and it is asserted that the interior of a canvas camp, which has been banked up with snow, is frequently intolerably hot. This we can testify to, though our own experience of temperature does not reach below the zero, while theirs becomes solid with the mercury at 40 deg. Such ruddy glow as the arctic atmosphere gives to the cheeks, and such stability as it gives to the health, can scarcely be imagined.

These Canadians pull trout through the holes cut in the ice with a gusto equal to the summer zest of angling, and they patiently starve themselves for two days to track and capture a caribou, in order that they may appreciate the meat the more for the abstinence. The editor of the Toronto Evening Telegram is one of these fellows. He writes to us, June 1:

"I take an earnest delight in the sporting matters you deal with, my appetite for such having been whet up by a trip (in company with a single companion) of six months—September to March of one season—in the wilds of northern, unsurveyed Canada, not seeing a human face but our own for five months. We built log houses, and while tramping sheltered ourselves with a cotton tent. We occupied our time in shooting duck, partridge and deer for food, and trapped beaver, mink, martin, fisher, etc. Came out on snowshoes, fifteen days' tramp to the first signs of civilization, each dragging a tahoggan loaded with our tent, food, skins, clothing, etc., etc. The tahoggans we made ourselves, hewing a plank 1-4x12in. out of a 15in. tree. We took the trip for our health. It was adventurous and enjoyable, though made up of a good deal of hard work and hardship, but brought us out hale and hearty."

DOCKING HORSES' TAILS.—Mr. Bergh complains that, in response to charges of cruelty advanced by him, he is too often met with ridicule. Now, here is the question of docking such ponies as are used in polo: Mr. Bergh insists that to dock a pony is cruel. The cruelty in this action we cannot for the life of us see. It may be stupid or useless, and make a pony look ugly, but if Mr. Bergh is to get up in arms because people lop off horses' tails, or cut dogs' ears or tails, next we will hear of the arrest of some of our good mothers for boring their daughters' ears. We are quite as conscious as anybody that there must be an advance in morals, and that, as Lecky shows, what is deemed as perfectly right in one century is deprecated in the next. Still we are too far off yet from those blessed days when men will shudder when they turn a turtle on his back, boil a live lobster or poach an egg. A good deal of vital energy, we are afraid, is lost by the worthy President of the Society for the Prevention of Cruelty to Animals on petty, useless topics of this character, such as of docking tails, which might be devoted to more crying and monstrous evils.

A GLASS BALL MONUMENT.—A novel method of raising a battle-memorial fund is that adopted by the Monmouth, N. J., people. They have been holding a series of glass ball matches, the proceeds of which go toward the erection of a monument commemorative of the battle of Monmouth. This is a pleasant conversion of the brittle spheres into enduring granite and bronze; perpetuating by such sport the memory of men whose weapons knew only serious work. At the tournament last Decoration Day fourteen towns were patriotically represented by their chosen teams. Here is a hint for a national tournament for the benefit of that unfortunate Washington Monument.

FARMS IN MINNESOTA.—FOREST AND STREAM is a good advertising medium for other things than fishing tackle and sportsmen's hardware. For instance, the Becker farm in Minnesota has recently been sold, through the medium of this paper, to Dr. D. R. Sutherland, of Poughkeepsie, for \$31,000 cash, which sum covers a very promising crop of 1,000 acres, which ought to yield 25,000 bushels of grain.

What we want now is to sell the 17-section plot lately advertised in our columns. It is a rare chance for parties wishing to engage in farming on a grand scale. Thirty thousand dollars capital is required, to be paid up in two years. Full particulars with the managing editor of FOREST AND STREAM. Over 30,000 emigrants are said to have settled in Minnesota within six months, and the value of land sold is stated to have been nearly \$5,000,000 in the month of May. The land we offer is on a line of railroad and can be bought at \$2.50 per acre.

IN MEMORIAM.—It is with regret that we announce the death of Jackson Gillbanks, Esq., of Whitefield House, Cumberland, England, who departed this life May 19, 1878, aged fifty years. Mr. Gillbanks was a frequent contributor to the columns of this paper. An ardent sportsman in his younger days, in later life he devoted a great deal of his time to the introduction of game birds and fish into England. It was at his suggestion that, some years ago, we forwarded to the Prince of Wales the eggs of our prairie chickens, and we now have among our papers many valuable suggestions made by Mr. Gillbanks as to the means to be employed in forwarding live game and the eggs of game birds to England. Mr. Gillbanks was exceedingly interested in fish culture, and anxious to gain all information from American sources. In England Mr. Gillbanks was well known for his contributions to the *London Field*.

OUR YACHTING COLUMNS.—We are in receipt of many gratifying encomiums of our yachting department. The public, always quick to comprehend honest efforts in catering to its wants and tastes, has given its unqualified approval of the professional nature of this department and the liberal space accorded it. The yachting columns of the FOREST AND STREAM fill a long existing void in the sporting literature of America, and it is our intention that they shall be brought to as high a degree of perfection as the well-directed efforts of our editor, who is a practical naval architect, seaman and yachtsman, can attain. That the public appreciates this purpose we are convinced, from the fact that FOREST AND STREAM is universally recognized at present by the *London Field* and other English papers as authority, and the accepted medium of the sport in America. The one hundred yacht clubs of this country ought to have a representative of their interests, and we will bid high for the position.

IMPORTANT TO SUBSCRIBERS.—From Georgia we have received this hint:

"Times so hard thought you would have made your paper \$3 before this."

Yes, we are just about to do something of the kind. Should have reduced our rates long ago, but have been hesitating whether to make a merely nominal charge, say 50 cents per annum, or to send the paper free, pay postage on it, and throw in a double-barreled shot-gun, fishing-rod and chromo—expressage prepaid—to each new subscriber. If times continue to harden, each of our subscribers may expect to make an independent fortune out of this concern. In view of such a possible contingency, we need not suggest to the casual reader the expediency of immediately sending in his name. It's better than buying lottery tickets.

CLAMS AT A PREMIUM.—The Centennial clam feast at Case's Grove, above McComb's Dam Bridge, came off happily, Tuesday, June 11, and closed in good order in spite of damp weather. Under the able presidency of Mr. Shepherd P. Kuapp, the event brought together many citizens of the metropolis of all grades and parties, who, at the convivial board, merged their differences for the nonce in a general onslaught upon the succulent bivalve and enlivening contents of sundry baskets labelled in French. The proposition made to intrust the city's destinies ere long in the hands of Mr. Kuapp was received with loud acclamation by all.

A LIFE SONG.—A New York lady has been receiving some newspaper attention because she recently sang continuously for three consecutive hours to an audience in Cooper Institute. That's nothing. We have heard of lots of people doomed to Sing Sing for a whole lifetime.

A FLORIDA INVESTMENT.—The current number of the *Florida New Yorker* announces that, owing to the failing health of its editor and proprietor, Mr. J. B. Oliver, that journal is now for sale. Here is an opportunity for capital, brains and enterprise.

—William Cullen Bryant, the best known and oldest of the American poets, died yesterday, June 12, in the 84th year of age.

ROBINS AS GAME BIRDS.—Mr. Editor: In your issue of May 30, in the "Game Bag and Gun" column, your Salem correspondent speaks of shooting robins among other birds. I respectfully suggest that if your correspondent is a sportsman he ought to be sufficiently informed to know that it has been a crime to shoot robins in this State for some years, and if he does know this and commits the crime, he ought to be prosecuted. It poorly accords with the spirit of many Massachusetts sportsmen to read the record of the wanton slaughter of one of our best songsters in our sporting journals by one of its accredited correspondents. It is a matter of pride with us that we are so far in advance of New York, New Jersey, and some other States, that we are not able to exult over a bag of slaughtered robins.

Springfield, Mass., June 5, 1878.

[We have seen flights of robins so numerous as to break the branches of the cedars, where they alighted to eat the berries, and if superabundance ever gives license to destroy or diminish, it would apply in such cases, especially as robins are larger and more delicious than many species of snipe. We do not gainsay what our correspondent says; we would assuredly protect robins from the fowler and gunner, and exclude them from the list of game birds; but occasions frequently offer in scattered localities, where the killing of them would be especially justified, not for sport truly, but for the stew and pot-pie. Our point is that a sweeping, inexorable, restrictive rule bears hard upon circumstances which operate to make a privilege which the tenderest conscience would prompt us to accept. The whole question rests upon the abundance or dearth of supply. However, the law of Massachusetts, being against robin shooting, ought not to be violated.—ED.]

NEW YORK.—The sportsmen of Akron, N. Y., have organized the Forest and Stream Sportsman's Club for the protection of fish and game, with twenty-seven members and the following officers: Dr. L. P. L. Parker, Pres.; Wm. L. Paxon, Vice-Pres.; Cecil Morgan, Sec.; N. B. Wickwire, Treas.

[We acknowledge with pleasure the honorary membership conferred upon the Editor and Business Manager of this journal.]

—Coboes, N. Y., has a game club with the following officers: Isaac Clute, Pres.; Leon Lackman, Vice-Pres.; Herbert Tanner, Treas.; Orville Winney, Sec.

SARATOGA GAME CLUB.—Saratoga Springs, May 27.—A few gentlemen interested in field sports have organized the Saratoga Game Club for the enforcement of all laws and ordinances for the protection of game, improvement of skill in shooting and fishing, the restocking of our forests and streams with game, and the fostering of public opinion in all that relates to the better preservation of all varieties of game. The officers are: A. R. McNair, Pres.; W. H. Hodgman, Vice-Pres.; L. A. Sharp, Sec. and Treas.

PENNSYLVANIA.—The Game and Fish Protective Association of Johnstown was organized May 19 with twenty-three members and the following officers: John Cox, Pres.; W. A. Kilgore, Vice-Pres.; Jas. Eldridge, Treas., and H. McMillen, Sec.; Messrs. S. E. Young, F. B. Gilbert, Geo. T. Swank, J. W. Waterman and John Roberts, Executive Committee. The club have appointed fish wardens, propose to stock Mill Creek with trout, and are energetic in their efforts to increase the fishing of the vicinity.

—The Tennessee Sportsmen's Club has been organized by the sportsmen of Maury County, with the following officers: Joseph H. Dew, Pres.; Thos. L. Porter, Vice-Pres.; Wm. N. Hughes, Treas.; Josh G. Bailey, Sec. Twenty members were present at the first meeting, and an equal number will probably be added at an early date.

For rules governing matches and competitions of various kinds see the "American Club List," price 50 cents.

FROM SHORE TO SHORE.

DR. W. F. CARVER'S TRIP FROM SAN FRANCISCO TO NEW YORK.

I propose to avail myself of your kind offer of the use of your columns to keep a promise made to my many friends that I would render them an account of my recent professional journey across the Continent, which time and engagements on hand will permit me to keep in no other manner. Having determined upon coming East, and making a tour of the world, I shot my farewell match at Oakland, Cal., on the 22d of February last, on which occasion I succeeded in breaking \$85 glass balls out of a possible 1,000, with a Winchester rifle. I then turned eastward, and have given exhibitions of rifle shooting in many places, meeting everywhere with a cordial and almost enthusiastic reception, and now that I am upon the Eastern shore of this continent, I look back upon my journey with pleasant recollections of many warm friendships made on the way.

Leaving San Francisco my first halt was at Sacramento, Cal. I gave two exhibitions at the Agricultural Park, both successful and well attended. Upon the urgent request of Mr. Daniels, I made a flying trip to Chico, Cal., and gave an exhibition there. It consisted principally of fancy shooting. My reception was hearty and attendance good. From Chico I went to Carson City, Nevada, where I was received by that warm-hearted and whole-souled gentleman, the Hon. Hub. G. Parker, the recollection of whose many kindnesses will remain green in my memory. My success here was wholly due to this gentleman. After enjoying his hospitality for two or three days, he accompanied me to Virginia City, Nev. Here we were both received by Mr. W. A. Perkins, to whom I am under many obligations for attentions which contributed largely towards the success of my exhibition on the Comstock. At Salt Lake City I was received by a company of thorough philosophers, led by G. W. Mears, Esq., all of whom vied with each other in their unceasing efforts to make my stay in the Mormon City the pleasant and successful one it was. Much of my time, however, was employed in flirting with the Mormon girls—a dangerous pastime, I was told; for the intrepid habit of the phins who never quails before the savage glance falls in easy prey to the sly gleams of the maiden's sparkling orbs.

At Denver, Col., I was cordially met by the driving sportsmen. Here I gave an exhibition amid a driving snow-storm, and consequently at great disadvantage. I was, however, challenged by G. W. Gove, a man 70 years of age, to shoot a match of 100 glass balls, his shot-gun against my rifle. Advanced in years as this gentleman is, he has no equal, much less superior, as a shot, among the younger men of the country. My score was 97 out of the 100 balls, making the match a tie.

From Denver to Cheyenne, W. T., where I arrived in the midst of a terrific wind-storm. I was now approaching "the old home," and at Cheyenne I met many old and familiar faces—companions of years gone by. Owing to the extremely bad weather, I gave but a short exhibition of fancy shots, and proceeded on to Omaha, Neb. Passing through this section the familiar landmarks carried me back in memory to the wild and stirring scenes through which I had passed in earlier life. Here, over these broad plains, I had hunted the buffalo, chased the antelope, and encountered the Indians. Here, upon the Medicine below, I had passed many a happy month of freedom from the cares of this world. But how changed! Far and wide I gazed to find the evidence of buffalo and other game, but they had passed away, and civilization had placed its mark upon the country through which I once roamed free as air. Buffalo and hostile Indians both have retired before the advance of the iron monster which now drags its loads of human freight daily across the continent. I expected to leave the train at North Platte to pay a visit to my old home on the "Medicine," and enjoy a few days' hunting, but the famous marksmen in the East, having learned of my coming, were publishing challenges from day to day, and I was particularly anxious to accommodate them as soon as possible, so I continued on my journey, thereby missing this long anticipated pleasure.

Reaching Omaha, trouble commenced in earnest. Here the shooters made their first bold stand, as if determined to wrest my laurels from me. Among the bravest of the brave was John W. Petty, of the firm of Collins & Petty, known among his most intimate friends as "Spoo Bill," on account of his peculiar attitude while making a shot. He stands six feet in height, of firm, manly proportions, and is possessed of a keen, mobile eye, which rests upon an object with that determination which denotes the man of remarkable nerve which he is. His position while shooting is known as well as his reputation as a marksman. When once assumed, nothing in the world can attract his attention. As the butt of his piece strikes the shoulder, he rests his nose between the hammers of the gun, and his eyes shoot forth light of unusual brilliancy. My match here with Petty was hot and closely contested, but the genial John suffered defeat in the most gentlemanly manner possible, although he made one of the most remarkable scores on record by breaking 478 glass balls out of a possible 500. Owing to the courtesy of the U. S. officers at the Fort, and also of the members of the Omaha Sportsman's Club, my stay here was somewhat prolonged.

A hunt was organized on the Platte River after geese and ducks, for my special benefit, under the leadership of Oil Collins, of Messrs. Collins & Petty, which offered unusual excitement and interest, as every man was armed with a rifle, and all were to shoot at flying objects. We went out in a wagon, and as we rode up the hill looking down upon the Platte River, we could see thousands upon thousands of geese upon the sand-bar, ranging out to an island in the river about a mile away. Descending from the wagon, we started for the river to cross over in a boat. As we were descending the hill, a flock of quail flew across in front of us. In an instant every man had his piece to his shoulder, and the sharp crack of the rifles, the whiz of the bullets and whir of the birds made up a most animated and exciting scene, as we were all armed with the Winchester Repeating Rifle. As a solitary bird was disappearing over the elevation, the last shot was fired by Collins, who was trying to shoot the top off of that hill. Every gun was emptied, when

Here true friends waited to receive me. It is here in the office where a man receives the true sportsman's grip. The

Very respectfully,
DR. W. F. CARVER.

Lieut. James Forsyth, of the Bengal Service, is the author of an exceedingly interesting and valuable treatise on "Sporting Rifle and its Projectiles," in which the question of explosive shells is very fully discussed. He condemns Jacob's shells as utterly inefficient and uncertain for sporting purposes, and cites numerous instances of his own experiences and those of others in proof of his assertions. He says: "I have fired one through a tiger at two yards' distance without any explosion, and I have seen another burst on skin, and fly back without penetrating an inch. Even when they do burst in an animal, the effect is less than that of a similar solid bullet, for the shell does not fly to pieces, but merely opens at the tip, while, of course, its penetration is checked, and the killing effect of a through and through wound is lost."

1,000.....Withdrawn.

CONNECTICUT.—At the regular monthly shoot of the New Haven Rifle Association, at Quinnipiac range, last Friday, the all-comers' match was won by Mr. Ruickoldt by a score of 40 out of a possible 50. This match was 10 shots at 200 yards off hand. The military match, seven shots each at 200 and 500 yards, was won by F. J. Colvin with a score of 47 out of a possible 70.

—The Bridgeport Rifle Association will have their opening on Friday, June 14th. There will be four competitions. At Willowbrook on Saturday the rain interfered with good work. Mr. W. H. Binns only completing a full score at all the ranges. This rifleman won the mid-range match. The military match at 200 and 500 yards was won by Lieut. W. M. Clark with a score of 57 out of a possible 70. Mr. J. D. Marks carried off the all-comers' match with a score of 31—three bulls and four centres. The next matches will be held on the 24th of June, when the Sharps Rifle Company have offered a handsome prize.

CREEDMOOR.—Monday, June 10th. Ninety-nine members of the Seventh Regiment qualified Saturday for the marksman's badge. Various other regiments during last week were on the range, and a fair proportion secured their badges.

SYRACUSE—SPRING MEETING—Wednesday, June 5.—The opening of the range took place with the greatest eclat. Matches were numerous and well contested, while the management was excellent. Directors' match; distances, 200 and 500 yards.

Short range match; 200 yards.—We give the leading scores:

200 yards.	500 yards.

Sixth Division National Guard Match.—This interesting match was represented by two teams from the Forty-ninth Regiment, one from the Forty-eighth, and one from the Fifty-first. We give the full score of the winning team:

Forty-ninth Regiment—First Team.										
	200 yards.					500 yards.				
Chas Talladay.....	3	4	5	4	3-19	5	5	5	5	6-25-44
H A Van Guilder.....	3	4	4	6-22	3	4	4	4	5-20-42	
Jas Rowley.....	3	4	4	6-22	5	5	3	3	2-18-40	
Sergt P H Stafford.....	4	3	4	4-19	3	4	4	4	5-20-39	
J H Westover.....	4	3	4	4-19	5	4	2	4	5-20-39	
J L Mills.....	3	4	3	4-18	5	4	3	4	4-20-38	
Corp J McCarlin.....	3	5	4	4-21	2	4	4	3	4-17-38	
J C Reamer.....	4	4	0	3-14	2	3	2	0	7-21	

Total.....801
The Forty-eighth team made 289; the second team from the Forty-ninth, 252, and the Fifty-first, 247. Mr. C. Talladay, with 44, won the individual prize.

For the second short-range match there were thirty entries. We give the leading scores:

200 yards.	500 yards.
Jones.....4 4 4 4 5-20	5 4 3 4 3-26
Barton.....4 4 3 4 5-20	2 4 4 4 4-20-26
Hart.....4 4 3 4 6-24	4 4 4 5 8-2-26
Stafford.....4 4 5 4 4-23	3 3 5 4 3-25
Mandeville.....4 4 3 4 4-23	4 4 3 3 3-25
Bruce.....4 3 3 4 4-23	5 4 3 3 3-25
Warner.....4 3 3 3 5-23	2 4 3 4 4-25
Storke.....4 2 4 4 5-23	2 3 4 4 3-25
Wright.....4 4 2 4 3-23	3 4 3 3 3-24
Rowley.....3 5 4 4 3-23	

The Dyncan Badge Match was next in order. Distances, 200 and 500 yards.

200 yards.	500 yards.
Lieut. Col. C. V. Boughton.....3 5 4 3 4-19	5 4 4 5 5-23-42
J. C. Reamer.....4 4 4 4 4-20	4 4 4 4 6-21-41
Blakeley.....4 4 3 4 4-19	3 3 3 4 4-20-39
Capt. R. G. Post.....3 4 4 4 4-20	3 4 4 3 5-19-39
O. G. Jones.....3 3 4 3 4-17	4 4 2 3 4-18-35
M. B. Nicholson.....2 4 5 3 4-18	3 3 2 4 4-17-35
Sergeant L. L. Barnes.....4 3 4 4 4-19	2 2 4 4 4-16-36
D. H. Bruce.....4 3 3 5 3-19	3 4 0 4 4-15-33

The Dyncan match concluded the first day's shooting.

June 6.—There was a good deal of pleasurable excitement as Mr. Frank Hyde, of the Sharps Rifle Company, had offered a fine Military Sharps rifle, new model, as a prize. Conditions, 200 yards. The officers' match was called promptly on time, and resulted as follows:

200 yards.	500 yards.
Post.....5 5 4 3 4-41	4 4 4 4 4-41
Barton.....4 4 4 4 4-40	4 4 4 4 4-40
Storke.....4 4 4 4 6-40	4 4 4 4 6-40
Houghton.....4 4 3 4 4-38	4 4 4 4 4-38
Nicholson.....4 3 3 3 4-37	4 4 4 4 4-37

Now came the special short-range match, offered by the Sharps Rifle Company, ten shots at 200 yards.

200 yards.	500 yards.
Hyde.....4 4 4 4 5-54	4 4 4 5 3-37
Jones.....4 4 4 4 5-54	4 4 4 5 3-37
Barnes.....4 3 4 4 4-43	4 4 4 5 3-37
Warner.....3 4 4 4 4-43	4 4 4 5 3-37
Hart.....3 4 4 4 4-43	4 4 4 5 3-37
Stafford.....3 4 4 4 4-43	4 4 4 5 3-37
Mandeville.....4 4 4 4 4-43	4 4 4 5 3-37
Bruce.....4 4 4 4 4-43	4 4 4 5 3-37
Smith, Jr.....4 4 4 4 4-43	4 4 4 5 3-37
Post.....3 4 4 4 4-43	4 4 4 5 3-37
Storke.....4 4 4 4 4-43	4 4 4 5 3-37
Andrews.....4 4 4 4 4-43	4 4 4 5 3-37
Salder.....3 3 3 4 4-43	4 4 4 5 3-37
Reamer.....3 3 3 4 4-43	4 4 4 5 3-37

If there was a little disappointment that the rifle did not leave the donor of the prize, still as it was won with a handsome score, no one complains.

The long-range match, 800 and 1,000 yards, was also won by Mr. Hyde. We append the whole scores, as interesting in the contest between breech-loading and muzzle-loading rifle.

800 yards.	1,000 yards.

MOHAWK VALLEY RANGE.—Meeting at the Utica Range on Friday last. Directors' and officers' match, 200 yards, two sighting shots, 25 possible: Kincaid, 16; Flower, 9; Wright, 14; Hill, 17; Dering, 9; Murray, 10; Griffiths, 15; Tallman, 15; Hepburn (Vice-President and formerly of American Team) 15 on four shots, and generously declined to win the match. Five hundred yard match; possible 25; scores: R. Omand, 21; F. Armstrong, 14; A. C. Seams, 20; C. A. Howard, 15; R. Winegar, 15; H. Ohmsmore, 19; S. Thistlewaite, 22; E. A. Tallman, 0; F. L. Partiss, 7; D. E. Pomeroy, 18; N. Walker, 19; W. L. Martin, 19; L. L. Hepburn, 25; H. D. Jennings, 18. Military team matches at 200 yards were next called—five men in a team. Total scores: Adjutant Bacon Cadets, 34; Utica Citizens' Corps, 74; Utica Veteran Zouaves, 87. Military match, 200 yards; five shots. The best scores were made by F. L. Myers, 20; F. W. Partiss, 20; D. E. Pomeroy, 18; F. Ferris, 18.

PROSPECT HILL RIFLE CLUB.—This new club of New York City has been organized with the following officers: Pres., Col. J. R. S. Smith; Vice-Pres., G. McL. Jones; Sec., J. L. Paulding; Treas., Lieut. J. J. Reilly. The club headquarters are at 1,516 Third avenue. The club will practice at Harting's Park, 132d street, and at Creedmoor. The N. R. A. rules have been adopted. Regular meetings the first Saturday of each month.

STATEN ISLAND, June 5.—Travelers' Command opened their first match of the season on May 30, at their range on Staten Island. The weather was unfavorable to good scores. The prize was the valuable club badge, which was carried off by Captain Fred Bucher, with a score of 36 out of a possible 50. Distance 150 yards. F. P. H.

GEORGIA—Augusta, June 3.—Our German fellow-citizens enjoyed a pleasant time during their Fest, which was held at the Platz a short time ago. Considerable interest was taken in the military rifle contest. The Volunteer Battalion, Augusta Rifle Association and visiting German societies participated in several contests at 200 yards. The highest score made was by the Augusta Rifle Association, 32 out of the possible 36. On the 29th of May an individual rifle match took place at the range of the A. R. A. between two of the best marksmen of the association. The rifles used were .50 calibre Springfield army guns. Distance, 200 yards; rounds, 20; off hand. The score stood, 88 to 80 out of the possible 100; Creedmoor target. Two prizes are contended for every month at the A. R. A. meetings, and the shooting is very well attended. A rifle tournament is arranged to take place on the 4th of July, under the auspices of the association, and the programme will afford an opportunity for the military and rifle organizations of the State to participate. More anon. ADAIR.

GEORGIA.—The members of Co. O, Savannah Volunteer Guards, have organized the first rifle club of Savannah. It bears the title of the "Rifle Club of Company O, S. V. G." The officers are: President, Captain H. C. Cunningham; Vice-President, Lieutenant W. P. Hunter; Secretary and Treasurer, Sergeant J. M. Bryan.

FREE FERRIAOE FOR SHARPSHOOTERS.—This is the law of February 27, 1878, and a refusal to comply with its provision may be punished with a fine of \$20:

"Any member or members of the National Guard, when in uniform, going to or returning from any parade, encampment, drill or meeting which he or they may be required to attend in compliance with orders from any competent authority, shall, together with such conveyances or military property of the State as he or they may be in charge of, be allowed, without any hindrance or delay, to pass through all toll-gates and over all toll-bridges and ferries within the State."

THE CANADIAN WIMBLEDON TEAM.—The team which sails next Saturday for England to represent the Dominion of Canada at the Wimbledon meeting is made up as follows:

Sergeant J. F. Pallen, Thirteenth Garrison Artillery, Chatham, N. B.; Bugler J. T. Hart, Engineers, St. John, N. B.; Sergeant Riddle, Garrison Artillery, Montreal, Q.; Trooper G. Langstroth, Eighth Regiment Cavalry, French Village, King's County, N. B.; Private J. M. Kinnear, Seventy-fourth Battalion, Sussex Vale, N. B.; Captain Thomas, Fifty-fourth Battalion, Melbourn, Que.; Major O. R. Arnold, Seventy-fourth Battalion, Sussex Vale, N. B.; Sergeant Holtby, Garrison Artillery, Montgomery, Q.; Sergeant C. W. Weyman, Eighth Regiment Cavalry, Apohaqui, King's County, N. B.; Sergeant R. Power, Sixty-third Battalion, Halifax, N. S.; Ensign T. G. Loggie, Seventy-first Battalion, Fredericton, N. B.; Captain Gibson, Garrison Artillery, Toronto, O.; Private J. D. Perkins, Seventy-first Battalion, Gibson, York County, N. B.; Sergeant J. Shana, Garrison Artillery, Halifax, N. S.; Trooper J. J. Ryan, Eighth Regiment Cavalry, Sussex Vale, N. B.; Lieutenant B. Weston, Sixty-sixth Battalion, Halifax, N. S.; Corporal F. Newby, G. G. F. Guards, Ottawa, Ont.; Captain Nelson, Seventy-eighth Battalion, Halifax, N. S.; Sergeant J. H. Edwards, Victoria Rifles, Montreal, Q.; Corporal G. F. Thompson, Engineers, St. John, N. B.

THE AMERICAN RIFLE TEAM.—The members of the team met on Tuesday, June 11. There were present Messrs. Jackson, Jewell, Allen, Bruce, Blydenburg and Weber in the chair. Mr. Weber was elected Captain of the team. After a slight discussion, the following resolution was passed:

Whereas, while this team recognize the fact that it has been the custom for the National Rifle Association and the Amateur Rifle Club, by joint action, to select the American rifle teams for international matches, they being heretofore almost the sole representatives of the interest taken in this country in long range rifle shooting, yet in the last few years other large organizations have grown up in different parts of the country, who should be hereafter represented in the election of teams of a national character; and, as a majority of this team have entertained the opinion that, by virtue of the representative character which it acquired by the method of its organization and selection, it could, with more propriety than any local organization of rifle men, undertake the selection of the next international team; and for these reasons, believing that they would be supported in their action by the rifle men of America, and without any desire to perpetuate themselves as a team, or coveting a trust which could not prove otherwise than onerous, they issued the programme for the selection of the teams of 1878. But as no foreign team has entered within the time required (June 1), and there will be no long range match this year, therefore be it

Resolved, That the programme heretofore adopted and issued by this team for the selection of the team of 1878 be and hereby is rescinded and withdrawn.

When the match will be held is not yet decided.

A WICKED REPORT.—We are in receipt of numerous letters from anxious friends of Mr. Dudley Selph, requesting us to give particulars of an accident said to have occurred to this well known rifleman. In our last issue, when we noticed the rumor, we were careful to write "we forbear mentioning further particulars until we have the fullest statement of the nature of the accident, if any accident there is, and the arm used on the occasion." We are in receipt to-day of the following letter:

Forest and Stream and Rod and Gun, New York:

GENTLEMEN.—The report that has been pretty well circulated and made the subject of an editorial in one of our sporting papers, "that the famous rifleman, Dudley Selph, Esq., has been permanently injured by the explosion of a Remington rifle," I find to be untrue, having seen a letter written by Mr. Selph, dated the 3d inst., in which he denies it. He shoots his rifle now, and is making his usual fine score. I am heartily glad that the report is not true.

Yours truly,
Boston, June 11, 1878.

W. H. JACKSON.

Evidently the rumor was started for the worst of purposes, in order to cast discredit on the Messrs. Remington and their very excellent arms.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	SALT WATER.
Trout, <i>Salmo fontinalis</i> .	Sea Bass, <i>Centropomus atrarius</i> .
Salmon, <i>Salmo salar</i> .	Sheepshead, <i>Archamia probatocephalus</i> .
Land-locked salmon, <i>Salmo gairdneri</i> .	Striped Bass, <i>Morone americana</i> .
Black Bass, <i>Micropterus salmoides</i> .	Weakfish, <i>Cynoscion regalis</i> .
<i>M. nigricans</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Muskellunge, <i>Esox nubilus</i> .	Spanish Mackerel, <i>Cybitus maculatus</i> .
Pike or Pickerel, <i>Esox lucius</i> .	Cero, <i>Cybitus regalis</i> .
Yellow Perch, <i>Perca flavescens</i> .	Bonito, <i>Sarda palmyra</i> .
	Kingfish, <i>Menticerua nebulosus</i> .

FLIES IN SEASON IN JUNE.

Hawthorn, No. 11.—Body, shining black; feet and head, black; wings bright hyaline.
Shoemaker, No. 10.—Body, ringed alternately with light and gray salmon; feet, dark ginger; wings, the mottled gray of the mallard and the mottled of the woodcock mixed; setae, mottled woodcock.
Black June, No. 10.—Body, peacock's herl; feet and wings black.
Dark Stone, Nos. 8 and 9.—Body, dark brown; feet, yellow brown; wings, luteous.
Governor, No. 10.—Body, peacock's herl; feet, dark red hackle; wings, made of the darkest part of the bittern's wing or brown hen.
Green Drake, No. 7.—Body, white posterior, half ribbed with black, green yellow, mottled with brown; setae, dark brown.
Brown Drake, No. 7.—Body, feet and wings, a golden yellow brown; setae, dark brown.
Racer, No. 11.—Body, feet and wings, black.
Wren Fly, No. 9.—Body, clay yellow; feet, made from the scapular feathers of the English wren or quail; wings and setae, mottled wilgeon.

FISH IN MARKET—RETAIL PRICES.—Bass, 18 cents; blue fish, 12; salmon, 10 to 12; mackerel, 20; shad, 50; weakfish, 10; Spanish mackerel, 15 to 25; green turtle, 12; halibut, 15; haddock, 6; king fish, 18; codfish, 6; black fish, 12; flounders, 8; porgies, 8; sea bass, 15; eels, 18; lobsters, 8; sheepshead, 15; Canada brook trout, 50; Long Island brook trout, \$1; white bait, per pound, \$1; smoked salmon, 18; soft crabs, per dozen, \$1.50.

Salmon still continues to arrive in large quantity, but the indications are that, the first rush being over, the fish in the Restigouche will decrease. Mackerel are arriving in small quantity. Sheepshead are plenty from Long Island. Bluefish rather scarce. At Mr. Blackford's we saw a good specimen of the ribbon fish (*Trichiurus lepturus*—DeKay). This fish is rather rare in our waters, the fish we noticed having been caught in Gravesend Bay. The ribbon fish has an extensive geographical range, and is most numerous in the Caribbean Sea. The fish measures some twenty-eight inches.

SALMON IN THE CONNECTICUT.—Wm. M. Hudson, Esq., Fish Commissioner of Connecticut, has kindly given us the following information as to the salmon in the Connecticut River:

"Salmon have been taken at almost every fishing place on the river below Hartford, and one has been taken at the

Gregory fishing place above the Enfield dam and near the Massachusetts line. The majority have probably been taken in gill nets within a few miles of the mouth of the river. About two weeks since, Mr. Joseph Tilden had taken nine salmon in his seine at Brookway's Beach, just below Deep River Station, and Mr. W. C. Hough, at Essex, had taken ten in the same manner. Next week I shall go to Holyoke and inquire whether any salmon have yet been seen at the foot of the dam."

James Bill, Esq., the Commissioner of the State at Lynn, has also kindly given us additional facts. Mr. Bill writes:

"At one landing I have counted up to 8 and 12 salmon caught in a night by the gill net men, then the catch is by the pounds outside first, the gill nets that drift for 30 miles up the river by hundreds, and then the hauling seines from the mouth of the river to Holyoke, and all have got their share. In a number of cases I have known the same drift net to catch two salmon per night. The seines caught several in a day. As to the pounds outside of the river, I have not known as much about them. From the mouth of the river to Hartford salmon have been taken in numbers and a few still higher up the river."

The number of salmon caught has not yet been fully estimated. So far it is our opinion that over five hundred fish have been marketed from the Connecticut. The study of these statistics leads us naturally to speculate as to how soon anglers will seek the Connecticut River for sport, at trifling expense, with privileges unrestricted, instead of taking interminable journeys to fish the high priced tributaries of the lower St. Lawrence. Even now, we opine there is rare sport at our very doors. We wonder that the anglers who dwell in the vicinity of the Connecticut and other New England rivers have not tempted the salmon with fly before this. We are not familiar with the character of the water between Hartford and the Holyoke dam, but we infer that there must be some localities where the broken water weaves itself into an eddy and a pool, so that a cast of the fly would be likely to be rewarded. Next year we hope to angle for salmon within the territory of the United States, just as we did twenty years ago in Maine; and we predict that the day is not far distant when the rare and much coveted sport of fly-fishing for salmon will be a common pastime in our rivers.

CANADA.—*Montreal, June 5.*—Mr. John Robinson, of this city, has just returned from two days' fishing at Matipedia. His catch was 6 salmon ranging from 23 to 32 pounds each. STANSTEAD.

Montreal, June 6.—A few days ago a friend of mine was bait fishing in Fairfield Lake, a beautiful sheet of water in the Northwestern part of Old Vermont. He was using the common angle worm for bait and caught a 2½ pound land-locked salmon, which was one of the number that this lake was stocked with two years ago. In its stomach were found several half digested minnows. Is it a common occurrence for these fish to take bait? If so, they need protection. STANSTEAD.

[Both the true salmon and the land-locked salmon take the red worm. Worm-fishing for salmon is very common in Great Britain.—Ed.]

Montreal, June 10.—The Gaspé rivers—the St. John, York, and Dartmouth—are full of salmon, which are unusually large. C. S.

NEW HAMPSHIRE.—*Nashua, June 6.*—Trout fishing is giving us more sport this season than for years. Fine string brought in June 4. Caught within a mile of town. Biggest weighed one pound fourteen ounces. Salmon have commenced running up the Merrimack. One was seen last week at Martin's Ferry, estimated to weigh twenty pounds. A shad was hooked up in the Nashua a few days ago. The fishways here will be commenced as soon as the water is low enough. Pickerel fishing opened on the first of the month, but as yet have heard of no brag strings. Pouts and perch are plenty; more so than usual. WEBB.

MOVEMENTS OF THE FISHING FLEET.—The whole number of fishing arrivals reported at this port the past week has been 88—11 from the Banks, 49 from Georges, and 28 from mackereling trips. The receipts of mackerel have been small, about 700 blbs., and the prospects of a good shore catch being unpromising, it is probable that a large fleet will soon fit away for the Bay of St. Lawrence. Mackerel have made their appearance at their usual northerly haunts, and some 2,000 blbs., of the new catch have already been marketed in Boston from Nova Scotia. The halibut receipts for the week have been larger than the previous week, some 130,000 lbs., but fair prices have been obtained. Receipts of Georges codfish, 1,055,000 lbs.; Bank codfish, 80,000 lbs.—*Cape Ann Advertiser, June 7.*

CONNECTICUT.—*Wethersfield, June 5.*—Mr. Bahcock, of this town, caught a striped bass in the Connecticut on Monday that weighed nearly fifty pounds.

Hartford, June 1.—Trout fishing has been exceptionally good this season in the neighborhood of our city, a number of fine strings, taken not further than twelve miles from here, bearing witness. In the Connecticut black bass have made their appearance in large numbers some time ago. At certain localities and certain times hundreds of them can be seen rising in the pursuit of small fry. The latter is probably the reason why bass have thus far refused to take angle worm, live bait, trolling spoon or fly. P. X.

FLY FISHING FOR SHAD IN THE HOUSATONIC.—Mr. Editor: The past few years, the writer and several other gentlemen have visited the dam (at Brainingham) on the Housatonic River, for the purpose of catching shad with an artificial fly, which many of your readers are doubtless aware is fine sport. The first year we tried this kind of fishing, shad were comparatively plenty, and our catch averaged good size (from one and a half to four pounds), since then there has been a marked decrease, both in the size and numbers of this fish. I was at the dam yesterday, and had very poor success, fish being scarce, and the five taken weighing but little over half a pound apiece. The question naturally arises, as to the cause of this steady decrease of the fish, which fact is so marked this year that half a dozen of the seines on the river have been withdrawn, and the catches of others so small as to afford but little encouragement to the parties working them. In my opinion the want of a fishway over the dam causes the

scarcity. While fishing yesterday I was much surprised to see a man and two boys row up the river within about eighty yards of the dam, and draw a seine twice (but much to my satisfaction without success); and on inquiring why such operations were allowed, was told that the Company or Corporation did not dare raise a question of law in the matter, as it would call the attention of outsiders to their violation of same in having no fishway. Where are the State Fish Commissioners, and why is this matter not investigated and attended to at once? All the fish culturists in the country cannot keep the Housatonic River stocked either with salmon (which have commenced to show themselves this season) or shad unless some facilities are given the fish to reach the upper spawning beds of the river. I call on the anglers of Connecticut (especially shad anglers whose numbers are steadily increasing) to give their attention to the matter, and to you, Messrs. Editors, who are always ready in a good cause, to so urge the matter, that the parties whose duty it is will oblige those owning the dam and water privilege to build a good fishway at the Housatonic or Derby Dam. A. J. H.

NEW YORK.—*Niagara Falls, June 4.*—We have black bass, pickerel, muskellunge, pike-perch and many other varieties of game and food fishes to furnish sport, among the many islands in the river above here. Through the efforts of our newly elected game constable we have nearly done away with pot-fishermen's devices on this part of the river. There is talk now of fish and clam chowder parties camping on some of the numerous islands above here. Doc.

ADIRONDACKS.—*Orduway House, Blue Mountain Lake, June 1.*—Beautiful weather, cool nights, crisp mornings, warm sunny days, bracing breezes. Many parties in the woods; fresh arrivals every day. Fishing fair for lake and speckled trout; improving every day. A "laker" was caught at Raquette a few days since weighing 19½ pounds. This is much larger than they generally run. The route to the North Woods via Adirondack R. R., is the quickest and most economical from points South and East. One can leave New York by evening boat or train for Albany connecting with morning train for Saratoga, there with Adirondack R. R. (time 9:30 A. M.) At the terminus of the road North Creek stages are in waiting to convey passengers direct to Blue Mountain Lake (dinner at North River) arriving about 10 P. M. Expense of trip will not exceed \$10. Those who prefer to make the trip by daylight can stop over night either at Indian or Cedar Rivers, at both of which places are good hotels, and conveyances can be obtained at reasonable rates. At Blue Mountain the terminus of the route by stage, are two excellent hotels, the "Orduway House" and "Holland's." Splendid bass fishing to be found in some parts of the Raquette, particularly in the South Bay off Hathorn's Camp. They were put in some years since by Seth Green. They afford fine sport with fly or troll. PATON.

MRS. HAYES' TROUT.—It is, to say the least, very ungallant in Mr. Adirondack Murray to hint to the newspaper men that the fifteen-pound trout caught by Mrs. Hayes in the Adirondacks the other day, was a pickerel. We should have expected such an intimation from the *Sun*; but, we believe, Mr. Murray edits a paper called *The Golden Rule*. There's no golden rule in discounting another man's, or woman's, fish story. Believe others' fish stories as ye would that others also should believe your fish stories.

Lake Port, Avon House, June 12.—Seventy-five or ninety pounds of fish are taken here daily. Good accommodations at this house. J. J. D.

Greenwood Lake, June 12.—Mr. Sandford E. Gee and Roht. R. Van Vleck caught, Saturday and Monday, ninety bass.

—Messrs. Andrew Clarke, Charles Imbrie (Abbey & Imbrie) and Griffith Rowe, left this city on Saturday for the Grand River, Canada, in quest of salmon.

—If it's wicked to fish on Sunday there's a pile of wickedness on the New York docks every Sunday. But is better to be fishing than stealing.

NEW JERSEY.—*Forked River, June 7.*—The first sheephead of the season was caught with hook and line yesterday. ARTHUR.

Kinsey's Ashley House, Barnegat Inlet, June 8.—Sheephead commenced biting on the 5th. Captain Jack Soper had the honor of catching the first fish. Boats took thirty-three on the 6th, one person taking twelve. P. Gustine, J. P. Malseed, and J. Freeze, of Philadelphia, took eight before breakfast to-day. Bluefish plenty off the inlet. Two boats came in yesterday loaded; they run about six pounds. Blackfish and sea bass biting good. B.

PENNSYLVANIA.—Very good trout fishing at Waterville, Lycoming Co. Go to Jersey Shore Station (next beyond Williamsport, on P. & E. R. R.), and drive two hour's ride to the "Forks," where you will find a comfortable hotel at the junction of Little and Big Pine Creeks. There are a dozen streams, affording good fishing, within eight or ten miles around this point, some within a mile. The landlord, "Sam," is an excellent fisherman, very accommodating, and will put you on the best stream at almost any time. O.

Erie, June 1.—Fishing is the finest we have ever had, on account of the removal of the pound nets from our shore. SNUPE.

VIRGINIA.—*Alexandria, June 9.*—Shad angling at the Great Falls of the Potomac is the sport *par excellence* at present. Fine catches reward the patient bolder. WENY.

NORTH CAROLINA.—*Beaufort, June 6.*—A party of Richmond anglers have been trying their luck at enticing the fishes of the great deep, and their efforts have met with very creditable success. Trolling is not quite in season yet, but the returns are moderately fair. SEQUID.

TENNESSEE.—*Columbia, June 1.*—Trout (basa) have deposited their spawn, left their beds and are now biting. Fishing parties are as numerous as at the first of the season. A party returned from Swan Creek last week with successful creels; another party starts for Shoal Creek this week. VAL.

Nashville, June 10.—Messrs. William Duncan, C. E. Hillman, J. P. Jones, F. Downville and others have organized for a trip to Northern Michigan and the States for a few days' fishing and hunting. The rates are exceedingly low. Tickets for the round trip, from Nashville to Traverse City, Petoskey and return, a distance of 789 miles, only \$39. J. D. H.

MISSOURI.—*Fayette, June 2.*—We have good trout fishing in the Shenandoah River here. They run between two and three pounds. I'm a girl, but I enjoy fishing perhaps as much as your masculine readers do. H.

A WISCONSIN FISHING RESORT.—Piscatorial advices from Neenah, Wis., are of the most favorable character. The route is over the Chicago and Northwestern Railroad. The angler will find the best of fun at the house of Mr. John Roberts, and the fishing in Lake Neenah, both in quantity and quality, will well reward the angling pilgrim.

Madison, June 3.—The beautiful city of Madison is located just half way between Lake Michigan and the Mississippi River, one hundred and thirty-one miles northwest of Chicago. The city is beautifully located upon high land, and has a commanding view of the surrounding country. On account of its delightful location, its beautiful lakes—there being one on each side of the city—its romantic surroundings, and, not least, its fine fishing grounds, it has become quite a favorite summer resort. There are four lakes in the immediate vicinity—Mendota, Monona, Kegonsa, and Waubesa. Lake Mendota is the largest and the favorite for pleasure seekers, although Monona is the most beautiful of this chain of lakes. All of these lakes furnish first class fishing and hunting grounds. Madison has always been a favorite resort for Southern people, being especially attractive to New Orleans and St. Louis. The hotels are of the best and no means left undone to make the tourist feel at home. ROVEN.

MINNESOTA.—*St. Paul, June 8.*—Fishing is superb. J. S.

TROUTING ON A TRICYCLE.—If you would be independent of livery bills and Shanks' mare, get thee a bicycle and fly to the haunts where the finny recluses dwell. A correspondent who, with his tricycle, penetrated to the heart of a Pennsylvania forest in quest of sport, writes enthusiastically of the success of this style of locomotion in the woods. And then the Children of the Forest regard your flying vehicle somewhat as the red-faced Los looked upon Fulton's steamboat puffing along up the Hudson.

STILL IN THE FIELD.—We have been in the habit of referring to Mr. William Mitchell as one of the old time rod makers, and to ascribe to his rods some of that excellence which is commonly attributed to the superior workmanship of the days of our fathers. But, as may be seen in our advertising columns, Mr. Mitchell is still in the field, and now shows a rod which, in addition to the good points of his old style of work, has, an adjustable handle fourteen inches in length, the advantage of which will be readily recognized by experienced anglers.

A NEW GAR.—While Professor Brown Goode one day this week was looking over the extensive collection of fish which Mr. Blackford always shows, a new species of the *Belone*, or gar, attracted Mr. Goode's notice. If we understand Mr. Goode rightly it is identical with a species found near the Bermudas, and has not yet been known on our own coast. These gar were caught off North Carolina. The gar is another of those fish which prejudice condemns. There is no better fish in the market than the gar. One peculiarity of this fish is that it has green bones.

THE JELLY FISH'S JAMBOREE.—The Jacks who fish from junks adjacent to the jetties of Jersey, Jerusalem and Japan, jacculate in jagged jargons ejaculations concerning the jecose jelly-fish which jam into their pound-nets. The slightest joggle, jerk or jostle by the Jew in the jigger jeopardizes his job. At the July adjournment of the jejune jelly-fish, the jolly Jacks will join in a jiggamaree with the juice of the joy-giving jug, which the just jury will adjudicate justifiable.

KILL THE FISH YOU CATCH.

PALATKA, Florida, June 1, 1878.

EDITOR FOREST AND STREAM:

Looking over an old scrap-book of 1835, I find the injunction—"Kill the Fish you Catch"—which has not spoiled in keeping. We all know, while it is quite certain not a quarter of us know anything about it, how much superior is a fish prepared for the pan as it is caught, compared to one that is allowed to die. Few, however, are aware of the difference. The reason is this: The fish transferred to the pan from the water is killed before it is cooked, while the one that dies in disease, and his body is not in proper condition to eat when brought to market. The difference between them is exactly that between an animal killed by the butcher and one that dies of fever, for the supply of oxygen that the fish secures when taken out of his native element is so great as to induce fever, of which he perishes.

The superiority of the fish of Holland is remarked by all who eat them, and the reason is that as soon as they are caught the Dutch fisherman sticks an awl in their heads, and they are not brought to market with stabby, fevered flesh, as in England and in this country. Not only is the flavor of the fish thus killed far superior to those that die of fever, but the effect upon the human system is not injurious. How common it is to hear the remark that fish make people feverish! So they do, as would the flesh of any animal that dies of fever. We trust that some of our fishermen will see this article and profit by it. Let the fish they take be killed with an awl driven into the brain. It will not take a second to do this, and it will be found that the flavor of their killed fish will be so far superior to that of those which die of fever that they will be bought in preference, and that after a while people will buy no fish but those that have been killed.

I would now suggest, is not this a proper time and subject to bring up which is the best way to preserve the fish after being caught and killed? A basket should be provided beforehand filled with fresh grass or leaves; lay your fish out in layers, grass or leaves alternately, till your good luck or expertness fills your basket. We are apt, while in boats, to throw the fish on to the bottom of the boat, then subject to the effects of the sun and weather and kicks, or to have a string of them dangle along against our legs and in the dirt, and to be soiled into the drink, to keep them fresh, at every hole we stop to fish.

N. P. W.

The American Club List and Sportsman's Glossary is just out. Carry the news to Mary!

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewellery, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

SPORTSMAN'S SCORE-BOOK FOR GLASS-BALL TRAP SHOOTING

In the spring traps now used to throw glass balls for practice shooting, sportsmen have a mechanical contrivance which should entirely do away with the "chances" which arise in trap-shooting, as the glass ball goes in the stable in the direction desired by the trap puller, or in which the trap is set. In first shooting from a trap—which many dislike on account of the A. & G. trap—there is a large element of chance, as one man may have a "low" shot, while another may have a "high" shot. In "in-catch" or "tail-birds," his opponent may get along "in-catch" or "tail-birds," making the match uneven, simply because the one has much easier shots than the other, and is not liable to miss or have his birds drop outside the boundaries. In order to derive the greatest possible benefit from trap shooting, and at the same time test the marksmanship of any number who may be engaged, it is necessary. First, that not only should the trap throw balls in different directions, but that each person should have in every run about the same angles at which the others shoot, so that no one may be favored by chance or by the trapper; Second, that a record, in kind of each person's hits and misses and the angles at which they occur, so that one may practice intelligently, knowing on what angles he needs more practice. It is believed that the "Sportman's Score-Book," which has been copyrighted, together with all arrangements, whether of letters, or figures, characters or plates for recording shooting by angles will be found all that is desired. (For good practice the trap should be set at all times be bid from view of the person shooting—by screen or otherwise.) This system not only records the angles at which each person competes, but also the angles at which he shoots, so that he can see the angles on which he falls to break his balls, so that he may practice alone and perfect himself where he falls most. It has been carefully examined. The "Sportman's Score-Book" for glass ball trap shooting, by D. E. HOLMES, and can easily be recommended it as being the most perfect system we have seen for keeping a complete record of a shooting match, and equalizing the chances of those engaged, in regard to the direction in which the balls are thrown, by giving each person the same angles at which all the others shoot. The book is well printed on good pencil paper, and contains full instructions together with

THIRD NATIONAL SHOOTING FESTIVAL
at the
SHARPshooters' UNION
of the United States of North America,
GEORGE AERY, President,
Held June 16 to 21, 1878,
at the
SCHULTZ PARK, UNION HILL, N. J.
Prizes on 24 'Targets, amounting to \$25,000, and
Bursting Prizes to the amount of \$1,400 will be distributed.

PROGRAMME.
FIRST DAY, SUNDAY, JUNE 16.
Reception of guests by the Reception Committee. During the afternoon Grand Sacred Concert by 100 of the best musicians, under the direction of Mr. P. W. Wainwright. Popular entertainments and prize-giving in the Scholzen Park.

SECOND DAY, MONDAY, JUNE 17.
Grand procession of all sharpshooters and their guests, accompanied by military organizations, rifle clubs, singing and gymnastic societies, sharpshooters' cadets, and other organizations. Line will be formed at 8 o'clock A. M., in flower, between Second and Seventh streets, under command of Col. Carl Jensen. The procession will move at precisely 10 o'clock to City Hall Park, and pass in review before His Honor the Mayor and Common Council of the City of New York. From City Hall Park to Barclay street ferry and thence to Hahkon, whence extra cars will convey the procession to the Scholzen Park. The arrival at the Park will be announced by the firing of salutes. The guests will then be officially welcomed, and the Union and societies' banners received with appropriate ceremonies by the President of the Union. The shooting commences at 7 P. M. and closes at 7 P. M.

THIRD DAY, TUESDAY, JUNE 18.
The shooting commences at 8 A. M. and closes at 7 P. M. in the Grand Hall.

FOURTH DAY, WEDNESDAY, JUNE 19.
The shooting commences and closes as on the third day. In the afternoon Grand Vocal Concert of the Singing Societies of New York and vicinity. At 8 P. M., Meeting of the Delegates at the Hotel.

FIFTH DAY, THURSDAY, JUNE 20.
The shooting commences and closes as on the previous days. In the afternoon Grand Exhibition of Gymnastic Exercises, for which liberal prizes will be awarded to the successful competitors.

SIXTH DAY, FRIDAY, JUNE 21.
The shooting commences and closes as on the previous days.

SEVENTH DAY, SATURDAY, JUNE 22.
The shooting commences at 8 A. M. and closes at 3 P. M. At 1 o'clock P. M. Prize Shooting of the Sharpshooters' Cadets.

EIGHTH DAY, SUNDAY, JUNE 23.
In the afternoon Grand Sacred Concert and Distribution of Prizes. Coronation of the best marksmen as Champions of the Festival, with appropriate ceremonies.

MONDAY, JUNE 24, 11 A. M.
Grand Competition for the "Forest and Stream" and "Rail and Gun" Gold Medal, and Cash Prizes.
Every day of the Festival, Prize Giving, Popular Entertainments, Acrobatic and Gymnastic Exhibitions, Dissolving Views, Balloon Ascensions, Fireworks, Illumination, Concert and Summer-Night's Ball.

TO REACH THE PARK, TAKE THE NORTHERN

via Chambers and Twenty-third Street Ferries.
On SUNDAY, June 16, and SUNDAY, June 23, leave depot, Jersey City, 6:15 A. M.; from 1 o'clock P. M. to 12 o'clock midnight.

Special trains TO AND FROM THE PARK every 30 minutes.

On June 17, 18, 19, 20, 21, 22 and 23 leave depot, Jersey City 6:35 and 10 A. M.; from 1 o'clock P. M. to 12 o'clock midnight.

Special trains TO AND FROM THE PARK every 30 minutes.

Tickets, 10c; Excursion Tickets (including Park, 25c; can be obtained at the ferries, in the Park, and at J. & J. Buhling (Kirk House), corner West and Chambers streets, New York.

Take horse-cars from Christopher and Barclay street ferries; 4 cars every 2 minutes. Tickets, 5c, each, can be had at the starting place in Hahkon and at the entrance to the Park; from Wittenberg (Forty-second street) Ferry, cars from Gutenberg every half hour.

Admission, 25 cents; children free.

JAMES M. ALLEN,
 DEALER IN
 GUNS, REVOLVERS, AMMUNITION, GUN MATERIAL, FISHING TACKLE, Etc.

NOTICE TO SPORTSMEN—I have now employed Mr. W. D. Miller, a first-class Gun Maker from New York City. I am prepared to manufacture fine breech-loading guns to order, and do all kinds of repairing on finest guns and others, at much below New York prices and at the shortest notice. Guns restocked with pistol grip, half-pistol or plain. Pistol grips fitted to old stocks. Locks altered from plain to rebounding. Plain fire breech-loaders altered to central fire. Barrels browned, Choke-boring from modified to full choke, and pattern guaranteed, either breech or muzzle-loaders. Old stocks straightened, crooked, lengthened or shortened to suit the shooter. Don't forget the Old Established Stand, new No. 25 Hanover street (old No. 14), Trenton, N. J. **JAMES M. ALLEN, Proprietor.**

Sportsmen's Goods.

Eaton's Rust Preventer.

For Guns, Cutlery and Surgical Instruments. Safe to handle, WILL NOT GUM, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-five years of active and frequent use of guns." The trade supplied by sole manufacturer, GEO. B. LATHAM, 510 Pavonia Avenue, Jersey City, N. J. Sold by principal New York dealers, and by Wm. Reed & Sons, Boston, Mass.; B. Kirtledge & Co., Cincinnati, Ohio; E. E. Eaton, Chicago, Ill.; Brown & Hildner, St. Louis, Mo. CANNOT BE SENT BY MAIL.

Auxiliary Rifle

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it can be put out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot gun can be converted into a most accurate rifle. The AUXILIARY BARREL will at any standard make of gun of 10 or 12-calibre—call of the Winchester Repeating Arms Co.'s barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 41, model 1878. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,

P.O. Box 1,178.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb. 1878, the Grand Prix de Casino, an object d'art valued at £100, and a money prize of £100, this the greatest prize ever shot for at Monaco, was competed for by thirty-six of the best shots of all nations, and won by Mr. Chomondley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 23 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 8 birds in success on at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Purley, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 84 birds out of 103, using one barrel only.

The winning gun also at the great London Gun Trial 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1874; No. 168,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.
H. C. SQUIRE, Agent, No. 1 Cortlandt Street, New York City.

IMPORTANT TO FARMERS, COW-KEEPERS AND DAIRYMEN.
The Wonderful Self-Acting Cow-Milker,

PATENTED MAY 28, 1878.

THE MOST USEFUL INVENTION OF THE AGE.

Tested and approved by many of the leading Agriculturists, Dairymen and Farmers throughout the United States, and highly recommended by all who have used it.

WILL MILK A COW IN FROM THREE TO FOUR MINUTES and can be adjusted and used by a CHILD. Usefulness, simplicity, cleanliness, durability and cheapness combined. PRICE, TWO DOLLARS.

Apparatus, with full instructions and pamphlet, containing description of the milker and sectional views and treatise of the cow's teats and bag, sent prepaid to any address on receipt of price, \$2.

READ THE FOLLOWING TESTIMONIAL:
25 LEXINGTON AVENUE, N. Y., June 5, 1878.
I hereby certify that, in company with the Superintendent of the American Society for the Prevention of Cruelty to Animals, and other officers of that society, I have witnessed the operation of the Self-Acting Cow-Milker, and that it fulfills all that is claimed for it.

Member Royal College of Veterinary Surgeons of England and Veterinary Surgeon to the American Society for the Prevention of Cruelty to Animals.

STENT & CO., Manufacturers' Agents, P. O. Box 2,997, 132 Nassau Street, New York.

Hart's Sportsman's Favorite Metallic Shells.
FOR BREECH-LOADING SHOT-GUNS.

These shells are easily loaded, and the caps easily extracted from inside. Dead solid and much thicker than any shell now made, giving a solid shot for cone or mull, which prevents it from driving through or springing away, thereby causing miss-fires. The cone is made of nickel, and fastened solid in its place. Neither rust nor corrosion fast, like movable anvil made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are duly finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & Co.—Gentlemen: The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.

Yours truly, A. H. BOGARDUS.

TATHAM'S
IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bore, modified chokes and cylinders. Our chilled shot will be found free from shrinkage, more spherical, more uniform in size, harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St.,

RESSED BUCK SHOT, more uniform than the ordinary moulded shot.

Gunpowder.

THE
HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. and 1 lb. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office. 59 WALL STREET, NEW YORK.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 6 1/2 lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Blazes, FFG, FFG and FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs. and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 lb.

All of the above give high velocities and less resistance than any other brands made, and are recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World." BLASTING POWDER and ELECTRICAL BLASTING APPARATUS. MITTANY POWDER of all kinds on hand and made to order. Safety Fuse, Frictional and

Pamphlets, showing sizes of the grain by wood cut, sent free on application to the above address.

 waterfowl and upland shooting sections in the coun-
 try. Connections direct for Chincoteague, Cobb's
 Island, and points on the Peninsula. City Point,
 James River, Currituck, Florida, and the mountain-
 ous country of Virginia, Tennessee, etc. Norfolk
 steamers sail Tuesday, Thursday and Saturday;
 Delaware, Monday and Thursday at 8 P. M. Full in-
 formation given at office, 137 Greenwich St., New
 York.

TO SPORTSMEN:

THE PENNSYLVANIA R.R. CO.

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the
 TRIPPING PARKS and RACE COURSES in the
 Middle States. These lines being continuous
 FROM ALL IMPORTANT PORTS, avoid the diffi-
 culties and dangers of reshipment, while the excel-
 lent cars which run over the smoothest tracks en-
 able STOCK TO BE TRANSPORTED without failure
 or injury.
 The lines of

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION
 TICKETS are sold at the offices of the Company in
 all the principal cities to KANE, RENOV, BED-
 FORD, CHESSON, RALSTON, MINNEQUA, and
 other well-known centers for

Trout Fishing, Wing Shooting, and Still
 Hunting.
 Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY,
 SEAN, and points on the NEW JERSEY COAST
 renowned for SALT WATER SPORT AFTER FIN
 AND FEATHER.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipage taken free.

The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butteront Creek and Lake for
 muskellunge; the many branches and lakes of the
 Flambeau and Chippewa which teem with bass, pike
 and pickerel, never till last season fished by sports-
 men. Between Silver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ash and or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam yacht, sail and power boats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.

Steamers from Ashland to all Lake Ports.
 Send for Guide Book.

Sportsmen's Routes.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,
 VIA THE

Grand Rapids & Indiana RR

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly, or trolled a spoon
 in the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscalonge, Pike and
 Pickerel abound.

In no other stream east of the Rocky Mountains
 is the famous AMERICAN GRAYLING found in
 such numbers.

BROOK TROUT Season opens May 1.

GRAYLING Season opens June 1.

The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery
 of the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpassing
 the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attrac-
 tive train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

A. B. LEET, G. P. A., Grand Rapids, Mich.

Hotels and Resorts for Sportsmen.

Invalids' and Tourists' Hotel,
 BUFFALO, N. Y.

A new and elegant summer resort; overlooks Lake
 Erie and Niagara River, and is in the midst of beau-
 tiful parks. The Canada shore and the spray from
 Niagara Falls may be distinctly seen from its Tower.
 Trains run to the Falls every hour. Climate deli-
 ciously cool, equable, and invigorating. The cool lake
 breezes so temper the atmosphere that no summer
 day is too warm for comfort, while the temperature
 at night is appreciated by all who have sojourned
 here during the warm months.

What man with a family, having once been crowded
 into some smoky "sky parlor" in that hothouse of all
 times, places, and seasons, has not been continually
 thinking and chafing at the want of a more congenial
 and airy place to spend his vacation? Long Branch, but that
 has never again to repair to summer resorts! And yet
 with each returning season, comes the query, where
 shall we go? No place on this continent pos-
 sesses more advantages for the tourist, pleasure
 seeker, or those in search of rest and relaxation from
 the cares of business, than this hotel. Its accom-
 modations are of the most comfortable and elegant;
 its climate, 24, its cool, bracing and salubrious climate;
 the thermometer ranging in summer from 65 to 75
 degrees Fahrenheit. The attractions of the hotel
 and its environs. All these combine to render it the
 most desirable resort for those in search of relaxa-
 tion and rest. The architectural features and interior
 finish of the house are such, by good judges, to be the
 finest of any hotel in the world. Its furnishings are
 unique and superbly rich. Table unsurpassed. Elec-
 tric, hot, cold, Turkish, Russian, electric, needle,
 and other baths; billiard room, bowling alley, speak-
 ing pipes communicating from every room with the
 office; telegraph and R. R. ticket office, and all modern
 conveniences are provided. Advantages for fish-
 ing and boating are unsurpassed. Terms, \$3.00,
 \$5.00 and \$10.00 per day, according to location of
 room. Address,
 MANAGER INVALIDS' AND TOURISTS' HOTEL,
 Buffalo, N. Y.

Ashland House,

Fourth Avenue, corner of Twenty-fourth St.

NEW YORK CITY.

Rooms, per day, \$1 and upward. Room and board,
 \$2, \$2.50 and \$3. Popular, strictly first-class, cer-
 tain. One block from Madison square; eight
 minutes from Grand Central Depot. Cross-Town
 Line, from foot of Grand street, East River, to foot
 of 43d street, North River; 23d street Cross-Town
 Line from Erie R. R. depot; and the Fourth Avenue
 Line from 11th Hall to Grand Central Depot; ALL
 PASS THE HOTEL. Passengers from Jersey City
 take the Desbrosses street ferry, Desbrosses and
 Grand street car line to Bowery, and then Fourth
 Avenue line to 24th street.

H. N. BROCKWAY, PROPRIETOR.

Mount Julien Summer Hotel.

WILLIAMS & CO., 59 Water Street, New York, agents for the London and New York Compass Co.

SCHUETZENFEST

* The FOREST AND STREAM AND RIFLE AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union take pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rifle and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must belong to the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 19, 1878, to Mr. F. HARENBURG, Treasurer of the Sharpshooters' Union, No. 199 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. OEO. AERY, President.

United States Arms Revolver, 5 shot, .32 cal., nickel, each,..... 4 50

EVERY PISTOL WARRANTED.

EVERYTHING REQUISITE FOR SPORTSMAN'S OUTFITS.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old style, \$6.

Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhardt, Logan Co., Ill.

Dec 6 11

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore was would respectfully caution the dealers against laying in a stock of passable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade

FOREST AND STREAM ROD AND GUN

THE AMERICAN SPORTSMAN'S JOURNAL.

Terms, Four Dollars a Year.
Ten Cents a Copy.

NEW YORK, THURSDAY, JUNE 20, 1878.

Volume 10.—No. 20.
[No. 111 Fulton St., N. Y.]

For Forest and Stream and Rod and Gun. COPPERHEAD.

BESIDE our path and just ahead he lay,
The hated thing!
A base assassin in the sunny ray,
Colled, waiting for a step to come his way,
To turn and spring!

The coppery blotches on his flattened head,
The leering eyes,
And forked tongue, create a sense of dread,
But treacherous silence in the path we tread—
That we despise,

Alert in ambush on his devious trail,
More human like,
The rattlesnake with crepitating tail,
To give the warning signal will not fail,
Though quick to strike.

But *T. Contortrix* is a different beast,
'Tis well to know;
He's ever watchful for a fight or feast;
Of warning sound he never gives the least
To friend or foe.

And there he lay, colled, trembling in his rage,
A thing despised;
Grim murder couchant ready war to wage—
An enemy that time can never assuage—
Hate symbolized!

'Mong vicious things we classed him with the worst,
And ere he died
We taunted him as foe of man the first,
As foe of man by every man accused,
And crushed his head!

—J. C. BURNETT.

For Forest and Stream and Rod and Gun. The Nepigon.

WE found ourselves upon a very warm Thursday morning, late in July, speeding over the Northern Railway of Canada, en route for Collingwood, on the Georgian Bay, where the steamer Cumberland awaited us. Emerging from the heated, suffocating atmosphere of the cars, we landed on the Collingwood wharf at five o'clock, and met with a lively sense of relief—the sweep of the cool west wind that came fresh and strong from the Province of Kewatin, across some hundred miles of cold, clear inland seas.

Shortly after six o'clock we got under weigh and steamed out into the rather vigorous play of waves on the open bay. We enjoyed the freshness and novelty of the situation until certain uncomfortable qualms reminded us of one of the greatest of the multitude of ills that humanity inherits. We retired to our berth before night had laid nature's counterpane over the forms of drowsy life.

The early dawn of Friday morning showed us in dim outline the ghastly shapes that stud the channel to the north of Manitoulin, which the increasing light caused us to think resembled pretty closely the charming scenery of the Thousand Islands. Upon one of the little islets, a dark granite rock covered with bright green foliage, we observed one of the singular rites or conditions of sepulture that accompany the setting out of a forest child for the happy hunting grounds. Within the sound of the everlasting murmur of the waters we discerned an Indian grave that seemed to contain the bones of some noted chief, and near it, formed of bark and brush, the small hut of the watcher, wherein sat an aged Indian—the living watched and waited on the dead. The Indian mission on the Grand Manitoulin Island was among the first missions established in Upper Canada for the conversion of the heathen Indians, and, although doubtless this man had dwelt in the light of the gospel for many years, the old traditions of his race were strong within his breast, and the mystery of the later faith had for him nothing of the strength of his simpler belief in the Manitou and a spirit-land where the conditions of life were free from the pain, the cold and hunger that he suffered here, but not utterly changed and beyond his realization. There was meaning for him in the running, shady brook, and the whisper of the forest trees, and the music of falling water was in his heart; but there was no meaning in the splendor of the heaven preached by missionaries. His buffalo, and fish, and fields of waving corn would interrupt the grand choruses of the angelic choir, and without these things no Indian could be happy.

We passed from the Sault Ste. Marie Canal out upon the calm waters of Superior on the evening of Saturday, and before sunset the air on deck became so cool that one after another of the passengers donned warmer wraps, and we who

had so lately exerted our ingenuity to avoid heat were thankful to encompass our chilled bodies in all the top covering available. The stars came out looking bright and eager for a frolic in the clear depths above, and we Cumberland passengers, close huddled under the saloon awning, settled ourselves for a hearty chat, the nearest land far behind us in the gloom, the thudding push of the vessel alone disturbing the solemn tranquillity of the situation.

One of the passengers was an old-time H. B. *voyageur* whose stories were exceedingly interesting. In his early life he had made several voyages in charge of fur-laden canoes, freighted in the Far West, and bound for the ancient City of Montreal. Then all was solitude, rarely interrupted, from the Fort Range on the Red River to the St. Lawrence. Upon one occasion his canoe and freight were lost in crossing Black Bay (Lake Superior). He and his ten *voyageurs* were thrown upon the storm-beaten rocks near the mouth of the Black Sturgeon River. After four weeks of weary toil, half-starved and fainting, they reached a small post of the company only in time to avoid death. The night was passed in story telling.

In our three-days' companionship we had become tolerably well known to each other, and now that mutual study had diverted most of the interest from external finish, some of the few passengers began to long for the journey's end. For our own part we had just found our sea legs and would not have objected to accompany the steamer to Duluth. However, the captain informed us that we would reach the mouth of the Nepigon shortly after one o'clock on Monday morning. We shook off the hand of "habit" that bears so strongly upon bachelorhood, and, putting together our traps on Sunday evening, prepared to cut adrift.

At two o'clock in the morning the stoppage of the steamer and the hurried stamping and general excitement upon deck awoke us to the dim consciousness that we were to get up and dress. Obeying the impulse, and with only a half notion of the wherefore, we were soon shivering at the gangway, while the ship hands, seemingly in half delirium, furiously tossed our luggage into the boats alongside, cursing the while in the ordinary naval fashion. A surveying party in one boat and we, with their and our personal effects, in the other boat, were rowed away from the lighted ship into the fog and darkness of the morning. The discomfort of our condition was not lessened by discovering that our boat from long disuse was leaking sadly. After drawing out of the water some of the flour bags and sacks of bacon, and with much squeezing and gymnastic exercise, we succeeded in getting thoroughly soaked and out of temper, and, fortunately, in time managed to get command over the leak. The steamer dared not venture up the river on account of sand bars, so that we had a pull of about two miles to reach the wharf of the H. B. Co at the Red Rock landing, where we arrived after an hour's patient toil. The cry of a bitter, as he rose from the marsh and flew across our bow, alone disturbed our drowsy ascent of the river.

In the gray chill morning we stand upon the wharf shivering and even yet but half awake. Before us waved the mist-enshrouded river; the noise of the rapids above us sounds in our ears, together with the faint song of the boat's crews fast receding down the river. We try to realize that we are at last within the realms of adventure so graphically pictured by Washington Irving and Ballantyne, whose writings had strongly colored our young life's hope. We shiver with the raw morning air, and thankfully accept the invitation of the H. B. trader who leads the way into the company's store house. Here we occupy a couple of rough shakedown, slumberously thank our benefactor, and fall asleep. The sun is some five hours high when we are awakened by a sir in the store below us. The daylight discovers to our consciousness a strange looking bed-chamber, the walls and rafters hung with the varied assortments of a general store. After a plunge in the icy waters of the river and a substantial breakfast at the trader's house, we pitch tent on the high ground looking toward the rapids and Lake Helen. The bright sunlight falls upon a beautiful scene this July morning, and with a deep sense of thankfulness and chest expansion we open our lungs to the fresh breeze and our hearts to the bounteous good, and set about putting our house in order. Some Indians and two half-breeds are lounging about, and the hearty voice of the porter, a fine, muscular half-breed, comes ringing up from the store in laugh or loud jest as he holds forth to his customers, some of whom we saw coming down the river from a far off post an hour or two before. They looked exceedingly picturesque as they careered, shouting and laughing, down the rapids, eight or nine of them in one of the large canoes. They were company servants, and were returning from Norway House where they had delivered a load of supplies. As they neared the landing we walked down to meet them. They came in swiftly and silently with rather a bravado of speed to impress the two strangers, probably. However, they apparently took not the slightest notice of us. The moment the canoe touched land it was lifted out of the water, tipped up to relieve it of leakage, and on the shoulders of four Indians carried lightly up the bank and deposited in the boat-house. It is extraordinary the weight these Indians will "pack" across portages. During the survey of the Canada Pacific Railway there were no less than seven deaths on one portage, the result of excessive straining.

Day after day we fished with almost unvarying success, but as we had no means of preserving our catch we were content

to leave in the river all fish that we could not conveniently eat. Across the river from the H. B. store rise the perpendicular rocks that give the post its name, lying parallel with the river's course. They form a striking background in their dark solemnity shadowing the fresh green of the valley. It is a difficult undertaking to scale the bold front of the cliff; and for the pleasure of feeling the fresh breeze about three hundred feet above the water level we were incapacitated from exerting ourselves upon the following day.

The trout in the Nepigon range in weight from one-quarter to more than six pounds, and afford gentle exercise and excitement in introducing them to terra firma, especially if the water be rapid. Some distance up the river, trout are taken in great quantities by the Indians and with the most uncouth tackle; indeed, we were told that the common custom at the foot of some of the upper rapids was to attach a half-dozen bear hooks to a strong line and draw out from two to four fish at every cast. This is only at certain seasons. When the ice forms on the Bay at the mouth of the Nepigon many Indians with their families move down to the coast from the interior and catch through the ice salmon trout and white fish sufficient to keep them from starving during the winter. These, with rabbits and what they can buy from the H. B. store, form their food during the winter, with an occasional beaver and musk rat, and sometimes they are fortunate enough to shoot a cariboo or bear.

The rations of an Indian in the service of the H. B. Company are, three times a day, a double handful of flour, a small piece of pork, and occasionally a little tea and salt. They are not particular as to the latter article, and even when eating fresh meat do not grumble at its absence. Boiling the pork in a large kettle they mix flour and water into a thick paste which is then rolled into long strings of about an inch diameter, cut into three or six inch lengths, and boiled for twenty minutes with the pork. When all is cooked the contents of the pot are turned out upon a bed of balsam boughs, and with knife and fingers the *voyageurs* proceed to dine at their own sweet will, seated around the "pile." Not tempting, perhaps, still we have found ourselves able upon occasion to enjoy this rough meal. This should invest with fresh charm for the dyspeptic the pie crust that stomach-conscience has been driven to reject, through a perusal of Hall's "How to Live Long," or otherwise. No liquor is permitted to be sold to the Indians on the North Shore of Lake Superior, a regulation that is rigidly enforced. They are thus thrown upon their own resources to enjoy the aesthetic charm of intoxication, and they meet the necessity promptly with a horrible mess of chewing tobacco, R. R. R., or Perry Davis' Pain Killer, and water, a decoction that throws them into the seventh Heaven of delirium very speedily.

One evening at sundown, while enjoying our ease before the tent-door after a comfortable meal, we observed two canoes cross the river, each containing five or six squaws. The night was just of the temperature calculated to lend a charm to indolence, and to stir up in one's memory the shadows of songs and music that we love. Languidly we watched the strangely freighted *chemans* as the rapid strokes of the paddlers hurried them across the river. They entered the trees upon the low bank opposite, and were lost to sight. Dimly conscious that this was something unusual and outside our experience of the weaker vessel, European or American, to be thus moving in amicable concert unless for some very definite purpose, we smoked on and waited further developments. We had not long to wait, for almost immediately after their disappearance there came swelling across the water about as mournful a chant or dirge as it was ever our fortune to hear. Stronger and stronger grew the tones of the chant as the passion of the singers seemed to awaken, and now, full, passionate and mournful, into the growing night, sounded the voices in a melody that might almost have been the wail of the lonely Irish widow and her friends over the corpse of "Con, the Shaughraun." In a half hour or thereabouts the canoes recrossed the river, the paddlers keeping up the while an alternate sobbing and wailing that positively seemed heart-breaking. We ascertained from one of the H. B. officials that the squaws had been lamenting the death of two children carried off by fever some days previous. Whatever the moving cause of this manifestation of grief, it was saddening to witness and had the effect of sending us to our blankets with the uncomfortable sensation that visible misery always inflicts upon the innocent beholder. We ventured no further up the river than to Lake Helen, where capital trolling may be had for pike and pickerel, etc. The expense of the trip and want of time alone deterred us from hiring a couple of Indians and exploring Lake Nepigon, rather more than forty miles from Red Rock. The lake is said to be beautiful; is dotted with innumerable islands, and from the depth and number of its bays is perplexing to the inexperienced navigators. The Indians about the Red Rock Post were, without exception almost, good natured, simple and honest, with a wonderful faith in the prowess of the white men, whom they look upon as magicians, possessing an extraordinary agency for good or evil. They can, with a few exceptions, be trusted implicitly. We were told that in 1872 a cache of provisions had been left in the woods bordering Long Lake, about sixty miles from Lake Nepigon, for the use of a surveying party who were expected to arrive at the cache some time in September, but for some reason failed to follow the route originally marked out. During the winter months the Indians in the neighborhood were unable to kill any game on account of the

great depth of snow, and were consequently in a state of starvation for nearly two months, subsisting on the scantiest gleanings, and yet, although destitute and dying, they refrained from touching a morsel of the food that lay hid under a mound of logs, moss and snow, in the midst of their fever-stricken lodges. The provisions were never removed, but allowed to mold and rot away the following summer.

None of these Indians speak English. Some of them have mastered the trading vocabulary of Franco-Indians that is used by the officers of the H. B., but which is as unintelligible as Chippewyan to the ordinary speaker of English. We would gladly have remained for a month longer on the beautiful Nepigon, but our leave expired early in August, and very regretfully we bade adieu to the pleasant scene of our holiday, hoping at some future time to return with more time at our disposal. It was a cheap trip, and we felt simply reimbursed for the outlay in greatly improved spirits and health.

R. ANDERSON.

Fish Culture.

SHAD HATCHING.

WORK OF THE UNITED STATES FISH COMMISSION AT HAVRE DE GRACE.

QUITE near the head water of the Chesapeake Bay lies the little island of Spesutia, near to where the Susquehanna and Elk rivers empty into the bay. Some six miles from Spesutia is the town of Havre de Grace, in Maryland. Just there, at the narrows, in a quiet channel, are anchored the spacious barges which serve as the hatching houses, the dormitories and offices of the U. S. Commission. At the invitation of the Secretary of the Smithsonian Institution, the Hon. Spencer F. Baird, and of the Assistant Commissioner of Fisheries, Prof. J. W. Milner, a representative of this paper paid, one day last week, quite a lengthy visit to the hatching establishment. Now, theoretically, your writing fishculturist may be quite well informed, but really, practically, he may be said to know nothing at all. Such confessions are always the wiser to make at once. It is much better for one whose profession it is to write about what he sees, when in the presence of experts, to declare his utter ignorance, and beg for the most rudimentary information. The art of the journalist—carried somewhat to an extreme—is to bring into prominence—into the foreground, what he does know, and to expatiate on that alone, and with literary cunning to conceal his ignorance of what he does not know. Now, as fish culture in its grandest, most comprehensive plan is carried on near the island of Spesutia, it will be wiser for us to go as far as possible into careful details and tell plainly, in popular style, if you please, just what we did see, and to endeavor to explain as clearly as possible how it was all done.

We believe we are only giving to T. B. Ferguson, Esq., Fish Commissioner of Maryland, his due, when we state that with this gentleman first originated the idea of floating fish breeding establishments. Before Mr. Ferguson conceived the present plan, when spawn was taken it was carried, of course, to water near the shore, and those employed in the business were not in close connection with the hatcheries. Time was lost in transferring the fish eggs, and many inconveniences arose. The present method is to have floating houses on barges, where all the necessary apparatus is ready at hand. Here all the details of sending out parties for collecting the eggs, of hatching them, of distributing them, can be systematically carried on. The work, then, no longer straggles; there are no loose ends. Everything is directly under the supervision of the chief. Another most important point is that these fish hatcheries become mobile. The whole establishment can be moved at an hour's notice. Portions of this same fish hatching station were in North Carolina early this year and were removed to Maryland in May. If necessary, any fish which might be thought worthy of propagating can be first taken in extreme southern waters and followed up with the season to the North. It is this power of locomotion which is so valuable. This flying fish establishment then (we want to be serious and intend no jokes) has two steam launches attached to it. In the present case they may be too light to move all the barges, but their use is to take out parties to the fishermen who capture the shad, and to carry the fish to certain stations where there are railroad facilities. Starting, then, with these floating barges, another inspiration has come which, we trust, may be carried into positive practice. It is the natural sequence of these first attempts. Now, the question is this: Would it not be less expensive and much more convenient to have a single government vessel of convenient size, which could go where it wanted to, having on board of her all the apparatus for fish culture? As mechanical adjuncts now play a prominent part in fish culture, such a steam vessel would have her engines ready for such work. Such a plan has been proposed, and, doubtless, before long, the method first suggested by Major Ferguson on his own small steamer will be carried out in all its completeness.

The entire object of the United States Fish Commission being that of obtaining the largest number of ripe fish, the locality near Havre de Grace has been especially favorable for this purpose. About May the shad run up Chesapeake Bay, making into all the rivers emptying into it in order to spawn. In the neighborhood of Spesutia, where the Susquehanna and Elk rivers flow into the bay, the U. S. Hatching Station has been placed, only some mile or two from the best fishing grounds. In the afternoon innumerable gilliers set out on their labors to get the best positions, in order to commence their netting some short time after sundown. Then there is bustle and work at the hatching house. A small steam launch is in readiness, and out she goes, dragging after her some seven or eight boats, the most of them having two men in them who are attached to the station. The object is to be on the ground just as soon as the fishermen cast their nets. In a long line, of some four miles or more, are the fishermen, observing a certain fixed distance between them, so that when their gilling nets are in the water they shall be far enough apart from one another so as not to foul. The steam launch nears them, the tow-rope is cast off, and away paddle the spawn-takers.

Now, as shad sell when plenty at fifteen to twenty cents a piece, it is quite an object to the fishermen to receive fifty

cents from the assistant commissioner for a ripe female shad. A half a dollar is then the award for a gravid female, providing her eggs are in good order, but nothing is paid if she is not fruitful. The milt of the male is not paid for. Now, a fisherman may take from his nets quite a number of fine female fish, and not one of them may produce eggs exactly good for fertilizing. The eggs may be too hard, the fish will not strip, or the spawn may be in that peculiar condition which is called "rotten." As to the male shad, at certain seasons they are hard to procure, and are quite as much in demand for their fertilizing milt as are the eggs of the female.

Off, then, go the spawn gatherers, remaining in the neighborhood of the gilliers. The launch occupies a position in the immediate neighborhood, ready to pick up the boats belonging to the station when they are all through with their work, or to start off on her own account to some group of gilliers, which may be too distant for the boats of her own party to reach. There is no end of laudable rivalry in collecting the eggs, and the man or boat who can bring together the most good eggs is the hero of the night. The night is coming down now, fast on the bay. The gilling boats all lie in a long line, and, as yet, not one of them has put overboard his net. The fishermen are waiting for some one of their own party to begin. No one will take the initiative. At last, one boat, away off, far down the line, lowers carefully his lantern, for each end of the gill-net has a buoyed light to it, for otherwise at night they could not tell their own nets, and the light dances on the rippling waters of the bay. Then all follow his example, and in a few minutes, at regular distances, a hundred soft lights are floating on the waves. The gill-net, a wall of meshes, as it were, maybe a hundred fathoms long, floated with corks, goes down with the stream, and the shad heading up stream from the channels, making for the flats, get caught in it. Now the gilliers row up and down their line of nets, taking out the shad. The spawn-catchers make for the men who are tending their nets and secure the fish. In busy times, when the shad are running free, one boat will serve about four gilling boats. The cry all along the line is: "Got any spawners? I say, I want a milter."

The spawn takers thus ply their labors in boarding the fishermen. But their labors do not end here. Just as soon as the ripe fish are procured the stripping must take place, and the milt must be had. One milter to three spawners may do for a pinch, but an abundance of the male fertilizing element, one for one, is the better. The manipulation of the eggs in the boat must be carefully attended to. Though it may storm and blow, and the rain may come pelting down, it is the eggs which must be cared for. Professor Milner has given us about the actual process. Having secured the milt, which is taken in an almost dry pan (the pans most in use being those which have a granite glazing), the spawn is introduced. At first it is a gentle mixture, with but a few tablespoonfuls of water added. This is allowed some twelve seconds of repose. Then more water is carefully added, taking always heed that the water shall not be poured with any violence on the eggs, as the concussion would kill them. This is done by placing the ladle on the side of the pan and letting the water flow gradually. Then there are some twenty to twenty-five minutes of quiet allowed. Now the water is decanted and fresh water is added. After a while a perceptible increase in the size of the egg is apparent. The egg swells about 2-20ths in size, or almost fifty per cent. If the eggs are felt carefully with the fingers when first introduced, before fertilization, they are scarcely perceptible to the touch; but when in contact with the spermatozoa of the male, as they are made fruitful, the eggs are granular and feel on the tips of the fingers like shot. This, in practical fish culture technology, is called "the rising" of the egg. The vitality of the spawn and milt under the abnormal condition of stripping, is both an interesting and important question. For practical purposes, the eggs are believed to retain their vitality for half an hour, the milt for some five minutes. Of course, when eggs and milt are within a dead fish—one recently captured—the time may be longer. It may be understood from this how active the spawn takers must be, not only in collecting, but in fertilizing their eggs. About 25,000 is a good yield of eggs from a ripe female, but 20,000 is an average. The milt, from what is called a good "squirt," is about two thirds of a drachm. One curious fact is that in the day time no good spawners can be had. They must be caught at night. Can this arise from the fact that the fish withhold its spawn or that it is not in proper condition in the day time? These questions, we believe, will be solved hereafter.

Holding off and on, the steam launch hovers in the neighborhood. After a while the lights on the nets, which have floated away down with the tide, are being clustered. Some two or three hours—perhaps all night—has been passed on the waters. Now the fishing is over, for the gilliers are putting out their double lights, and having collected their harvest, are preparing for the run home. Now the launch sounds the signal by flashing their lanterns, which are half red and half white. These they blaze all around the points of the compass. Here is one right on our bow, two on the port side, and the rest all scattered. The steam launch herself has been busy, and the Assistant Commissioner, who is on board of her, though the water is rough, has clambered into a half dozen boats and has stripped several shad, and has been fortunate enough to secure some fine spawners and milters. One by one the spawn tenders' boats have been picked up. A long line of tows is made, and away goes the little launch, doing her best, her screw swirling through the water, for the great shad nursery. It is pitch dark. The gleam of the lantern shows 11 o'clock when the narrow channel is threaded, and the steady puff-puff of the little engine on the hatching barge is heard. In a minute we are tied up fast. The boats are made secure, and the tired men, who have been rowing for three hours, emerge with their buckets and turn over the eggs to Mr. F. N. Clark, the expert, who is all ready to nurse the eggs and produce the fish.

The hatching barge has an engine which keeps on working a pump night and day, and she has also a mechanical attachment for a purpose we shall presently describe. Along both sides of the barge, under cover, are the cone-shaped hatching cans, due to Mr. Charles Bell and Mr. Fred Mather, an account of which was first given in the *FOREST AND STREAM* (See report of U. S. Fish Commissioners 1874-5, p. 372). Briefly described, these are cones in which a steady flow of water enters at the apex below. The wider portion of the cone is protected with a rim of wire. This allows the overflow of the water to enter into a circular gutter and to pass off. In these cones the eggs are placed. An up movement of the eggs, a quiet and gradual one, caused by the upward flow of water, takes place, of not more than six or eight inches. The eggs are coming up all the time from the centre and falling, constant motion being necessary for the

hatching of the shad eggs. There are seventeen of the hatching cones always going. On looking into these cones one sees most conspicuously the bad eggs, which are white, opaque and floccuous, with a fungoid growth. A person ignorant of such things would imagine that the bad eggs were in majority, as the good eggs, perfectly sound and looking at first like transparent pearls or water bubbles, escape the eye. The bad eggs, being lighter and rising to the surface, are the more conspicuous. This is really not the case, as the good eggs, in much larger quantity, being rather hard to make out remain at the bottom and escape detection. All day and all night the water passes incessantly through the cones. The bad eggs are being constantly taken away by a net skimmer. The hatching of the eggs depends very much on the temperature. At 56 deg. fish appear from the ninth to the tenth day; at 64 deg. from the fifth to the sixth day; at 72 deg. from the third to the fourth day. When the fish break the shell and swim about with their eyes, Professor J. H. Rice gives their measurement to be $\frac{3}{4}$ of an inch. The little fellows are wonderfully active and skip and dart about in all directions, the water being alive with them. To this hatching house, outside, protruding from the hull, are the levers to which the Ferguson hatching buckets are attached, a full description of which, with cuts of the apparatus, has been already placed before our readers. (See report of Commissioners of Maryland for 1878). The principle is that of making the movement of the eggs by means of the receptacle itself. By cams and levers the buckets of iron, protected at the bottom with gauze, are lifted up and lowered in the water. Under certain circumstances the Ferguson method could be used with marked advantage, and when, at the present station, the cones were full of eggs, the Ferguson buckets were employed with marked advantage. This apparatus marks a new method in fish culture, though it may be capable of further improvement. Though perfectly simple in construction, it might be liable to the objection of too great wear and tear on the buckets, and consequent loss of fish by accident. But the Bell and Mather cone is also capable of some amelioration, such as the automatic running off of the young fish as soon as hatched, which would prevent their being bruised by being drawn by the current of water against the wire rims. Such an improvement has been made at the U. S. hatching house. It is believed that the greatest benefit could be obtained by the use of glass instead of copper-lined cones, and it is quite likely that before long this change will be made. The real advantage will be that the whole process can be seen. The main point of excellence, putting aside ease in manipulation of the Ferguson jars, is that the transparent medium shows everything to be visible. It may be stated in very positive terms that the United States has developed no end of inventive skill in devising simple and cheap apparatus for fish hatching. We are inclined to give great prominence to the hatching cone due to Bell and Mather, as having produced the most remarkable results, though at the same time great credit must be given to Mr. Ferguson for the apparatus he has produced.

The capacity of each cone of hatching apparatus is some 150,000 eggs; of the Ferguson hatching buckets, some 100,000. After hatching, the young fish, when transported in quantity, will live some eleven or twelve days when due precaution is taken. After that time they die, probably from starvation. When in small quantity in an ample supply of water, their lives are considerably prolonged. This matter of transportation, thanks to Professor Milner, having been carefully studied, quantities of fish in cans for shipment are thus graduated: For short trips of only a few days, some 25,000 young fish can be put in the ordinary shipping can containing fifty gallons of water; for moderate distances, 16,000 fish; but for long trips, such as to California, only some 10,000 fish. The duties of the gentlemen attached to the commission do not consist alone in securing spawn, but in their distribution. The person who has been collecting eggs all night may be required to-morrow to take charge of a hundred thousand fish for Texas. Then two men have the little fish under their care, and may be said to wet nurse the fish during the whole trip, changing their water, guarding them from accident, until finally they give their foster fish their liberty in some far off stream which may find its way to the Pacific Ocean. The eggs this year collected near Havre de Grace have been something like 13,000,000, by far the largest collection of shad eggs ever made. In one day almost 2,000,000 were collected. The total hatch of fish has not yet been made up. In Pamlico Sound, this season, some 10,000,000 eggs were collected. The largest number of shad stripped in a single night was 97 females, which were fertilized by about as many males. Shipments have been made this season from Havre de Grace to Iowa, Texas, Arkansas, Louisiana, Georgia, South Carolina, Illinois, Indiana, Kentucky, Tennessee, Maryland, Virginia, Missouri, Ohio and Mississippi. This week the third shipment made by the government was sent to California under the charge of Mr. F. N. Clark.

To undertake this large work, by far the most important ever undertaken, quite a large *personnel* is necessary. Under charge of their most thorough chief—Professor Milner—as many as forty men were at one time employed; at the conclusion of the season it was some thirty. It must be understood that there are parties being constantly detailed, who are traveling over the country distributing the fish as soon as they are hatched. While the practical work is going on, full opportunity is given to students who are desirous of making scientific research. Professor J. H. Rice, of the Hopkins University, whose microscopical work on the report of the Commissioners of Maryland on the smelt (1877) was of such interest, we found hard at work with his instruments, studying the wonderful embryology of the shad. Of course the fullest opportunities were afforded of examining the egg and fish in all its stages of development. From Mr. Rice we had the curious fact that monstrosity, so common in the trout, was exceedingly rare in shad, but one single case having ever been presented to his notice. It became interesting for us to form some idea of the growth of shad, comparing them with the growth of fowl. In data we thought would be advantageous if obtainable, in order to show that of all creatures the growth of fish was the most astounding. If such growth was comparatively expressed and well understood, we should suppose it would go far to allay popular impatience. People—stupid people we must say—might be better satisfied then in allowing fish to grow. Professor Rice, having weighed some fish just from the egg, comes to this conclusion: that while the difference between a chick just from the egg and a full grown pullet would be about in the proportion of 1 to 100, in a shad it would be 1 to 19,000; in other words, that a shad which would weigh one grain when free from the shell, when matured would probably have increased 19,000 times. It would be exceedingly curious to follow out some researches of this kind, and as Professor Rice has kindly promised to make some drafts of young shad for us, we trust to be able to present to our readers the actual results of his labors.

It may be positively asserted that there has been no work of any kind undertaken by the General Government which has yielded such remarkable results as that of the Fish Commission. The benefits obtained by the country have been very far beyond the small amount of money expended. Under the careful and systematic management of the Commissioner-in-Chief, Professor Spencer F. Baird, aided by such a zealous lieutenant as Professor Milner, work of the most thorough and comprehensive character has been accomplished. It has taken, then, but a very few years to create an entirely new science, and from speculative theory to have produced the most practical usefulness. The position held by the Fish Commission was fully recognized a few days ago by a visit paid by Mr. Hayes to the hatching works off Spessutia Island, where, for the first time in the history of the country, a President of the United States received explanations in practical shad hatching.

FISH CULTURE IN NEW HAMPSHIRE.—*Manchester, N. H., June 1.*—I sent you a month since a copy of our annual report to the G. W. Council, which was necessarily prepared before our work was entirely completed, in order to have it printed for the June session of the Legislature. Since then we have completed our labor for the year by planting 6,000 land locked salmon in Sunapee Lake; 4,000 in Star Pond, Springfield; 5,000 in Silver Lake, Madison, and 5,000 in Merry Meeting Pond, New Durham, and have also placed 5,000 blue backed trout (*Salmo aquapa*) in Sunapee Lake, and 25,000 in Lovewell's Pond, Wakefield, and the same number in Cook's Pond, Brookfield. The above are all natural trout waters, and we hope to get favorable results in due season. We have also prepared, with the aid of Commissioner Brackett, of Mass., plans for new fishways on his pattern at the two dams on the Nashua River in Nashua, to be followed up in Massachusetts by fishways at Pepperell and Groton, so that the young shad and salmon, which the Mass. Commissioners have planted in the headwaters of that river at Lancaster and Clinton, can return to their starting point. We have also matured a plan for a Brackett fishway at the Amoskeag Falls in this city, for which ground will be broken next week, of ample width and gentle slope to permit the ascent of shad as well as salmon. The latter fish have ascended the old Foster fishway last year in large numbers, but we have doubts of its practicability for shad. I saw a fine shad in the Laurence fishway on the 20th ult., two-thirds of the way up, in company with a number of alewives, bass and suckers, and an innumerable multitude of humprey eels. We have reports to-day of a fine salmon, estimated at twenty pounds, seen four miles above here at the mouth of a once celebrated trout brook, now nearly depopulated. This fish was above all the dams with his way open to the Pemigewasset, where we shall probably hear from him in due season. We are making good progress in excavation of the storage ponds at the State Hatchery at Livermore Falls, and preparing our nets, boats and lines to capture spawners by and by, and are accumulating a stock of trout for breeders.

SAMUEL WEBBER.

AN EARLY RECOGNITION.—*Land and Water*, in its last number, acknowledges the receipt of a letter from our well-known fishculturist, whom it calls *Maitre*, which communication, as it is dated "Newark, N. J., Feb. 11," must have taken not quite three months to reach England. Possibly our much esteemed friend, Fred Mather, Esq., will keep on writing to *Land and Water*.

ILLINOIS.—*Charleston, Coles Co., June 12.*—Fish Commissioner Haines put 75,000 shad, eight days old, into the Embarras River this morning, two and a quarter miles east of this city. Mr. Haines thinks shad will do well in this river because it is fed principally by springs.

J. B. D.

MINNESOTA.—The State Fish Commissioners have put 5,000 brook trout in the head waters of the little Iowa river this spring.

V. A. N.

APPRECIATIVE MISSISSIPPI.—*Vicksburg, Miss., June 8.*—*Editor Forest and Stream:* Please return thanks to the Hon. Spencer F. Baird for the prompt manner in which he complied with our request in stocking some of the Southern streams with shad, notably, Yallowhusba, 120,000; Cold Water, 120,000; Sun Flower River, 120,000; total, 360,000. All placed nicely and in good condition. We also thank him for his promise to assist us in building and stocking a hatchery here for the propagation of California salmon this coming fall.

MARONER.

EELS IN MICHIGAN.—We venture to print the following extract from a private letter to the editor of this paper from Supt. Geo. H. Jerome of the Michigan Fisheries Commission:

"At present I am terribly busy in the labors and anxieties of our annual eel campaign, having already captured and removed into our State from the Hudson at Troy, in the neighborhood of 500,000. Our people will have eels—they are enthusiasts—yes, more; they are monomaniacal on the subject of their introduction into Michigan waters, and we have to humor the disorder. Whether it shall prove fitful or chronic I dare not prophesy."

Natural History.

PET SKUNKS.—There are few animals more beautiful than the skunk, although they are "very desaving," as the Irishman said when he attempted to pick one up in the road. But for one trait they would make pleasant pets. That there are immaculate skunks, our correspondent, who writes below, abundantly testifies:

A few months since the writer noticed at a herdsman's camp in Texas several skunks playing around the hut. "You needn't slope 'em, they're all doctored," gracefully explained my host. "How do you do that?" "We just take out two little sacks when they're pups," quoth he, taking up one and showing a minute cicatrice each side of the anus.

These innocuous skunks wandered around the camp foraging on whatever they could pick up, and repaying their protectors by consuming beetles, cockroaches and spiders without number, and, as the herdsman said, keeping away all snakes. They made their nests in little holes in the corner of the hut, and lived in gentle amity with the dog, who seemed to regard them with disdain.

One was given to me and I brought it to New York in a basket and turned it out in my back-yard, where it soon dug a hole

and a covered way into the adjoining yard and drove away the cats from the neighborhood. At eventide it could be seen prowling about daily, picking up bugs and looking for bits of meat. When playful it would elevate its big flag-like tail and strut up and down the path with the manners of a black and white turkey cock. His favorite food was a fresh egg. If given to him whole he would carry it to the edge of the stone wall, and then taking it in his front feet, pound it on the stone until he had broken a hole in it, and then would put in his nose and eat the contents. Unfortunately about this time I read Col. Dodge's "Life on the Plains," and the numerous instances there given of hydrophobia following the bite of the skunk lead me to doubt my pet, although I handled him freely and he had never attempted to bite. I did not care to experiment further, and so presented him to the Aquarium, where he still leads a happy life.

WHITEHEAD.

AN AMERICAN JURASSIC MAMMAL.—The first mammal ever found in American rocks of Jurassic age has just been described by Prof. Marsh in the *American Journal of Science* for June. The remains preserved include the greater portion of the right lower jaw, and one of the teeth is still in place in the socket. *Dryolestes priscus* was about the size of a weasel, and was apparently a marsupial allied to the existing opossums. The fossil was found in the Atlantosaurus beds of the Jurassic of the Rocky Mountains, and the associated fossils are mainly Dinosaurs.

ANOTHER KIRTLAND WARBLER.—Our correspondent, H. Ernst, writes us from Cleveland, Ohio, under date of May 4, saying:

"Last evening Mr. John Hall, of Rockport, near here, shot a fine male specimen of that rarest of rare warblers, the Kirtlands. This is the third instance, if I am not mistaken, of its having been taken in the United States."

CURIOUS, IF TRUE.—The Springfield (Mass.) Union of June 10, says:

"A most singular affair recently happened near Lynchburg, Va. As Col. A. H. Fulkerson was riding over his farm he was attacked by about one hundred swallows, who assailed him with great chattering and pecked away lustily at his face and clothing. He was at first amused at the puny assaults, but the wounds which they inflicted on his face and neck convinced him that he had nothing to laugh at, and he barely escaped with his life. It is feared that he will lose the sight of both eyes, and his nose is so badly mutilated that, in all probability, it will have to be amputated."

If the statements in this extract are true, the case is a most extraordinary one, and deserves investigation. Do any of our Virginia readers know anything about it?

MORE TESTIMONY ON THE OLD SUBJECT.—A correspondent who signs himself "Prairie," and who writes from the Creek Nation, Indian Territory, confirms by his experience what other Western contributors have so often asserted in these columns about deer burying their horns. "Prairie" has hunted deer in New Mexico, Colorado, Nebraska and the Nation, and had never heard of deer burying their horns until he read Mr. Cassel's letter in the columns of *FOREST AND STREAM*. Our correspondent believes that there is a wide difference in the time of shedding, and states that on the 11th of May last, when hunting cattle, he rode up in one day twenty-seven deer, two of which still carried full horns. We give the remainder of this interesting note in "Prairie's" own words:

MUSKOGEE, Indian T.

EDITOR FOREST AND STREAM:

Hunting is done here in the saddle. Deer are to be found in the prairie branches and sloughs, and seldom go to timber for cover, except in winter or when started from their range by the gun and dogs. Their horns are to be found on their grazing grounds, near their cover, where they come out at night to seek grasses along the spring branches. I have shot deer under a lamp at night, and having failed to kill my game outright, I went to the spot in the morning with my dogs and picked up a full head of horns, dropped by the sudden start of the animal by the discharge of the gun. I have also seen deer drop their horns on the velvet, and have been informed by old Indian hunters in the latter case they eat them; but I have yet to be convinced that they ever bury them. If any of your numerous readers wish to see deer horns, or enjoy a rare chase, let them come to the Indian Territory.

SPARROW AND STARLING.

CHICAGO, April 27, 1878.

DEAR EDITOR: I am glad to see that some of our naturalists can speak a word for the English sparrow, even though he may be a trifle pugnacious about squatter rights. When a boy, through a mistaken prejudice, I have robbed their nests, trapped them, and when old enough to carry my first gun, have shot them by scores. Some of the farmers gave us premiums for taking their eggs, while others gave us a good thrashing for our pains. This, combined with an occasional thrashing at home for torn pants, jackets and shirts, while shinning up trees for the nests, soon taught us that birds' nesting was a losing game. At one time we made sparrows pretty scarce, so vigorous was the war we waged against them. I think it was the winter of 1856. A very mild one, and in early spring the gardens were overrun with snails, grubs and caterpillars, and every other squirming thing that attacks vegetables. What a time we boys had of it! It was snails and grubs from early morn until dewy eve. When not in school we were picking, picking, until we were nauseated, yet everything green was alive with these parasites. Cabbage, broccoli, garden turnips, asparagus, kale, cress, radishes, in fact everything green, was more or less eaten, while the strawberries were ruined. The currant bushes hung in festoons of caterpillar life, while the apple blossoms had been eaten off so early that the fine summer apple crop failed. Did not we boys curse our folly as day by day through that season we had to take our pan of salt and dose these "critters."

How we wished the sparrows had been let alone. I need not say it was not healthy for a boy to be seen hunting for sparrows' nests during that summer and the next spring. Since that time I have had many opportunities to see something of sparrow life, and though sometimes they would help themselves to the currants, yet oftener we would see them bringing grubs or young caterpillars from the trees.

I remember at one time our beautiful lawn was made unpleasant and unsightly by numbers of large worms continually casting up hills on it. It was fun to see a little cock-sparrow pounce down on these

long worms and pull as for dear life, never giving up until he bore off the prize wriggling and squirming to a nest full of open mouths. I believe many other birds are more destructive to vegetation than the sparrow. The bullfinch—indeed all the finches—is destructive to all kinds of buds, while even the red-breast is a very scamp when cherries are ripe. That there is a great deal of antagonism between the sparrows and some other birds I never dispute; they will hold to their own and fight fiercely before giving up. But for fifteen years I have never knowingly shot a sparrow. I think them too useful to want a little spite upon, and don't want to see them driven out because they are important birds.

To correspondents from Texas: do the starlings, by all means. They are handsome birds, and from personal knowledge I would say are useful, too; they are food of insect life—worms, snails and grubs. I have seen a flock of fifty picking around the sheep and cows; have seen them industriously working through the thick wool on a sheep's back to pick out ticks, jumping from one sheep to another, while the sheep were quietly grazing; or lie on the cows you would find a starling on the back of every one in the pasture.

They are not pugnacious, but are very difficult to keep in confinement, because they are very wild; but if taken from a nest quite young can be tamed to stay around the house, coming to your call. My mother once raised one that had fallen out of the nest. Even after it had grown and mated and built its nest in the trees in front of the house, if mother was seen at the front door or on the lawn the bird would instantly jump for the topmost branch of the tree and scold out its fine note-like note of greeting. Mother had only to say, "Pretty Jack," when down he would start, circling around her head, uttering short clear notes expressing his joy; but though he knew us all, to no one else would he act in this manner. Every returning spring would he greet mother, until one day some one shot him. He came to the old tree badly wounded, sat on the top twig, uttering short, piercing notes to call us out. When he sailed down on the grass mother picked him up, and in a few minutes he died in her hands. The bird was the handsomest starling I ever saw, and I have counted them by thousands. Mr. Editor, it may seem foolish, but it is a fact, that when "Pretty Jack" died we all felt we had lost something that had given us a great deal of pleasure in our daily life, even though he was only a handsome starling. Yours, respectfully,

NORMAN.

THE MIGRATORY QUAIL AT HOME.

MADRID, Spain, April 20, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have read with much interest several articles which have recently appeared in the *FOREST AND STREAM* respecting Migratory Quail, and thinking it might be acceptable to you to know something of them and their movements in this part of the world, I beg to offer you a little information. This bird is known here as the *Codorita* (Latin, *Tetrao codorita*), and resembles the American quail very much, being, however, of a much lighter color, and only about one-half the size. Its habits are identical with those of the American quail, except its regards its semi-annual migrations. Its winter home is in northern Africa, in the plains south of the Atlas Mountains, whence it takes its departure in large bodies in the month of April, crossing over to Spain at points from Tarifa on the Atlantic coast to Cape St. Martha on the Mediterranean in the province of Alicante; and their flight occurs generally at night and near the time of the full moon. If the wind should be strong from either the west (Poniente) or from the east (Levante), at which time they seek the narrower points between Africa and Europe, near Gibraltar, to cross. They usually alight upon some hill or mountain, where they rest one day, when they again continue their journey en masse and in such a complete manner that the following day not one can be found. Their next resting place is on the northern slopes of the Sierra Morena Mountains, from whence they descend to the plains throughout Castile, Aragon and Estremadura, and scatter for feeding, and remain until the young birds are strong enough to bear the return journey to Africa in the months of September, October and November; but this is accomplished in smaller detachments than during their entrance into Spain. Stray birds may be found all the year, both in Spain and in Africa, but not in numbers sufficient for sport out of their regular season. They are hunted in this country with the old Spanish pointer (not one in a hundred, however, being guilty of any proper field training), are shot sitting, caught in traps and slaughtered publicly in any manner possible by wretched pot-hunters who have no idea of what true, manly field sport is, and, as there are no game laws in Spain, were it not for the beneficence of an All-Wise Providence in causing these periodical migrations there would be no such thing as a game bird to be had in all this land for the invalid, or the epicure. Were it not that I fear I have exhausted your patience already I could give you some idea of the capital shooting, boar hunting, etc., to be had in Morocco, twenty to thirty miles from Gibraltar; but, basta! I will leave the pleasant theme, and if I have told you ought of interest I am pleased, and you can say with the poet, "That old man went back to his old wild and lived on grass and vanished, and his book came down to me."

Very truly yours,

ORTIZ.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUESDAY, JUNE 11.—Four ruffed grouse, *Tetrao umbellus*, born in garden; one white rabbit, *Lepus cuniculus* var. *albino*, presented; one spotted cavy, *Caviarys jaca*, presented; one milk snake, *Coluber obsoletus confinis*, presented; one mule deer, *Cervus macrotis*, born in garden.

A FREAK OF MEMORY.—*Nashville, Tenn., June 5.*—A man living in this city received during the war a severe wound in the head which affected his mind. Upon a close examination by several surgeons, it was decided to perform an operation, with the hope of relieving the sufferer. As the case was a peculiar one, the operation was performed at the medical college before a class, the operator at the same time lecturing upon it. The poor fellow was not benefited, and since has been subject to violent attacks of pain and delirium. Last night, during one of these paroxysms and in the presence of one of the surgeons who assisted in the operation, strange to say, he repeated *verbatim* the lecture delivered at the time, although several years have elapsed.

J. D. H.

This instance has many parallels in medical and psychological annals equally curious. We recall a well authenticated incident of an ignorant servant girl, in her delirium reciting *verbatim* whole pages of Greek and Latin, which she had casually overheard read aloud while she was sweeping in the mornings. From facts of this character it is argued that we never really forget anything.

FLY TIME.—The New Haven Register says:

The "Buck Fly" is the heading of an article in a sporting paper. We must confess that in all our experience with flies we have never been able to tell a buck fly from a doe.

The meat favorable field for enlightenment is a cheap restaurant. Our friend with proper application will soon be able to recognize a dough fly when he sees it.

YACHTING NEWS.

EMPIRE YACHT CLUB REGATTA.—The regatta of this club, June 18, proved unsuccessful on account of light winds, and will be sailed again. There were a large number of entries.

EASTERN NEWS.—*Boston, June 15.*—After trying for several days, the clerk of the weather finally succeeded in giving us one fine one throughout, and that was yesterday. The *Halcyon*, Mr. Brooks, has left for Swampscott, where she is to be this summer. *Fleur de Lys* came in last evening at about six o'clock; boats out to tow the last hundred yards; Mr. Boucchault and son on board. *Brenda*, Mr. Little, anchored off the flats, fitting for a short cruise to Provincetown. *Shadow* preparing for race on the 17th, and has a new set of sails, which, however, the owner, Mr. Bryant, is, I understand, not satisfied with. *Shadow* has always had a good record. Let us hope she will keep it up. *Narragansett*, *Thistle*, *Nautilus* and *Ianthe* are off Rowe's wharf. There is to be a rendezvous of the Eastern Club off Swampscott the 17th, and race at Marblehead, open to all, so that things look encouraging for flyers. The moonlight regatta off City Point is said to have been a great success, the bay being alive with small craft. The *Foam*, Com. Boardman, which has been lengthened, has not as yet put in an appearance in the harbor, though we are anxiously keeping our weather eye open to take in all her new wood, and hope it may be the improvement that is desired.

NARRAGANSETT YACHT CLUB.—This club, with headquarters in Boston waters, numbers forty-five members, and thirty-eight yachts. Their time table is reduced to the amount allowed by a yacht 111 feet long to those of less dimensions for one mile. The amount multiplied by the number of miles in the course, and subtracted from the total time occupied by each yacht gives the corrected times. This rule is very much more equitable than the hard and fast ones, which allow a fixed amount, irrespective of the relative sizes of different yachts, and apply the same allowance among small or large craft alike, and often also without regard to the length of the course.

HAVERHILL REGATTA.—*Haverhill, June 17.*—The nineteenth regatta of the Haverhill Yacht Club was held this p. m., on the Merrimack over the club course—viz., from stakeboat anchored off the club house to buoy at Groveland Bridge and return. Distance, five miles. The wind was light from the south and west, very baffling, at times trying the patience of the skippers. During the race the yacht *Emma L.* twisted her rudder-post head off just after turning the first buoy, thus rendering her tiller useless, but quickly repaired the damage, by rigging tackle to the end of her rudder and steering with lines:

FIRST CLASS.			
Yacht.	Owner.	Water Line.	Cor. Time.
Emma L.....	Texbury & Heath.....	26 9	1 01 45
Lizzie Warner.....	W. F. Ticombe.....	24 9	1 19 52

Novice.....	J. E. Heath.....	19	1 39 51
THIRD CLASS.			
Sultana.....	W. Mark Ford.....	16 10	1 44 05
Phasma.....	J. W. Dow.....	17 7	1 53 45
Vixen.....	E. E. Brown.....	17 7	1 56 59
Vision.....	J. S. Collins.....	17 11	Not taken.

The prizes, which were in cash, were awarded to the first and second boats in each class.

A yacht club has recently been organized in New Market, N. H., called the "New Market Yacht Club." Their race course is in Gnat Bay, a most beautiful sheet of water, about six miles in length and four miles in width, with easy access to the ocean through Portsmouth Harbor. They have two catamarans in the club, which, report says, have made wonderful time over the club course.

WEATHER HELM.

NEW YORK Y. C. REGATTA.—Thursday, June 13, had been designated for the annual race of the leading club of America, and, though almost unheralded, the goodly number of entries drew together a large fleet of yachts of all classes in the lower bay and a number of steamers, which went over the course. The morning broke overcast, with a fine breeze from the westward, which died out, however, before the gun fire, and left the boats becalmed. *Rambler*, *Vision* and others had to be towed to windward of the line, and finally a start was effected. *Active* was inshore, to leeward, with her red-capped crew at work stowing her balloon jib and her club and jib header aloft. *Christine* next, looking handsome since her lengthening, her pot-leaded sides glistening in the sun and looking like business. Among the schooners, *Rambler* was first to cross the line, with *Nettie* and *Restless* close together, about 4m astern. *Estelle*, *Peerless* and *Clytie* some time behind, the latter being the last of the fleet to get away. Light sails were whiskered out on the sloops, and the schooners were wing and wing, or had their booms to starboard. The wind almost completely died away, and the whole affair turned into a mere drifting match, in which slants and est's-paws did unequal work among the fleet, so that any detailed account of the tedious drift down to the spit buoy would be without object. The catamaran *Nereid*, against which several protests had been lodged, dropped astern and kept *Rambler* company until near the buoy, where she crept up well on the leading schooners, and managed to round the hook among the first. *Rambler* did not show to any advantage, but it could hardly be expected that so large a craft would be able to hold her own with the smaller ones in such weather. *Clytie*, on the contrary, had more than made good her late start, for she had overhauled the ruck, and when the Hook was reached, she was third among the schooners, with *Peerless* and *Tidal Wave* a quarter of a mile ahead. What little there had been in the way of occasional cat-paws now died out completely, and it became evident that the course could not be made in the prescribed time, so *Tidal Wave* hailed the judges' boat and signified her wish to put about for home. At this point *Peerless* was leading, with the smart *Regina* close aboard, *Active*, *Christine*, *Vixen*, *Vision*, *Tidal Wave*, *Clytie*, *Estelle* and *Nereid*, with the ruck

inside the Hook nipped by the strong flood tide and unable to make way against it. The fleet had hardly headed for home when a squall from the westward struck the boats, and after landing light sails, gave them something to run home with. The judges decided that the race should be sailed over again the next day, Friday, June 14.

Twelve of the thirteen boats entered the day previous were ready when the first gun gave them warning to prepare. To several yachts, including *Estelle*, *Clytie* and *Nettie*, much praise is due to the spirited manner in which they took hold of the second day's sport, as their crews were hard worked the night before trying to get to the line in season. The course was the usual one of the club, and the prizes and Bennett Challenge Cup have been noticed in the columns of another issue. The regatta committee lost no time in getting the vessels away with the first of a nice southerly breeze, which sprung up in the nick of time.

KEEL SCHOONERS.

Name.	Owner.	Cubic Contents.	Class.	Prizes.	Start.	Finish.	Corrected Time.
Restless.....	Com. Kane.....	8,929	Allowa.	8 55	11 41 38

Active.....	F. W. J. Hurst.....	1,903	Allowa.	12 55	11 55 00		
Regina.....	W. A. W. Stewart.....	1,875	21	19 55	11 50 00		
Vixen.....	F. L. Lawrence.....	1,815	1 04	20 59	11 51 05		
Christine.....	F. T. Brown.....	1,732	2 05	21 41	11 51 05		

Both schooners and sloops, in their respective classes, sailed for the challenge prizes without classification.

The Commodore's schooner led across with working topsails and the usual cruising complement only. The other schooners had main clubs set, the sloops their clubs and jib topsails. From the time of passing the line it will be seen that *Tidal Wave* was handicapped 45s., *Nereid* 2m., and unfortunate *Active* 3m. 32s. The wind was still light, and *Active* got caught in the tide while in stays, and there hung "in irons" for some time. *Christine*, *Active*, *Nereid* and *Nettie* stood across to the Long Island shore on the starboard tack, the rest of the fleet hugging the Staten Island side. *Regina*, who had shown of what smart stuff she and her crew were made of the day before, again took the lead among the sloops, while *Clytie* proved that Boss Ketchum knew what he was about when he gave her that long floor and easy swell forward. *Vixen* and *Peerless* did wonders, the sloop evidently being in something like her old form when in the hands of Mr. Livingston, and as for *Peerless*, her splendid record this season will not likely be eclipsed by that of any craft of her size. The way she has been disposing of *Estelle* wherever the two have met is something to be proud of. *Vixen* weathered on *Regina*, blanketed her and went to the fore. The fleet stood over toward the Coney Island shore, and with a long leg stood for the Spindle Buoy, *Active* having done well in making up for a bad start. The Commodore's schooner, too, with ordinary canvas and crew, was showing a noted racing craft the way, much to the surprise of many, a fact which goes far to prove that a good, honest and reliable boat is not a thing to be despised, but may even show some of the machines how to do the very work they were built for. *Peerless* weathered on *Clytie*, and the fleet turned the buoy in the following order:

H. M. S.	H. M. S.	H. M. S.	H. M. S.
Vixen.....	27 40	Restless.....	1 45 54
Regina.....	1 30 48	Active.....	1 46 20
Christine.....	1 35 47	Tidal Wave.....	1 50 35
Peerless.....	1 36 35	Estelle.....	1 52 30
Vision.....	1 38 28	Nereid.....	2 01 00
Clytie.....	1 45 30	Nettie.....	2 19 30

The run up the Hook was close hauled, the wind having come out from S. S. W., and pretty fresh at that. *Vixen* led the ruck a lively dance with pretty *Regina* a mile astern, the rest maintained their relative positions, and the Light Ship was rounded as under:

H. M. S.	H. M. S.	H. M. S.	H. M. S.
Vixen.....	2 40 45	Tidal Wave.....	3 06 46
Regina.....	2 50 30	Active.....	3 02 44
Peerless.....	2 59 51	Restless.....	3 15 03
Vision.....	3 02 32	Estelle.....	3 20 53
Christine.....	3 02 47	Nereid.....	Not timed.
Clytie.....	3 04 31	Nettie.....	Not timed.

Clytie seemed to want more wind, for that she is a speedy one will not be questioned, but she failed to close the gap between herself and *Peerless* in the rougher water outside as had been expected. Kites were set by all hands on the run home excepting orthodox *Restless*, who had it pretty much her own way in her class anyhow. *Tidal Wave*, in the reach, showed the worth of a steamboat bow and went through the water in fine style with as little fuss as a Harlem boat. She dropped *Clytie*, with a fuller howl, as we had predicted of the latter in these columns. *Vixen* led round the spit again, with *Peerless* a mile in her wake, and *Tidal Wave* half a mile astern of the pride of the Atlantic Club. *Regina* a good fourth, with *Clytie* close aboard, *Vision* and *Christine* a minute apart, and the rest pretty much out of the hunt. Owing to the last of the ebb still setting, the ruck caught up somewhat on the reach up to the narrows, and the leaders were bunched pretty well. The judges made their final report as under:

KEEL SCHOONERS.

Restless takes the prize for keel schooners, and *Tidal Wave* for first class centreboards. *Peerless* for second class centreboards, and also the Bennett Challenge Prize for schooners. *Vision* had a "walk over" in her class, and *Vixen* takes the prize for second class sloops as well as the Bennett Challenge Prize for sloops.

ATLANTIC YACHT CLUB REGATTA.—Owing to the variable wind, the annual match of the enterprising Atlantic Club, Monday, June 17, turned out only partially successful. There was a fine lot of entries, including such noted wind-jammers as *Undine* and *Orion* among the first class sloops, and the famous *Peerless* in the schooners, while *Kaiser* and *Lizzie L.* promised to make an interesting time among the smaller ones. *The Cyclops*, with the judges, and the *Americus*, with the guests, went over the course with the fleet. Not until noon could the yachts be got into position, and, with a light, southerly breeze, they were sent across the line as follows:

Name.	H. M. S.	Name.	H. M. S.
Orion.....	11 59 30	Kaiser.....	12 08 42
Dolphin.....	12 00 00	Sheila.....	12 08 00
Sadie.....	12 00 00	Genia.....	12 11 15
Undine.....	12 01 10	Nomad.....	12 12 00
Imperia.....	12 02 00	Hope.....	12 12 20
Peerless.....	12 04 45	Nimbus.....	12 12 45
Lizzie L.....	12 07 00	Imperia.....	12 13 30
Intrepid.....	12 07 45	Mab.....	12 15 00
Alma.....	12 08 30		

The courses for the different classes have been given in a previous number of FOREST AND STREAM. Schooners were to go around the spit and light-ship, likewise the first class sloops. Second class sloops round the spit and Gedney Channel buoy, and the third class sloops only round the southwest spit and return. *Triton* led off in the schooners, and, as expected, *Orion* and *Undine* had a luffing match, in which Mr. Cooper's famous wind-squeezer came out second best. *Undine* then picked up her accustomed place ahead of the entire fleet, big or little, and did some fine work in screwing out to windward as long as the breeze lasted. *Peerless* weathered *Triton* off Coney Island, when the wind suddenly chopped round and reversed positions. *Kaiser* led her class as long as the wind held out, when the race resolved itself into a drift, with the lee tide to help them along to the spit. The Spindle Buoy was fetched as under:

Name.	H. M. S.	Name.	H. M. S.
Undine.....	2 23 15	Sadie.....	2 33 30
Triton.....	2 24 45	Sheila.....	2 37 00
Orion.....	2 25 15	Kaiser.....	2 43 00
Peerless.....	2 25 20	Hope.....	2 45 30
Dolphin.....	2 26 15	Nomad.....	2 50 15
Lizzie L.....	2 28 13	Genia.....	2 50 30
Imperia.....	2 30 00	Alma.....	2 51 30
Intrepid.....	2 30 45	Mab.....	2 51 30
Nimbus.....	2 33 00		

The smallest class here put for home, while *Lizzie L.* led the way in hers to the Gedney, tacking round the same, while *Imperia*, at some risk to her sticks, jibbed over, thereby gaining materially. *Lizzie L.* at 3:20; *Imperia*, 3:23; and *Sheila*, 3:28. The rest distanced. On the run to the light-ship, with the wind S. S. E., *Orion's* fine lines began to tell, and she dropped *Undine*, while *Peerless* obtained and held the lead of the fleet. The ship was rounded as follows:

Name.	H. M. S.	Name.	H. M. S.
Peerless.....	3 45 30	Triton.....	3 55 00
Orion.....	3 50 00	Dolphin.....	4 00 00
Undine.....	3 51 30	Sadie.....	4 05 00

With sheets eased, balloons were in order, the schooners setting club topsails, main-topmast staysails and jib-topmasts, and the sloops their hallon-jib-topmasts. Both *Undine* and *Orion* got in a snarl doing this. *Undine* got hers under the bows and had to round to before she could hand it, and in so doing sprung her topmast above the cap and snapped it off short after the sail had finally been set. The fickle breeze died away entirely when the yachts reached abreast of the Rorer and the ruck closed the gap, bringing the tail end of the breeze outside with them. Finally, after some tedious drifting, the flood tide began to make and brought in all hands, the slowest craft in the van and the fastest in the rear:

Name.	Start.	Finish.	Elapsed Time.	Corrected Time.
Peerless.....	12 04 45	8 01 00	7 56 15	7 56 15
Triton.....	12 02 00	7 56 00	7 54 00	7 45 00

SLOOPS—CLASS C.				
Undine.....	12 01 10	8 17 45	8 16 35	8 16 35

Alma.....	12 08 30	5 03 10	5 04 40	5 02 43
Intrepid.....	12 07 45	5 15 05	5 07 20	5 05 18
Nomad.....	12 12 00	5 46 14	5 34 14	5 27 18
Mab.....	12 15 00	5 25 30	5 10 30	5 36 00

claims of the smallest yachts in the fleet. The steamer was invariably kept to leeward of the vessels in the race, and when once the *Petrel* was brought slightly under the steamer's lee, the latter was hauled to clear her wind. Old Prob. himself seemed to look with high favor upon the Corinthian tars, and by the time all hands were ready for the start, sent them a nice breeze from S. S. E., which soon increased to a wholesome wind, and finished up the day with a brisk blow and a lumpy sea, about all that the smaller craft had harnessed for. The entries and crews of each vessel were as below, the *Eddy*, schooner, being the only one which failed to put in an appearance:

SCHOONERS.

Estelle, Captain J. D. Smith, with Mr. W. H. Scott as chief officer, and W. D. Smith, A. H. Smith, "Jack" Oddie, B. Foulke, E. Brown, A. A. Drake, John Meday, A. R. Whiting and Chas. Thompson as crew. Her area is 1,881.60 square feet; her allowance of time 1m. 29s. minus.

Peerless, Captain J. Roger Maxwell; J. H. Divron as chief officer and W. D. Steele, W. T. Lawrence, H. Earle, G. Mann, R. C. Field, C. Leland, A. Farrington, W. H. H. Beebe, H. S. Washburne, S. Barton, K. S. Church and R. T. Timpon as crew. Her area is 1,331.64 feet; her allowance of time 9m. 54s. minus.

SECOND CLASS SLOOP.

Active, Captain F. W. J. Hurst, with E. E. Chase as chief officer, and J. Van Buskirk, W. L. Catlin, C. H. Meigs, H. G. Asien, M. Nicoll, S. Griswold, S. Wood, Jr., L. Gladwin, W. Weston, Langdon Ward and Gouverneur Kortright as crew. Her area is 870.37 feet; her allowance, 19m. 48s. minus.

Imperia, Captain C. T. Pierce, with George W. Moffat as chief officer, and F. T. Peet, E. B. Clarke, Maxwell Wrigley, Frank Williams, E. M. Haydock, P. M. Brasher, W. M. Pileston, Thomas L. Arnold and Percy Meeker as crew. Her area is 652.34 feet, with 26m. 32s. allowance minus.

Regina, Captain Wm. A. W. Stewart, with J. F. Tams as chief officer, and William Foulke, Frederick De P. Foster, Periere Meigs, E. Roosevelt, Thomas S. Young, Jr., Wm. G. Didrickson, G. A. Irving and Howard Mitchell as crew. Her area is 780.2; her allowance 22m. 32s. minus.

Schemer, Captain C. S. Lee, with A. B. Alley as chief officer, and W. S. Alley, A. P. Montaut, R. C. Cornell, Philip Timpon, A. Simmou, H. Blood, Jr., and F. L. Blood as crew. Her area is 551.87; her allowance 30m. 25s. minus.

Wave, Captain E. B. Underhill, with R. M. Munroe as chief officer, and M. Tynan, Morris Betts, Geo. W. Clark, Wm. T. Jacobs, James Millon, Harry Bailey, John O'Neil and James King as crew. Her area is 581.74; her allowance, 28m. 19s. minus.

Undine, Captain Henry Bryant, with G. E. Cromwell as chief officer, and C. G. Peters, E. M. Cook, Chas. Leland and J. O. Davidson, T. A. Bronson and G. L. Rives as crew. Her area is 889.73; her allowance, 19m. 9s.

THIRD CLASS SLOOP.

Blanche, Captain C. H. Grundy, with Francis Scott as chief officer, and E. G. Lenthion, T. M. Pratt, E. S. Pratt, L. G. Honderaon, M. Campbell and J. Proudfit as crew. Her area is 541.95 feet; her allowance, 30m. 46s. minus.

Dudley, Captain I. W. Russell, with A. W. Russell as chief officer, and B. R. Hamilton, H. L. Morris, Wm. Remsen, W. T. Talboys, M. Mitchell, R. Rutherford and D. Henry as crew. Her area is 549.36 feet, with an allowance of 30m. 41s. minus.

Midge, Captain W. E. Iselin, with Giraud Foster, Alfred Roosevelt, Herman L. E. Emmet, R. W. Emmet and Daniel Lord, Jr., as crew. Her area is 308.47 feet; her allowance 47m. 53s. minus.

Petrel, Captain J. Hpslop, with C. B. Kunhardt as chief officer and W. H. Simons and Richard Gden as crew. Her area is 240 feet; her allowance, 56m. 20s. minus.

Volante, Captain I. Hitechoek, with Robert Centre as chief officer and J. E. Roosevelt, J. Grenville Kane and F. R. Hitchcock as crew. Her area is 509.5 feet; her allowance, 32m. 25s. minus.

At 11h. 55m. the gun for the start was given from the *Americus*, when the fleet made for the line and crossed in the following order: *Undine* at 11h. 55m. 49s., followed by the *Estelle* at 11h. 56m. 23s.; the *Petrel*, at 11h. 56m. 50s.; *Wave*, 11h. 57m. 15s.; *Schemer*, 11h. 57m. 39s.; *Regina*, 11h. 58m. 14s.; *Active*, 11h. 58m. 34s.; *Imperia*, 11h. 59m. 31s.; *Dudley*, 12h. 0m. 23s.; *Peerless*, 12h. 0m. 45s.; *Midge*, 12h. 1m. 23s.; *Volante*, 12h. 2m. 18s.; and *Blanche* at 12h. 2m. 49s. The tide was about half ebb, and all crossed on the port tack heading toward Dix's Island. *Volante*, having crossed the line high up to windward, made a short tack to the northeast, and then laid a course for Hoffman Island, while *Undine*, *Petrel* and *Active* followed up the main channel in short boards in order to benefit by the tide as much as possible. The rest of the fleet went about and stood into Gravesend Bay with the wind to starboard, and after several boards trimmed in for Buoy No. 10. *Undine* went to windward in a style that was remarkable even for such a well known windjammer as she. Rather ungainly and unlikely in outward appearance, she caused a flutter among the Corinthians who knew her record, when her racing flag appeared in the lower bay with Mr. G. E. Cromwell to tool her. Apparently she looked a quarter point higher than any other sloop in the fleet, and with well sitting sails she soon cut out to windward of the lot, and heeled Hoffman Island led by a long stretch. The yachts that had stood to the northward at the outset got the first of the freshening breeze, and upon nearing the spit buoy were found to have profited by their manœuvre. *Volante* had been doing wonders in the meantime and was certainly in exceedingly fine form, for we have never seen her do so well before. Her canvas set like the proverbial board, and, as for appearances, she was decidedly the smartest looking craft in the race. She outtailed all of her class, and was handled in a masterly manner by Mr. Centre, well known as the designer of both *Vindex* and *Volante*. The same can be said of *Peerless*. This schooner was not only well managed throughout by her amateur crew, but must have been in good shape this year, or else there is something wrong with *Estelle*, for the latter did not certainly come up to expectations or her past record. To us she seemed a little too deep in the water, and as though she would do better if lightened up an inch or so. Though *Peerless* went across the line four minutes astern of Mr. Smith's schooner, she outwinded her and outran her by some seven minutes when the spit was reached. Buoy No. 10 was rounded as under:

Name.	H.	M.	S.	Name.	H.	M.	S.
Undine.....	1	09	30	Estelle.....	1	17	56
Wave.....	1	13	14	Volante.....	1	20	04
Peerless.....	1	14	33	Dudley.....	1	25	08
Regina.....	1	14	50	Petrel.....	1	29	34
Imperia.....	1	15	39	Midge.....	1	30	31
Schemer.....	1	16	43	Blanche.....	1	32	58
Active.....	1	16	24				

The sailing of *Volante* and *Petrel* calls for more than passing notice. Both of these are of the modified cutter type, of large displacement and comparatively narrow, the former having a length of 42ft. on load line, with 12ft. beam, and the latter 28ft. with 8ft. beam. *Volante* out-sailed everything in her class, including *Blanche* and *Dudley*, both of which measured larger, while the sailing of the little *Petrel* must be considered even more remarkable, for she led the *Midge* and *Blanche* the entire stretch to the Spit by a long distance, and fairly out-weathered them. The latter two somewhat closed the gap just before rounding the buoy on account of *Petrel's* running out of the breeze for a minute or two. When clear of the Hook Mr. Hyslop's little cutter sprang her masthead, and her topsail had to be doused and the boat put off her course, enabling *Midge* and *Blanche*, boats twice her size, to run up even. Finally, when it was discovered that *Petrel's* masthead would go by the board if kept at it, she was put off and run inside to examine damages. Had it not been for this accident she would have given some of her big sisters a bad beating, as she was doing splendidly in the seas, taking them as easily and dry as can be imagined. The doings of both *Volante* and *Petrel*, with craft much beyond their size, points a moral, and will go far to convince the skeptical of the value of a narrow model and lead on the keel in a seaway. Somehow *Estelle* did not seem to improve in the rougher water off shore, for *Peerless* continued to increase her lead. The light-ship was rounded as follows:

Name.	H.	M.	S.	Name.	H.	M.	S.
Undine.....	2	14	30	Estelle.....	2	19	01
Peerless.....	2	18	30	Imperia.....	2	23	16
Active.....	2	24	34	Volante.....	2	26	06
Regina.....	2	27	17	Dudley.....	2	31	39
Wave.....	2	27	51	Blanche.....	2	31	54
Schemer.....	2	33	10	Midge.....	2	33	30

On the run home they had the wind free, and jib topsails and such kites as the rules allowed were set. *Regina* carried away her stick aloft, but fished in the wreck, keeping her top-sail aloft in a bag to catch what wind it would. *Wave's* steering wheel gave way, and she flew up into the wind. Her mainsail was lowered and a temporary steering gear rigged with spare gear, when, with her peak dropped, she was again put upon her course, coming home through the Swash without rounding the spit buoy. *Active* snapped her booming-out pole and lost the use of her jib in the run home from the buoy. *Peerless*, with her boom over the starboard quarter, continued to increase her lead, and went over the line between the club steamer and Fort Wadsworth, a winner in fine style, having beaten *Estelle* by over twenty minutes. The results of the day's race are appended:

	Start.	Flatb.	Elapsed	Corrected
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Peerless.....	12 00 45	4 10 31	4 09 45	3 59 02
Estelle.....	11 56 25	4 18 43	4 20 18	4 20 49

SECOND CLASS SLOOP.

	Start.	Flatb.	Elapsed	Corrected
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Undine.....	11 55 49	4 16 29	4 20 40	4 01 31
Active.....	11 58 34	4 23 58	4 25 24	4 05 36
Schemer.....	11 57 39	4 35 54	4 38 15	4 07 50

THIRD CLASS SLOOP.

	Start.	Flatb.	Elapsed	Corrected
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Volante.....	12 02 18	4 53 31	4 51 13	4 18 48
Dudley.....	12 00 02	5 04 51	5 04 49	4 34 03
Midge.....	12 01 23	Not timed.		
Blanche.....	12 02 49	5 18 46	5 15 57	4 45 11
Petrel.....	11 55 50	Disabled.		

Peerless takes the prize for schooners, *Undine* that for the second class sloop, having been pretty closely pushed at times by *Active*, and *Volante* hearing off the palm in the third-class by long odds, having shown the light drafts what a sea-going cutter ought to be.

CORINTHIAN PRINCIPLES.—During the *Fidget-Victoria* match no shifting of hallast was allowed, as noticed in our last issue. The crew was limited to six, besides the owner, and Corinthian rules were observed throughout. We commend similar action to the many small craft of other clubs, believing that a close adherence to amateur rules will be vastly more interesting and of much greater benefit than lowering the sport of yacht racing to the level of mere machine tooling and jockeying. The wind in the match referred to was very fickle, varying frequently as much as eight points, and consisted of puffs and calms interspersed, otherwise the result might have been different. *Fidget* was sailed in her usual cat-rig only, and the correct dimensions of her sail are 33ft. on boom, 19ft. on gaff, and hoist only 24ft. She carried no jib, as erroneously stated in some of the reports of the race. Mr. Grinnell has again challenged the *Victoria* to sail for the champion pennant on the day after the annual match of the Central Hudson Y. C., the rules allowing any yacht of the first class of the club to challenge the holder of the pennant once during each season. In this race *Fidget* will come out for the first time as a sloop in her existence of eighteen years, with a 22½ foot jib in addition to her present sail.

NEWS FOR THE SEAWANAKAS.—A correspondent in a contemporary thinks the Seawanaka and the Atlantic clubs will soon be swallowed up by their larger sisters. Nonsense. It is not necessary to a club's existence that it should have any special anchorage or make a show in the way of club houses at all. The life of any organization depends upon the spirit animating its members individually and the purposes kept in view at its foundation. The Seawanaka and Atlantic are the two most essentially yachting clubs in New York waters. They are composed not simply of yacht owners, but of yacht sailors, which is, by far, more important to a successful and lengthy existence than big boats and a common anchorage ground. On the contrary, the Seawanaka and Atlantic clubs are growing every year, and their influence to-day among American yachtsmen is more strongly felt than ever before. Clubs which contain a dozen members capable of designing the craft they propose to own as well as skippering them in man-of-war style when built, are not likely to be swallowed up by others less energetic or influential. We look upon those two clubs as destined to a bright future and great prosperity, while their influence, cast in favor of Corinthian principles, is doing more to popularize and extend the sport than anything ever before done by wealthier and larger clubs. The Seawanakas occupy in America the enviable position of the Royal Alfreds in Great Britain.

BROOKLYN UNION REGATTA.—Tuesday, the 18th inst., broke overcast and damp, with a moderate wind from the westward. The sorry outlook brought only eight yachts out of the fourteen entries to the start, and that only after the judges' boat, *Fletcher*, had steamed up to Gowanus and brought out some of the laggards. To some the absence of the Commodore in the *Columbia* seemed a disappointment, but for our part we fail to see why any commodore in a cruising craft should be expected to put in an appearance on regatta days unless he so chooses for his own pleasure. A yacht match is not gotten

up as a circus entertainment for the guests, but as a matter of business between the racing craft, and guests must rest content with what they happen to find going on. Toward noon several sails were made out running down to the line. *Comet*, off Bay Ridge, also loosed and hoisted, Mr. Langley going over the course out of courtesy to his only competitor, the Vice-Commodore's *Mystic*. He kept his boats at the davits and added to his ordinary crew a few ladies, who, in nautical storm rig, put to shame many a would-be yachtsman in long togs aboard the club steamer, by the gallant manner in which they remained on deck throughout the race, unmindful of wind and rain. The yachts went across the line, with the mart little *Brown*, from Newburgh waters, showing the way 91 12h. 49m. 47s.; *Susie S.*, 12h. 51m.; *Mystic*, 12h. 52m. 40s.; *Kate*, 12h. 53m. 7s.; *Schemer*, 12h. 54m. 18s.; *Comet*, 42h. 55m. 10s.; *Annie*, 12h. 55m. 30s.; *Lizzie L.*, 12h. 56m. 13s. Poor *Susie S.* came out in her storm rig; but old Prob., being in a mild sort of humor, failed to rouse Boreas, and so *Brown* had it all her own way. But she not only led her *Beas*, but the entire fleet in a most remarkable way, when eshe was hreeze enough for some of the bigger ones, too. First round the buoy at the spit, she trimmed aft and made a short board for the stako boat, and then eased sheets again for home. Among the big sloops *Kate* stood over to the Long Island shore, and led through the Narrows, making a short leg into Gravesend Bay, and there lying down to work on a long one for the spit buoy. Her only antagonist, *Annie*, one of Bob Fisher's famous turnouts, was not long in weathering and headreaching on the black sloop, and although the latter was sailing well with her stern spun out, alongside of such a crack as *Annie* the task was almost a hopeless one. The way in which *Annie* disposed of the fleet, including even *Comet*, was something quite as remarkable as the recent performances of *Undine* and *Orion*. No doubt much of this was due to the hauling she received from Ellsworth and his crack crew, but for all that *Annie* must be counted in among the three fastest wind jammers in America, and a match with *Orion* and *Undine*, in a breeze of wind free from tidal flukes as far as possible, would form perhaps the most interesting race for yachtsmen that could be arranged. She had a long lead of the big ones down to the Spit buoy, and in the beat up the Horseshoe weathered all hands in a style that was wholesome to look at. The fleet rounded the buoy in the following order: *William R. Brown*, 2h. 33m. 11s.; *Annie*, 2h. 33m. 35s.; *Mystic*, 2h. 37m. 47s.; *Schemer*, 2h. 38m. 20s.; *Comet*, 2h. 39m. 28s.; *Kate*, 2h. 40m. 05s.; *Lizzie L.*, 2h. 43m. 43s.; *Susie S.*, 2h. 47m. 40s. *Schemer* hung to *Mystic* all the way down and back, often receiving a bad blanketing from the schooner, but as Dr. Johnson's craft was well astern, owing to a late start and loss of breeze, it did not matter much. Vice-Commodore Hall's schooner seemed to be under a very scant rig, harring her balloon jib topsail, which set exceedingly well and did good service over the entire course almost. A few cloths more to fore and mastsails and picing on the foot would do *Mystic* no harm. In the livelier breeze outside *Comet* weathered on *Mystic* and led her a long stretch after rounding the stake-boat at the Outer Homer, which was made in the times given below: *Annie*, 3h. 38m. 37s.; *Comet*, 3h. 40m.; *Schemer*, 3h. 44m. 87s.; *Mystic*, 3h. 45m. 3s.; *Lizzie L.*, 3h. 53m. 38s.; *Kate*, 3h. 59m. 19s. But the wind played the Brooklyn Club the same trick it did the others, and left the yachts almost becalmed when the rain ceased. Catpaws from the northward hardly enabled them to hold their own against the last of the ebb, and the match, so favorably begun, ended in a hopeless drift and a series of flukes. *Mystic* crawled ahead of *Comet* through a favorable slant, and *Annie*, hugging the shore to the north, managed to cheat the tide enough to hold her long lead, working up homeward while the rest were nipped about the Homer Beacon. She crossed the winning line at 9h. 04m., or 7m. 47s. too late to make the race. The little *Brown* was the only one to make it in time, and thus takes the prize in her class, having given *Susie S.* in her storm rig a very bad heating. The race was declared off, and probably will be re-sailed later in the season.

INCREDIBLE BUT TRUE.—The catamaran *Tarantella*, on her way out to Rockaway, performed some remarkable feats of speed, which, however, seem to be quite common to the catamaran species. Lying in wait for the steamer *Columbia*, she trimmed aft upon her approach and ran by the steamer as though the latter was at anchor. The *Columbia* must have been making about twelve knots at the time, and the speed of *Tarantella* could not have been less than fifteen to sixteen knots, or about eighteen miles an hour, and this with a reef down and the sprit on the jib carried away. Had it been blowing a little stronger the catamaran would have reached twenty miles readily, or railroad time. The marvellous exhibition of speed by the *Tarantella* called forth rounds of applause from the two thousand passengers aboard the *Columbia*. On the way back the catamaran sailed three times around the steamer *Twilight*, and then stood for home, and was soon out of sight ahead!

MAOGIE B.—This well known yscht, once the property of General Tom Thumb, but more recently known as belonging to Mr. W. Tumbridge, who sailed her himself all the way to Jacksonville, Fla., has been heard from favorably. The pilots who hought the sloop from Mr. Tumbridge express great satisfaction with her. She recently beat the opposition boat nearly eight miles in a sail of eighteen miles.

NEW JERSEY YACHT CLUB.—The seventh annual regatta of this club took place June 12, over the regular course, from Elysian Fields, Hoboken, to Eighty-sixth street, N. R., and return, sailed three times over. Time allowance, 2m. to the foot. *Estelle* won in the first class in 4h. 59m. *Meteor* won in second class in 5h. 4m. 22s., with *Dire Devil* second and *Charm* third. *Pauline* won in third class, and *Freddie* a long distance astern.

TRENTON YACHT CLUB.—The race on the 18th inst. at Trenton was a partial failure, owing to want of wind. The *E. S. Ellis* won over a course of about twenty miles. Fifteen boats were entered.

SOUTHERN YACHT CLUB.—Mr. O'Brien has been elected Commodore of the club. New members are rapidly being added, add over \$1,200 has been collected. The club has adopted a harbor at West End between the revetment levee and Hoyt's House.

ON THE LAKES.—*Belleville, Ont., June 6.*—The yachtsmen of this northern section begin to enjoy their favorite pastime. Belleville now possesses the largest, and on the whole I may say the fastest, fleet of yachts on fresh water; for while of the three first-class yachts around here there may be some faster, yet, in the second-class, competition can be successfully defied, and the third-class craft can hold their own with anything of their inches. The fleet consists of 3 first-class, over 10 tons; 7 second-class, 10 tons and over 5; and 6 third-class, 5 tons and under. The sport is controlled by the Bay

of Quinte Yacht Club, a flourishing young organization with some seventy members of the right stamp, and which has already acquired a very high standing in the Province of Ontario. Kingston, once a conspicuous centre of yachting sport, but which of late years had been indifferent in the matter, has at length been aroused into activity by the numerous defeats which its boats have met with from those of the first fleet, and seem likely to revive its ancient reputation. Five second-class and a considerable number of third-class yachts are now owned there. An event of much interest will occur here on the 20th inst., namely: a twenty-mile sailing match between the *Katie Gray*, of the local fleet, and the *Surprise*, of Trenton. Both are very fast craft of 10 tons each, and both were built by the well known builder, Cuthbert, formerly of Coburg. A daring attempt was made one night last week to rob the champion yacht *Annie Cuthbert* at Hamilton. Doyle, the sailing master, who sleeps on board, was awakened by a noise, and going on deck saw three men with masks or blackened faces attempting to make away with some property stolen from the yacht. He fired on them, and one, evidently hit, fell into a boat alongside in which they had come. They fled in return, doing no damage to the brave Doyle, and made off as fast as they could. There has for several years past been a gang of pirates operating among the yachts at Hamilton, of whom these rascals were doubtless a portion. The culprits have not yet been discovered. The *Brunette*, a 24-ton yacht, formerly owned by Mr. Harry Stinson, of Hamilton, who was suddenly cut off with brain fever last autumn, is offered for sale in Toronto. She is both staunch and speedy. Cutamarans seem to be coming into favor on the lakes, two having lately been built, namely, one in Oswego and one in Hamilton, both of which have shown immense speed. As, however, these flying craft are not adapted for cruising, they will never become generally popular. A regatta, in which \$100 are to be given in prizes to second-class, and \$50 to third-class yachts, is to be given at Trenton, twelve miles west of this place, on the 26th inst., and the entries are likely to be numerous. The *Katie Gray* and the *Surprise*, which are to sail their match race on the 20th, have been put into complete trim, both craft having received a thorough overhauling and being fit to sail for a man's life. The winner of the match will not unlikely be challenged by the *Kathleen*, one of the three yachts which dispute for supremacy in the 10-ton class in these waters.

DETROIT YACHT CLUB.—The course for the regatta, July 4, will be from a stake-boat off the Excelsior Club house through Canadian channel to Lake St. Clair, a distance of 12½ miles, and return. Second-class yachts to the Gross Point Light House and return, and third-class yachts to go around Belle Isle.

WESTERN NEWS.—*Madison, Wis., June 13.*—The grand regatta of the season will take place on Lake Mendota July 17; open to all yachts, no matter from where they come they are cordially invited to participate in the sport. There will be two prizes in the first class and two in the second. The first prize in first class will be \$150; the other prizes have not yet been decided upon. From letters received we learn that the entries will be numerous.

GORANIC YACHT CLUB.—*Lillie* beat four other yachts in the match of this club, Tuesday, June 18; course, 25 miles; no time taken.

—Owing to the crowded condition of our columns further details of the above matches have been unavoidably postponed, as well as other matter.

CENTRAL HUDSON REGATTA.—In the race of this club off Newburgh, Tuesday, June 18, *Flyaway*, *Freak* and *A. S. Ring* were declared winners after a drifting and uneventful day.

OAR AND PADDLE.

SCHUYLKILL NAVY.—*Philadelphia, June 1.*—Mr. Editor: Since leaving Baltimore your correspondent has been "doing" the watering-places. Fishing is tolerably good at the inlet in Atlantic City, though sport is tame yet, and tamely participated in. I was out at the spring meeting of the Schuylkill Navy on Friday and Saturday afternoon of last week. The regattas this spring were very good, though pronounced inferior to the fall regatta of '77. On Friday afternoon we had the trial heats in the four-oared race. The water was a little rough, but not sufficiently so to be damaging to any extent. The starters for this event were the Quaker City in the western position. Crew: Messrs. Carlisle, Dunton, West, and Henderson stroke. Crescent Club, east; crew: Messrs. Seale, Harper, Phillips, and Hinchman stroke. College Club, centre; crew: Messrs. Stewart, Bond, Hart and Kennedy stroke. For nearly half the course the boats kept close together, when the Quaker boys fell back, and the College boys and Crescent boys had it to themselves; but there was very little tugging for the mastery, although the College boys did pretty well, an easy victory was gained by the Crescents. Time: Crescents, 9m. 40½s.; College, 9m. 54½s., and the Quaker City, 10m. 7½s. The first day's regatta closed with the second trial heat. Entries: Undine, who had the western position; crew: Messrs. Hart, Barnes, Stile and Cheston stroke. Pennsylvania, centre; crew: Messrs. Barr, Thomas, Hartley and Rennett stroke. The Philadelphia crew held the eastern position; crew: Messrs. Lee, White, Kay and Richards. There was a good deal of spurring done, especially by the Pennsylvania crew, but the contest was a poor one, and the Undine won in 9m. 33½s.; Pennsylvania, 9m. 43s.; Philadelphia, 10m. 9s. On Saturday the day was a gala one, and the annual regatta of the Schuylkill Navy drew an immense audience, who completely thronged the banks, making a strikingly animated and picturesque scene. The final heat, continued from the race of Friday, was the first thing on the programme, and was hotly contested by the Undine and Crescent clubs, the latter being victorious in 9m. 33½s. This gives the Crescent Club the championship four of the river by three consecutive races. The second race was for pair-oared shells between the University and Undine crews, which was a close and interesting race. Time: 9m. 50s.; Undine, 9m. 51s. The next event was a gig race, the entries being Quaker City, Pennsylvania and University crews. Won by the latter club. The event of the day was the single scull race, on which considerable interest was centred. The entries were four in number, viz.: Messrs. Calhoun, Megargu, of the College; G. Hartledge, of the Pennsylvania, and Geo. W. Young and Charles P. Tasker, of the Crescent Club. After a lively pull, especially between the two Crescent men, the race was won by Young. Time: 10m. 39s.; Tasker, 11m. 15s.; Hartledge, 11m. 29s. The closing race of the day was the barge contest between selected crews from the Pennsylvania, Undine and Crescent clubs. The Undine fell out almost at the start, but the race between the other two crews was quite interesting, the Pennsylvania winning by about three and a half lengths.

TRAYMORE.

BALTIMORE NEWS.—The Baltimore and Canton Yacht Clubs held their annual regattas June 10. The wind was light, but freshened after the start, and outside of Fort McHenry the little craft had enough of it. The course of the Baltimore Club was from the Point to Seven Foot Knoll and return, for first-class, for the fifth to Fort Carroll and return, and for the others to White Rocks and return. The *John Milroy* won in the first class, the *Jo. Hebb* in the second, the *Rooney* in the third, *Dauntless* in the fourth and *Silver Star* in the fifth class. Of the Canton yachts the *Slater* won the first-class prize, the *Matthe* the second and the *Clinch* the third.

HAVRE REGATTA.—The "Societe des Regates du Havre" announces two yacht races for July 18 and July 22. They are open to yachts of all nations, the course being about fifty miles, and the time allowance fifteen seconds per ton. Schooners, yawls and cutters will sail in separate classes. First prize for all classes 1,250fr., second prize 500fr. and a silver medal. A special prize is offered by the Yacht Club de France of 1,000fr. for the first French yacht in, and the Prix d'Honneur, a Sevres vase worth 1,000fr., will be sailed for by the three winning yachts of the different classes. For this prize schooners count at three fifths their tonnage, yawls at three-fourths and cutters full tonnage. For the second races, there will be two classes: for yachts above 35 tons, and for those under 35 but above 10 tons. First prize in first-class, 1,200fr. and a telescope, offered by the Admiralty; second prize, 500fr. and a barometer. First prize in second-class, 1,000fr. and silver medal; second prize, 300fr. and silver medal. A special prize for French built yachts is offered, worth 1,000fr. and a marine glass by the Admiralty. Yachts tonnage will count as above mentioned. Course for second day twenty-five miles. Entrances to be sent to the Secretary, Mr. H. P. Champeaux, 55 Quai d'Orleans, Havre. The annual sailing and rowing matches will take place July 21 and 22. It is not likely that any American yachts will enter, or we might with reason expect the Stars and Stripes to show the British and French lead droguers over the course. As it is they will have things to themselves.

THE HANLON-ROSS RACE.—*Toronto, June 8.*—This race will take place at St. John's, N. B., over the Kennebecasis course, Thursday, July 25; distance five miles, for \$1,000 a side, Hanlon receiving \$250 expenses. The articles of agreement have been forwarded to Toronto for signature. . . . Brockville single scull race on 1st July; distance, four miles, for \$1,000. The secretary has received letters from Hanlon, Luther, Johnson, Reilly and McKen, intimating their intention to enter. Morris says probably he will be there.

THE PEORIA REGATTA.—This event has attracted a large number of entries from the West, and promises to be a brilliant success. There are four entries for the senior four-oared race, six junior fours, two senior doubles, one junior double, two senior singles, five junior singles, two six-oared barges and two four-oared gigs. Prizes of elegant design have been manufactured by M. S. Smith & Co., of Detroit. The regatta takes place June 19 and 20. The barge race will be one and a half miles straight away; all others, one mile and return. The officers of the Mississippi Valley Amateur Rowing Association are: J. C. Osgood, Pres.; J. A. St. John, Vice-Pres.; R. G. Thwaites, Secretary, Madison, Wis.; F. M. Staples, Treas.; C. L. Williams, Commodore; L. D. Powers, Vice-Commodore; and P. C. Wheeler, Ensign.

ALBANY CITY REGATTA.—The city authorities of Albany have determined to offer \$2,000 in support of an amateur regatta, July 4, under rules of the N. A. of A. O. Entries close June 29, and must be sent to the Chairman of the Fourth of July Committee. Races will be for four-oared shells, pair-oared shells, double sculls, single sculls and six-oared gigs.

NATIONAL ASSOCIATION OF AMATEUR OARSMEN.—At their last meeting, Tuesday, June 11, the following rule was adopted: "A junior sculler is defined to be one who has never been winner in a sculling race open to more than one club, nor pulled in such a race, unless it was distinctly announced as a junior scullers' race." The Annual National Regatta will be held at Newark, N. J., August 20 and 21.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age.
2. Food and medicine given.
3. Appearance of the eye; of the coat; of the tongue and tips.
4. Any change in the appearance of the body, as bloating, drawing in of the flanks, etc.
5. Breathing the number of respirations per minute, and whether labored or not.
6. Condition of the bowels and excretions of the kidneys, color, etc.
7. Appetite; regular, variable, etc.
8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg.
9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the use of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, sign of suffering, etc.

INTERNAL CANKER OF THE EAR.

OUR column of questions and answers contain so many of our replies as to the treatment of canker that we have made an abstract of a very thorough paper on this disease which we find in the *Live Stock Journal*, written by Dr. Gordon Stables:

Canker of the ear in the dog is a name given to an inflammation, usually chronic, sometimes acute, of the lining membrane of the ear passages, or of the flap of the ear. It is rather a troublesome complaint to deal with, hard to get rid of, as it has a tendency to recur.

Causes and Pathology.—Anything that obstructs the passage of the blood into the auditory canal may produce canker. The lining of the ear is very thin and vascular, and contains the glands which secrete the wax. If primary cause, as from over heat of the system, or from gross feeding, this secretion becomes dry and hard, canker is likely to show itself. A chill may produce the attack, cold from exposure, especially if during such exposure the dog is tired and hungry. It often occurs from no appreciable cause. (We believe ourselves that canker is often inherited. We have known of sires having a progeny, all of which were predisposed to develop canker.—Ed.) Water dogs, such as spaniels and Newfoundlanders, are said to be more frequently afflicted with canker, though Dr. Stables thinks this fact is not fully established. (From our own experience derived from the innumerable cases brought

before our notice, we are inclined to think that spaniels are more likely to have canker than any other breed of dogs. The long flap which covers the auditory canal seems to us to give a predisposition to canker. In prick-eared dogs we think canker is rare. It might be curious to find out whether erop-eared dogs have canker. We should like to have our readers give us some cases.—Ed.)

Symptoms.—The first discernible symptom of canker in the dog is the shaking of the head. (In nine cases out of ten when the question is put to us by those who write us as to symptoms, the letter begins: "My dog has been lately shaking his head a great deal."—Ed.) The dog does this in a pained, anxious and troubled way. If the ear is taken between the finger and thumb a crackling sound is heard. A fetid odor is quite diagnostic of the disease, although no discharge may be visible. Acute cases of canker are comparatively rare, but in this case the animal appears in great distress and pain, and howls in agony, the seat of the mischief being apparent by the dog rubbing his ears with his paws. Canker generally is quite gradual in its appearance, and the head shaking is almost always indicative of the disease. On examination a slight redness is seen, and the offensive odor is smelt. There is an increased flow of wax mixed with the product of inflammation. In long standing cases the discharge lessens, giving place to pus of a yellow color. Ulceration then sets in and the disease seems to be more deeply seated. The wax secreting cells are destroyed. These are the more difficult cases to deal with. Dr. Stables advises that the ears be moistened every day with a drop of pure oil, and occasionally washed, but not syringed. In old cases of canker deafness inevitably follows. Too strong astringent lotions Dr. Stables very rightly condemns.

Treatment.—In mild cases of canker a few drops of oil may be introduced, plugging up the ear with cotton, and hot fomentations of poppy-heads, if there be much pain, can be used. (We have known the disease entirely cured with a fomentation made of hops, the lupuline in the hops acting like a charum.) The system of the dog must be cared for, and Epsom salts, from one to three drachms, with half the quantity of glauber, can be given with advantage. An old plan was to use gunpowder as a drink. A lotion of lead, zinc and even alum is useful. (In an early case of canker, taken at the start, though we have never advised alum, we should think from its well known properties that it would be found quite useful. We have always recommended sulphate of zinc.—Ed.) Dr. Stables used nitrate of silver, two grains to the ounce of water; of sulphate of zinc, three grains, or of alum four, and of Goutard's water, one pint to three of water. These lotions must be applied tepid. About a teaspoonful is to be poured into each ear twice a day, retained for a minute, and then discharged, having previously carefully washed and cleansed the ear with tepid water using a strong rag. (We have generally found the zinc lotion efficacious. In extreme cases, such as of ulceration of the ear, where the parts were being eaten out, such as on the edges, we have found the use of stick lunar caustic, to touch them only, to effect a rapid cure, of course using the zinc lotion for the inner ear.—En.) Dr. Stables warns those treating dogs not to use any devices to secure the ear, such as a canker cap. (We do not lay as great stress on this adjunct for the method of treatment as we formerly did. It has been recommended in our columns to use strips of an adhesive plaster to secure the dog's ears. We are inclined to think that on the very beginning of canker it may be useful and prevent over-irritation from the constant flapping of the ears, but as it is an unnatural position for the ears, it should not be used after the first day or two. If taken early, and there is no disease of the dog so readily seen, the cure of canker seems to be quite easy. We differ somewhat with Dr. Stables as to its persistence.—Ed.)

A CURE FOR DISTEMPER IN DOGS.

Our readers will remember a charming sketch of the European starling which appeared in *FOREST AND STREAM* of April 14, from the pen of R. O'C., of Dublin, Ireland. We are once more indebted to Mr. O'C. for the following letter, which will interest all lovers of the dog. The remedy for that dreaded disease, distemper, is so simple that if in this climate it will effect what it does in India, our Irish friend will have earned for himself the gratitude of all American sportsmen.

The following note will explain the letter to our readers. It is pleasant for us to believe, from the concluding sentence, that the high appreciation in which *FOREST AND STREAM* is held by gentlemen sportsmen is not confined to this country alone. Our correspondent says:

"I enclose a copy of a letter from my friend, Mr. B. W. B., a shikari, well known in the jungles of Bengal, giving an account of a remedy which he used with marked success in the treatment of distemper in dogs in India. It occurs to me that it may prove of interest to some of your readers, and if you think so, Mr. B. (who is here on leave, and who takes a great interest in *FOREST AND STREAM*) and I would be glad to see it in a paper which gives us both so much pleasure.

Yours very sincerely,

R. O'C.

The letter referred to runs as follows:

My Dear R.—About twelve years ago, while near shooting in the lower ranges of the Himalaya, I met and joined camps for a few days with Captain R., Bengal Staff Corps, from whom I learned a treatment for distemper in dogs, which I have since very frequently used and have never found to fail. Before my meeting with Captain R. I had lost four valuable dogs, and a fifth was in distemper and would in all probability have died. But fortunately the dog was brought up for inspection while we were together, and Captain R. remarked that it was rather a bad case of distemper, and asked me how I cured the disease. I told him that I was at my wit's end; that I had lost four good dogs, and that I feared this would also die. I tried everything I could hear of, to no purpose. "Ah!" he said, "I can tell you a cure. It is very simple—so simple indeed, that I have known men to refuse to try it. Shall I show you how to proceed?" "Certainly," said I, "I shall be very glad if you will. You can't do worse than I am doing even if you kill the dog." He at once administered a tablespoonful of ordinary dry table salt, and let the dog go. The salt acted as an emetic; but a few minutes afterward I was surprised to find that the dog was able to eat his food. Next morning Captain R. gave the dog a teaspoonful (liquid measure in both cases) of Epsom salts; next day again the table salt as before, and then upon the following day the Epsom salts, and so on upon the alternate days, giving all the time liquid food only. After about a fortnight of this treatment the dog was perfectly cured, and rapidly gaining his proper condition. He completely recovered, and lived to be taken from under my bed by a leopard a year afterward. The dog was an Irish red setter. The same quantities will suit a greyhound or slumber spaniel; for young puppies, of course, less should

Total.....22 Total.....24

The game closed with a tug of war between the members of the club on one side by W. F. Meyers, who commanded, W. Aymar, E. H. Bowley, M. Livingston and H. R. Adams; the opposite side was commanded by George Coughlin and consisted of J. H. Van Loan, Will Coughlin, Frank Hill, and M. Goodson. The first trial was won easily by Coughlin's team. The second, after a hard fight, was won by Meyers' team, and in the final heat the team commanded by Meyers outplayed the others, and the match was given to Meyers' team. Time: 3.32½.

PRINCETON ATHLETICS.—The annual spring meeting of the Princeton Athletic Club was held June 15. The games were participated in by representatives of Princeton College, the Univ. of Pa., American Athletic Club and the Elizabeth Athletic Club. The events were as follows:

100 yard run—A. Hunt, P. C. A. A.; Duffield, P. C. A. A.; H. B. Emmons, Princeton, and F. Dennis, P. C. A. A. Won by Hunt, Duffield second. Time, 10.2 seconds.

Throwing the hammer—F. Larkin, P. C. A. A., first; 102 feet 7 inches. Blackwell second, 93 feet.

220 yard race—L. P. Smock, P. C. A. A.; F. McKaig, P. C. A. A.; F. Dennis, P. C. A. A., and J. S. Shriver, P. C. A. A. Won by Smock. Time, 24½ seconds. McKaig second, 25½.

Running long jump—William Wyckoff, P. C. A. A., S. P. Withington, P. C. A. A., and Frank Van Dyke, P. C. A. A.; F. McKaig won; 17 feet 6 inches. Wyckoff second, 17 feet 5 inches.

100 yard race—L. P. Smock, P. C. A. A.; F. McKaig, P. C. A. A.; F. Dennis, P. C. A. A., and J. S. Shriver, P. C. A. A. Won by Smock. Time, 24½ seconds. McKaig second, 25½.

40 yard race—McKay first; Lanier, P. C. A. A., second. Vaulting with pole—Frank Duke first, height 9 feet 5 inches; B. F. Harrah, University of Pennsylvania; second, 9 feet 1 inch.

The mile run—E. E. Gibson and J. V. Orner, P. C. A. C. Crator won. Time, 6m. 17s.

Putting the shot—F. Larkin, first; distance, 34 feet 4 inches. Half-mile run—J. Stewart, P. C. A. A.; J. M. Woodbury, P. C. A. A.; R. M. Fielder, P. C. A. C. Stewart first, Woodbury second. Time, 2m. 24½.

Running high leap—J. P. Whiting, F. I. Haines, H. B. Emmons, F. Duke and F. McKaig. Whiting, 5 feet; Haines second, 4 feet 10½ inches.

The games ended with a hurdle race, in which there were but two entries—F. Dennis, P. C. A. C., winning, Emmons being second.

PRINCETON ATHLETIC ASSOCIATION.—Annual games, June 17: Three broad jumps—Three entries; won by F. Larkin, '79, 32 feet 4 inches.

One half-mile run—Three entries; won by J. Stewart, '79, 2m. 24½s.

In the running high leap, J. P. Whiting, '80, cleared 5 feet and won.

In the pole vaulting Larkin was first—7 ft. 10 in.—and Withington second—7 ft. 8 in.

In the one mile run, D. Wilson was the winner in 6m. 55½s.

In throwing the hammer (14 pounds lbs.) Larkin cleared 101 ft. 4 in., C. Dodge cleared 98 ft. 5 in.

The quarter-mile run was won by Stewart; J. F. Lanier, '80, second. Time, 2m. 25 seconds.

Running long jump—A. C. Hunt, '78, 20 ft. Putting the cannon ball—Larkin, 33 ft. 8 in.; Dodge, 32 ft. 11½ in.

In the hurdle race, Brown came in first, Dodge second. Time, 18.1-5 seconds.

In the standing high jump Larkin cleared 4 ft. 6½ in. and Haines 4 ft. 4 in.

In the 220 yards dash H. L. Smock, '79, came in first, Stevenson second. Time 25.4-5 seconds.

The games ended with a graduate's 100 yard dash, in which J. Duffield, '76, came in first and J. Wood second. Time, 10.1-5s.

RACKET CHAMPIONSHIP.—The second rubber of the American Championship games of racket between Oscar Manning of Philadelphia and James Keating of New York was concluded at Hoboken last Saturday. The first two games were won by Keating, the third and fourth by Manning. In the fifth game when the score stood 11 to 0 in his favor, Keating sprained his ankle and withdrew. This would have given the rubber to Manning had he claimed it, but he declined it. A new match has been made, in which eleven games will be played.

HARRIMAN'S WALK.—At Haverill, Mass., last Saturday, Harriman the pedestrian completed his walk of 400 miles in 127h. 36m. 45s.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

G. F. H., Bridgeport.—Could not decide unless you gave us the full scores.

W. N. W., Portsmouth, Va.—For wild pigeons see our advertising columns.

A. N., Johnstown, N. Y.—Write to Orange Judd & Co. for books on Architecture.

F. H. K., Pittsfield, Mass.—The woodcock and partridge season opens in New York Aug. 1.

R. A. C., Rookland, Me.—From all that we hear the trap you mention is giving satisfaction.

G. H., Philadelphia.—In his former trip to England Bogardus was not defeated by any English shooter.

J. D. H., Mayton.—Please tell me the shooting qualities of the breech-loading shot-gun? Ans. Very good.

J. E. P., Buffalo, N. Y.—The open season for woodcock in Penn., according to the law just passed, begins July 4.

W. A. McC., Milwaukee.—The shell is the *Scalaria Groenlandica* and it is found from Greenland to Massachusetts.

E. L., 171 E. Eighty-seventh st.—Write to John Bonnell, Forked River, N. J., or to G. Mercor, William's Bridge, N. Y.

J. M., care of G. H., Philadelphia.—Check for \$26 has been received, and you have been written to. See this week's paper.

H. H. F., Portland, Maine.—The crooked tail on your dog is a defect on the show bench, but he may be a capital animal in the field.

W. A. McC., Milwaukee.—Very sorry, but all our material was turned over to Mr. Burgess for the forthcoming kennel book. Write to him; Hillsdale, Mich.

H. K., Albany, N. Y.—Pointer puppy four months old has a breach at navel size of a walnut. What shall I do? Ans. A good surgeon will be able to remedy the defect.

L. B. H., Buffalo.—Could not inform you of the standing either of the parties or their dogs. We never can guarantee advertisers. The deer claw is no sign of poor breeding.

J. P., Midland, Mo.—Which is the best dog for turkey, quail, pheasants, ducks and squirrels? Ans. A good sized coon dog for ducks and squirrels, and a setter for the other game.

J. S. W., Tanceton.—Is a setter good as a watch dog? Which would be the better, a setter or a pointer? Ans. Either setter or pointer make good watch dogs. See advertisements.

G. N., Stony Hollow.—To "Break shot" is to rush for game the moment it is killed. To "Drop to shot" is to drop to the ground at the report of the gun. "Hold up," to rise after dropping to shot.

J. B. T. and F. C., of Boston, and some half dozen others.—See last week's issue of this paper. You will find that the accident to Mr. Dudley Selph never occurred, and that it was a malicious falsehood.

M. S. C., Newark.—My pointer 3 months old has tape worms. What shall I give her? Ans. Try powdered pumpkin seeds, followed three hours after by a dose of castor oil. Doubtful if you are correct in your diagnosis at that age.

M. H., N. H.—I have a cocker spaniel about two years old that does not seem to have much scent; hardly any. His nose is hard, harsh as a die and dry. Can he be helped? Ans. Give plenty of exercise and don't feed him too high.

P. O. S., Cincinnati.—1. Is the — a first-class rifle? 2. What size calibre, length of barrel and weight would you advise me to get for target practice at 400, or 500 yards? Ans. 1. An excellent rifle. 2. .40 calibre, 70 grains, 30 inches, 9 pounds.

REAUER, Erie.—With a 12 bore breech-loader, and with 4 drs. powder and 1½ oz. No. 6 shot, 1 put into a square, 14x15, at 40 yds., with right barrel 186, and with left barrel 183 pellets. Is that a good average? Ans. Very good indeed.

Carrizo, St. Augustine, Fla.—Your criticism is very sensible. The matter will be very fully discussed by Dr. Carver, the riderman, in an early issue. Our artist has never been on the plains, and never saw a buffalo, except the stuffed one of the museum.

W. H. B., Pontiac, Mich.—We think for your one-armed friend the Wessou ride would be the better. It could be better managed and loaded than any other we know. We could not give you the name of any correspondent of this paper without his consent.

A. D. B., Carlisle.—My setter 3½ years old struts very much and passes a little blood. Bavo given him castor oil and landanum without effect; he shows no signs of illness. Had him out yesterday, when he showed a 9:40 gait. Ans. Repeat castor oil and landanum.

M. B. A., Phila.—Have a pair of popples six months old, the dog half the size of the bitch. Dog has been sickly 1½ weeks across the hind quarters and staggers when he runs. Ans. Probably suffering from worms, unless he has a nervous disorder. Give arsenic and castor oil.

W. E. W., Waltham.—If a cocker spaniel dog pup is castrated will it interfere the slightest with his hunting qualities? At what age should the dog be altered? Ans. It generally deprives a dog of high courage and he treads sooner, though it does not effect his scent. The operation should be done before six months of age.

J. F. C., Portsmouth.—1. Does Sensation receive visits? If yes, what is the fee and owner's address? 2. What would be the cost in your city of a 12 bore paragon Tolly breech-loader, with case and appendances complete? Ans. 1. Yes. \$35. Address Dr. Webb, Secy. Westminster Kennel Club, N. Y. City. 2. Some \$225.

R. L. G., Louisville, Ga.—The gun Mr. Squire has for sale is 12 bore, 30 calibre. It would be difficult for you to find the 14, 16, or 20. Schuyler, Hartley & Graham import them made by Scott, and they cost \$150. They weigh from 5½ to 6½ pounds. (We are afraid your queries have been overlooked, or would have been replied to.)

H. J. G., Sabula, O.—We published a full list of works on taxidermy in our answers for June 6. From repeated demands for just this information we infer two things: First, that the country is full of amateur collectors; second, that if these amateur collectors read this paper more carefully they would save themselves a great deal of unnecessary trouble.

RIPLE, Newark.—What is the best kind of canoe for general use? also its price and where procured? Ans. Buy a Canadian bass wood, or cedar canoe; price \$25 to \$35. Send to Peterboro for an English canoe, to Lakeland for a Gordon, or to Gore's Landing, Rice Lake, for a Herald. See all late numbers of FOREST AND STREAM, which you have evidently failed to read.

A. C. W., City, New York.—Do striped bass when hooked ever jump from the water, as the black bass do? Are not black bass acknowledged by one and all to be the king of fish? What kind of shooting do wild pigeons afford from the trap? Ans. Yes; it is very common. 2. Many salmon anglers would dispute this point. 3. The best practice next to shooting in the fields.

J. A., Franklin Falls.—1. Why does a gun make a better pattern after it has been shot two or three times than it does the first time it is shot when it is clean and smooth? 2. What kind of a pattern is 110 No. 5 shot in a target 16 by 24, ¾ dra. of powder, 1½ oz. shot at 40 yds at Ans. 1. We cannot admit that it does. You merely get used to the gun. 2. Remarkably good.

S. I. H., Salem.—1. I have a double gun, choke-bore, 12 gauge, 28 inch barrel. Will you please tell me the proper charge and what reputation the maker has? 2. What kinds of game and fish at Blue Hill, Maine? Ans. 1. Do not know the name of the maker. ¾ dra. powder and 1½ oz. shot. 2. Trout, blue and deer shooting within easy traveling distance. Grouse, shore birds, etc.

M. E. L., Fradrick City.—I have a double-barrel breech-loading gun 12 gauge laminated steel barrels, cylinder, — make, which scatters too widely in do any good shooting. Can I have this gun rebored so as to shoot closely? If so please recommend a reliable firm that will benefit the shooting qualities of my gun. Ans. Send it to Clark & Snider, Haltimore, Md., who make a specialty of such work.

A. J. S., Brooklyn.—I want to take a long tramp; have tender feet. Where shall I get shoes? Ans. We can recommend you to no other person than McSwyny, 419 Broadway. Suffice to say McS. makes O'Leary's walking shoes, and the great pedestrian insisted, in our presence, that good shoes were half the battle. It is a higher art to make a well fitting, snug, yet easy shoe, than to build a coat.

H. F. F., Augusta.—The first of the two names you ask us about we believe to be perfectly responsible. As to the second one we have no reason to suppose that he could not do exactly as he represented. But we cannot guarantee anything. We would, however, buy dogs from either of the persons. Could not further advise you about a dog. We have often declared that we are not responsible for advertisers.

H. E. S., Sparta, Mich.—1. How much space should the shot cover at 40 yards from the gun for a good gun for shooting on the wing? 2. How heavy should a pair of shot barrels ½ inch bore be to stand charge of 8 dra. powder and 1 oz. shot, and what the weight of a pair with ½ inch bore, charge 8 dra. powder ½ oz. shot so as not to give unpleasant recoil if both barrels are fired at the same time? Ans. 1. A space 36

inches square. 2. For the first, 3½ pounds; for the second, from 3 to 3½ pounds.

J. A. J., Jersey City.—My setter pup is 3 months old and has had his temper for the last month. He turns his head and snaps on the air. He is not troubled with fleas and vermin. Gave him castor oil for worms,

but he has not passed any. Appetite good as are his sp. ribs, though his eyes run a little. What shall I do for him? Ans. The snapping is evidence of nervous disorder. Give 2 grains of quinine and ¼ grain of nuxvomica three times a day for a week. Do not let him bite you.

M. V. Y., M. D., Gettysville, Ind.—How old are gold fish when they take on their golden colors? I have a lot in my ponds one year old and they are of a brown color yet. Also, can I get some of the European carp from Washington this fall? Ans. Send to the U. S. Fishery Commission for carp. Your brown fish are but as dross and never will become gold fish. Get some new stock. These cyprinoids hatch of many different hues from the same stock; golden, brown, crimson, red, white, pink, black, etc.

LENOIR, N. C.—My pointer dog, 3 years old, frequently has violent spasms once a week. Perfectly helpless when in that condition. Seems to suffer great agony. The fits last half an hour; sometimes longer. What shall I do? Ans. The length of time during which your dog has been subject to fits renders it improbable that a cure can be effected through medicines. Keep his bowels open by giving sulphur and castor oil every week, and if not strong give 2 grains of quinine three times a day for a short time.

M. C. B., Monson, Me.—We have shot a duck in Hobron Pond whose like was never seen in this country before. It is a smallish duck with a red spot on bill, white near each eye, one half the body black, the other white; yellowish spot on back. Tall like that of any duck, with the exception of two long-peaked feathers in the centre. Please give us the name of the duck? Ans. Your description is very meagre, but we opine that the bird was a long-tailed duck, or old squaw, a male, in summer plumage; scientific name, *Harleia glacialis*.

J. H. N., Memaroneck, N. Y.—At the last session of the board of supervisors of Westchester county a law was passed making the close season for woodcock extend to October 1. The State law makes the close season expire August 1. Is this supervisor's law making the close season until October binding and in force? Ans. We have before this replied to a similar question. The supervisors have no power to make any game law which contradicts the State law. The law of the supervisors, when it clashes with the State law, is not binding.

J. W., Pittsburgh.—1. How does the \$100 — gun compare with the —, or —? 2. What would be a good pattern of No. 6, 8 and 10 chilled shot at 80 inch circle, 40 yards? 3. How many sheets of brown paper should they penetrate? 4. Whose paper shells are the better, American compared with English? 5. Would it be safe to use wire or bridge in a choke-bore? Ans. 1. Compares most favorably. 2. 200, 300 and 450 pellets. 3. There belong no fixed standard of brown paper, we can give no idea of penetration. 4. American are just as good. 5. Unsafe.

G. E. R., Rochester.—I have a .44 cal. breech-loading rifle and am using Hassard's FG rifle powder. Would it flatten the trajectory to amount to anything for 100 to 150 yards to use a hollow bullet and quicker powder? What would be the best powder to use in such case? Are "Express bullets" hardened, and if so how many parts of lead are put to one of tin? Ans. Yes, but hardly enough to be perceptible in your shooting, but would not advise it, unless specially made for heavy charges and light bullets; your arm would probably shoot wild. The Express bullet is made of soft lead.

NBS, Avoca, N. Y.—1. Where should we clerks in the central part of the State of New York go for a few days' recreation and fishing and, last but not least, where we can have the most sport for the least cash? 2. Is there a book or map that gives a good description of the lakes, rivers and villages of the United States? 3. What kind of hook and bait should be used in our lakes? Ans. 1. Take the Adirondack R. R. "North Creek and beyond." 2. The "Sport-man's Gazetteer" tells it all. For sale at this office. Price 25c. 3. Use a No. 6 or medium sized hook for small fish, and a cod hook for the big ones. See "Gazetteer" as above.

A. W. G., York, Pa.—Please inform me where I can buy a well bred great St. Bernard pup—probable cost for male as well as female? Which is the larger and gentler, the rough or smooth-haired? Are they suitable for children in their rough tumblings? If I am not mistaken, the St. Bernards are eminently affectionate and good-natured. Ans. In Philadelphia in 1877 there were some very fair St. Bernards shown there. Write to Wm. Bub, Philadelphia, or to J. D. Patterson, Norton, Del. Co., Pa.; or to John P. Haines, 378 Broadway, N. Y. We could not give you price. It would be better to get puppies, and bring them up. The St. Bernard is decidedly the most sagacious and affectionate of all the canine species. The smooth-coated run a trifle heavier than the rough-haired St. Bernards. Perhaps an advertisement would help you.

C. W., Brooklyn.—My Gordon setter puppy has been sick, though improving. When walking she seems distressed, carrying her hind legs under her body. When I feel her hind legs from the back down she seems to suffer pain, though I can see no swelling. Her eyes are running a little. Coat glossy and in good condition. Have given her nuxvomica. She has passed some worms. As my bitch took first prize at New York I am anxious about her. Ans. You do not speak of the condition of the bowels. Many dogs at the show suffered from dysentery. The symptoms as described point mainly to rheumatism. Would recommend you to leave off the nuxvomica. Give a little niphon once a day and a small dose of castor oil each alternate day for a week. Also two grains of quinine three times a day. If there is rheumatism in a small teaspoonful of bicarbonate of soda dissolved in a little water given in the evening will be beneficial. Be on the watch for distemper at her age.

CHESS CORRESPONDENTS.

—, New Haven, Conn.—Send us your address.

W. Steinitz, Chess Editor *Land and Water* and Dr. Gold.—Shall we exchange?

Westminster Papers.—The FOREST AND STREAM has been sent you regularly.

C. Jacobs, New Brighton, Pa.—Should like to publish one of your correspondence games.

C. E. Minard, Syracuse, N. Y.—Solutions received. Contributions to this department requested.

Rev. C. E. Haaken.—Kindly furnish us with the January and February exchange numbers of the *Chronicle*.

W. A. Briggs, Montpelier, Vt.—That correspondence game long overdue has been received and will shortly appear.

W. D. Mills, Savannah, Tenn.—Has the chess board ordered been received? We shall expect a tourney set from you soon.

C. Schwede, Leipzig.—We have not received a copy of the *Schach Zeitung* from January to June. Shall we continue the exchange?

G. Reichenheim, Philadelphia, Pa.—Your 121-mover in the *Times* is a big gun. Shall send you a set for thorough examination very soon. Thanks for past favors.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

(Post Office Box 2392.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Two or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 20, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous communications will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade applied by American News Company.

Western Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

Friday, June 21.—Creedmoor: Eighth and Sixty-ninth Regts. marksmen. Union Hill Schutzen-Fest. Regattas: Quincy, Mass., Y. C. Champion; Columbus Club Annual; Nova Scotia Y. Squadron. Base ball: Cricket vs Teumseh, at London, Can.; Live Oak vs Lowell, at Lowell. Trotting: Beacon Park, Boston; Grand Rapids, Mich.; Akron, O. Running Meeting at Pittsburg, Pa.

Saturday, June 22.—Creedmoor: Soldiers' Match for Olyphant Trophy; Champion Marksmen's Badge; Seventh Regt. Shells. Union Hill Schutzen-Fest. Regattas: Seawanhaka Open Ocean; Chicago Club Annual; Aleyone Boat Club (Brooklyn) Annual; Harlem Rowing; Passaic Am. Rowing Ass. Manhattan Athletic Club Open Games; Harding-Ennis 100 miles walk, N. Y. Cricket: Belmont vs Germantown, at West Philadelphia; Merion (2d) vs Young America (2d), at Ardmore; Longwood vs St. Georges, at Longwood. Base ball: Indianapolis vs Providence, at Prov.; Cincinnati vs Boston, at Boston; Chicago vs Milwaukee, at Milwaukee; Cricket vs Buffalo, at Buffalo; Lowell vs Live Oak, at Lynn; Rochester vs Star, at Syracuse. Running Meeting as above.

Monday, June 24.—Creedmoor: First Div. Cavalry for Marksmen's Badges. Base ball: Cricket vs Allegheny, at Allegheny; Live Oak vs Springfield, at Springfield.

Tuesday, June 25.—Base ball: Boston vs Chicago, at Chicago; Providence vs Milwaukee, at Milwaukee; Cincinnati vs Indianapolis, at Indianapolis; Cricket vs Allegheny, at Allegheny; Live Oak vs Hartford, at Hartford. Trotting: Oil City, Pa.; Seneca Falls; St. Louis, Mo.; Newark, O.; Mystic Park, Medford; East Saginaw, Mich.

Wednesday, June 26.—Creedmoor: Ballard Rifle Dirty Match. Eastern Yacht Club Regatta off City Point, Boston. Cricket: Manhattan vs Staten Island, Prospect Park. Base ball: Tecumseh vs Star, at Syracuse. Trotting as above, also at Norwich, Conn., and Sodas, N. Y.

Thursday, June 27.—Creedmoor: Fifth Regt. Practice. New York Bay Open Regatta. Base ball: Cricket vs Buffalo, at Buffalo; Manchester vs Hartford, at Hartford; Tecumseh vs Utica, at Utica. Trotting as above. Running Meeting at Kansas City, Mo.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

THE VOICES OF CRUSTACEANS.

UNDER this title Prof. G. Brown Goode contributes to the last number of the "Proceedings of the U. S. National Museum" a series of most interesting observations made by him recently, while collecting in the Bermudas. That crustaceans possess certain organs which may be used for the production of sounds has been known for some time, Hilgendorf, in Von der Decken's "Travel in East Africa," having been the first to bring the fact to the notice of the scientific world. Quite recently Mr. Saville-Kent and Mr. Wood-Mason have published a number of valuable notes on the same subject.

It appears, from what is now known with regard to these structures in the crustacea, that they are paired organs—that is to say, there are organs working perfectly independently of each other, on each side of the body. Their position, however, seems to vary greatly in the different members of the group. And similarly, the sounds emitted by the different species are very diverse, in some sharp "clickings," resembling, but much louder than, the ticking of a watch, are heard, while others produce a shrill, stridulating noise. In some forms of crustacea the sound-emitting organs are partly on the body and partly on a pair of appendages, while in others they are seated wholly on the appendages. *Matuta*, for example, has the scraper on the body and the rasp on the appendages, while *Macrophthalmus* has the rasp on the body and the scraper on the appendages. When the sound-producing organs are wholly on the appendages, the two parts of the structure may be either on different parts of the same appendages, as in *Ocyropsis*; or, as in the genus *Platyonichus*, the rasps may be on one pair and the scrapers on another.

We may conjecture that the sounds produced by these organs serve two purposes. They are, no doubt, in part protective, for Prof. Goode, speaking of a species of *Alpheus*, which emits a loud, clicking noise, says: "When one of them is taken between the fingers by an inexperienced collector, the sudden, convulsive snap almost invariably causes him to drop it." Doubtless the sound may serve, too, as a call between the sexes during the breeding season.

Prof. Goode's paper contains so much that is interesting that we take pleasure in giving a brief abstract of a part for the benefit of such of our readers as may not have access to it. Some small species of *Alpheus* inhabit in great numbers the cavities of a large aplysine sponge, found abundant on the reefs of the island, and when one of these sponges is "taken in the hand, the quick succession of clickings reminds one of the sound of instruments in a large telegraph office." The noise emitted by one of these creatures when put in a vessel of glass or earthenware is much louder. The sound, in the animals of this genus, is produced by a convulsive snapping of the last joint of the large claw. The sudden movement resembles that of the snapping beetles (*Elateridae*), and the noise emitted is similar. Another crustacean, which, from its power of wounding by means of a sharp claw, is locally known as "split thumb," produces a similar but louder noise, apparently in the same manner as *Alpheus*.

The "Bermuda lobster" (*Palinurus americanus*) is, on the other hand, provided with a stridulating apparatus, the sounds being produced by a peculiar modification of the lower joints of the antennae. Broad, elevated ridges, one at the base of each of the antennae, are closely embraced by processes from the latter, and when the antennae are moved backward and forward, "the close contact of the hard, smooth chitinous surfaces produces a shrill, harsh stridulation, like the sound of filing a saw." This sound has not been heard while the animal is under the water, although the characteristic movements of the antennae have often been observed. Prof. Goode believes, however, that these animals can in this manner produce vibrations which may be perceptible to their mates at great distances.

WILLIAM CULLEN BRYANT.—The honored and venerable man who passed so peacefully from us on the morning of June 12th while the bright sun was illumining the path of his exit, was the oldest of American poets. Born in Cummington, Hampshire County, Massachusetts, on Nov. 3d, 1794, he was in his 84th year when he died. Had it not been for imprudent exposure to the sun, he might have lived a century, for both his mental and physical powers were well preserved. Of the latter he was especially proud. When a lad he was a pupil of the Rev. Moses Hallock, who, with Rev. Mr. Snell, fitted him for college. The son of Rev. Moses Hallock (Rev. Wm. A. Hallock, uncle of the writer,) is still living, and also 84 years of age; and it had been for several years previous to Bryant's death a matter of some emulation between the two veterans as to which best held over the other. Only last spring Mr. Bryant, in conversation with the writer, jocularly referred to what he considered an advantage in his own favor. Alas! for human chances at 84! Mr. Hallock is now engaged in writing a biographical work on which he has been several years employed, and is in better health apparently than for three or four years past. Mr. Hallock's brother, Leavitt Hallock, and Bryant married daughters of Mr. Snell. Bryant's literary ability was manifested early in life. At ten years of age he made elegant translations of the Latin poets; at eighteen his most celebrated poem, one which is read to-day with exceeding pleasure, *Thanatopsis*, was written. In 1815 our poet was a lawyer, and in ten years stood high in his profession. In 1825 his first entrance into journalistic life commenced. In 1826 Mr. Bryant became editor of the *Evening Post* of New York, and for over half a century he has been connected with

this paper. For vigor of intellect, even up to the time of his death, there was no decline. There is no name in the United States better known or more revered than that of the great old man who is now dead. No line of poetry did William Cullen Bryant ever write which was not pure and chaste. It was a masculine mind which, though it had men do their duty, inculcated love and taught sympathy. Truly has a grand old singer passed away. His memory will long be cherished.

THE AMERICAN CLUB LIST.—That the criticism of our conscientious contemporary, the *Country*, is just, as respects defects in the Club List just printed, stands confessed in the preface of the book. We have first to construe a thing before we can discover its defects. Then we perceive where omissions can be supplied. If the World had been made in a day, it would probably have been a worse and wickeder world than it is; but the Creator paused to inspect the work at the close of each day's labor, and when He felt satisfied that it was "good," He continued until the whole was completed to His satisfaction. We trust that all secretaries and members of Clubs will send us such corrections and additions as they discover are needed, and also the names of the President and Secretary of each respective Club. We are convinced, as the *Country* suggests, that the usefulness of the book will be much increased by supplying the names of these officers, and as we have not published the book on speculation, we will send a copy of the revised "Club List" gratuitously to every one who has purchased a copy of the first edition; to this end we are keeping a list of their names. Meanwhile we will call the *Country's* attention to the fact, that of the four omissions with which he charges the "Club List," only one exists.

SHOOTING A CHICKEN THIEF.—A gentleman residing at Linden, N. J., has had the misery of seeing several fine broods of chickens almost exterminated through some agency which it was impossible to discover. The newly fledged were taken, until few or none were left, and then those of a larger growth gradually disappeared. Talking the matter over with a neighbor, he found that others were suffering in like manner, so that the attempt to raise fowl seemed most discouraging. Last night, however, he took a gun and watched by moonlight for cats, weasels, or whatever might turn up. Soon after nine o'clock a dark object was seen moving across the field toward the barn. The trigger was pulled and a skunk fell dead. The whole mystery was solved; and besides there was a dreadful smell.

FLOWERS AND MUSIC.—Gilmore's Garden offers rare attractions just now with the magnificent floral display of the New York Horticultural Society and the music of Theodore Thomas' orchestra. The opening entertainment last evening was all that could please in an æsthetic sense.

CUSHNOO HEIGHTS GUN AND FISHING CLUB—Augusta, Maine.—We beg to acknowledge the courtesy extended to us by the above-named Club, in making our managing editor an honorary member. We wish it success as long as fish swim and game runs; and bad luck to all poachers and pot-hunters to the end of time.

—Professor D. G. Elliott, F. R. S., etc., widely and favorably known in scientific circles for his labors in ornithology, arrived in this city from Paris last week, and has taken up his residence for a year to come at New Brighton, Staten Island.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

Tennessee State Sportsmen's Association, Nashville, Dec. 2
Sect'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President
Missouri State Sportsmen's Association.

HOW A COMMA VIOLATED THE MASSACHUSETTS GAME LAW.—A man's life was once saved because the lawyer who drew up his indictment for murder did not know how to punctuate. It was a quibble, but his life was preserved all the same. A less fortunate error in punctuation marks has been the means of bringing some undeserved odium upon our estimable correspondent, R. L. N., of Salem, Mass. In his notes for May 30 he recorded having shot some "robin-snipe," which was all right. But the birds appeared in the Game Bag and Gun column with *disjecta membra*. In the place of the hyphen was a comma, and, instead of "robin-snipe," was read "robin, snipe." This was at the same time very bad grammar, and a most unfortunate imputation upon the character of our law-abiding correspondent. Of course vigilant Massachusetts sportsmen were quick to note those two words, and the result was the communication published last week with our own comments upon the same, all of which was, as the sequel shows, powder and shot wasted upon a straw man. Trusting that this explanation will set matters right once more, we append a note from our correspondent under date of June 14:

EDITOR FOREST AND STREAM:

In your issue of June 13 I find myself severely handled by a

R. L. NEWCOMB.

In the "dirty gun match" there was but one rifleman who, with his seven shots at 200 and 500, made the following :

Towell.....	4 5 4 4 5 4-30	4 5 4 4 3 5-29-68
-------------	----------------	-------------------

— On the Fourth of July, at Creedmoor, there will be a grand celebration. There will be orations, rifleations, and grandans.

practice. The members are all amateurs, and some of the rifles were shot for the first time. GOODWENT

The charge in each case amounted to 4½ lbs., four 24-pow
howitzers being employed to fire the respective char

ea. codfish and 280,000 lbs. halibut; the call for dry-cured

will make the Bank trips in that department remunerative, and prices have averaged fairly for the halibut fares. The Georges fleet met with good success for the season; receipts, 925,000 lbs. codfish and about 50,000 lbs. halibut.—*Cape Ann Advertiser*, June 14.

RHODE ISLAND—Newport, June 15.—Bass fishing from Rough Point is very fine. Largest taken last week weighed from twenty-two to twenty-five pounds. T. J. F. F.

CONNECTICUT—West Hill Pond.—Lest any of our readers should be tempted by a communication in these columns, June 6, to try his hand on the bass in West Hill Pond this month of June, we append this timely warning:

"Citizens of New Hartford, together with this club, give notice that we shall prosecute to the extent of the law all persons found fishing in this pond in the month of June, as we are fully determined to enforce the laws for the proper protection of fish and game in this vicinity.

"CANTON ROD AND GUN CLUB."

New London, June 17.—Trout fishing poor. Streams for sixteen miles are fished to death. On May 30, twenty-six persons fished the Great Brook in Groton, and two of the party had a boat. Go where you will, if you catch thirty fish in a day's jaunt you do nobly. Five and six are the average catch. Flykes and pounds have destroyed all fishing in the Thames River. The river is filled with nets. Every farmer whose land borders on the river or around its mouth has his fyke, and his pigs are fed and his land manured with our best game and food fishes. Millions of small striped and sea bass are annually lost to us in this way. Many salmon have been taken in pounds off Millstone and Black Points and off Niantic. I used for bait, during the month of May, for black bass, what is called here mummy-chogs, or salt water minnows, and found them very effective. Caught 119 bass in six trips, smallest weighing twelve ounces, largest, 4½ lbs., besides returning all females not badly hooked. MISAL.

New York—Catskill, June 15.—Bass fishing at the Point yields good returns. Hook.

NEW JERSEY—Forked River, June 13.—The first blackfish of consequence were caught yesterday, Joel Barkalow and Geo. Woolley of this place taking seventy-nine with hook and line in a few hours, weighing from one to three pounds each. There are some bluefish in the bay, but they will not take the hook unless the weather gets warmer. The baymen are taking a few small ones in their nets. ARTHUR.

SPORT AT SEAGIRT, N. J.—On Sunday last at Seagirt, N. J., there was a grand rush of bluefish. They took the squid line ravenously, and large numbers were caught. The sport somewhat interfered with religious worship on that day.

Kinsey's Ashley House, Barnegat Inlet, June 16.—10th, P. P. Gustine, James Malshead, J. Freese, 38 sheephead. 11th, Gustin & Co., 36 sheephead; H. Schroeder and J. T. Price, Philadelphia, 25 blackfish. No guests for bluefishing, some of our captains took as high as 40 per boat. 12th, Wm. T. Bailey, Camden, H. O. Wilber and Geo. A. Perks, Philadelphia, 22 bluefish; J. T. Price, 7 sheephead. 13th, Bailey & Co., 25 bluefish; Price & Co., 30 blackfish. 14th, Bailey & Co., 80 bluefish; Price & Co., 2 sheephead. 15th, Col. Levi Davis & Co., of Bordentown, 22 bluefish; 75 sheepheads by the professionals.

PENNSYLVANIA—Bristol, June 10.—The bad fishing season, closing to-day, has been very unremunerative to those engaged in it. The light run of fish, the multitude of nets on account of so many men being out of employment, and the trichina scare, made the average small. The salmon comes in nicely for fancy fishing, but for an all-day bread-and-butter job a poor man would rather have plenty of shad. A barrel of salt shad in the cellar during a severe winter helps materially in keeping the blood circulating until spring. S.

THE DELAWARE CATFISH.—The catfish of the Delaware are favorite game fish with many anglers who suppose them to have nine lives. However that may be, a plague has come upon them and they are dying in great numbers. An important branch of study is opened in connection with these fish epidemics which are so often reported as destroying scores of fish. We invite the fullest information from our readers who may chance to notice such fish mortality.

MARYLAND—Baltimore, June 11.—We are taking a few bass from Lake Roland, nine miles from this city. A party from Oakland visited the Blackwater last week and caught 300 trout. The perch have not run up Bush River this spring. WILL.

VIRGINIA—Leesburg, June 12.—Last Monday a little eight-year-old boy took two eleven-inch trout, and his brother, nine years old, took one about the same length; beat "Papa," who took one eight-inch trout, and "Uncle Willie," who took none. A few bass have been taken from the Potomac by parties who claim that possession in Virginia of bass taken elsewhere is not a violation of the law. J. W.

Leesburg, June 15.—Fifteen large bass yesterday taken from Potomac, largest four weighing over three pounds. Weather fine. Our law makers must try again if they want to protect the bass in spawning time. T. W.

TENNESSEE—Columbia, June 8.—Col. Geo. Connor and Mr. M. Dowson returned from Buffalo last week, showing a creel of thirty-five or forty trout and perch (rock bass). Messrs. Gordon, Moore, Tilford, White, McFall and Porter returned Friday night from the mouth of Blue Buck on Swan, a place familiar to Tennessee anglers, well satisfied with their catch. VAL.

Columbia, June 14.—Messrs. Tilford, Bailly, Postmaster Hughes and Caldwell went to Swan Creek Monday and returned Thursday, the creek being too high. They caught 20 very nice ones during their stay. A fisherman fishing at mouth of Bear Creek caught 103 pounds of fish in one night; they were mostly blue cat. VAL.

Nashville, June 13.—Saw a catfish to-day, which was caught in the Mississippi, and weighed 110 lbs.; head measured 18 in. in length and 12 in. in width. J. D. H.

FLORIDA—Orlando, June 1.—Messrs. E. A. Richards, C. F. McQuaig, and H. Burke have just returned from a trip to Lake Okechobee. They report all kinds of game and fish very abundant. HEXAGONAL.

ILLINOIS—Chicago, June 3.—You know the volume of water passing over the water-shed at Elk Rapids, Michigan. It has always seemed to me a place where land-locked salmon would be found. The water is cold and clear, with just enough dash and swirl to suit these fish. I know they have been caught in nets just a few miles below the rapids in the bay, weighing nine or ten pounds, yet have heard of but one being caught in the rapids, and from the description given by my friends I concluded it was a true land-locked salmon. Mr. Jerome said some time since: "They ought to show themselves in the summer of 1878." I am very anxious to try my skill against one of them, and would like to lie over there and try them. Many thanks for your kind advice regarding flies.

Since writing you I have received a letter from my Elk Rapids friends. They tell me that some fine speckled trout have been caught in the race just below the dam, and above Mr. Noble's house on the island. The fishing up there has opened very fair. Wirt Dexter, our famous Chicago lawyer, with a party of friends, are up there fishing in the lakes and streams in the vicinity. Our worthy friend, Holabird, caught a "whale" May 23. He was having a few hours' fishing, when he struck a bass measuring 21½ inches long. It made things lively for him for a few minutes. I am pleased to see Mr. Chandler has given us the promised letter on bass fishing. W. D. T.

MICHIGAN.—Messrs. Hazeltine, Nelson and Thompson, of Grand Rapids, and Mr. Fox, of Boston, had a glorious time on the Jordan—1,300 trout in six days. Northern Michigan offers unusual attractions to anglers and invalids. H.

WISCONSIN—Neenah, June 11.—Mr. E. W. Gillett and two ladies caught 160 bass and pike yesterday in Lake Winnebago. R.

WILDERNESS WISCONSIN.—There are hundreds of localities in Wisconsin which have never been fished by the angler nor visited except by the aborigines. Even the Government Surveyor has skipped them. The officers of the Wisconsin Central Railroad, which runs through a primitive wilderness for more than half of its 350 miles of line, being enthusiastic sportsmen, are making extended investigations in the woods along the route and sending in explorers to search out the fishing places. Col. Henry Pratt, the General Passenger Agent, has permitted us to copy the following letter from one of their surveyors:

ASHLAND, Wis., June 6, 1878.

CAPT. H. PRATT:

In accordance with your request and Mr. Bacon's order, I have visited the big falls of Bad River, also English Lake, and have made very close inquiry about the small lake I spoke of as being near Silver Creek Station. This lake is claimed by all to be No. 1 bass fishing. You will see from the map inclosed that it is only two miles from Brunsweiler, where the trouting is best on that stream, and that it is only one-half mile from Trout Brook. From the lake to each of these streams Davis promises to mark a trail. He has a good boat on the lake. The trail to the lake leaves our track at the second telegraph pole north of Trout Creek Bridge. Bass fishing was found to be good on English Lake. There is a good birch canoe on the lake said to belong to some Indians—this is the only thing there is in the shape of boats. There is a good road from Penokee Station to Peter's Homestead, within one mile of the lake, and from there to the lake is a good plain trail. Distance from railroad station to lake is about three miles; much of the way up and down quite high hills. And now for the big falls of Bad River—certainly the grandest thing I ever saw. Tyler's Fork emptying into Bad River is what makes the falls. It is certainly well worth the trouble of going to see them. They are about two miles from the railroad crossing of Beaver Brook. From this point there is an old timber road cut to within three-quarters of a mile of the falls. From this point to the falls is through about as bad a windfall as the country affords, besides being up and down high hills and without some patience and lots of Christian fortitude a man had better not make the undertaking. The falls are so located that it is difficult to get in position to make an intelligent estimate of their height, but they are certainly over 75 feet, and I would not be surprised to know that they measure 100 feet. Strangers should not try to make this trip without a guide; O. W. Davis, Silver Creek, would be a good guide.

T. M. WILLIS.

P. S. There is a path cut to the Bad River Falls, and Mr. Davis, of Silver Creek, is to make a trail to-morrow from the bass lake to the trout streams a mile or two each way from it.

How a Fish Grows.—About three months ago we published a modest, unassuming, little account of a bass, caught by a very innocent person, which weighed 58 pounds. In one week that same fisherman was said to have caught a bass weighing 85 pounds. Three weeks afterward a Western paper made that fish grow to 135 pounds, and now it comes to us from California weighing 581 pounds. A bass will increase, then, in ninety days exactly 437 pounds. Truly a Bastodon!

TROUT PHOTOGRAPHS.—When one fat trout says to another fat trout "Going to sit for your picture to-day?" it is not speaking after the manner of men. The question really means this: "Do you expect to-day to be jerked out of this aqueous sphere into a higher and more ethereal one, where all good trout who have grown big and fat down here, as it is every trout's duty to do, have their photographs taken?" That was just what happened to a fish, whose years should have taught him wisdom, up in a Quebec, Ont., trout stream. He weighed three pounds ten ounces, was twenty-one inches in length, twelve inches in girth, and "took a beautiful picture." Mr. John T. Moody, Superintendent of the New York, New Haven and Hartford Railroad, tells us that there are better fish in that same stream than have yet been caught out of it, which we leave for our trout-minded reader to prove for himself.

ANGLING IN CENTRAL PARK.—The fishing season at Central Park is just now at its height. Few of the afternoon strollers in the Park ever dream of this fishing, which, from its extent and importance in the domestic economy of many interested families, may be termed an industry. That is, because ninety-nine ramblers out of one hundred keep their eyes wide open, and so see nothing. The one hundredth, if he be more astute, seeks a bench at the water's edge, shuts his

eyes, and straightway beholds strange things. Creeping along with the caution and cat-like tread of the crafty red-skin, silently steals the small boy, with scanty dress and capacious pockets. The gray-coated "cop" is not in sight; no one near except the One Hundredth, and he is fast asleep. The small boy's hand dives into one capacious pocket, and brings forth a string, to which is attached a cunningly bent pin-hook. Another hand dives into another capacious pocket and brings up a piece of dough. This is for bait. Then, quicker than we can tell it—a final scout-glance all around and an assuring look at the slumbering O. H.—the bait touches the water, a catfish seizes it, is jerked out, and disappears head first down into the depths of one capacious pocket. The whole operation, so far as the dozing O. H. can judge, consumes about three seconds and is repeated just four times. Then, with two squirming, wriggling catfish in each capacious pocket, the small boy, like a fishing smack with a full cargo, takes the straightest way for home, and before the somnolent O. H. has fairly finished his dream, is back again, ready for another cargo. If, just after the sixteenth catfish has found its way into the capacious pocket, the snoring O. H. suddenly opens his eyes and thinks to intimidate the small boy into going shares, there are just three thousand chances to one that there will be no small boy in the whole Park. Then the O. H. may conclude that he was asleep after all.

A FEW HINTS ON BASS FISHING.

CHICAGO, June 6, 1878.

Mr. Editor.—A perusal of the interesting letter in your last issue, signed "G. C.," on bass fishing, has given me and several personal friends much pleasure, and I hope you will induce him to land another bass for the delight of your readers. It has been my good fortune for many summers past, and occasionally a winter in Florida, to undergo the same experience he so delightfully detailed, and I once thought while reading I recognized the identical snarl that once rattled my temper. He basaled his pupil through most of the scrapes a new beginner naturally falls into, and with a kindly hand sets him aright. To one who has fished for bass but little, I advise the cutting out of that article, and pasting it in his fishing hat. It is the most instructive article you have yet published. Who "G. C." is is a mystery to me, but the fraternity owes him thanks. He was so busily employed instructing his pupil that he did no fishing himself, and I thought it proper to state my experience on one point which may have been overlooked by some of your readers.

It is a well known fact that bass moving in schools have what might be termed pathways, and one in fishing over what he supposes to be good ground, often has to wait until the fish arrive at that point (I am speaking of still fishing), and after a short time of vigorous biting, a lull occurs, for the fish have gone on. Now, the point is to keep them with you as long as possible; and when two are fishing from the same boat the school can, with due judgment, be kept some time by taking advantage of their curiosity or voracity, whichever attribute it may be that causes other fish to follow almost to the surface a captive. If A and B are fishing together, we will suppose A has hooked a bass, and just about fired him out. Should A land his bass, the balance of the school, not seeing B's hook, may move off. But if—before A lands his bass, and while he has him well under control—B moves his bait near A's bass, some of the school, evidently thinking the hooked bass, in his struggles, is after B's bait, will rush up and take it. At this point, both have hooked a bass. B should keep his fish in the water until A has landed his and put on fresh bait; and then drop it near B's fish, who, probably, is still surrounded with curiosity hunters. The chances are that A will again hook a bass. I have seen this kept up until six or seven have been taken from a school. W. C. EAGAN.

—An old fisherman on the Lehigh (Pa.) tells how to catch black bass, which are now in season. "Black bass," he says, "will first nibble gently at the bait, and will frequently draw the float away under water. But wait—the float comes back. Suddenly he seizes and darts off. Don't pull—give him play. Suddenly he stops—he swallows the bait slowly. Now a quick pull and you have him." This is good advice.

THE ENGLISH TROUT FISHER.—There are two classes of trout-fishers, the one who haunts the impetuous rocky moorland and mountain-stream, and the other who affects rather the duller streams of the southern and midland districts. The pursuit of either is beautiful in its way. The former, perhaps, sees nature in her wilder and more unadorned garb, and in most cases has no need to ask for or obtain permission; though unfortunately this privilege, which formerly was very generally enjoyed by the public in the north and in Ireland and Wales, is now being rapidly curtailed, and stream after stream, loch after loch, is year by year shut up and forbidden to the public. This is greatly to be regretted, but in many instances the public has deserved it. It is a singular thing that while Englishmen are at home and in serious business costume, they have a wonderful respect for property and its rights; they recognize the laws of trespass and damage to the uttermost; but once put them in a shooting coat and a wide-awake, thick shoes, and a generally free and easy costume, and their notions of the rights of *meum* and *tuum* become as free and easy as their clothes, and it is quite marvelous what a lot of really wanton mischief they can do, and the nuisance they can make of themselves. No one who has not lived in a tourist track can form any idea of this, and, as regards the streams, "all's fish that comes to net," and nothing in season or out of season, big, or little, comes amiss, nor any mode of fishing either. The result is that the streams are reduced to a very low ebb in the number and size of fish, where they are free to the public and at all easily approachable. Still there are localities yet where the wandering angler can, if he be skillful in the use of his weapons, and the day and water favor him, drag from the streams a respectable creel of trout, though it is harder and harder to do every year that passes, and to carry it through he has to resort more and more to bait fishing, and to trust less and less to the artificial fly. But supposing all to be fairly satisfactory, a scramble up some well plenisated burr, away up among the wild hills which border the valleys on the upper part of the Tweed say, is a delightful way of passing a day; and notwithstanding the bulk of your trout will hardly run three or four to the pound, with an odd pounder or two, and a half-pounder now and then, the constant change, the heavenly air, so soft and yet so bracing, the entire surroundings of scenery and wild life will repay one for the fatigue, even though a four or five mile walk over the hills to one's inn after the sport is over should be the wind-up.—*The Week*.

A BRAND-NEW SPORTING STORY.—The following is found in Lysippus, a very little known Greek writer of the second century:

A huntsman with spear and bow intent on sport, met a countryman, who was gazing in a listless way on a herd of pigs.

"What wilt thou make me pay, oh, Herdman, if I launch a shaft amid that herd of swine?" asked the hunter.

"Four pieces of copper for all thou canst kill," said the lout.

"Then by Apollo!" cried the hunter, "it is a bargain. Nerve my arm, oh Hercules! and speed my arrow, oh Diana!" Thereupon, drawing his bow string to his ear, he let fly a shaft and transpierced with one arrow three pigs.

"Here is thy money, old man," said the hunter; "but never didst thou think I should have had so cheap a bargain as three swine for four pieces of copper."

"True," said the countryman, "but the swine were not mine."

We think we have heard this little joke before.

ANOTHER VERSION OF THE SAME JOKE.—While the above was in the hands of the compositor the following train of incidents actually took place in this city. Besides being a noteworthy coincidence and a commentary upon the prescient management of this journal, this modern epic of the goose is an admirable illustration of Schlegel's profound remark that "History repeats itself," and Solomon's reflection that "That which has been shall be." Now for the goose:

On Thursday afternoon Gustave Schmidt, who is noted for the interest he takes in rifle shooting, entered the saloon of John Lutz, and drew from his pocket a fine revolver which he had recently purchased, and which he exhibited with pride to Lutz and to those of his friends who were in the saloon at the time. Schmidt spoke boastfully of his own powers as a marksman, and offered to make a bet of \$10 that he could hit a mark at the other end of the room.

"Do you see that goose," said Lutz, contemptuously, pointing to a fowl that could be seen through the open door waddling about the back yard; "you give me a dollar and I'll let you fire three shots at her, and if you hit her once you can have her."

Schmidt accepted the offer, and fired from where he was standing, bringing down the goose. A roar of laughter greeted his achievement. He walked proudly into the yard and took the goose, supposing that the merriment was at Lutz's expense. As he re-entered the saloon with the fowl in his hand, the side-door of the saloon was thrown violently open and an angry man ran into the saloon. This was Henry Steinberg, the owner of the goose. His first act was to knock Schmidt down, and his second was to explain his reasons for doing so. When Schmidt understood how he had been taken in, he knocked Lutz down and demanded the return of his money. Steinberg in the meantime busying himself in asking both of them to pay for the goose. The noise attracted the attention of Officer Wheeler, who entered the saloon. After some discussion he arrested Lutz on the complaint of Schmidt, who charged him with obtaining \$1 by false pretenses; Schmidt, on the complaint of Lutz, on a charge of assault and battery, and Steinberg on a similar charge, also made by Schmidt.

When the prisoners were taken to the station-house, and the sergeant heard with wondering eyes the various complaints, he turned to Wheeler and asked if that were all. "Why, no," was the answer; "Lutz was selling liquor without a license, Schmidt hasn't a permit to carry that pistol, and then that other man, Steinberg, hasn't got any permit from the Board of Health to keep his goose."

When the three prisoners were taken before Justice Flammer, in the Essex Market Police Court, recently, a long investigation was held, and the court room was crowded by the friends of the three prisoners. Lutz said it was all a joke, and gave back the dollar, withdrawing his charge against Schmidt. The latter, touched by this spirit of conciliation, withdrew his charges against Lutz and Steinberg, and the owner of the goose forgave the marksman, when the latter and the saloon keeper each promised to pay half the value of the goose. Their misunderstandings being over, they expected to be allowed to go. But just then officer Wheeler and his charges loomed up like grim fate. Justice Flammer required Lutz to give \$100 bail on a charge of violating the Excise law, held Steinberg in the same amount for keeping geese without a permit and fined Schmidt \$5 for carrying a pistol without a permit.

NO CATS, NO RATS, NO MICE.—Visiting the large lead establishment of Messrs. Tatham, we overheard the foreman commiserating a cat.

"She won't be here long," he said; "only came here yesterday."

"Why?" we asked.

"Because cats are gonners here."

"How?"

"Lead poison. They don't stand it five

days. They get painter's colic and keel over. There isn't much use for cats, however, for the rats and mice don't find it comfortable here either, for we never see any."

Happy proprietors of lead works, we thought, who never hear any caterwauling! The remedy, evidently, for the householder plagued with cats in his back yard is of the simplest character. Let him convert his mansion into a pipe, shot and sheet lead factory.

SNAKES AND HORSES' EYES.—Whole volumes have been written upon the well-known phenomenon of horse-hairs which, immersed in water, turn into snakes. But here is a new field of study: What would be the effect upon the equine race if all had snakes in their eyes? A Penn Yan, N. Y., horse has a snake in his left eye. When the snake squirms the horse winks his eye. The winking is so frequent as to induce sleepiness. We might, then, reason that an ophidian-eyed variety of horses would be sleepy, sluggish and lazy. But Philadelphia street-car horses have snakes in their eyes, and lions and tigers, too. This menagerie in the eye of a Philadelphia horse, however, it has been observed, instead of making him slow and sleepy, induces in him friskiness, spirit and mettle. The way of it is this: When a horse falters and dies in Philadelphia, he is straightway carted away to be devoured by snakes, lions and tigers in the Zoological Garden. Such a fate is ever before him, staring him in the face. By these snakes in his eye the horse is impelled to suffer the woes of an outrageous fortune a year or two longer than would otherwise be possible, and the result of this is a breed of Philadelphia horses which will probably before long become famous in the great horse marts of the world.

SEALING STEAMERS.—Why do not some of the Arctic exploring parties equip an iron ram and fight their way through to the pole, "if it takes all summer?" The Newfoundland sealing vessels are in their way something like what is wanted for a North Pole campaign. According to the *Toronto Globe* they are armed with iron prows, with which they attack ice fields with the grit and pertinacity of bull dogs:

"The iron prow acts like a huge wedge driven by steam. Saws are used in making a way through thick ice, especially when an approaching iceberg threatens a catastrophe. The long, sloping stems of these vessels are built of solid oak and covered with inch thick iron plates, forming a ram of great weight and strength. The rest of the hull is sheathed four inches thick with a New Zealand wood almost as hard as metal."

FISH DAMAGING SUBMARINE TELEGRAPHS.—The *German Fishery Gazette* is authority for the following:

The submarine telegraph cable laid down between Portugal and Brazil, and along the eastern coast of the South American Continent, has been repeatedly subjected to the attacks of the saw-fish. Splinters of bone belonging to this fish have been found within the gutta percha and outer coverings of the cable, embedded so deeply as to damage the electric wire. Five such accidents have been reported, from which it seems probable that the saw-fish, running with his full strength against the cable, and being of a hot temper, getting angry, had attacked the cable with his saw. A yet more strange story is reported from Persia, where a short time since the submarine cable laid down in the Persian Gulf, suddenly ceased its functions. Upon examination it was found that a large whale had got entangled in the cable and broken it. The monster was covered all over with parasites, and it seems not unlikely that the whale in his attempts to rid himself of them, rubbed his body against the cable, and using his strong tail to sweep them off, had accidentally broken the cable, which immediately had coiled itself spiral like, round the body of the whale. The monster in trying to escape got yet more and more entangled and finished his efforts by being suffocated, his body presenting a terribly lacerated appearance.

ROMULUS BOWMAN.—We have here in Hart County, Kentucky, a man by the name of William Bowman, who was thrown away in the Apalache Mountains, North Carolina, when an infant, and was found by an old bear and adopted as a cub. At the age of about ten years he was captured, tied hand and foot, and then his captors found that he could not talk, nor could he be persuaded to take any food but milk, which he sucked from a bottle, showing that he had lived solely by the nursing of the bear. Bowman is now a farmer near Omega, and any one doubting the truth of this statement can have it verified by seeing him.—*Hart County, Three Springs.*

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing, and other sports, and on request they prepare special designs for similar purposes. Their TIMING WATCHES are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. TIFFANY & CO. are also the agents in America for Messrs. PATEK, PHILIPPE & CO., of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

UNION SQUARE, NEW YORK

APOLLINARIS

NATURAL

Mineral Water.

HIGHLY EFFERVESCENT.

APPROVED by the *Académie de Médecine* of France, and its sale in France authorized by special order of the French Government.

Recommended by the highest Medical Authorities in New York.

"A great relief for sickness."

"A delightful beverage."

"Far superior to Vichy, Seltzer, or any other."

"Most grateful and refreshing."

"Absolutely pure and wholesome; superior to all for daily use; free from all the objections urged against Croton and artificially aerated waters."

"Impregnated only with its own gas."

"Useful and very agreeable."

"Healthful and well adapted for Dyspepsia and cases of acute disease."

"Mildly acid; agrees well with dyspeptics, and where there is a gassy diathesis."

"By far the most agreeable, alone or mixed with wine, useful in Catarrhs of Stomach or Bladder, and in Gout."

"Not only a luxury, but a necessity."

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and wholesale of

Painting.

PAINTING.

EVERY ONE THEIR OWN PAINTER.

50 Per Cent. Saved.

We are manufacturing a very fine Pure Ready-mixed Paint, mixed in such a manner that any ordinary painter or farm hand can make as good a job painting as a painter can with paint mixed in the old way. This is because our paint does not set quick, and thus show marks of the brush. We sell it lower than materials can be bought in the ordinary way, and pay freight on certain sized orders.

Any one wishing to Paint, will have mailed free, upon application, our book—"How Every One can Paint and Select Harmonious Colors." Address INGERSOLL PAINT WORKS, South and Dover streets, New York.

Auxiliary Rifle.

SHELTON'S Auxiliary Rifle Barrel for Breech-Loading Shot-Guns.

This barrel can be placed in a gun ready for use in a second of time with the same ease as a cartridge, and can be removed just as expeditiously. There is no wear on the rifle barrel, nor on the shot-gun, and it cannot get out of order. With this Auxiliary Barrel, which weighs about one pound, almost instantly a breech-loading shot-gun can be converted into a most accurate rifle. The AUXILIARY BARREL will fit any standard make of gun of 10 or 12-calibre—calibre of rifle 32, 38, or 44 as desired. Length of barrel, twenty inches. The shells used with the best advantage are the Winchester Repeating Arms Co.'s cartridges, No. 32 and 38, extra long, and No. 44, model 1873. Send for a Circular and Price List.

AUXILIARY RIFLE BARREL COMPANY,
NEW HAVEN, CONN.

P.O. box 1,178.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the international pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £100, and a money prize of £705, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 15 at 23 yards and 1 foot and 2 1/2 yards. He also won the second event, killing 3 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke-bore match, 1877, being 17 yards by the best London makers, and winning the silver cup, valued at 60 guineas, presented by Mr. J. Purley, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 104, using one barrel only.

The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1873; No. 163,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

H. C. SQUIRES, Agent, No. 1 Cortlandt Street, New York City.

IMPORTANT TO FARMERS, COW-KEEPERS AND DAIRYMEN.

The Wonderful Self-Acting Cow-Milker,

PATENTED MAY 28, 1878.

THE MOST USEFUL INVENTION OF THE AGE.

Tested and approved by many of the leading Agriculturists, Dairymen and Farmers throughout the United States, and highly recommended by all who have used it.

WILL MILK A COW IN FROM THREE TO FOUR MINUTES and can be adjusted and used by a CHILD. Usefulness, simplicity, cleanliness, durability and cheapness combined.

PRICE, TWO DOLLARS.
Apparatus, with full instructions and pamphlet containing description of the milker and sectional views and treatise of the cow's teats and bag, sent prepaid to any address on receipt of price, \$2.

READ THE FOLLOWING TESTIMONIAL:

25 LEXINGTON AVENUE, N. Y., June 5, 1878.
I hereby certify that, in company with the Society, I have witnessed the operation of the Self-Acting Cow-Milker, and that it fulfills all that is claimed for it.

(Signed) JOSEPH D. COLEMAN, Veterinary Surgeon to the American Society for the Prevention of Cruelty to Animals, and Veterinary Surgeon to the American Society for the Prevention of Cruelty to Animals.

STENT & CO., Manufacturers' Agents, P. O. Box 2,997, 132 Nassau Street, New York.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing miss-fires. The cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast like movable anvil made from steel. The Nickel cone also prevents miss-fires when a cap has been left in shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.
Yours truly,
A. H. BOGARDUS.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bored, modified chokes and cylinders.
Our chilled shot will be found free from shrinkage, more spherical, more uniform in size, harder, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COM-PRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

THE SPORTSMAN'S ROUTE.

Chicago & Northwestern R.R.

Embraces under one management the Great Trunk Railway Line of the West and Northwest, and with its numerous branches and connections, form the shortest and quickest route between Chicago and all points in Illinois, Wisconsin, Northern Michigan, Minnesota, Iowa, Nebraska, California, and the Western Territories. Its

OMAHA AND CALIFORNIA LINE is the shortest and best route for all points in Northern Illinois, Iowa, Dakota, Nebraska, Wyoming, Colorado, Utah, Nevada, California, Oregon, China, Japan and Australia. Its

CHICAGO, ST. PAUL AND MINNEAPOLIS LINE is the shortest line for Northern Wisconsin and Minnesota, and for Madison, St. Paul, Minneapolis, Duluth and all points in the Great Northwest. Its

WINONA AND ST. PETER LINE is the only route for Winona, Rochester, Owatonna, Mankato, St. Peter, New Ulm and all points in Southern and Central Minnesota. Its

GREEN BAY AND MARQUETTE LINE is the only line for Janesville, Watertown, Fond du Lac, Oskosh, Appleton, Green Bay, Escanaba, Negaunee, Marquette, Houghton, Hancock and the Lake Superior country. Its

FREEDPORT AND DUBUQUE LINE is the only route for Elgin, Rockford, Freeport and all points via Freeport. Its

CHICAGO AND MILWAUKEE LINE is the old Lake Shore route, and is the only one passing through Evanston, Lake Forest, Highland Park, Waukegan, Racine, Kenosha to Milwaukee.

PULLMAN HOTEL CARS are now running regularly between Chicago and Council Bluffs, on the California Express Train of the

CHICAGO & NORTHWESTERN RAILWAY. West bound, they leave Chicago daily, except Sunday (and on every third Sunday), from the Wells Street Depot, at 10:30 A. M., and arrive at Council Bluffs next morning.

East-bound they leave Council Bluffs at 5:30 P. M., daily, except Saturday (and on every third Saturday), and reach Chicago next afternoon.

No other roads west of Chicago run Pullman or any other form of Hotel cars.

TO SPORTSMEN.

This line presents peculiar advantages. For Prairie Chickens, Ducks, Geese and Brant shooting, our Iowa line to-day offers more favorable points than any other road in the country, while for Deer and Bear hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel and Bass fishing, a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by anything to the West.

TROUT FISHING!

The Wisconsin Central Railroad

THROUGH TO

LAKE SUPERIOR.

EXCURSION TICKETS from Chicago to Ashland
 and return for \$20 are sold at 63 Clark street, or the
 C. M. and St. Paul, Madison Street Depot, Chicago;
 also at low rates from Milwaukee. Dogs, guns and
 camp equipage taken free.

The points of attraction to sportsmen on this
 "Forest and Stream" route are Menasha and Green
 Bay for bass fishing; Butternut Creek and Lake for
 muskellunge; the many branches and lakes of the
 Flambeau and Chippewa which teem with bass, pike
 and pickerel; never till last season fished by sports-
 men. Between Silver Creek and Ashland all are
 trout streams, and many others can be easily reached
 along the shore from Ashland or Bayfield, while
 rock fishing for speckled trout and trolling in the
 Bay affords excellent sport.

The Chequamegon hotel at Ashland, built last
 year, has been enlarged, and is supplied with a
 steam-yacht, sail and rowboats and excellent guides.
 The atmosphere at Ashland is a sure preventive of
 hay fever.
 Steamers from Ashland to all Lake Ports.

Sportsmen's Routes.

"THE FISHING LINE."

Brook Trout, Grayling and Black Bass Fisheries
 of Northern Michigan,

VIA THE

Grand Rapids & Indiana RR
 (Mackinaw, Grand Rapids & Cincinnati Short Line.)

Sportsmen who have cast a fly, or trolled a spoon
 in the

Grand Traverse Region

will come again without solicitation. All other lovers
 of the Rod are invited to try these waters, wherein
 the fish named above, as also Muscullonge, Pike and
 Pickerel abound.

In no other streams east of the Rocky Mountains
 is the famous AMERICAN GRAYLING found in
 such numbers.

BROOK TROUT Season opens May 1.
 GRAYLING Season opens June 1.
 The Sportsman can readily send trophies of his
 skill to his friends or "Club" at home, as ice for
 packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of
 the North Woods and Lakes is very beautiful.
 The air is pure, dry and bracing. The climate is
 peculiarly beneficial to those suffering with

Hay Fever and Asthma.

The Hotel accommodations are good, far surpassing
 the average in countries new enough to afford
 the finest of fishing.

On and after June 1 Round Trip Excursion Tickets
 sold to Points in Grand Traverse Region, and attractive
 train facilities offered to tourists and sportsmen;
 also Mackinaw and Lake Superior Excursion Tickets.
 Dogs, Guns and Fishing Tackle Carried Free, at
 owner's risk.

Camp Cars for fishing parties and families at low
 rates.

It is our aim to make sportsmen feel "at home"
 on this route. For Tourist's Guide, containing full
 information as to Hotels, Boats, Guides, etc., and
 accurate maps of the fishing grounds, send to

Hotels and Resorts for Sportsmen.

Invalids' and Tourists' Hotel,
BUFFALO, N. Y.

A new and elegant summer resort; overlooks Lake
 Erie and Niagara River, and is in the midst of beau-
 tiful parks. The Canada shore and the spray from
 Niagara Falls may be distinctly seen from the Tower.
 Trains run to the Falls every hour. Climate—delight-
 fully cool, equable, and invigorating. The cool lake
 breezes so temper the atmosphere that no summer
 day is too warm for comfort, while the temperature
 at night is appreciated by all who have sojourned
 here during the warm months.

What man with a family, having once been crowded
 into some small "sky parlor" in that hottest of all
 places—Saratoga—or has been continually jostled
 and elbowed by the metropolitan throng that rolls
 alternately to and from Long Branch, but that
 has vowed never again to repeat the summer resort
 And yet with each returning season, comes the query,
 where shall we go? No place on this continent
 possesses more advantages for the tourist, pleasure
 seeker, or those in search of rest and relaxation than
 the care of business, than this hotel. Its accessi-
 bility, its cool, airy and salubrious climate; the
 thermometer ranging in summer from 65 to 75
 degrees Fahrenheit. Its attractions of the hotel
 and its environs. All these combine to render it the
 most desirable resort for those in search of relaxa-
 tion and rest. The architectural features and interior
 finish of the house are said, by good judges, to be the
 finest of any hotel in the world. Its furnishing is
 unique and superbly rich. Electric apparatus. Elec-
 toric, hot, cold, Turkish, Russian, electric, needle,
 and other baths; billiard room, bowling alley, speak-
 ing pipes communicating from every room with the
 office; telegraph and L. R. ticket office, and all con-
 veniences are provided. Advantages for fish-
 ing and boating are unsurpassed. Terms, \$3.00,
 \$5.00 and \$10.00 per day, according to location of
 room. Address

EVERY PISTOL WARRANTED.

EVERYTHING REQUISITE FOR SPORTSMAN'S OUTFITS.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers.

Liberal discount to the Trade.

2 VERY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8. Old style, \$6.

Parties buying glass balls will receive, in each barrel containing 300 balls, score book and rules for glass ball shooting, containing 40 pages.

HEADQUARTERS FOR BALLS, HAGGERTY BROS. & CO., 10 Platt Street, N. Y. City.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," by A. H. BOGARDUS, containing instructions for Glass Ball Shooting, and chapter on breeding and breaking of dogs, by Miles Johnson. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, Elkhart, Logan Co., Ill. Dec 11

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD and ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

NEW YORK, THURSDAY, JUNE 27, 1878.

Volume 10.—No. 21.
(No. 111 Fulton St., N. Y.)

TO FLUSH, MY DOG.

BUT of thee it shall be said,
This dog watched beside a bed
Day and night unwearied,
Watched within a curtained room,
Where no sunbeam broke the gloom
Round the sick and dreary.
Roses gathered for a vase,
In that chamber died apace,
Beam and breeze resigning.
This dog only, waited on,
Knowing that when light is gone
Love remains for shining.
Other dogs to thymy dew
Tracked the hares and followed through
Sunny moor or meadow;
This dog only, crept and crept
Next a languid cheek that slept,
Sharing in the shadow.
Other dogs of loyal cheer
Bounded at the whistle clear,
Up the woodside hieing;
This dog only, watched in reach
Of a faintly uttered speech,
Or a louder sighing.
And if one or two quick tears
Dropped upon his glossy ears,
Or a sigh came double,—
Up he sprang in eager haste,
Fawning, fondling, breathing fast,
In a tender trouble.
And this dog was satisfied
If a pale, thin hand would glide
Down his dewlaps sloping,—
Which he pushed his nose within;
After, platforming his chin
On the palm left open.
This dog, if a friendly voice
Call him now to blither choice
Than such chamber-keeping;
"Come out!" praying from the door,
Presseth backward as before,
Up again at me leaping.
Therefore to this dog will I,
Tenderly not scornfully,
Render praise and favor;
With my hand upon his head,
Is my benediction said,
Therefore and forever.

—MRS. BROWNING.

For Forest and Stream and Rod and Gun.

Breeches Lake.

NOT a very euphonious title, certainly, but as suggestive as the name (Spider) generally applied to Lake Maccawamak. It is situated some fifty miles N. E. of Sherbrook, and is some three to four miles in length, having its outlet at the extremity of the right leg of the breeches. Although "Stanstead" places it in the Megantic district, it is more properly in the St. Francis district, being westerly of the St. Francis Lake and river and within the judicial district of that name. Within a range of ten or fifteen miles from Breeches Lake are numerous lakes and ponds but little fished as yet with rod or troll, and literally teeming with trout, lung, pike, pickerel and bass. I question much if either troll or fly has ever been used on Breeches Lake, the night line being the approved method of capturing the speckled and silvery sided denizens of this pretty little lake. The lake and speckled trout—a very fair sprinkling of the latter—run from three-fourths to two or three pounds weight, with a general average of about one and one-fourth pounds. Two years ago the Patriarch (W. W. Beckett, Esq.), my companion of several very pleasant fishing trips, and myself left Sherbrook en route for Breeches Lake. The first twenty-five miles were over the Quebec Central Railway, landing us at Marbleton in time to dine with our hospitable friend and enthusiastic fishermen, the Rev. Thomas S. Chapman. Our reverend friend, whether preaching or fishing, displays an ardent affection for his calling, and fulfills the duties thereof with an energy which knows no weariness. The Episcopal Church at Marbleton was actually to a great extent erected and internally finished off by his manual labor; for he is quite a proficient in the use of the "working tools of the craft" in more ways than one. His reverence having kindly supplied us with the use of his boat, which he made water tight for the occasion, we engaged

Selected.

a team for the boat and a huggy for ourselves, and about six o'clock reached the residence of Geo. Goodenough, Esq., at South Ham, about ten miles distance from Marbleton. Mr. Goodenough being an old friend of the "Patriarch," we were treated to a bed, supper and breakfast such as few sportsmen enjoy. How delicious the cream, butter and home-cured hams! Mr. Goodenough's son keeps a hotel at South Ham, quite good enough to satisfy anybody of reasonable expectations, or any other man. We called there on our return, not feeling disposed to "ride a free horse to death." While a team was sent forward at an early hour with our boat and baggage we spent two or three hours fishing a small pond of about a mile in length, lying about half a mile from the road and distant about three miles from South Ham. Here we caught with fly some very fine trout, and I feel satisfied that an evening or two in June devoted to a careful whipping of this pond would secure good results. From South Ham to Nicolet Lake, about six miles, the road runs through a timbered, unsettled country, and as there are no wayside residents to keep the road in repair it is anything but a comfortable route in flytime. Although tolerably well macadamized, the stones are anything but uniform in size, being as nature furnished them, and seem to wax bolder every additional step one takes, and the black fly becomes bolder as the boulders increase in size, and the signs of the wearied tourist and the size of the boulders and black flies continue to increase. Finally, after a few hundred yards where the road appears to have been the head of a mountain freshet, we emerge in full view of the Nicolet Lake, studded with its rocky islets, a lake of five or six miles in length, and for its size one of the most beautiful in the Province of Quebec. The scenery around is mountainous, and grand and majestic in its state of nature. It has no regular feeders or inlets, and seems to be supplied by springs, as its waters are delightfully cold in summer and clear as crystal. When calm a pin can be seen at a depth of twelve to fifteen feet. It is a delightful place to camp out, and would make a grand resort for a two or three days' picnic. It is pretty well stocked with speckled trout, but these are difficult to catch with rod and line on account of the extraordinary clearness of the waters.

Perhaps Old Coulombe, who formerly lived near the lake, can account to some extent for its partial depletion. They were all fish that came to his net. This so nettled our fisheries' inspector that he "went for" Old Coulombe, who has probably managed to find a rendezvous where he is less likely to be fined for outskating in his particular manner. I last saw him at Breeches Lake, where he wasn't likely to be troubled with many visitors. Alongside of the road to Nicolet Lake an antimony mine has been opened, but is not worked at present, probably on account of the ante money necessary to develop it. On the hill, near the southeast of the lake, are the Ham Copper mines, at present abandoned, but in which several shafts and lots of money have been sunk. The ore is of a good grade, and will doubtless pay well for working when better communication with a market is afforded. From Nicolet Lake we have an up-hill pull of two or three miles to where the road branches off to Lake Aylmer, where we leave our team, and having engaged a French Canadian with a yoke of oxen and a *marche dans* or lumber sled, haul our boat and traps to Sunday or Indian lake, about half a mile through the woods. This lake is some three miles long, with a very steep, abrupt, northerly shore, formed of igneous or lava-looking decomposed rock. The only fish we saw here were a small kind of lake hauge, running scarcely a pound weight. As we found two Canadians fishing here with night lines, along which were strung several hundred hooks, we passed through the lake and pitched our tent at the outlet, which we made headquarters during the ten days' stay. We were unfortunately unable to portage our boat through the three quarters of a mile of woods which intervenes between Breeches and Indian lakes, while the small stream connecting the two is so small and grown up with timber that it is impossible to get a boat through it. We were therefore restricted to the occupation of an old, rotten dug-out, through any part of which I could shove my knife, and by the aid of which, with a single occupant, we managed to put out our lines and run the same when the water was tolerably smooth. From fallen tree-tops we took out some nice speckled trout, but were unable to cast a fly. We also caught on our set lines a fair number of lake and speckled trout. That the fish in Breeches Lake are plenty there can be no doubt. In running the lines out from the shore fish frequently rose to the minnow bait, and in taking up a short line for the last time before leaving, out of six trout caught on it two were caught foul. This would look as though they must have been having a lively time below. An old lumber road extends between Indian and Breeches lakes, which could be brushed out in a few hours so that a light boat could be portaged across, when I feel confident that a skilful handling of fly and troll would meet with abundant success. The proper time to arrive there would be about June 30. Old Coulombe told us that in the left leg of the Breeches he had caught lunge nearly twenty pounds weight. The water is generally deep and clear, with beautifully smooth sand and gravel beach at the head of the lake. The high ridge or promontory which separates the legs of the breeches would be a very desirable camping spot, as from its situation flies could not be troublesome, and the dry timber standing would be ample to keep the pot boiling. A handy man for camp work can be had for \$1 per day. Neither Indian nor Breeches lakes are

settled. The Quebec Central Railway will pass within five or six miles, so that by next summer it is expected that a good deal of rough wagging on this route will be avoided.

D. T.

For Forest and Stream and Rod and Gun. AN ALLIGATOR HUNT, "EN FAMILIE," ON LAKE GEORGE, FLORIDA.

TWO weeks ago my father, mother and sisters paid me a visit previous to their departure for the North. As none except the first had ever been in a wild country before, they were delighted, especially at the novelty of a bachelor's home. What fishing, hunting, and riding we did have! As some of your readers may be interested in a description of an alligator hunt in which ladies took an active part, I will relate the following incident which occurred during this visit:

We started out for a quiet row in my Whitehall boat about 5:30 p. m. The lake, a beautiful sheet of water about ten by twelve miles, was, for wonder, quite calm, and as smooth as glass. My father had with him a Maynard rifle, .40 cal., and I had a Stevens', .33 cal. As we slowly rowed along shore, they admired the picturesque and novel scenery; the huge cypress trees draped with the long Spanish moss, and sometimes capped with the enormous nest of the osprey; under these the cabbage palmettos, looking, very tropical, while thousands of vines climbed luxuriantly among the trees, many of them in full bloom. These, combined with the ever present perfume of the magnolias, made a *tout ensemble* that can only be appreciated in a tropical country, when the fierce glare of the sun has given place to a cool twilight and the winds and waves are hushed for the night. (In summer here the wind and sun generally go down together). I could fill a page with descriptions of birds we saw and the singing we heard. The beautiful and rare swallow-tail hawk, slowly sailing in graceful curves overhead; the osprey, anon flying screaming high in the air, and then, with wings closed, descending on some unfortunate fish. Sometimes the hawk got safely to his nest with his prey, and then we could see the necks and heads of the newly fledged young birds as they anxiously waited for their respective morsels. But oftener the osprey was met by that bold robber, the bald eagle, and after a brief and noisy chase was obliged to drop his spoil, which the eagle quickly appropriated.

While the older members of the party were quietly taking in the beauties of the scene, my elder sister suddenly exclaimed, "I see an alligator!" As soon as we caught sight of him we proceeded to business. I caught hold of the oars, and the boat, steered by my mother, slowly approached the monster. There he was, about two hundred yards off, lying at full length on the water. Suddenly he commenced to sink, and in a moment was out of sight. "Now's your time!" my father called out, and I put on a spurt that reminded me of my "Cornell" days.

"Steady," cries my father; "there he is about a hundred yards off." I drop the oars quietly and follow the example of my father, who has taken up and cocked his Maynard. At first we see nothing but the alligator's eyes and the end of his snout, then slowly up comes the top of his head about three inches out of water. Crack! goes the Maynard, striking a little high. Crack! goes the Stevens, also too high. He sinks a little; crack! goes the Maynard again, but the 'gator has gone down to rise over a hundred yards off. "Row nearer," comes from my father, but the 'gator is broadside to the boat, with head and back showing, and I have already a sight on his head; I pull the trigger; ehug! he's hit. What a commotion! tail thrown five feet out and lashing the water to foam. Also imagine the commotion in the boat. My father and I each snatch up a pair of oars and lay to it. My mother and sisters, with breath held, steer straight for the 'gator. There he lies on his side, with one huge paw and leg thrust in the air. As we near him we drop the oars. My mother steers as if she had hunted 'gators all her life. I cry to my father, who is in the bow, "Catch hold of the paw and I will get a half hitch on it." "You had better put another bullet in him," says he; but, in my excitement, forgetting that a large 'gator is never killed by the first shot, even when through the brain, I cry "No." He reaches over the boat with the rope in one hand, and catches the paw. Good Lord! half under the boat, as the 'gator is, he springs his enormous tail around, splashing water all over the ladies and careening the boat to the water's edge, and then, his back grating on the keel as he goes under the boat, he's off. I look toward the stern; there sits my mother, leaning half over the boat, one hand clutching each girl, and the latter clinging to her shoulders. But straighten up, ladies, when you read this: Not a cry was heard, and the first words were from thirteen-year-old Mamie. "Oh! Will, he is lost, is he not?" But no; there his scrawled back appears, fifty yards off. Nell and I row the boat close to him, and my father puts a bullet into his head; another commotion; I hand my father another rifle, and he repeats the dose until the 'gator has had *quant. suff.* to quiet him down. Then we had to put a half-hitch around his hind

and forepaws; this was a hard job, as he revived frequently and required a lead pill. Then with two rowing, and 'gator held by my father in the bow, we slowly approach the shore. I had to leave my oars every few minutes and put a ball in him. He would have towed better in the stern, but my mother, although passing through the former ordeal bravely, did not exactly like to have his 'gatorship towing a few feet behind her. After getting him ashore we tried to haul him out on some lumber, but at last we had to send one of the girls after the workmen, and also for some more cartridges, as the 'gator still showed some fight, although we had put nearly a score of bullets into his head and neck. Mamie soon came back with a pitcher of cool orangeade—very thoughtful of her, as our mouths were parched. The 'gator weighed nearly 500 pounds, had a splendid set of teeth, and was about ten and a half feet long. When the teeth comes out we will have them made into charms and sleeve buttons, etc., as mementoes. The 'gator, I hope, is dead now, as after being decapitated he was put to sleep under my grapevines for their special nutriment. Had this 'gator not been an unusually large and tough one we would probably have lost him, as they either get off or sink when shot in a vital spot in deep water. I don't think the ladies will ever forget their alligator hunt. As I write this they are all on board the good steamer Charleston, on the way to New York, and I don't blush to confess I feel their absence, all alone in the wilds of Florida.

Fish Culture.

SALMON CANNING IN OREGON AND CALIFORNIA.

THE accompanying cuts illustrate some of the operations of salmon canning on the Columbia River, a business whose importance as a commercial factor of the Pacific coast trade can only be estimated by its stupendous results. The exportation of salmon in cans is truly of immense proportions, having grown to it in a decade of years. Beginning in 1868, it reached the enormous production of 20,000,000 pounds in 1876. The venture was initiated on the Sacramento River,

times in contravention of prudence, common sense and compunction of stomach.

So far, the barreling of salmon has not been remunerative, the business being merely an adjunct to canning, such fish only being salted as cannot be caught within twenty-four hours after being caught. Salted salmon is worth only \$7 the barrel of 200 pounds, or three and a half cents per pound, which is cheap food.

The Columbia River salmon average about twenty pounds in weight, and frequently reach sixty-five pounds, having a length of nearly six feet, and a girth of over four feet, or the bulk of an unusually large man!

The heaviest catch takes place in June, and the largest factories then employ nearly 400 men.

CALIFORNIA SALMON.—We still urge as strongly as possible that fishermen should carefully examine such salmon as they may catch, so that should a *salmo gairdneri*—a California salmon—come under their notice, such a fact should be announced to us at once. The difference between the Atlantic and California salmon is quite marked. The California fish is heavier and coarser in build, and has greater bulk for his length, and would weigh more than an Atlantic fish of the same size. Then there are more rays in the anal fin. The Secretary of the Smithsonian Institution writes us that he hopes he shall yet have the California fish in abundance. If they come at all it will probably be in large numbers. Next year ought to be the time for them, still it is wise to be on the lookout for them.

DIRECTIONS FOR TRANSPORTING LIVING FISH FRY.—The following very useful instructions for the transportation of fish are published by Dr. R. O. Sweeny, Chairman of the Minnesota Fish Commission. They will be found especially seasonable just now:

When the water is exhausted of its oxygen, which is rapidly breathed out by the great number of fish

stopping, and yet to admit air, when the cans are moving; but when standing still, place covers upside down on the cans, to keep out dirt, and be readily moved for dipper work.

If ice be used, it will not be necessary to change water for forty-eight hours or more. If it should be necessary to keep them so long as that in the cans, the dirt may be drawn off from the bottom by an Indian rubber tube used as a siphon.

In planting fish fry, keep toward the head of the Lake, always avoiding an outlet current, and if practicable, give them a stony or gravelly bottom, so they may have hiding places at first.

Quietly lay the can on its side, so as to allow the lake water to enter it gently, that the change of temperature be gradual and not violent; then slowly raise the bottom end so that the fish and water will gently flow out together. This should be done in deep water, away from the shore when practicable, particularly in hot weather.

—A Nashville correspondent sends the following hints on this subject:

Concerning the carrying of minnows to our fishing streams, we haul them 100 miles overland with perfect safety. I and my boys caught 400 beautiful "steel-backs" and "chubs" on the 15th day of March last. Put them into eight three-gallon buckets, each bucket being furnished with an "inside" bucket, perforated thickly with eighteen inch holes, the inside fitting loosely. As fast as a bucketful is secured, we take the inside out and tie it in running water, if convenient, and if not, we wash the minnows washing them quite clean. You see, it is the excrement in tight buckets that kills them, together with want of "aeration." We thus washed them for about a week, and then hauled them to "Fruy," a beautiful, clear little mountain river, about seventy miles to the west of us, a tributary of our beautiful Tennessee. Tennessee, and especially Nashville, is noted for its accomplished amateur fishermen, and is fully up with the times in all that can be done with "Meek and Milan." Fish are not as abundant in our streams as formerly, but yet sufficiently so to give a chance for camp life for a few weeks in spring and autumn, especially to those who long to quit the busy haunts of men and quietly commune with nature during these delightful seasons. If you will read this, I will know that you are in sympathy with all the pleasure that kind nature gives.

Nashville, Tenn., June 16, 1878.

IRBY MORRAN.

A. BOOTH'S CANNING ESTABLISHMENT.

SECTIONAL VIEW OF SAME.

CALIFORNIA SALMON—*Salmo Gairdneri*.

and afterward transferred to Oregon, with Astoria as its head quarters and entrepot, the Columbia River being the nursery of the raw material. Mr. Booth's establishment, which is the largest in the world, alone produces 2,500,000 pounds of canned fish annually. But, in addition to the 20,000,000 pounds of salmon exported in cans, the quantity of salted fish in barrels, and the great amount consumed by the Indians as their staple article of diet the year round (fresh or dried), make the grand product of the Columbia River alone fully 45,000,000 pounds, or four and a half times the whole catch of the United Kingdom of Great Britain. There are now, we believe, thirty canning establishments on the Pacific coast, and those run night and day, like a blast furnace, for 100 days in the year. Such consumption, it is reasonable to suppose, must inevitably result in depletion; and to guard against such probable contingency the United States Government established, two years ago, a hatching house on the Olackamas River, a tributary of the Columbia, capable of producing 20,000,000 of young salmon per season, which, when mature, would make ten times 20,000,000 pounds in canned weight. Of course the percentage of loss from natural causes is very great, but just now the most destructive foe to contend with is the violator of the protective law, who catches fish at all

crowded in an unnaturally small quantity of water, they become restless, gasping for air at the surface, and if not relieved in a very few minutes, fall exhausted and smother or drown at the bottom of the can.

To prevent this drowning, take a dipper or pint cup and dip up the water, pouring it back into the can from the height of eighteen inches or two feet, so as to drive the air down to the bottom of the can. The air is rapidly reabsorbed by the water, aerating and refreshing it, so that the fish will go down to the bottom to enjoy the revitalizing and refreshing stream. The dipping should be continued for several minutes, until the fish remain quietly in the lower part of the can.

When the weather is warm, it is necessary to keep the water cool by ice, one or two pieces the size of a coconut, replaced when melted, will keep the temperature about 50 deg. When the temperature is low the fish breathe more slowly and exhaust the water with less rapidity, but the dipper must be used freely, particularly if the cans are standing quiet. When the fish are comfortable they remain quiet and breathing easily, and without restlessness.

Always be ready with your dipper to freshen the water. Do not let fifteen minutes pass without looking at the fish.

When the cans are not in motion, the fish require more attention than when shaken by the moving of car or wagon, which agitates the water and keeps it aerated to a certain extent.

Never allow your fish to stand exposed to the sun, or in a strong draft, particularly if it be a warm one.

The covers may be put on the cans lightly, so as to prevent

NEW YORK.—Seth Green placed in the river, below the lower falls, some 90,000 young shad, hatched at Castleton on the Hudson. This makes some 210,000 young shad in all which have been put in the river.

—Mr. Monroe A. Green has broken camp at Castleton and finished work for the season. The season for shad has been exceedingly cold and backward.

WISCONSIN.—Madison, June 19.—The new Board of Fish Commissioners met in this city to-day and organized by the election of the following officers: Pres., Wm. Welsh, Madison; Sec., Moses Hooker, Oshkosh; Treas., Dr. P. Hoy, Racine. Many improvements are to be made at the Madison fish hatching house. Fifteen million white fish will be hatched for Lake Michigan. Two million brook trout, when large enough, will be distributed generally.

ROVER.

THE HALIFAX STEAMERS.—Perhaps the most delightful way of reaching the famous trout and salmon streams of Nova Scotia and New Brunswick is by the popular steamers of the Cromwell Line. So long and favorably known in the New Orleans trade, Messrs. Clark and Seaman have placed two of their most commodious and reliable steamships on their Halifax and St. John's, N. F., branch, thereby enabling tourists to enjoy a pleasant summer's trip at sea at very reasonable rates. The *Ss. Cortes* and *Alhambra* make trips on schedule time every ten days, as will be seen by reference to our advertisements.

Natural History.

THE PROCREATION OF SKATES AND STINGRAYS.

HOT SPRINGS, Ark., May 14, 1878.

Mr. Editor—Last summer, while cruising and fishing among the islands of the Gulf of Mexico, between Bay St. Louis and Pensacola, our party caught quite a number of those most villainous looking inhabitants of salt water called sting-a-rees. One day in the surf, outside of one of the Chandeliers, a friend, with my assistance, after the detestable thing was hooked, caught one which measured about five feet from tip to tip and twenty-eight or thirty inches across the back. It was pulled upon the beach and turned upon its back and left lying there. Passing by the thing in less than half an hour, we saw lying by it two smaller ones, about the size of a very large sancer, which had evidently come from this old one. A year or two before this, Mr. Boswell, a prominent member of the Marooner Club of Vicksburg, caught one, and while an Italian was extracting the hook it gave birth to a young one, much smaller than the two young ones mentioned above. I presume all fishermen along the Gulf coast are acquainted with this habit of the sting-a-ree, but the question with me is whether this odd thing is propagated through eggs as other fishes are, and after the young are hatched, carries them in a protecting way, as many reptiles do, or whether they breed as do animals? I confess an ignorance on this point, and should like to be enlightened by you, whom we all regard as the dispenser of gospel when it comes to the denizens of the deep.

MIXON.

Mr. Fred Mather, whose opportunities to observe the habits of the *Raidae* and *Trygonidae* at the New York Aquarium have enabled him to gather information on this subject, has very kindly favored us with the following reply to the above:

The skates are all classed as "viviparous" because the embryo is formed before the horny covering, or "egg case," is laid, and not afterward, as in case of most fishes. I have seen the smooth skate (*Raja levei*) lay its eggs, and have hatched several species of skates. Never did of sting-a-rees (*Trygon centrurus*), however, and know but little about them. Have looked up authorities; all silent on this. Have heard that the fish in question had been opened and the young found alive without "cases" on, but how true it may be I cannot say.

FIG. 1.—Egg of skate, half natural size.

Would very much like to see it. The "eggs" of skates, as found on the beach, are properly "embryo cases," in which the development begins in the body is completed—a pouch, and not properly an egg. The ovary is unprovided with an excretory duct in these fishes, and when the ova are set free from the ovary they fall into the cavity of the abdomen. It may be that some are retained and completely developed within the body.

Yours,

FRED MATHER.

Prof. D. S. Jordan, a most eminent authority, has done us the favor to write the following opinion:

IRVINGTON, Ind., May 27, 1878.

Dear Hallock—I take it that the difference between those sharks, like the dog fish (*Squalus americanus*) and the dog-shark (*Mustelus canis*), which are reckoned "viviparous" and the ordinary "oviparous" sharks and skates is simply this: In the "oviparous" shark or skate, the young is laid in the peculiar leathery "egg case," as described by Mr. Mather above, while in the "viviparous" species the young is sent out a free swimming animal without his "swaddling clothes." I have, like Mr. Mather, examined the egg-cases and young, both in and out of the parent, of several species of skate (*Raidae*), but not of any of the stingray (*Trygonidae*). I know of no record of the development of any of the latter except the following, which may refer to the same species noticed by your correspondent, "Moxna," but whether that species is our common stingray (*Trygon centrurus*), or some other member either of that family or the allied *Myliobatidae*, I believe, is uncertain. Prof. Agassiz says (American Journ. Sci. Arts, 1855, p. 369): "Mr. Thayer S. Abern, of the U. S. Engineers, informs me that the stingray of the coast of North Carolina also brings forth living young. This would be, as far as I know, the first example of a viviparous species in the family of Rays."

Your correspondent has, therefore, struck a good lead, and would do a real service to science if he would send to the Smithsonian the next batch of the young of "the detestable thing" which he may secure, for exact determination.

As to how the skates (*Raidae*) and stingrays (*Trygonidae*) differ: The skates have in general the tail comparatively thick, not whip-like, and provided with two rayed dorsal fins and more or less of a caudal fin, and no large barbed spine, although the skin is rough with smaller prickles. The pectoral fins extend to the snout, but usually not around it.

FIG. 2.—Figure of clear-nosed skate (*Raja eglanteria*), showing eggs in position in the oviducts, a, a., Eggs, b, b., Ovaries, with immature eggs, c., Junction of oviducts.

The stingrays have the tail slender and whip-like, with only rudimentary fins if any, one of the dorsal fins being usually (but not always) replaced by a stout barbed spine. The pectoral fins are continued forward without interruption around the snout. They are larger animals than the *Raidae*, although not the largest of the rays.

D. S. JORDAN.

P. S. While on the subject of viviparous fishes, I may note that numerous small specimens of one of the famous viviparous fish of California (*Embiotocidae*), the *Heterostichus traski* of Gibbons, are in a collection received at the National Museum from Brownsville, Texas. The others in the collection are a genuine Gulf fish, and unless there is some "hocus-poena" in the matter, we have here a very interesting addition to our Gulf of Mexico fauna.

D. S. J.

In reply to our prosecution of the inquiry on this subject Prof. Tarleton H. Bean, of the Smithsonian Institution at Washington, tells us of a young stingray which was taken from the inside of the mother—back uppermost—and all of the tail outside:

The stingrays have been supposed to bring forth the young alive, but I am not aware that any one has recorded the fact concerning this species. This ray was possessed of all the organs of the adult and would have been able to capture its own food in the event of separation from the parent. The pectorals were folded snugly one over the other in the uterus to economize space. The tail was proportionately longer than in the adult.

In your issue of May 30 I stated that a young ray was taken from *Atotaxis narinari* instead of from *Rhinoptera quadriloba*. We received both species, but the young was found in the latter.

TARLETON H. BEAN.

Smithsonian Inst., Washington, June 3.

Four years ago Com. L. A. Beardslee, U. S. N., commanding the steamer Blue Light in charge of the U. S. Fishery Commission, sent us the following description of the gestation of this skate, with the diagrams accompanying:

"Not one in a thousand would be puzzled to decide in what kingdom, animal or vegetable he would locate the egg, although it is found frequently on our sandy beaches, thrown up by the waves with masses of sea weed and resembling the empty husk of some curious nut. The egg of the skate is about two inches in length by one and a quarter inches broad, shaped like a sack, with four horns at the corners, each about two and a half inches long. This egg is composed of a parchment-like cover, and is of a dark green hue. Cutting open, the little

FIG. 3.—Young skate, natural size.
